The sun he could not understand, because it was too bright to be looked at; but the moon was like a dumpling, and somebody sent it rolling over the tops of the trees, just as he rolled his marble over the table. The stars were cut out of paper with a large pair of

scissors and stuck in the sky with the end of the thumb. Having thus arranged the order of the universe, he looked very happy, and patted himself on the breast, evidently as much pleased as some more pretentious philosophers who have been quite as far from the truth.

And like those philosophers, too, he was very critical about other explanations than his own. The next day he came in a great wrath and said that "Mam's" tongue ought to be pulled out, which was his way of saying that she had told a lie. When she looked very innocent and said "what," he explained that he had looked everywhere for God. He had been down the street, over the bridge, into the church yard, through the fields; had even looked into the castle grounds and the soldiers' barracks, and at night had popped his head out of the window; but he could not find God. There was nobody anywhere who was big enough to put up his hand and stick the stars in the sky. "Mam" was bad, and must have her tongue pulled out. For "God—no, God—no," he repeated, with great finger-volubility.

The difficulty of inculcating an impression of a character so abstracted from anything material as the unseen God can be imagined. But the method was as ingenious as the task was puzzling. As "Mam" and her pupil sat on opposite sides of the fire, she shrugged her shoulders and seemed to acknowledge her delinquency, at which Jack shook his head at her to show how much he was offended. Presently she seized a pair of bellows, and first blowing the fire for a time, she turned the blast on his hand. He snatched it away scowling, and shivered to show how much he disliked it. The teacher looked very innocent, and repeated the puff, which made him still more angry. But she looked at the nozzle of the bellows, and then all around, as if searching for what offended him, and then said "Wind—no," and told him his tongue must be cut out. The effect of this was curious. He opened his eyes very wide, panted, and turned very red; while his face shone with more intelligence than it had ever before exhibited, and instantly catching her meaning he repeated many times—*shouting* silently with his fingers—"God—wind, God—wind," holding two fingers out to show that they were equal and like, for he had no other expression for "like."

When it is remembered that both teacher and scholar were totally deaf, and that one was dumb, this success in communicating an idea so difficult to conceive was wonderful. But undoubtedly the infirmity which compelled Charlotte Elizabeth to obtain all her impressions of the world by the use of sight, smell, touch, and motion, prepared her all the better for a task so perplexing as the instruction of the clumsy understanding of this boy.

As we have seen, this first grasp his mind made of the infinite had the physical character of a pang. Every fiber of his body helped his mind in the mysterious process by which memory and inquisitiveness combined in this befogged nature to comprehend the most ab-

struse question which is presented to man. But from this time he learned steadily and mysteriously truths which no one had taught him. He followed out with perfect correctness deductions from this simple beginning, which led him to obtain a very clear idea of God. He discovered that God was like the sun, in that he had to shut his eyes when he looked at either, an illustration of the glory of God which is of common use among larger intellects, but which was new and original with Jack.

He had always been given to teasing the dog and other inferior animals. But his obscure cogitations soon taught him that the works of God were to be treated with respect, and he became very careful and tender of all living things, passing his hand over them caressingly and saying "God made." At first he had a queer but natural idea that the worms were not made by God, saying that they came up out of the ground, while God was up in the sky. His teacher told him that God made the worms too, and then he set his mind to find out how this could be. At last he agreed that the worms might have been rolled up in the world when it was made, like meat in a pudding, and bite their way out. He had been very fond of fishing, but after this discovery his wrath was great when he found an angler looking for live bait.

His was a reasoning without words, and we are utterly confounded when we seek to discover whether his mind had a language, and if not, how it revolved thoughts and evolved ideas. The best explanation we can conceive of is that the impressions on his mind were hieroglyphic. We see a tree, a dog, a house, and our minds revert to certain little ink-marks which we learned in our youth to put for those things. In short, we reason in *words*. Jack must have dealt entirely with *things*. Perhaps that mind which we call darkened, was revolving problems of pure philosophy, intuitions, the hidden meaning of the phenomena of life, the mysterious correspondence of natural objects, with the highest ideas of man; things which are reserved for the most cultured and profound minds among more perfectly made mortals.

It was remarked that he could not always deal understandingly with words. He knew how to write, and spent a good deal of time copying out of the Bible. But though he would dwell on the words that he knew, he seemed to obtain no ideas from printed language. He would skip two pages without knowing it, and go right on with the copying; and among his papers were found pages of sentences and parts of sentences copied out of the Bible and put together without any sense or meaning. Very like he attached an arbitrary meaning to particular words, and these jumbling paragraphs may have been complete stories to him.

His language was peculiar, and mostly confined to nouns and a few verbs, which he arranged by rules of his own, the result being very like a dispatch by the present Atlantic telegraph cable. If his mistress wanted to send

him to the village for a small loaf of bread and pay for it, she would say: "Jack go village money bread small one." And he could not understand such a sentence as "You must go to the village and buy me a small loaf of bread." He would perform his errand by going to the shop and writing down "Bread small one," at the same time holding out the money. He was once taken into a toy shop, and while his mistress was buying something a great commotion was heard. There was Jack, mounted on a rocking-horse driving away at full gallop, to the great danger of everything near by, and shouting and waving his arms. He gave a diverting account of how he cautiously approached the horse, found out that it was "bite—no; kick—no," and finally mounted him. He wanted to know if it was God—made, and how far he had ridden.

When a horse was bought by his master, Jack was very anxious to groom him. He told his mistress confidentially that men were very wicked; that a man servant would often shake hands with the devil (his way of saying that he would be a bad fellow). He also said that a man would eat a great deal and cost money, but Jack would only eat "small potato, small meat," because he loved Captain B. The captain finally consented to let Jack try, and the boy really did the grooming very well. His exultation was great. He went up to the horse, kissed it, and in great glee said, "No man; all Jack. Devil cry—go devil;" for it was a part of his belief that the devil was always on the lookout to trip him up. A funnier scene still occurred when another horse and a cow were added to the establishment. It was thought that he could not do so much work, and a young woman was hired to milk the cow. But Jack considered himself outraged. He talked of his mother's Kilkenny cows and "cow's baby," and moreover treated the dairy maid with contumely. At length they let him have his way and he was happy. He never afterward referred to that time without saying that then he was "Hell Jack."

Education had a remarkable physical effect upon him. His stiff, bristly hair became silky, color came and went constantly in his cheeks, in sympathy with the flow of emotions in his mind, and the succession of new scenes and feelings which gradually increasing perceptions called up, lent the charm of childish freshness to his countenance. His large hazel eyes were peculiarly beautiful, for he used them to express his thoughts. He depended a great deal upon the manner of others to him, claiming a shake of the hand at morning and night, and suffering so much if it was omitted, that the denial of the kindness was resorted to only as a punishment for the gravest offenses. One of the latter was a habit of howling when anything offended him. Of course he could not hear his own noise, but he was capable of making a vast deal of it, and seemed to like the commotion it occasioned. This, however, he overcame in time. As he grew older, both mind and manners became gentle and delicate.

When his mistress lost her brother by drowning, Jack stole down at night from his bed and removed from the walls of her study every picture that contained a ship or a boat, or that in any way suggested the water. These pictures were of his own drawing, and the whole occurrence shows how well and intelligently he could sympathize with the afflicted woman.

It has been said before that the first idea which Jack mastered came to him like a pang. All his expression was bodily. His friends could often read his features, which, beaming, glowing, or darkening, showed not merely the depth but the quality of every emotion. Thirty years ago, when Jack lived, there was a great agitation in England on the Popery question. "Mam" was a stout Protestant, and of course he was whatever she was. He came home one day from mass, and, setting up a brush, began to bow before it, asking if it could hear him. For an instant he waited in a reverential attitude, and then getting no answer, began kicking the brush around the room, saying, "Bad god! bad god!" After that, whenever the subject of Romanism was adverted to, Jack would run for the clothes-brush, and vent upon it his hearty heresy.

The ease and directness with which he seized the meaning of difficult lessons was wonderful. Charlotte Elizabeth, in trying to answer some questions he put about the future life, drew a picture of a great number of persons in the midst of flames and fire, to represent hell, and then one figure apart, who, she said, was God's son, a man who came out of heaven, was never "bad," and would not have to go to the flames. But he allowed himself to be killed; and when he died, God shut up the pit where the fire was, and spared all the people. After a few moments' cogitation, Jack saw an objection to this atonement. He pointed out that the people were many—"God's son" was one; and his earnest "*What*" showed that he understood the difficulty of one rescuing so many. She then cut a bunch of dead flowers into small pieces, and showed Jack that they represented the people in the pit. Then laying down a gold ring to stand for "God's son," she asked him which he would rather have. He struck his hand to his forehead, and with eager rapidity declared that the one ring was better than the whole room full of dead flowers.

A creature like Jack was sure to have many odd ideas and ways. Among the curious notions that came into his head, one was that he must have a hoop to run errands with. He said the stage that passed the house went so fast because the horses had four large hoops, meaning the wheels, and he thought if he had a hoop he could go just as fast. With him an impression was a verity, and when he got his hoop he had no hesitation in racing with the coach, nodding and grinning defiance to the horses. It really was a help to him, and gave him a reason and object for going fast on his errands.

Charlotte Elizabeth once undertook to teach some of the poor children in the neighborhood, and to keep Jack employed during the lesson

made him monitor over the others. But a more unfortunate choice could not have been made. Nearly all the disorder came from the irresistible merriment which his actions excited. Seated in a high arm-chair he narrowly watched the whole party, and if anything occurred which he considered improper or disorderly, he conveyed to the culprit a warning of the consequences of such actions by slapping his own face, pulling his own ears, and kicking out his foot, all the while looking gravely and sternly at the offending one.

His range of thought was narrow, and, if his conversation were a proof, reverted almost entirely to religious subjects. He was content with a very quiet life, and when he could not talk with "Mam," preferred to sit alone in his little room over the barn rather than have the company of any other person. There he would draw, or sing, or think. It is an old saying, that if horses had a god, it would be a horse. And so Jack's deities—God and the devil—were beings of action and not of words. God was benignant, gentle, and with beaming face; Satan was always in a great rage when he saw any one doing good, and would stamp his foot and tear around, howling with chagrin. But when people were bad, the devil would laugh and clap his hands. Jack always showed a great anxiety when he talked to his fellow-creatures. Expression was hard work to him; but when he talked with God he never had the least difficulty. He would stand perfectly quiet, and seemed to be at ease, expressing with face and gesture the simple prayers he had to offer.

The rapidity with which he leaped to conclusions has already been spoken of. All emotions were intensified in him. When a petition against the admission of Romanists to Parliament was handed round, Jack implored leave to sign it, though he was under seventeen, the limit of age that had been fixed. He wept so hard that his benefactress consented, and with a face flushing deep crimson, and flashing eyes, he rather cut than wrote his name down.

When "Mam" lost her brother, Jack was waiting at table, where laughter was as hearty and frequent as usual. But he noticed that "Mam" did not laugh, and putting down the plate he had in his hand, looked sternly at the company, saying, "Bad laughing!" walked out of the room in great indignation, stopping at the door to say, "Mam come; no laughing; gone, dead."

His was a beautiful though an obscured character, and when at the age of nineteen he died of consumption, those with whom he had lived felt that they had lost one who had for them a sympathy and affection that is not often found in life.

PSYCHOLOGY has relations to Theology. Ideas of Divine Being must be in our own minds, as well as arguments, to prove this existence. Questions of human ability and of free-will are discussed and decided.—*Horace Mann.*

Our Social Relations.

Domestic happiness, thou only taste
Of paradise that has survived the fall!
Thou art the nurse of virtue. In thine arms
She smiles, appearing as in truth she is,
Heav'n-born, and destined to the skies again.—*Chapman.*

MY CHILDHOOD'S HOME.

They tell me of Italian lands,
Where flowers, by zephyr breezes fanned,
Perfume the evening air;
The home of music and of arts,
The land of true and loving hearts,
And birthplace of the fair.

They tell me, too, of vine-clad France,
Where peasants wheel in merry dance
Around the cottage door;
Of California's golden skies,
Arrayed in nature's deepest dyes,
As fair as Eden's shore.

But give to me the pastures green,
With hill and dale and slope between,
Where childhood loved to roam;
And give to me the forests grand,
Which bend beneath the storm-king's hand,
Around my childhood's home.

Let others sing the beauties fair
Of orange groves and southern air,
Where fancy loves to roam;
But memory turns with mournful eye,
While other scenes pass slowly by
Of home, a childhood's home.

No future land can ever be
One half so fair and dear to me
As that in childhood tried;
For there a mother's grave is made,
And there a sister's form is laid,
With brother side by side.

Oh, would I could forever stay
Mid scenes where childhood loved to play
In years forever gone;
But life has cares which we must meet,
Ere we can press with sinless feet
The happy shores beyond.

Then let us work while work we may,
The morrow soon will be to-day,
To-day will soon be o'er;
And ere another sun shall rise,
The hand of death may seal our eyes,
To open nevermore. DELTA KAPPA PHI.

THE TYRANNY OF FASHION.

BY MRS. JOHN HALIFAX.

As we sat in one of our city cars the other day, a young mother entered, dragging after her three babies, and seated herself with a sigh of such utter weariness that it arrested our lazy attention and set curiosity to work to trace that sigh to its source. She was a delicate little woman, with a face whose deep-cut lines and premature wrinkles told so plainly of overwork that it might have moved any ignorant looker-on to pity.

Yet there she sat—poor, little, pale, jaded, dull-eyed, worn-out, old young woman—a slave to the hardest mistress that ever shod an iron heel with velvet, for she was dressed from the crown of her head to the sole of her foot according to the "very latest" rules of Fashion. Everything she wore, though of inexpensive material, was cut as carefully and trimmed as

elaborately as if she were the laziest belle of Fifth Avenue, with a score to execute her senseless whims. Her three children were decked off in like manner, utterly regardless, if not of money, at least of *time*. Their little garments, all snow-white, were tucked, embroidered, braided, flounced to the last inch, shining with starch and faultless laundressing, till each poor baby was a moving mass of finery, just fit to set up in the window of a "Ladies' Emporium" as a sample of "Work of the best quality done here."

Now if people who have plenty of time and money to waste choose to make little puppets of their children, they can do so with some show of reason under the plea that they have nothing else to do; but for the mother of a family, who was evidently her own nurse, seamstress, and maid-of-all-work, to tax herself so needlessly, so cruelly, so absurdly as that! Is it not incomprehensible? And she is but one of thousands. Yet slow-brained people wonder every day why the women of this generation are not as healthy as their grandmothers. Reasons why are plenty, and this is one of them: The grandmother of that waxen-faced expiring fragment of womanhood had but two "best" gowns—one for winter, one for summer, and she wore them half a lifetime without wasting any anxiety or labor on either. With her mother's brooch, and her fine kerchief, and some rich old lace handed down by an amiable grandmother, she was equipped for any occasion of dignity or importance. Then, her children wore calico dresses, "linsey woolsey" petticoats, and homespun stockings; played with doll, and said their catechisms, and were ever so much healthier, happier, and better children than the little men and women who walk our streets to-day.

Now, the laws of Fashion change as rapidly as the seasons, and are so arbitrary that the shape of a collar, the width of a ribbon, the size of a bow will determine one's claims to eligibility. And if it be folly in the rich to yield themselves to such tyranny, how much worse the folly of the poor, who must sacrifice their golden hours of leisure, their health, sometimes even life itself, in the senseless straining after empty and unsatisfying frippery which does not belong to them, and can not add one iota to their solid comfort and happiness!

And the children—ah, me! ah, me! Said a little lady of ten years in our hearing: "You see, aunty, my veil is *real* lace," and she held it up for admiration as if profoundly impressed with the importance of the weighty fact. Said another: "Will it do for me to wear this collar to the Park?" "Why not?" we asked, innocently. "Why, it isn't a *Shakespeare* collar!" she replied, with wide-open eyes of astonishment at our ignorance.

Oh, if mothers, rich and poor, would but give up this wearying struggle to comply with the demands of Fashion! if they would put upon their children comfortable, wholesome, neat, inexpensive dresses, and then devote the extra time and money to healthy recreation or

culture; if they would go out and romp with them, play merry tunes that will set their little feet flying over the floor; read good books, study good pictures; in short, fill every day's cup brim full of the pleasures that satisfy and can not harm, then the sweetness of such a childhood will blossom and bear fruit in the future when such frippery as beads and ribbons have done their poor miserable work and perished.

Children really need no such adornment. God made them beautiful, and beautiful they will be if His work is not tampered with. If they are healthy, happy, and innocent, they will always be the loveliest of God's gifts, and need no help of ruffles or embroidery to make them attractive.

THE MUTE AND UNSOCIAL.

The dissipated and abandoned have had their advocates of reform. They have been followed to the scenes of their indulgences, and urged even at the brink beyond which there is no hope, to break from the spell of that infatuation which culminates in hideous death. But who has raised a voice of reform in behalf of those who, while of strict moral integrity, have become educated into muteness—into a distant coldness—into an unsocial and sour disposition? The class which is the victim of this distemper is large indeed, and a singularity in it is that people applaud their probity and virtue, and forget the freezing that is penetrating deeper and deeper; that freezing that stops the very flow of those spirits whose generous influences when withdrawn from the mind and body leave the one to unbroken melancholy, and the other to waste away by a protracted yet miserable consumption. What superinduces a more unhappy abandonment and loss of aspiration than melancholy? and what so soon generates this soul-racking malady as solitude and lack of sympathy?

Only through our social capacity can we be happy. Only through the exercise of our social qualities can mind and body perform every one of their proper offices; to stunt or stint them is to poison the very source of life at its fountains.

Look about you! See that deserted one—perhaps uncouth—perhaps a stranger. With a kindly tongue address him—with warm hands welcome him; throw around him the warmest influences. Away with false "proprieties." They had their origin in artificial and not natural sources; they are rightly regarded in the right place, but are of the height of folly and evil as usages; they advertise the finical and shallow; an outrage of them in our communion as human beings—as members in good standing of a common brotherhood—of one blood—is right; one who can with true dignity and charity, with discretion, give kind words to the social outcast, the mute and unhappy; who can extend a cordial sympathy to the stranger—the stranger to comfort

and happiness as well as social connections—is worthy indeed a philosopher's mantle, a brave man's meed, and a Christian's crown.

JOHN DUNN.

AN AGED MAN.

FROM the Wooster (Ohio) *Democrat* we take the following interesting account:

"There is residing at this time in the village of Jefferson, Plain Township, Wayne County, Ohio, five miles west of Wooster, the oldest man in the State of Ohio, and probably in the United States. His name is John Folgate. He was born in Lebanon County, Pa., in the month of February, 1759, making him 108 years old. He emigrated to Ohio in 1829, and has lived since that time an industrious, quiet, unobtrusive life in Jefferson. He was seventy years of age when he settled in that village, having already attained the period in life designated in Holy Writ as the usual limit of human existence, and at which most men, under the burden of many years, die. Physically, he is rather small; probably under the medium size, but exhibits a compact frame and a well-constructed body, which, no doubt, eighty years ago, was one of physical excellence and muscular perfection. He was married at the age of thirty to Miss Elizabeth Wolgamott—the very mention of whose name starts bitter tears in those old eyes that have led him upward through the darkness and labyrinths of a century. His wife was born in Lancaster Co., Pa., three years before the battle of Lexington, and three years after the birth of the great Bonaparte. She had often seen and spoken to Washington. Her death occurred Jan. 20th, 1849, in her seventy-eighth year. An only child was their wedded inheritance, and the old man, who carries upon his back the weight of well nigh a million hours, weeps and wonders that the son, aged fifty years, should be dead, and the father here. He was a teamster in his early years, about Baltimore, Md., and in Pennsylvania, but for the last sixty or seventy years has been engaged in mechanical labor. He was drafted in the war of 1812, shouldered his musket, but was *discharged on account of his old age*—so that fifty-five years ago he was too far advanced in life to be a soldier. At the time he was drafted he was keeping a tavern at a place called 'Sporting Hill,' near Baltimore. In politics he was always an old-line Whig, but in political as well as social life, while he had stern convictions, he had but few prejudices."

His habits and manner of life would afford an interesting subject for consideration. We would like to be informed of their character. Can any of our readers furnish us the particulars?

SAD.—Said a poor little girl in the fourth ward of New York, as she was dying, "I am glad I am going to die, because now my brothers and sisters will have enough to eat!" Nothing could be written or thought more simply pathetic.

"THE STICK-UP NOSE."

A DASHING little black horse, with a little gem of a cutter behind him, and a bright, rosy driver, stopped near a large dry-goods store, and a group of boys on the corner stood and stared. It took them but a moment to scan the horse and cutter, and then they fastened their eyes on the young girl. "I tell you what, Joe, she's killing handsome," said one of them. "That long red scarf around her neck is a good match for her cheeks, and her eyes are as black as her pony. And didn't she rein up her horse as if she knew how! Julius Cæsar! she's splendid!"

"Well, I suppose I must get out and take in this bundle, but I'm tucked up so nicely in this robe, I don't want to," said the young lady to herself, glancing at the boys who were too far off to hear what she said.

Throwing back the robe, she started to get out, when she saw a boy standing near the store door, and looking at her.

"I'll ask him to take this foll in," she said,

zig-zag. Why, it isn't half as good-looking a nose as yours. What's your name?"

"Harry McAlister," replied the boy, smiling, as he thought of the "zig-zag" nose on the

FIG. 2.

corner, and also of his own, which the young lady had tried to praise.

"Any woman that can say a good word for such a nose as mine must be a real lady," he said; and now it was Mary Davenport's turn to smile.

"Well, I can say a good word for such a nose as yours, and for such a boy as you, too," she replied. "I know by your looks that you are a first-rate little fellow, and you've got a splendid name. Harry McAlister. Why, you couldn't have a better. What's the name of that boy who cried out so loud: 'You'd better name him Stick-up nose,' and then turned

round and showed his zig-zag nose?"

"Jimmy Snod," answered Harry, going almost into hysterics, he laughed so hard.

"That's good for you, Harry," said Miss

FIG. 3.

Mary. "Laugh away as fast as you can. It's a great deal better for you than crying. Here's the quarter—a twenty-five-cent piece. I'm

much obliged to you for taking my bundle into the store."

"I can't take the money," replied Harry, putting his hands behind him. "I don't like to be paid just for doing a little thing for a kind, polite young lady."

"Oh, but you must. You needn't call it pay, but take it to remember me by."

"Well, I'll do that, and I'll never spend it the longest day I live," said Harry, as he hurried away with his quarter, and with new and pleasant feelings. But he was obliged to pass the corner where the boys were congregated, and the rude fellow with the "zig-zag nose," Jimmy Snod, wishing to show his wit at the expense of Harry, called out: "Little chap! little chap! follow your nose and you'll be sure to go right, for it sticks up as high as a church steeple."

Harry McAlister's face not only crimsoned but burned with rage. "I'd like to lay that fellow on a level with the ground," he said to himself, "but then the young lady was kind and polite to me, and told me I was handsome,

FIG. 4.

so I think I won't do it. I might tell him what she said about his 'zig-zag nose,' but I'm satisfied without it." Harry went on toward his home, an unpretending cottage where his humble parents lived, and as soon as he entered the house he repeated Mary Davenport's pleasant, warm words, the compliments she had paid him, and the insulting words of the boys on the corner.

Mrs. McAlister's face lighted up with pride as she thought of the attentions her Harry had received from the beautiful and charming young lady, and she pondered on the kind words until late at night; but Harry, although he did not forget Miss Mary's words, pondered rather on what Jimmy Snod had said. Again and again he repeated to himself: "Little chap! little chap! follow your nose and you'll be sure to go right, for it sticks up as high as a church steeple." As he lay on his bed thinking it all over, he concluded that it wouldn't be a bad idea to take Jimmy Snod's advice. "Why, if I follow my nose," said he, "it's a fact, as the fellow said, that I'll 'be sure to go right,' and, by and by, I'll be a rising man.

FIG. 1.

and called out: "Come here, little fellow, and take this into the store for me, and I'll give you a quarter."

"That young lady is calling you, crooked-nose," screamed out one of the boys.

"You'd better name him Stick-up nose," said another; so "Stick-up nose" was handed from one to the other, and went sounding through the air till it reached the ears of the little boy as, with flashing eyes and flushed face, he went up to the cutter to take out the bundle.

Mary Davenport, the young lady, heard it, and noticed the boy's air of embarrassment and indignation, and her heart went out to him at once.

"You needn't care for what those boys say," she said to him. "You are a handsome little fellow, whether your nose is straight or stick-up, and I dare say their noses are not half as good-looking as yours."

This brought the tears, and the young lady, wishing to save the child from a regular cry, added: "There, now! I can see those noses on that corner, and one of them goes zig-zag,

When a body's nose sticks up, it's a good thing to follow it."

Many years afterward, a stranger was entertaining the passengers in a car by telling them of a lad he once knew who was grossly insulted by some boys for having a stick-up nose.

"One day," said he, "after receiving two shillings (which he has kept to this day) for doing a favor for a young lady, he passed a group of boys, who stood on the corner, and they repeated the insulting words they had spoken only a few minutes before, and one of them—the worst of the group—called out: 'Little chap! little chap! follow your nose and you'll be sure to go right, for it sticks up as high as a church steeple.' Well, the insulted boy was very angry at first, but he soon began to think seriously of following his nose, and from that time forward he did it. And it made him a prosperous man, worth fifty thousand dollars, and, what's better, a good man, first and foremost in every good work."

All the passengers were very much interested, one in particular, who said: "Why, where did you get that story? I've heard it before. What was the boy's name?"

"Harry McAlister," replied the stranger, and he added, as he crossed his forefinger over his nose, "this is the nose that Harry McAlister followed."

There was quite an excitement in the car, and a general burst of laughter as Mr. McAlister concluded his story.

Soon afterward, as he and a dozen others were leaving the cars, the man who had been more interested than all the rest, jogged his elbow, and whispered: "Confound it all, if my name ain't Jimmy Snod, but don't you tell anybody as long as you live. I've often wished I could see you somewhere in the world and beg your pardon, and now, as this may be my last chance, I beg your pardon a thousand times."

Taken by surprise, and unable to control himself, Mr. McAlister broke out, as he grasped the man's hand and gave it a hearty shaking: "Why, bless your heart, Jimmy Snod, I owe you an everlasting debt of gratitude—you've been the making of me, don't you know it?"

"Wasn't I a saucy, insulting youngster?" replied the man.

"Well, no matter about that," answered Mr. McAlister, as they walked on together.

"Ah, it's a great deal of matter, sir. How often I've wondered what had become of the boy whose nose I so insulted."

"But it was only my nose," said Mr. McAlister, wishing to relieve the man.

"Well, sir," wound up Mr. Snod, as he and Mr. McAlister parted, "that detestable performance of mine, and the sequel (meeting you after so many years and learning what my words accomplished), have taught me one thing, and that is, that the great God can bring untold good out of evil, and use the words that sting and pain a boy, to help him onward and upward in the world. I beg your pardon again. Good-bye, sir."

INTEMPERANCE IN THE SOUTH.

THE editor of the Sandusky Register gives the following as the result of his personal observation on a recent tour through several of the Southern States:

"The extent to which the drinking of intoxicating liquors prevails at the South, as a 'social custom,' is appalling to one who looks upon intemperance as the curse of our land. It is next to impossible to enter any circle, or, in fact, meet anybody anywhere, without having the infernal ghost of 'something to drink' forced under your nose. If you are casually introduced to Major Jones, late of the Confederate army, the first sentence after the salutation is, 'Step this way and take something.' You purchase ten dollars' worth of dry goods at a Southern store, and after paying your bill you are, with a wink, beckoned to a back room, where a free glass of whisky is gracefully proffered. You enter the business office of an acquaintance to chat three minutes, and before you leave, the business acquaintance is certain to say, 'Sam, fetch that black bottle from the shelf and two glasses.'"

"You call at a Southern home, and your host would think that he had outraged the very spirit of hospitality did he not offer you some fluid that has the happy power of giving the human nose the color of a lobster's claw. The wonderful variety of these fluids surprises one who knows the destitution of the Southern country in other respects. In point of strength and palatability they range all the way from dish-water to aquafortis, and their results have the same gradation, reaching from nausea to murder in the first degree.

"It would seem that the South had been sufficiently cursed by slavery, secession, war, and defeat; but the plague of drunkenness is now added. The morals, no less than the politics of the South, need reconstruction; and the field for reformatory work is a wide one. But one thing is plain, that so long as the offering of intoxicating drinks is regarded as a standard social custom, intemperance can not be successfully battled any more than the current of the Mississippi can be permanently stayed."

The Sandusky editor tells the truth. If slavery in itself was a curse, that curse was tenfold intensified by the constant and all-pervading use of the infernal fire-water. Planters acknowledged that most of the barbarous flogging, bruising, and faying, inflicted formerly on the slaves, was done at the instance of, or by, whisky-drinking overseers. It was said that the slaves would spend their last cent for whisky, tobacco, and lottery tickets. Negro slavery has been abolished, but the soul-and-body-consuming slavery of whisky and tobacco remains. Many women use a "boonder," and swab their mouths with powdered tobacco, and, like nasty men, spit the foul stuff at a mark.

A big political war has been fought to preserve the Union, in which hundreds of thousands lost their lives, and the bodies of nearly four millions of slaves have been set free. That is a big thing! But another war—God grant that it may be bloodless!—must now be waged for the emancipation of men and women from those twin curses, whisky and tobacco. We are in for this fight. Our cause is just. We are on the side of God and humanity. Be it ours to aid in the rescue of

fallen man and to remove the temptation, lest we, too, and our household, become engulfed by the insidious tempter. There is no security, no safety, save in temperance. And we call on all the world, men, women and children, to enroll themselves on the *right side* in this struggle. The South, so far as soil and climate generally are concerned, is a land of health, wealth, beauty, and sunshine. Let her people, white, black, and yellow, be freed from these blighting curses, and she will become the paradise of this continent. Men and women, will you take hold and help to remove this mountain? The way to redeem and bring prosperity to the South is through temperance, education, industry, and true religion. Secure these, and "capital" will follow.

HOW FRANKLIN OBTAINED A SITUATION.—

When quite a youth Franklin went to London, entered a printing-office, and inquired if he could get employment as a printer.

"Where are you from?" inquired the man.

"America," was the reply.

"Ah!" said the foreman, "from America! a lad from America seeking employment as a printer! Well, do you really understand the art of printing? Can you set type?"

Franklin stepped to one of the cases, and in a very brief space set up the following passage from the first chapter of the Gospel by Saint John:

"Nathaniel saith unto him, Can any good thing come out of Nazareth? Philip saith unto him, Come and see."

It was done so quick, so accurately, and contained a delicate reproof so appropriate and powerful, that it at once gave him character and standing with all in the office.

COSTLY OBSTINACY—LARGE FIRMNESS.—

There are two men in prison in England whose fate it has been to illustrate the nature of lawyers' bills on a magnificent scale. P. Foster, a farmer, now lies in Taunton jail for non-payment of a church-rate amounting to the sum of \$3 75. But the cost of the law proceedings by which he was condemned amount to \$710. J. B. Grant is immured in Whitecross Street Prison for non-payment of \$8 00 church-rate, coupled with \$1,234 costs.

[This illustrates a kind of martyr spirit which is based on large FIRMNESS and CONSCIENTIOUSNESS, without that large endowment of Veneration which is necessary to enable one to observe the injunction of St. Paul, "Honor the king," though he be like Nero. If these men think themselves *right* in refusing to pay church-rates, and if governed by strong conscientious scruples, they will stand out till starved into submission. But it is hard to "kick against the pricks." Better conform to the law of their country, or leave it for one which imposes no restraint on religious opinion. However, if men choose to abide their "obstinacy" rather than yield to the fates, why, it is their own affair.]

A DAY ON JAMES ISLAND, SOUTH CAROLINA.

I FOUND, near the Battery, three black boys in an unpainted and leaky skiff, who were willing for a consideration to row me over to the island. The waters of the beautiful Bay of Charleston were just rippled by the rising sea-breeze, which blows here so freshly during the greater part of the day. My boatmen pulled lazily and in silence at their oars. They seemed to possess none of the loquacity and jollity we are wont to associate with the negro character. They had a sullen, morose, and sinister look, suggestive of piracy and murder; and I thought it a lucky circumstance that my voyage with such a crew was to be short, and within sight of land.

They put me ashore near where a lofty earth-work, thrown up by the rebels during the late war, crowned a slight bluff. On the right was a picturesque grove of lofty, long-leaved pines, and near them quite a little village of negro cabins. On the left, and just behind the fortification, I came upon a comfortable dwelling, probably, under the old *régime*, the residence of the overseer of the plantation, or, possibly, the winter habitation of the planter.

I found the present proprietor overseeing the operations of the plantation himself, and had an interesting conversation with him about the island and its productions. He pointed out to me the ruins of what once must have been a fine mansion on the opposite side of the neighboring creek, near which, he said, there was before the war one of the finest orange groves in the South—equal to any in Florida—an evidence of the semi-tropical character of the chain of Southern sea-islands of which James Island forms an important link.

Here I saw for the first time, in its normal habitation, and in all the glory of a thrifty growth, the long staple or black-seeded cotton, generally known as Sea-Island Cotton. My pleasant and courteous new acquaintance said that he was cultivating ninety acres, manuring as heavily and working as thoroughly as he was able; that his freedmen were giving him no trouble or cause of complaint, performing their regular tasks as under the old system, which gave them, when they chose to apply themselves closely, the larger portion of the afternoon for rest and recreation; and that it was difficult to get them to work in any other way. He mentioned this last circumstance as, with him, an obstacle to market gardening, which he said might otherwise, at this point, be made exceedingly profitable, all the common vegetables and small fruits growing there with the greatest luxuriance, and the markets of Charleston and of New York being almost equally accessible.

After making some inquiries in regard to the route to Fort Johnson, I set out on my tour of exploration. My road, for some distance, lay through fields of cotton, corn, and sweet potatoes, all in the best possible condition of tilth and growth. Entering, finally, the Fort Johnson road, I found myself shut in on both sides

by an immense and impenetrable natural hedge of cassino and myrtle interwoven with creeping and twining plants of many species, among which the most prominent is the Muscadine or Bullace grapevine, now loaded with its delicious fruit. Through this hedge a bird could scarcely fly; and to the human vision it forms a perfect barrier. Here and there an opening gives egress from adjacent fields and permits an occasional glimpse of cotton fields, patches of corn and sweet potatoes, or of now untilled and weedy wastes; but the level character of the country precludes extensive prospects even where no obstructions exist. But the verdant walls which shut you in are, unlike fences of wood and stone, replete with objects calculated to interest and employ the mind, and to please the senses also. Their variety of foliage, their thousands of flowers, and just now the rich clusters of the ripening muscadine, make one little loth to be thus shut in.

Observing through one of the openings of which I have spoken, an old negro at work in a patch of the finest cotton I had seen, I entered and spoke to him. He said that the cotton belonged to him, but that he rented the land from the "Government." How it happened that the Government owns land here I could not learn. I inquired the distance to Fort Johnson.

"You see dose tall pines, massa?"

"Yes."

"Well, you pass dem, and you are dere."

The pines seemed near, but the distance proved to be greater than I could have believed possible. However, I finally passed the pine grove, and found myself in the midst of the network of batteries and rifle pits which defended this important point—the eastern end of the island.

Ascending the walls of a fort, I gazed around me. The prospect I obtained was peculiar and characteristic. No sloping hillsides, no beautiful valleys, no background of purple-tinted mountains met my view, but in their place were level plains bordered and dotted with masses of semi-tropical foliage, green marshy flats, long stretches of white beach, and bright expanses of inlet, river, bay, and ocean. Toward the east and south stretches the illimitable sea, flecked here and there with white sails; on the north lies dreary, desolate Sullivan, with its sand-hills, its forts, and its ruined village, and beyond, the bluffs of Mount Pleasant; northwestward, at the head of her beautiful bay, and in the embrace of her sister rivers Cooper and Ashley, rests, as it were on the bosom of the waters, the once proud metropolis of South Carolina—a city of melancholy ruins; and on every hand, near and far, forts, batteries, and rifle pits. Every spot possesses an historic interest. These laboriously constructed earth-works were the defenses of a people struggling against superior numbers, wealth, and power in behalf of a cause and a land they loved. These plains not long ago were tented fields; these groves filtered the smoke of a thousand camp-fires. Yonder are

the ruins of defiant Sumter; across the channel old Moultrie, of Revolutionary memory, may be faintly discerned, hidden in sand and flanked on either hand by the long line of earth-works—huge, shapeless heaps of sand they seem now—which were thrown up during the late civil war. Castle Pinckney, nearer the city, has a garrison, and over it floats the old flag.

Enough, perhaps, of sentiment. I had visited the island for the most matter-of-fact and practical purpose conceivable—to investigate its resources—to judge of its adaptation in soil, climate, and other conditions for the growing of cabbages, beans, peas, potatoes, peaches, grapes, figs, and strawberries.

The soil of James Island is sandy but naturally fertile, and much of it, unlike that of other portions of the State and of the South generally, has been improved and rendered still more productive by an enlightened system of culture. Its great staple has been and is Sea Island cotton; but all the fruits and vegetables of the temperate zone, as well as some that belong more properly to the tropics, grow here with wonderful luxuriance.

The climate, as already remarked, is semi-tropical. Whether it is the proximity of the Gulf Stream, or some other less obvious cause, which gives it this abnormal character, I need not stop here to inquire. It is certain that many trees and plants thrive here that can be grown on the mainland only, several degrees farther South. The orange and palmetto seem as much at home here as in southern Florida. I saw many trees of the former loaded with fruit and growing luxuriantly.

A late writer speaking of the climate of the Sea Islands in general, says:

"It is delightful in winter, which, on account of the great preponderance of evergreens, hardly differs to the eye from the warmer seasons, and rises to a splendor in summer and autumn that is never experienced elsewhere in the same latitudes, while the excess of heat is happily tempered by the sea-breezes, which, rising with astonishing regularity toward the middle of the day, bathe the country far into the interior with moist and refreshing coolness."*

In the forest growth of the island, nearly all the principal trees of the South seem to be represented. Conspicuous among these are the long-leaved pine, the live oak, the Spanish oak, the water oak, the great magnolia (*M. grandiflora*), and the cypress. The pine often grows to the height of more than a hundred feet, straight, strong, and majestic, and is the true monarch of the Southern woods. The live oak, too, is a magnificent tree, but just the opposite, in almost every respect, of the pine, throwing out from a short massive trunk numerous gigantic and far-reaching branches, covered with a dense, glossy, evergreen foliage, and forming what seems at a distance like a miniature mountain of verdure. Not so grand, perhaps,

* E. B. Seabrook, in "The Galaxy."

but more beautiful, is the magnolia, a perfect pyramid of bright and shining green flecked at the proper season with its great, white, fragrant flowers. Cedars, myrtles, bays, cassinos, and other shrubs, covered and interwoven with vines, form the undergrowth, or are massed into impenetrable thickets around the swamps and lagoons. Among the vines, in addition to the wild grapes already alluded to, the trumpet flower and the yellow jasmine or jessamine (*Gelsemium sempervirens*) are prominent. It is the latter which, in the early spring, or, more strictly, the latter part of winter, makes gay the thickets with its golden bloom and loads the air with its unsurpassed fragrance.

Fort Johnson was, before the war, the site of a flourishing little village, not a vestige of which, however, now remains. It was the summer residence of planters whose plantations were not considered habitable during the hot months, on account of the malaria. Two or three negro cabins are the only habitations that now meet the eye on this end of the island.

I found the soil less fertile here than at the point where I landed, but sufficiently good, with some manure and proper cultivation, for the production of good crops of cotton, corn, vegetable, or fruit. Only a small portion of it is now under cultivation.

To the south of Fort Johnson stretch extensive marshes permeated by numerous creeks and inlets; and on the southeast may be seen the low sandy shores of Morris Island and the main channel by which ships enter the harbor of Charleston.

Having explored the neighborhood of Fort Johnson to my satisfaction, I turned my face westward and retraced my steps.

During this long ramble I had met no white person of either sex. The freedmen all seemed busy and contented, and I always found them respectful and obliging.

On reaching my landing-place, I found that my black water-imps had not returned for me, as they had promised.

I had no reason to regret their defection, for at "The Bluff," a mile or so above, I found a boat just ready to sail for the city, on which I at once secured a passage.

At the Bluff is a store. Here, a large number of freedmen and freedwomen were gathered, talking, laughing, and lounging about; it was Saturday evening, and the work of the day and of the week was over. A planter drove up in a mule cart while I was standing there. He alighted, and the cart and its black driver returned to the plantation. The gentleman lived in the city, and his boat lay at the dock ready to take him over.

My boatmen on the return trip were fine-looking black fellows, mirthful and loquacious as negroes should be; and the sail down the creek and across the bay was delightful.

We met many boats returning from the city to the island. All of them were filled with dusky forms, and strong black arms pulled the oars and managed the sails. Some of the boat-

men were singing, and their oars kept time with the monotonous music of their songs.

When I reached the Battery, the military band was playing martial airs, and crowds of gay promenaders were enjoying the refreshing coolness of the evening breeze.

I looked back. The long, low shores of James Island were growing indistinct, but the grove of tall pines near which I had landed in the morning, stood out clearly defined against the blue sky.

September, 1867.

INTERNAL CONDITION OF THE EARTH.

MR. EDITOR: An article appearing in the November number of the JOURNAL, treating upon the internal condition of the earth, contains so many absurdities, that I can not forbear pointing some of them out.

When we have no positive knowledge concerning a subject toward which our thoughts are drawn, speculation upon it may afford us considerable entertainment, and if the theories we build are not contrary to any of the known laws of Nature, sometimes improvement and a valuable addition to our stock of ideas may result.

Ingenious conjectures upon matters unknown, and in most cases unknowable to man, have from time to time been published in the JOURNAL, but, though generally original and frequently improbable, they have seldom been such as from the nature of things were absolutely impossible.

The writer of the article to which I refer appears to have forgotten that weight is but a relative term, expressive of the power which the attraction of gravitation exerts upon all substances that are found upon or in the earth, or that in however volatile a form move over its surface.

The atmosphere has weight; a swaddling band forty miles thick, and pressing upon every portion of our globe with a power of fifteen pounds to the square inch. Hydrogen and other buoyant gases, if generated and liberated at the bottom of this vast ocean of air, will rise through it, as wood does through water, till they reach its confines, where, operated upon by the same universal law of gravitation, they will hover unable to mount upward into empty space. If the crust of the earth was hermetically tight, gases that upon its surface show great buoyancy, confined within its center would be powerless, having no more sluggish substance than themselves to climb upon; the only result that would follow such a state of things would be, that the crust of the earth, having no support, would be crushed inward, if not by its own weight, by the tremendous pressure of the atmosphere that incloses it.

If there was an aperture however small, through which the atmospheric air could find its way, it would rush in with great force, and displace all lighter substances; and as a hollow thin crusted globe such as our ingenious

theorist supposes the world to be, would hold all of an atmosphere that philosophers inform us extends in its most rarefied form but forty miles from the earth's surface, we would be left as helpless as fish out of water, with no food for our lungs, except perhaps the purest hydrogen, that would waste us like a devouring flame. That there are numerous openings in the crust of the earth our writer admits, and indeed they are well known to exist—principally in the shape of volcanoes—so that the fact that the atmosphere instead of passing through these still floats around us, is proof positive that the interior of the earth consists of substances heavier than the common air. Having thus shown the absurdity of the idea that the earth is a hollow shell filled with buoyant gases, it now remains to be seen whether any such contrivance is necessary to retain the earth in its position. Gases essentially buoyant, that is, buoyant in their very nature, and not because acting in a heavier substance (if we can conceive of such buoyancy), would certainly have no more effect upon the motion of the earth if confined within it, than the efforts of a boy to lift himself in a basket, for they would rise from the center and press outward in all directions against the circumference, thus neutralizing their own power. The idea that any substance could be heavy enough "to sink the world into perdition" is equally absurd; for the greater the weight of the materials, all gravitating toward a common center, the more solidly is the world bound together, and the less likelihood is there of any disruption of its parts. A planet poised in space has no weight as a whole, and if it felt no attraction from other bodies would remain motionless forever; or if the Being who created it set it in motion, it would continue moving eternally onward in a straight line. This would be the motion of our earth if it were not also influenced by the attraction of the sun, which partly overcomes the tendency to move in a direct line, and causes it to revolve in an orbit. If the earth was increased in weight, that is to say in density of material, its momentum would be greater, and more power would be necessary to swerve it from its original straightforward path; at the same time its increase of density would strengthen the sun's attraction for it to a corresponding degree, and thus one force would neutralize the other and no change take place in the annual motion of the planet. The effect would be the same as placing a pound weight on each side of a scale that was before equally balanced. Considering these facts, it is plain that the writer in the November number is mistaken in both his premises and his conclusions, and that the density or heaviness of the materials that compose the interior of the earth can have no effect to weaken its cohesion or sway it from its position in respect to the sun.

GIVE a man a taste for reading, and the means of gratifying it, and you can scarcely fail of making him a happy man. You make him a denizen of all nations—a cotemporary of all ages.

THE MEDICINE-MAN.

YOUNG TIGER TAIL.

On Ethnology.

True Christianity will gain by every step which is made in the knowledge of man.—Spurzheim.

OUR FLORIDA INDIANS.

FROM some cause, the farther south in the United States we go, the more civilized the Indians seem to be, the more inclined to civil government, tillage of the soil, and the establishment of the arts of peace. The Seminoles and the Cherokees—especially the latter—seem to bear out this proposition. The Indians in the West and Northwest are roaming, warlike, restless people, with force and fierceness; while among their characteristics artfulness, cunning, and cruelty appear to be the chief.

Black Hawk, one of the most resolute and yet most noble of savages, whose head is familiar to all readers of the PHRENOLOGICAL JOURNAL, was a centralized embodiment of the Northwestern Indian character. Big Thunder, whose skull we have in our possession, was also an eminent example of uncultured fierceness. We have in our collection a cast of Oscoola, the eminent Seminole chief, the form

of whose head was eminently elevated, and bears the outline of civilization. The intellectual and moral organs were largely developed.

It will be seen, by the engraving, that the head-dress is only a band or turban, the top of the head being bare of everything but nature's own covering. The head seems to rise high at the crown, showing Self-Esteem and Firmness well marked. The head also appears to be rather broad through the region of the ears, indicative of force. The medicine-man has evidently the better intellect, more power of thought, and more dignity. Young Tiger Tail may be more forcible and fierce, but has not so much dignity or intelligence.

A valued correspondent has sent us the photographs of three Indians from Florida, with the following remarks:

These three Seminole Indians visited Key West, Florida, upon the close of the rebellion, when they were photographed by Buis, the artist. Their tribe, occupying a large portion of the Florida peninsula, with great shrewdness took no part in the "great conflict;" for the United States in the past had necessarily, as a government, made war upon them, and

the Floridian, as a volunteer, was then their most bitter and effective enemy; hence in their morass fastness they could preserve their chosen neutrality, because both their old enemies had their hands full, fighting one against the other. The tribe molested neither rebel nor Union, nor did either meddle with them. Before the rebellion they had had their periods of war and their periods of peace. Isolated from other tribes for many years, their conflicts had alone been with the white man. Probably this warring with white men alone gave more character to them as a tribe, and even fastened upon them something of the true character of a nation, by concentrating their power and location. They have absorbed other tribes, as, for instance, the Yemassee of South Carolina; and were themselves divided by Billy Bowlegs' party, which went to the Indian Territory a few years ago. They have captured negroes, and in some instances these have become prominent in the tribe; yet the negro seemed not naturally to affiliate with the Indian as with the white man, probably from a taste for a more civilized life, and a desire to see old friends and kindred.

George W. Ferguson, Esq., of Key West, Fla., to whom we are indebted for facts, says:

"Young Tiger Tail, who is on the right of the picture, I have often seen, and also his father, who is the chief of the Seminoles, and also his mother, who was remarkable for her beauty. The father is a fine-looking, stout, manly character, more so than the son, who is now about twenty-four years old."

Here is a comely face, with eyes full of mirth and lips of affection. There may be dormant the fierceness of the father in war and the openness of the man in peace, qualities which time and circumstance may disclose. The young man's make-up is prepossessing. We judge he is a favorite with his mother, and a beau with the fair ones of the tribe, making many a dusky lover jealous. The vital temperament predominates, and good health and good humor are indicated in his organization.

The medicine-man, seen on the left, is now about twenty-eight or thirty years old, and is fine-looking and intelligent. With him the motive temperament predominates greatly, as witness the marked prominence of every feature, as if wrought by the bitter experiences of war or a deeper reach of thought inspired by all the requirements of the wild medicine-man's profession.

His is a bold, confident, self-reliant presence; mentally and physically, he is a superior in his tribe, and a fine sample of that once powerful race, now fast disappearing before the march of civilization. The top-head is well developed, the nose finely cut, the lips compressed, the eye stern, and the face furrowed—all marks of the man of judgment, decision, and action. We should not like to make him angry, for all the passions find expression in this face, and there is the will sufficient to empower them to act.

The one in the background, who is about

twenty-eight or thirty, is not a man of note or prominence in his tribe. While young Tiger Tail has much affection and humor, and the medicine-man force and intelligence, this face has no remarkable expression of either, but is a good specimen of the common "Injun."

The medicine-man, it will be observed, is the most dressed. The two shields upon the breast indicate rank of family, which is second only to that of young Tiger Tail, who wears three; yet the younger has no sash, scarf, or plume to indicate authority or position on account of personal prowess or merit. The one in the background is wanting in every mark of distinction as an Indian.

THE GOLDIS.

THE Goldis, inhabiting the islands and the shores of the lower Amoor River, in Eastern Asia, are classed, ethnologically, with the great Mongolian race. This is determined by the characteristic of the Mongols proper, which is the obliquity of the eyes, they being depressed or bent down at the inner angle. Their eyebrows are black and but little curved; they have a broad nose, high cheek-bones, a round head and face, while their lips are large and thick, and their teeth usually white and sound. This description corresponds very closely to our illustration of a Goldi man and woman. They are a nomadic race; and though they resemble the original Manchurians, now the governing class in China, they do not appear to be possessed of the same energy of character and warlike disposition.

Their chief occupation is feeding their extensive flocks, or hunting wild game which abound in those regions. Travelers and merchants who have visited them, say that they are full of superstitious beliefs, the result of ignorance and the servility to which they are reduced by their priests, who exercise great power over them. Their religion is a sort of fetich or spirit worship, in which mysterious powers are attributed to the heavenly bodies, mountains, or any object that exhibits peculiar form or properties. Rude images of ancestors are made of wood, and sacrificed at times to their gods, and numbers of bears are kept in every village which are also given as peace offerings to their deities.

The priests are men or women, married or single. Their character is acquired by pretending that the soul of a deceased priest has appeared to the individual in a dream, appointing him or her his successor. If the priests are in function, they wear a long robe of elk skin, hung with small and large brass and iron bells; moreover, they carry staves, carved at the top into the shape of horses' heads, also hung with bells; and with the assistance of these staves they leap to an extraordinary height. Their sacrifices are performed in a hut. There are no fixed periods for the performance of their ceremonies; births, marriages, and sickness, uncommon appearances in the atmosphere, or

GOLDI MAN AND WOMAN.

public calamities, are generally the occasions which call for them. The animal to be sacrificed is fixed upon by either the shaman or the donor; and after the persons uniting in the ceremony have assembled, the shaman or priest enters the hut, chanting certain words, sprinkles on all sides of the hut, and over the fire, alcohol and milk, and then orders the animal to be killed, which is done by its heart being torn out. The skin of the victim is then stripped off, and its flesh, with the exception of a few pieces which are thrown into the fire, is eaten by the persons assembled.

Fetichism was probably the ancient religion of the Tartar tribes of Asia, and is akin to Buddhism and Lamaism. As yet, Christian missionaries have not visited the Goldis—at least, have not settled permanently among them. But there is a large field for Christian labor there.

Their physiognomy would indicate that they are of very sluggish temperament; this, added to the practice of opium smoking, gives to them, especially the men, a dull, imbecile expression of countenance. The head is low and broad. The intellect of a low order; they can neither plan nor originate, but are simply imitators, led by the fascinations of their fetich priests. Like other human beings, they are capable of cultivation. So are the Hottentots. But it will require generations to elevate them to a plane of Christian education and civilization. Who, of our missionaries, will let in the Gospel light upon that dark and benighted people?

THERE is a man and his wife—he a mulatto, she a poor negro—residing in New York, who have several children that are alternately, in the order of their birth, white and black; the white ones having albino characteristics.

OLIVER CROMWELL—HIS LIFE AND CHARACTER.

BY EDWARD W. TULLIDGE.

[CONCLUDED.]

AFTER the battle of Marston Moor, the Parliamentary generals seemed to play into the hands of the king; and Cromwell formally impeached his commanding officer, the Earl of Manchester, and our hero was a thorn in his side, even to the commander-in-chief (the Earl of Essex). At length the Commons voted themselves into a grand committee to take into consideration "the sad condition of the kingdom," etc. There was silence for a long time, some looking one upon another, none bold enough to touch the impeachment, when Cromwell arose and opened and said:

"That it was now a time to speak, or forever to hold the tongue; the important occasion being no less than to save a nation out of a bleeding, nay, almost a dying condition, which the long continuance of the war had brought it into," etc. His whole speech was very moderate, casting very little reflection on the Parliamentary commanders, but urging the necessity of sinking personal considerations in the great good of the commonwealth. The result was the passage of the famous "Self-Denying Ordinance," and the remodeling of the army under Sir Thomas Fairfax; but Cromwell was exempted from the Self-Denying Ordinance, and allowed to keep the field, and on the 14th of June, 1644, the great battle of Naseby was fought, and the King's cause lost. The repeated victories of our hero followed until not a foe was left in the field.

At length the king was beheaded, and six months afterward Cromwell was made Lord Lieutenant of Ireland, and sent to put down the rebellion there. He reached the Irish capital August 15th, 1649, took the field on

the 30th, and in nine days struck terror through the land. His career in Ireland has been abundantly censured for its iron cruelty, but we must remember the times, and that there was much of a religious tone in the war. Doubtless Cromwell and his troops considered their work a Protestant vengeance for the then recent Catholic massacre.

Then came the invasion of Scotland, and Cromwell became Captain-General of the land forces. In Scotland, his army was reduced by immense losses. Scotland was ever a formidable foe for England to invade; and even the mighty Cromwell nearly split upon that rock. He drew off his remaining forces, now scarcely twelve thousand men, toward Dunbar, where he shipped his baggage and sick. The Scots followed him closely, now increased to twenty-seven thousand, anticipating triumph; and Charles II. himself was soon to be at their head to suddenly fall upon the remnant of Cromwell's army. Our hero, in a letter to the Speaker of the House, thus describes their forlorn condition, and yet how characteristic of the marvelous tone and mighty faith of the "army of the Lord!"

"The enemy lying in the posture before mentioned, having these advantages, we lay very near him; being sensible of our disadvantages, having some weakness of flesh, but yet consolation and support from the Lord himself to our poor, weak faith, wherein I believe not a few among us shared; that *because* of their numbers, *because* of their advantages, *because* of their confidence, *because* of our weakness, *because* of our strait we were in the mount, and in the mount the Lord would be seen, and that he would find out a way of deliverance and salvation for us, and indeed we had our consolations and hopes."

Hopes indeed! Hopes, then, in his own mighty soul, and the grand faith that he was an instrument of God! Consolations? Consolations, then, that God and himself were equal to the task of saving, in its direst extremity, the great cause of the *people* versus the king! What if in him was the splendid assumption that Oliver Cromwell was the embodiment of the people? What even if he was tempted at times by the glittering bauble of a crown? There is something divine in the one, something very human in the other. But Cromwell was true to his grand inspirations, and even when he became mightier than any king that ever sat upon England's throne, he lived to the glory of the nation and to make the English people great. The cause of the nation now, as so many times before, hung upon Cromwell and a few fighting, praying men. Such a crisis ever brought out the man and made his grand assumption strongest in words and deeds, that the Lord of Hosts was on his side and the man Cromwell his chief captain. And who shall say that this grand assumption had not a world's prophecy in its burden, seeing that republicanism is the world's final issue? Who shall say that it had not a diviner origin than Cromwell's soul, or that it was not the voice of the world's

Providence speaking in him, though he understood it not; prophesying in the actions of its mightiest instrument with all his imperfections of the empire of peoples above kings wrought out by God-fearing men? Such were the Pilgrim Puritans; such were George Washington and the Revolutionary sires! With the whole Scots army on the right, the sea on the left, and the whole nation of Scotland behind, yet Cromwell heard the voice, "in the mount the Lord would be seen." When the sires of our own independence were there, they saw him too.

On the night preceding the memorable 3d of September, 1650, while the Scots yet "hovered upon the hills like a thick cloud menacing ruin and destruction," Cromwell called his chief officers together and gave general instruction to the army to seek the Lord. After devotions he assumed his wonted serenity, and "*bade all take heart, for God had certainly heard them and would appear for them.*" On the morning he caused a detachment to attack the enemy at six o'clock; and when he saw that the Scots were coming down the heights he exclaimed: "God is delivering them into our hands; they are coming down to us!" His generalship was as magnificent as his inspiration, and when the sun was rising in his majesty he cried aloud: "Now let God arise, and his enemies shall be smitten!" But they were not the Scots and the renowned General who had fought with Cromwell at Marston Moor against Charles I., but they who fought against Cromwell and his little host for Charles II. In a little more than an hour, with very little loss on our hero's side, the enemy was thrown into a panic, upward of four thousand were killed, and in the chase upward of ten thousand taken prisoners, including one hundred and forty chief officers.

Subsequently Charles II. marched into England at the head of a formidable Scotch army, to the dismay of Parliament; but Cromwell followed him, and in the battle of Worcester Charles II.'s hopes during Cromwell's life were annihilated. Besides the slain of the king's army, ten thousand six hundred were taken prisoners, including all the principal generals, and six hundred officers besides. Then followed the chapter of events that made Cromwell for life "Lord Protector of England, Scotland, and Ireland."

The reign of Parliament had been a reign of England's might, and it gave abundant proof that England, as a republic, with the potent spirits of the nation ruling, would far eclipse the glory of her monarchical career. When Cromwell returned from Scotland victorious, the English navy, on its side, had "swept from the seas the friends of the Inquisition and the enemies of freedom, and had broken for ever the maritime power of the Dutch." Nor did the prestige of England decline after the might of the nation had become embodied in the name and person of Cromwell. The powers of Europe attributed the giant force which England manifested, both at home and abroad, to the genius and

force of Cromwell himself. From the first the cause of the nation was won in him, and he had inspired his countrymen with his own nature and the fervor of the times. In fact, Cromwell was an embodiment of the times; and the strongest expression of the religious and political temper of England during his life. It was the same temper as that which has since brought forth the American nation, with its glorious republicanism and constitutional religious liberty. Indeed, the same men that gave birth to the Commonwealth of England gave birth to Anglo-Saxon America. They were puritanic and republican in their very genius, and Cromwell, even when on the throne, was but a Puritan and a republican still. He was but a President for life, made such because he was the lion of the age; and no man could be King or President while a Cromwell lived, excepting Cromwell himself. He was not transmittible in hereditary rule. He was not the king but the people; and, at last, the people bore the name of Cromwell. It was the name of all England. The nation adopted it because it was the strongest name in itself, at the time, like the man. But foreign powers could better understand the might of republican, puritanic England of the seventeenth century when crowded into a name and a man, than it could in the grand ideal of the people's sovereignty. Kingdom was an easier problem for monarchs to solve in that age than republic, and they hastened to throw themselves at the foot of Cromwell's throne. At his court there were ambassadors from France, Spain, Holland, Portugal, and Denmark, striving which should most abjectly prostrate themselves and their respective nations to the man whose force of character broke the charm of monarchy and first showed to the world the might of the Anglo-Saxon race without a king. It was a novel spectacle then, though Cromwell's Puritan brethren in America have since magnified and glorified that spectacle for the world to look up to.

Spain, through its ambassador, assured Cromwell of its affection for him, and said the Spanish minister, "*if he would go a step further, and take upon him the crown*, that his master would venture the crown of Spain to defend him in it." France, on her side, offered to enter into a league, defensive and offensive, with England, and to make war upon Spain; or if England did it upon her own account, France would contribute to the charge. The Dutch agents, ascribing the destruction of their maritime power to the genius of Cromwell rather than to the warlike ability of Parliament, were urgent for peace; and Denmark had sent a special envoy to congratulate his Highness, and was highly pleased to be included in the Dutch treaty; while the terms granted to Portugal were in the loftiest tone, and enforced with a high hand. To win the good-will of Cromwell, Lochart, his ambassador, was received at the French court with all the homage due to the minister of the first monarch in Europe; at the same time, to please England, Cardinal Mazarine refused

to see Charles II., who had traveled through France to meet him at the foot of the Pyrenean hills; nor would the minister of France so much as speak to Charles' envoy. In the terms of his treaties with Holland and Portugal, the Dutch flag was to be struck at sea, upon all occasions, to the English; restitution was to be made for losses sustained by the East India Company; they were to exclude the Prince of Orange and his descendants, prosecute and punish the authors of the massacre committed by their countrymen at Amboyna, and make satisfaction to the heirs and executors of the English sufferers. Denmark, by humble pleading, was at length permitted by Cromwell to be included in the treaty as an ally of the States of Holland, but upon the same stern demand for ample restitution. The treaty was concluded under novel circumstances. The brother of the Portuguese ambassador had been concerned in a murder of an English gentleman, arising out of a quarrel between the principals and their trains. He fled to the refuge of his brother's house; but in vain did he plead that he was by his royal master constituted ambassador in his brother's absence, and was, in consequence, exempt by the law of nations from trial. Cromwell was the law of stern justice, and he would make nations submit to that. The ambassador's brother, and those concerned with him, were tried by an English jury, and all sentenced to be hanged; and the only grace that could be won from Cromwell by the ambassador was the ax instead of the gallows for his brother, while the afflicted ambassador signed the treaty with Cromwell at eight in the morning of the day of his brother's execution, and hastily embarked at Gravesend. When the king of Portugal hesitated to confirm the treaty, Cromwell sent word to his famous admiral, Blake, "to take, arrest, and seize upon the fleet or fleets belonging to the king of Portugal," etc., which Blake quickly communicated to the Portuguese king, who thereupon ratified the treaty with all haste, and as an offering for mercy and favor sent a large sum of money, which was immediately shipped to England.

After much weighing of the matter he decided upon throwing the might of England against Spain and with France, and thus he completed what Elizabeth had begun; and from that day Spain was wiped out of Europe as the great continental chief, and France took her place. He is blamed for having thus disturbed the "balance of power" in Europe, but England had not outlived Elizabeth's days; and France had, during the revolution, not offended, while Spain had been guilty of unprovoked cruelties toward the Puritans in America. The champion of the Independents, and of religious liberty everywhere, dispatched this noble epistle to Rome: "Oliver Cromwell, Lord Protector of England, to the Pope of Rome. Let the Piedmontese worship God according to their own consciences, or my fleets shall be seen in the Mediterranean, and the thunder of my cannon shall be heard in the Vatican."

On one occasion, after reading a characteristic letter from Blake to his council, relating how that gallant admiral had asserted the rights of some English sailors which had been violated by Spaniards, by threatening to destroy a Spanish town in three hours after notice unless satisfaction was given, Cromwell exultingly remarked, that "*he hoped he should make the name of an Englishman as great as ever that of a Roman had been.*" And this was before he had declared war with Spain.

War with Spain came. Cromwell's admiral, Blake, broke the power of Spain at sea, while six thousand troops were sent to help Louis XIV. against the Spaniards. The siege of Dunkirk followed, at which were present with the French army the king, the famous Marshal Turenne, and the great Prince Conde. Dunkirk was to be delivered up to Cromwell when taken. The French were for raising the siege; but the English commanders threatened that if the siege were raised, the alliance with England would "be broken the same hour." The French army was allowed to be drawn out; but the English, impatient for the attack, fell upon the Spanish van with so much fury that the enemy fell back in disorder; then they fell on the main body, which were also defeated after a desperate resistance. And all this was wrought without the aid of the French, more than the trivial support of a body of cavalry. At the close of the glorious engagement, Marshal Turenne with about one hundred officers came up to the English and alighted, and embraced the officers, telling them that they never saw a more glorious action in their lives; and that they were so transported that they had not the power to move or do a thing. The great Prince Conde said "he had never seen so gallant an action as that day's performance by the English." No, for till that day he had not seen the army fight whose battle-cry was, "The Lord of Hosts is with us!"—never seen the might of Cromwell's "God-fearing men" whom he had called into a host, and filled with his own spirit so as to be invincible against the force of Charles with all his attraction of "right divine," and of all Europe when it stood against the army of the Lord and His chosen captain. That is just what Cromwell believed himself to be. He was the incarnation of hypocrisy and ambition, was the judgment of England after it apostatized back into the superstition of king-craft. But that judgment was burdened with the fool's emptiness. It *explains* nothing, but adds to the great Puritan-republican problem of the seventeenth century an infinite mystification. Hypocrisy is not inspired; but Cromwell inspired a nation and awed a world. His very policy to win the great issue with "God-fearing men" is a proof at once of his great human insight and of his own genuine character. He was not only one of the "God-fearing men," a fact which made him invincible, and the cause invincible, and his army invincible; but as a statesman and a general, out-

side of his own religious consistency, he was an enthusiast upon the subject of placing the empire upon the shoulders of men who feared God. The "divine" John Milton and his patriot brothers, who were themselves inspired by the same spirit, did not look upon him as a hypocrite; and it is worthy of Milton's poetic immortality that it was his pen which wrote those magnificent letters to the European monarchs—such as the one to the Pope of Rome at the dictation of the mighty Cromwell. Call the man a grand fanatic if you must call him names, for it is one of those epithets that makes splendid fools of us and satisfies us immensely. The great problem of the times and the man *might* have had more than man in it, but anyhow it is big enough to be commanding if we call it by no higher or stronger name than Cromwell. Truly, when he lived, there was a "British lion;" and were he and Puritan-republican England of the seventeenth century alive again, we should not have the satisfaction of calling the mother country "old granny," as now we do. He reigned as Lord Protector for the brief space of five years, and he died the "grand fanatic" that he had lived—Thomas Cromwell, one of his biographers, says "more like a mediator than a sinner." A man's last moments and prayers which could call up such a fancy have volumes in them. England never was so great in religious and national force as when Cromwell reigned. It was that nation's golden era. Two years after the accursed house of the Stuarts was restored, and "the bones of the Puritan hero, with those of two of his fellow-soldiers and workers for what they felt was God's truth, were hung on Tyburn gallows." But Cromwell and his Puritan brethren, with their republican cause, have received a glorious resurrection in our American nationality.

THE LARGE TOWNS OF BRITAIN.—The population of London in the middle of the present year was estimated by the Registrar-General at 3,082,372; Edinburg (city) 176,081; of Dublin (city and some suburbs) 319,210; of the borough of Liverpool, 492,439; of the city of Manchester, 362,823, and of the borough of Salford, 115,013; of the city of Glasgow, 440,979; of the borough of Birmingham, 343,948; of the borough of Leeds, 232,438; of the borough of Sheffield, 225,199; of the city of Bristol, 165,576; of the borough of Newcastle-on-Tyne, 124,860; of the borough of Hull, 106,740.

WASHINGTON, before the rebellion, contained a population of 65,900 souls; but to-day it is said to have a population of 130,000, counting in the suburb of Georgetown. The buildings erected during the present year number not less than 1,500, and yet rents continue exorbitantly high, and comfortable dwellings are hard to obtain at any price. Northern ideas of business have taken the place of the old way of letting well enough alone, and there is a new spirit of enterprise prevailing, which promises to make the city worthy of being the national metropolis.

VICTORIA I.—ENGLAND.

NAPOLEON III.—FRANCE.

ALEXANDER II.—RUSSIA.

EUROPE—ITS SOVEREIGNTIES.

WITH PORTRAITS AND SKETCHES.

EUROPE is the smallest, but the most populous and highly cultivated of the three grand divisions of the Eastern Hemisphere. Its area is estimated at nearly 3,800,000 square miles—about 800,000 more than the area of the United States, exclusive of Walrusia—while it has a population of nearly 270,000,000, an average of $73\frac{1}{2}$ for each square mile. This area is divided into about forty-five kingdoms, principalities, and republics, each governed by its hereditary monarch or elective council. The largest of the subdivisions is the empire of Russia, which contains a population of nearly 70,000,000, and an area of 2,042,000 square miles—over half the entire continent. The smallest nationality is the little republic of San Marino, with its sovereign council. It comprehends but twenty-four square miles of territory and over eight thousand inhabitants. As it may not be known to most of our readers to what extent republican principles may have obtained a foothold in European legislation, we will state that, besides San Marino, there are five states whose form of government is republican. These are Andorra, population in 1860, 15,000; the free city of Hamburg, population 222,379; the Ionian Islands, population 227,109; Lubeck, population 55,423; and the Swiss Confederation, population 2,534,250. Sandwiched as these small samples of popular rule are by the greater and more or less absolute monarchies of Europe, and preserving so firmly their peculiar national characteristics, we, as Americans, can not but experience a thrill of pride as we behold thus clearly exemplified the strong and enduring principles of republicanism.

Of the thirty-nine other nations we will particularize but eleven of the most influential, giving a few details concerning each, and a brief biographical review of its sovereign.

GREAT BRITAIN.

Prominent among the first-rate powers stands GREAT BRITAIN, the nature of whose government is a limited monarchy. With Ireland the area of this country is a little over 121,000 square miles, while its population is little short of 30,000,000. Its chief city, London, is one of the largest cities in the world, and the most important in commercial enterprise.

Victoria I. Alexandrina, Queen of England, was born at Kensington Palace, May 24th, 1819, and is the only child of the late Edward Duke of Kent, son of King George III. She succeeded to the throne on the death of William IV., her uncle, June 20th, 1837, and was crowned June 28th, 1838. February 10th, 1840, she was married to Prince Albert, of Saxe Coburg Gotha. She has had nine children, all of whom are living. Her reign is unexampled in English history for its tranquillity and political influence in European affairs.

Victoria, who is she? and what of her? She is a woman considerably under the average in stature, and may be described as "short and dumpy." She has blue eyes, light hair, a round, plump face, and a well-formed head. Her most remarkable trait is a high moral sense, not very common to women in her position. She was a dutiful child, a faithful wife, a loving mother, a devout Christian, and every way a good ruler. If she be in some degree nervous, excitable, or eccentric, she is no different or worse than the majority of women. Ethnologically, she is a good type of the Anglo-Saxon, the Teutonic element predominating.

EMPRESS EUGENIE.

WILLIAM I.—PRUSSIA.

FRANCIS JOSEPH—AUSTRIA.

CHRISTIAN IX.—DENMARK.

WILLIAM III.—HOLLAND.

LEOPOLD III.—BELGIUM.

FRANCE.

A monarchy with a national Assembly, includes a territory 210,732 square miles in extent, with a population of nearly 37,000,000. Paris, the capital, is considered one of the most beautiful cities in the world, and ranks next to London in population.

Napoleon III., Emperor of the French, the youngest son of Louis Bonaparte and Hortense, daughter of the Empress Josephine, was born in Paris, April 20th, 1808. After a strangely checkered career, in which proscription and banishment are marked features, he was selected in 1848 one of the deputies to the National Assembly. In May, 1850, he was made President of France. In November, 1852, he was elected Emperor by a popular vote, and so proclaimed under the title of Napoleon III.

Napoleon is something like his uncle in ambition and cunning, but unlike him in native ability. He has less self-reliance, less intellectual reach or comprehensiveness. He is more influenced by advisers, and will steer his course so as to avoid the rocks on which his uncle foundered. In him there is something more of the sensual than of the spiritual, but nevertheless he has a spirit potent for a moderate degree of good, or for great mischief. His aims, his ambitions, are all in the direction of self-gratification. It will never be said of him that he subordinated Louis Napoleon for the good of anything, or anybody. His ruling motives are love of praise and love of power.

Eugenie Marie De Guzman, Empress of the French, was born at Granada, in Spain, May 5th, 1826, and is the second daughter of the Count of Montijo. She was married to the Emperor Napoleon III., January 30th, 1853. In the absence of the Emperor during the Italian war of 1859 she exercised the office of Regent. Eugenie is a sensitive, delicate creature, very much like ten thousand other highly cultured, fashionable ladies. Her eyes are blue, her hair is light, and her general organization fine and delicate. She is the mother of one fragile child, about whose life and health there is much anxiety in royal circles. We give his portrait elsewhere. Eugenie exhibits her benevolence by visiting asylums, hospitals, prisons, and workshops. She has a pleasant word for those who need it, and sweet smiles for those who do not. Her brain is neither large nor small, but is fairly developed in most respects. She is neither a philosopher nor an imbecile. With ordinary care and nursing, it may be reasonably presumed that she will be able to spin out a moderately protracted existence. Whatever influence she exerts, we may safely hope to be in the direction of her better nature.

RUSSIA.

The empire of Russia, embracing as it does nearly half the entire area of Europe, possesses the elements of great power and influence. Its sovereign is absolute. Of the population and extent of the country we have already spoken. Within a few years past, under the administration of energetic monarchs, it has taken position inferior to none among the continental nations.

Alexander II., Emperor of Russia, was born April 29th, 1818. He was carefully educated, and in early life accustomed to military discipline. His accession to the throne occurred March 2d, 1855, since which time his administration of the government has been characterized by measures eminently conducive to peace, and the intellectual and social improvement of his subjects.

Alexander is a brisk, active, wide-awake, go-ahead sort of a man. He inherits something of his father's strength, and more of his mother's amiability, sympathy, taste, and refinement. He is still comparatively young, and may hope to grow into comparative greatness or power. A marked feature in his character is the expression of enterprise, activity, and intelligence. We think the world will be no worse for his having lived in it. At present, he is proving his good sense by adopting the new inventions of Americans, including railways, steamships, etc.; also by selling useless or unavailable territory. When he shall take that other great step in the direction of absolute freedom for all his people, he will place his nation on the high road to the front.

PRUSSIA.

Lately considerably advanced in political importance by reason of her successes in the war with Austria, is a constitutional monarchy, and possesses upward of 110,000

VICTOR EMANUEL II.—ITALY.

ISABELLA II.—SPAIN.

DOM LOUIS I.—PORTUGAL.

square miles of country, with nearly 18,000,000 inhabitants. In agricultural and mineral resources Prussia is exceeding rich, while in manufactures she is scarcely second to any nation.

William I., King of Prussia, was born March 22d, 1797. He is the second son of Frederick William III. During the illness of his brother, Frederick William IV., in 1858, he was four times commissioned with the direction of the government until October 9th, 1858, when he was formally declared regent. He became king January 21st, 1861, and though advanced in years is skillful and energetic as a sovereign.

This face indicates a strong will, great dignity, steadfastness, practical common sense, ambition, large Approbativeness, and great love for display. Mark the head and face of this dignitary! Self-Esteem and Firmness are especially prominent, but the head, as a whole, is neither large nor of the finest model. Without his more forcible Bismarck, King William would have been less successful in military or political achievements. Still, there are evidences of an immensely strong will and desire to "have his own way." He is neither very great nor very good, though his aims for liberty, education, and religious freedom are all in the right direction. He is in danger of becoming crusty, and of losing what little amiability he has.

AUSTRIA,

The largest of the German nationalities, having an extent of country of 947,000 square miles, and a population exceeding 35,000,000. The government partakes of the nature of an absolute monarchy. Previous to 1866 Austria was considered the first of the German kingdoms. Its contest with Prussia, resulting in the cession of Luxemburg to that power, and its general submission to Prussian dictation, has considerably reduced its political influence in the diplomatic circles of Europe.

Francis Joseph, Emperor of Austria, was born August 18th, 1830, and is the eldest son of the Archduke Francis and Sophia, a princess of Bavaria. In youth he was taught to speak all the languages of his somewhat mixed dominions. He succeeded to the throne on the abdication of his uncle, Ferdinand I., December 2d, 1848. His reign has not been marked by prosperity, but rather by internal dissensions among the different provinces of his empire and by external complicities with neighboring powers, which, owing to injudicious management on his part, have cost him a considerable portion of his territory.

This is a high and narrow rather than deep and broad head. He is neither gross nor coarse, but refined and elevated in his tastes and character. He would seek the elevation of all, as well as his own promotion, and if he fails, it will be more the error of judgment or of bad counsels than from any predisposition to vice on his part. He may be outgeneraled by more capable and cunning men, but his motives would be good. He is only great because of his office or position, not in natural power or ability. We doubt not that he will improve with age. The experiences he has had of late should tend to open his mind to progress and improvement.

DENMARK.

The King of Denmark is an absolute monarch, yet there is a limited popular representation by a national congress. Denmark comprehends an extent of territory amounting to 21,900 square miles. The number of inhabitants exceeds 2,575,000. Uninterrupted peace and enterprising commercial relations have marked the policy of this nation for several years past.

Charles Frederick Augustus, King of Denmark, with the title of Christian IX., was born July 19th, 1798, and succeeded to the throne November 15th, 1863, Frederick VII. having died childless. The commencement of his reign was somewhat turbulent, owing to the claims preferred by the duchies of Schleswig and Holstein to the succession in the person of Prince Frederick. These claims were urged with so much pertinacity that a war became imminent, but was averted by the intervention of several of the great powers of Europe, on the basis of the "Treaty of London," made May 8th, 1852.

Judged from the portrait, we should say this gentleman would consider himself "a nice young man." He is evidently tasty and testy. He has a broad head, a small cerebellum, and is not very high in Veneration and Spirituality. Activity and executiveness are both well

indicated. There is nothing in this countenance worthy of elaborate remark or description. We think he has mistaken his calling; that he would have made a better mechanic, engineer, or artist than king or statesman. We see nothing in this man that would incline an American citizen to take off his hat and bow in humble meekness to his "august majesty." On the contrary, a passable Republican or Democrat would consider himself the better man, notwithstanding his royal kingship.

HOLLAND.

The Kingdom of Holland, otherwise known as the Netherlands, includes various provinces, comprising together a territory of 13,584 square miles. Its population is upward of 3,700,000. The government is that of a limited constitutional monarchy—hereditary in the male line, but by default of that, in the female. The legislative power is shared by the king and the two chambers of the states-general. Considered with respect to its size, Holland is the most flourishing commercial nation on the face of the globe.

William III., Alexander Paul Frederick Lodewijk, King of Holland, was born at the Hague, February 19th, 1817, and ascended the throne March 17th, 1849. His reign has been marked by important reforms in the administrative policy of the government, and by a careful observance of its constitutional principles. In 1839 he married the Princess Sophia of Wurtemberg, by whom he has two sons now living.

This is a strongly-marked character. The head is broad between the ears, indicating energy and force. It is high and full in intellect, indicating strong, practical common sense and good reflective powers. It is wide through Constructiveness and Acquisitiveness, indicating invention, mechanism, and economy. He would appreciate machinery and its uses, and also works of art and their beauty. There are also high soldierly qualities manifested here, and he is not wanting in moral sense. He would be energetic, self-relying, devotional, tasteful, affectionate, ambitious, and sympathetic, but he is only moderately developed in Cautiousness. Among all the sovereigns he has as favorable an organization as any one among them. Were he an American, we should probably feel proud of him.

BELGIUM.

This state has a territory of 11,268 square miles, and a population of nearly 5,000,000. It is governed by a king, whose powers are limited, and in connection with him there is a national council of two chambers. This country is the most densely populated in Europe, and is celebrated for the extent and character of its manufactures.

The present King of the Belgians, Leopold III., was born at Brussels, April 9th, 1835, and succeeded his father in the occupancy of the throne in 1866. At the age of eighteen he married Marie, Archduchess of Austria.

Evidently a well-meaning, kindly-disposed young man. He has a large and well-formed brain, with a strong and healthy body; moreover, he has for a wife one of the most charming women living. We shall look for progress in his reign, though we can scarcely hope—educated as he was, in a school of monarchical teachings—that he will adopt the broader and better methods of a democratic republic.

ITALY.

The geographical position of Italy is such as should contribute greatly to its importance as a maritime nation. Its extent of seacoast is the largest among European nations. Its area, including the recent acquired province of Venetia and the Papal Possessions, exceeds 113,250 square miles. Its inhabitants number over 25,000,000. The government is a constitutional monarchy. Italy is now emerging from the condition of comparative obscurity which has been her lot for centuries, and seems likely to take and maintain a respectable status among civilized nations.

Victor Emanuel II., King of Italy, formerly King of Sardinia, was born March 14th, 1820. He succeeded to the throne of Sardinia on the abdication of his father in March, 1849. In the war for Italian independence, so ably promoted by Garibaldi against Austria, he secured the esteem of his subjects and the regard of the distinguished patriot, and took the title of King of Italy, March 17th, 1861. His reign since that time has been marked by

some energy, although he truckles considerably to the weightier powers of Europe.

Characteristically, Victor Emmanuel is a proud, puffed-up, pompous little man. Should he be seen alone in the streets of New York or Chicago, he would, undoubtedly, and most truthfully, be pronounced a "swell." He has been made great more by accident than by any special act or merit of his own. He lacks the grandeur and nobleness of high and honorable manhood, and will play the sycophant to those who permit him to serve. Approbativeness and love of show or display form the leading traits in his weak character. "Vanity of vanities"—with him, all is vanity. We see no hope for Italy while he is in the way to block the wheels of progress. We can not doubt that Providence will remove him in good time, when the people will have been sufficiently developed to become self-regulating.

SPAIN.

Spain, occupying the larger portion of the peninsula at the southwestern extremity of continental Europe, has territory amounting to over 176,500 square miles. Its population is nearly 15,500,000. The character of the government is that of a constitutional monarchy, with a legislative assembly of two chambers. Spain, at one time a dominant state in Europe, is now comparatively weak and unimportant.

Isabella II., Queen of Spain, was born in October, 1830. Ferdinand VII., her father, died near the close of the year 1833, having appointed by will Maria Christina, his queen, regent until the young queen should attain the age of eighteen. After a turbulent administration of the regency, Isabella was declared queen, but the continued interference of her mother in public affairs led to her expulsion from Spain in 1854, leaving Isabella in possession of the throne.

Our artist has overdrawn, modified, and beautified the head and face of this voluptuous woman. In her, the vital temperament and animal propensities predominate; she is more animal than mental, more sensual than spiritual. We grant that, as compared with most ladies, she has more to struggle against than many others, in order to subordinate the passions to higher principles. It was unfortunate that one with such tendencies should have been placed in such a responsible and conspicuous position. Her example is anything but good or elevating. There will be comparatively few mourners when she shall be called hence. A poor, impulsive, selfish, sensual woman.

PORTUGAL,

Is 38,663 square miles in extent, and contains nearly 4,000,000 of inhabitants. It is a constitutional monarchy, and possesses some eminence, mainly on account of its maritime position.

Dom Louis I., the present King of Portugal, is the second son of Dona Maria II. and Prince Ferdinand of Saxe Coburg. He succeeded to the throne on the death of his elder brother, Pedro V., near the close of the year 1861, and is now about twenty-six years of age.

Passable, only passable; great in nothing except in his own estimation. Propped up by a parliament of older and wiser men, restrained by the good social and high moral influences of others, he may be kept on the track; but if left to himself we doubt if his course would be "onward and upward." Grace will do much for those who do but little for themselves, provided they put themselves in the way of it. He will need all good influences to keep him straight. He has a voluptuous expression, indicating more of the animal than of the spiritual. Stripped of his royal birthright, of his equipage and trappings, he would be left an ordinary human being, with nothing special to recommend him; but he is young, and may improve.

OURSELVES.

SOME REFLECTIONS SUGGESTED BY THE FORE-GOING.

In contrast with these male and female monarchs, Americans lose nothing. We may find in every State Legislature throughout our Union fifty, or a hundred, men who are the peers of any of these hereditary kings,

queens, or emperors. Indeed, they are only poor frail human beings, like the rest of us. They eat, drink, and sleep the same, and are not blest with more faculties of mind, or more bones or muscles of body. They strut, swell, swagger, and show temper when they need not. They are superior in nothing but the accidental circumstance of birth; and this more frequently costs them their heads than it insures tranquillity of mind or growth in moral power. Human monarchies are human impositions, and must go down before the onward march of intelligence, freedom, and Christianity. How significant the words of the inspired writer in allusion to the cry of the Israelites for a king! "And He gave them a king in His anger;" as if the institution of the monarchical system was in chastisement for inconstancy and unbelief.

Let any reasonable man—be he American or European—contemplate successively affairs in Europe and in America, and he will declare himself more favorably disposed toward the latter. How paltry, if not ludicrous, the contrast! In Europe we find an extent of territory not half the size of the United States split into thirty-four different nationalities. Twenty-eight or nine of these have respectively their royal establishment, with all the expensive equipage and privilege connected therewith. Can we wonder that so many millions in Europe groan under the grievous taxation and oppression which is even necessary to sustain so many kings, queens, princesses, and courts in their desired magnificence. No wonder that a standing army must be kept within the reach of the sovereign's voice, in every monarchy. The spirit of the *common* people must be repressed, subdued by the strong arm of military force, or it would burst into revolution all over the Continent. Witness the past history of France, Switzerland, Hungary, Poland, Italy, England, and the under swell of popular sentiment in Europe now.

In this country, until the seeds of revolution sown by imported aristocratic influence under the pseudonym of secession had germinated into open rebellion against "the best government under heaven," a strong military array to enforce law and order and maintain individual rights was not thought of in the council of the nation. And even now, so soon after a war unexampled in magnitude and ferocity, the United States Government maintains in arms a regular force for merely frontier purposes, so small that an insignificant European monarch would proudly point in contemptuous comparison at the decorated legions that support his throne and depend on his subsidies. The mutual confidence among its people, inspired by a free government, tacitly if not avowedly repels the idea of the officers of that government having at their disposal a military force of sufficient strength to overawe the citizen. No; Americans would be free, and feel free; and their efforts to maintain free government find a sympathetic chord among the masses of king-ridden Europe. America has

become too strong a nation, and is too intimately related through her promiscuous and foreign-born population with every civilized country of the old world, not to exert a powerful and increasing influence on the civil affairs of Europe. With her prosperity, the deeply rooted principles of human liberty there expand, and in time will ameliorate the nations. Let the heaven work. Well may the crowned heads feel uneasy on account of the growing sentiment that is clamorous for reform. If they heed the premonitions, and wisely yield to the people the right so long withheld, it may be well for them. If they oppose the mighty movement, it will ere long sweep them with their senseless assumptions before it, as the hurricane disperses the dry leaves.

DON'T BE CONTENTED!

"A CONTENTED mind is a continual feast!"

There's where we don't agree with the wise man of old! He must have been a conservative—one of the barnacles that cling to the huge, helpless hull of antiquity. If he had practiced just exactly as he preached, that gorgeous temple never would have reared its shining pinnacles in the blue air of the holy city!

Moreover, "circumstances alter cases." Contented minds might have done very well in those gray old times when people lived a wandering, easy, shiftless sort of life, rolling up their tents and trudging off under the palm-trees, very much as traveling peddlers and itinerant ministers live now! The weather was very convenient, too—a rain of quails, with the article at fifty cents a pair, or a shower of manna, with flour at nineteen dollars a barrel, wasn't so unhandy. Besides, they didn't pay Croton water bills, and no greedy landlord pounced on 'em four times a year to pay their own weight in gold for tent-room and taxes!

We find, in the average run of every-day life, that "contented minds" are very apt to become anything but "continual feasts" with unlucky souls who are associated with them! Contented minds stand contentedly still! They vote against modern improvements; they persist in thinking that the old windlass is better than the modern chain pump; they assert, with features of stolidity, that tallow candles, pounding tubs, and toilsome sewing by hand are good enough for *them*! They don't believe in your new-fangled notions about machinery! And when you think you are on the verge of converting them to some idea or other a few hundred years later than the times of Ptolemy or Plato, they suddenly "let you down" by a hollow groan, and a "Well, I dare say it's all very fine, but give *me* the good old good times!"

What is the use of trying to do anything with such people as that!

Did you ever travel? Well, the ruinous, tumble-down old farmhouses with wood-piles and pigsties in front and swampy wildernesses behind, invariably belong to the people of

"contented minds." They are out cutting their grass with slow sweeps of the scythe and abundance of that part of our original punishment comprehended under the head of "sweat of the brow," while half a mile farther on a mowing machine hums merrily over the level meads, the incarnation of all-daring radicalism to their shocked vision. Their fences are all awry; their gates swing on one hinge; their windows are supported by sticks, like ancient pilgrims leaning on their staffs; they are propped here and braced there, and some day great will be the fall thereof! You see they are partaking of that "continual feast" alluded to in the proverb! Their girls pick berries for a few cents a quart, and invest the proceeds in gilt jewelry set with green and red glass; their boys, prematurely bent, sallow, and stunted, toil all day, and study "Daboll's Arithmetic" at night. Their fathers and mothers traveled the same beaten road before them; and the contented mind says, "What is good enough for my father is good enough for my son!" It would be, perhaps, if the world were like a tortoise; but the world moves—it is a *LIVE* world!

Nature never stands still an instant; she is always progressing! From the tiny seed leaves to the perfect bud; from the bud to the blossom; from blossom to ripened seed, she moves to the grand march of creation. It is part of God's religion to move and live; we have no right to settle down like fossils and let the tide of improvement flow past us like a dream.

Don't be contented, young man! Don't rest until you have a home over your head; and then don't be contented until you have a thrifty wife and two or three rosy little ones to make it cheerful; and then don't be contented until you have surrounded it with trees and vines and graceful shrubs. Keep improving it as you would keep improving yourself; is it not a representation, a type of your own being?

Young woman, don't allow yourself to be deceived by the respectable old age and hoary plausibility of the axioms of conservatism. So far as things are irremediably, be contented—but not a hair's breadth farther. Keep improving yourself, mentally, physically, socially. Give your husband the daily example of noble aspirations and properly directed ambition. Set your children in life's broad path with their faces turned heavenward, and bid them never stand still, but move on upward to the goal Heaven itself intended us all to attain!

We are tired of seeing people fall back, limp and helpless, on the principle of "let well enough alone!" We say, make "well enough" better! We believe in what Ignatius Loyola says: "First pray as if everything depended on prayer; then work as if everything depended on *work*!" You may be sure the old Jesuit was right. There are better feasts than a contented mind, if one is only willing to work for them.

When you have reached the level God meant you to reach; when you have done life's work, be contented; until then, our advice is, "be discontented!"

CRAYON BLANC.

NEW YORK.

JANUARY, 1868.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous precipice of telling unbiassed truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*De Poe.*

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED is published monthly at \$3 a year in advance; single numbers, 30 cents. Please address, SAMUEL R. WELLS, 339 Broadway, New York.

SALUTATORY.

THE SHIP SAILS TO-DAY! We now embark on a new year's voyage, 1868. This is our THIRTIETH in the service. Our craft, the A. P. J., has been well tried; she is staunch and seaworthy; has never failed to keep all her appointments; never struck a rock; never collided; never entered port disabled, or "short of coals." She has often encountered head winds; has had frequent rough passages; weathering storms and encountering fresh gales. But with sails snugly reefed and hatches down she triumphantly rode out every gale. She has kept clear of dangerous coasts, and was never lost in the fog. She is worked by men of experience, knowledge, and energy. She never lost a passenger—though she has carried many thousands; has picked up and brought to land many lost wanderers, found floating hither and thither on the wild tempestuous seas of life, without compass or rudder—and hopeless!

Metaphor aside. We enter, to-day, upon the forty-seventh volume of the PHRENOLOGICAL JOURNAL. There is no broken link in the chain of months since it begun. It closed its last year's volume with a larger circulation than it ever before enjoyed since its rates of subscription were raised; an evidence that its principles are better appreciated than formerly, and that the prejudice which its earlier advocates unfortunately caused to be brought against it, is being overcome. Formerly, the clergy, and other good men, seeing Phrenology prostituted by bad men to ignoble purposes, took ground against it and them. The error on their part consisted in their confounding the genuine with the counterfeit; and in their haste to put down the

wicked, trampled on the good. A better state of things now prevails. The ignorant pretenders, the vulgar vagabonds, are leaving the field, and a better class succeed them. It was once believed—and indeed it was so taught—that one must of necessity act in accordance with his phrenological developments and inclinations; that the phrenological organs indicated just what he would do; in short, that he was fated to be good, or to be bad. Whereas the truth is, we are to study ourselves, discover our besetting sins, tendencies to excess or perversion, and in love and fear work out our salvation. Instead of being *fated*, we are left *free* to do as we please, right or wrong—to be good or bad. No intelligent phrenologist ever pretended to tell what one has done, nor what he will do. He simply compares one with another, and points out differences, indicating capabilities, deficiencies, and what are his natural endowments. Is he artistic, mechanical? or is he inclined to literature, science, or philosophy? Is he generous? or is he selfish? Loving? or indifferent? Economical? or prodigal? And so on through the catalogue of all the faculties. But though I may have a violent temper, it does not follow that I shall commit murder. And though I may be skeptical, it is not to be inferred that I may not obtain a full measure of faith and become a consistent worshiper.

When our beautiful science shall be weeded from the vagaries that some of its ignorant advocates have hitched on to it; when it shall be freed from the incubus of ignorant pretenders, it will shine forth in its true colors, and be welcomed into the innermost recesses of the highest cultured minds.

We now have on our subscription books the names of a large number of clergymen, statesmen, authors, teachers, physicians, and men of science. They write us letters of heartiest thanks for benefits received.

A river will not rise higher than its source. Until Phrenology can be *taught* by the highest cultured minds, in the highest schools of learning, it can not obtain the indorsement of the world. Before it can be got into the schools, we must create a demand for it, by placing it within reach of the people. When *they* come to know its utility, they will

demand that it be taught to their sons and daughters. Our hope, dear reader, is in *you*. You who know something of it, can bring it to the notice of those who know nothing of it. And thus knowledge shall be increased. Every word spoken in its favor, every page of print circulated, will be, if no more, as a "drop in the bucket;" and many drops make an ocean!

WHAT GOOD WILL IT DO?

Place your hand on the head of a young man, and in kindness and in sincerity tell him his faults—his excess of appetite, willfulness, lustfulness, pride, passion, envy, jealousy; his heedlessness, or his timidity; his avarice, or want of economy; his lack of application, or his plodding disposition; his respect for others, or the lack of it. Tell him his true character, and he will, at first, be startled at the revelation. He will confess, with meekness, the truth—if truth you tell him—and, like Nicodemus, he will beg to know what he may do to be saved. You can then point out the way, and name the means. Your basis on which to build is the CONSTITUTION of MAN—body, brain, soul. Tell him *how to live*. Warn him against bad habits; and by the aid of science, revelation, and Christianity, it is in the power of a godly phrenologist to direct that young man in the way of light, love, righteousness, and devotion. And *this* is our answer to the question, "What good will it do?"

ENCOURAGEMENT, NOT FLATTERY.

None are all bad—none all good. All have their faults. All their virtues and graces. Kick, cuff, and scold a poor child—tell him he is only a dunce—that he has not a redeeming trait, and you do him an irreparable injury; you crush out all ambition and aspiration, and leave him a hopeless wreck. He gives up the ship, and relapses into a moping despondency. On the contrary, indulge a child—flatter him, make him believe he is greater and better than others—he will become puffed up with vanity, egotism, and bombast. He will bore you with self-laudation, insufferable to one with only ordinary patience. He—or she—has been literally *spoiled* by wicked flattery. A knowledge of Phrenology on the part of parents would have prevented excess in either case, and

developed harmonious and well-balanced heads and characters.

CHOOSING ASSOCIATES.

It is the privilege of each to decide with whom he will form intimate relations. We may, indeed we are in duty bound to, look after the welfare of our neighbors. The poor ye shall always have with you—and it is fortunate, especially for the rich, that it is so. Has it not been said that “it is more blessed to *give* than to receive?” But this does not imply a necessity of intimate social relations with ignorant boors, nor with clowns or jockeys. Nor should virtuous children be contaminated by mixing with the dissolute. Keepers of prisons and alms-houses will discriminate as to where and with whom to place new-comers, in order to prevent the unfortunate from becoming bad. It is very wrong to place juvenile offenders with old criminals. If one at first is only a thief, he may be rescued, or by bad associations he may become a robber and a murderer.

THE OBJECTS OF LIFE

are made more clear by the aid of our science. Instead of groping our way in the dark—not realizing for *what* we were created; blundering first one way and then another, we lose half a lifetime in learning *how to live*; accomplishing, too many of us, little or nothing, while thousands simply clog the wheels of progress by their worthless presence. Can it be doubted that any of these would thus waste the golden opportunities which are open to every one, did he *know* his capabilities as Phrenology would have made it clear to him?

FINALLY.

There are millions of human beings in the world, and no two *exactly alike*; as we differ in size, shape, color, and complexion, so we differ in thought and in action. Hitherto, in times long past, men were put to death for simple differences of opinion. Consider the holy wars, the Christian martyrs, religious persecutions, and say if “man’s inhumanity to man” has not “made countless millions mourn?” But a brighter day is dawning. Let us survey the field of life and light to-day. What do we see? Religious conventions of different denominations exchanging deputations and salutation; Young Men’s Christian Associations in every considerable town and

city; munificent sums donated by wealthy men and women for every worthy charity; and hospitals, asylums, colleges, schools, being built and endowed in every State; every heart vying with its neighbor to do the most good. Say what we may of religious bigotry and superstition, there is at present religious freedom in America, and soon will be the world over. The days of absolutism in politics and in religion are numbered. Phrenology sheds light on the entire rights, duties, and privileges of man. Embrace it, apply it, disseminate it, and God will bless it to our use, and to His glory.

OUR COUNTRY.

WHILE discontent and unrest are everywhere apparent in the old world—and not without good cause—while revolutions are constantly threatened; and standing armies, which produce nothing, but eat up the substance of the industrious, are required to keep the peace; while commotions and upheavals are constantly occurring among the monarchies, *we* are quietly settling our political disputes, electing our *servants* for a brief period—not hereditary rulers for life and an unwelcome succession—reconstructing our communities and industries; reorganizing all things, improving our rivers and harbors, opening up vast new territories for settlement, improving our schools and all educational facilities, multiplying churches and missionary services everywhere, making wonderful strides in mechanical inventions, perfecting our architecture—both public and private, opening beautiful and healthful public parks for the people; when, we ask, was there ever a nation with prospects so bright? We are now, and have been from the start, clearly on a rising scale. Since the birth of our great Republic we have had but a single “draw-back,” and that our late war—which can never be repeated—for the *cause* is removed, and we are to-day stronger in mind, muscle, material, and patriotism than ever before.

Let us see what we have bought, and what we paid for it. Since the present government was established, the United States have acquired the following territory, on the terms named:

1. The purchase of Louisiana and the

Mississippi Valley, in 1803, from France, for \$15,000,000.

2. The purchase of Florida, in 1810, from Spain, for \$3,000,000.

3. The annexation of Texas, in 1845.

4. The purchase of California, New Mexico, and Utah, from Mexico, for \$15,000,000, in 1848.

5. The purchase of Arizona, from Mexico, for \$10,000,000, in 1854.

6. The purchase of the immense Russian Possessions, running down on the Pacific coast from the north pole to 54° 40', north latitude, at which line it strikes the British Possessions, for \$7,000,000.

We wait the wish of the Canadas, adjoining provinces, Mexico, Cuba, the Bahamas, and West India Islands to come under the Stars and Stripes and annex themselves, and become parts of the United States.

At present we are three thousand miles in advance of England on our routes to China, Japan, and the Indies. There are fourteen hundred million acres of public land undisposed of, in which is included our Walrussian purchase; and there are thirty-seven thousand miles of railroad already completed, which, counting from the time of commencing to build them, averages one thousand miles a year. There are 17,860 miles now in course of construction.

We need not enumerate our vast forests, our mountains of iron, beds of copper, coal, lead, silver, and gold in inexhaustible quantities, nor the incomparable richness of our soils, our rivers and lakes, the variety of our climates—tropic, temperate, and arctic, salubrity and clearness of our atmosphere, purity of water, abundance of vegetation, nor of the ten thousand other God-given beauties, grandeur, and utilities vouchsafed to a young, vigorous, and hopeful nation.

But we are in debt! What nation is not? We are heavily taxed! Not to compare with any of the old-world monarchies; and every year will increase our means and reduce our debt and our taxes.

Our legislators and politicians are low, selfish, and corrupt! This is not *worse* than old-world imbecility, ambition, and corruption. Besides, here it is clearly our own fault; for we can, if we will, choose honest, honorable, and intelligent men to fill all our places of trust. *There*, it is rather a misfortune to the people

than their fault, the incumbents being *born* to their places, can not be so easily displaced. Let us not complain of our lot, but rather thank God it is no worse. We can *easily* make it better. Our resources are inexhaustible; our opportunities incomparable. With good motives and well-directed efforts we shall overcome all difficulties and make our lives useful to others, successful to ourselves, and acceptable to the God in whom we live, move, and have our being.

YOUR DUTY.

WITH the questions—What is original sin? In what consists the fall of man? Will the heathen be saved? Predestination, Free-will, and so forth, we will not now involve ourselves or our readers. When the old-school philosophers, and theologians of all schools, finish ciphering out these problems, we may open our phrenological camera and let in the clear light of day on these and other vexed questions. At present, we have to do with *present* duties—duties relating to growth, health, character, life.

Mainwayringe quaintly, but truly, says: "Nor is it left *arbitrary*, at the will and pleasure of every man, to do as he *list*; after the dictates of a depraved *humor* and extravagant *phancy*, to live at what rate he pleaseth; but every one is bound to observe the *Injunction* and *Law* of *Nature*, upon the penalty of forfeiting their *health*, *strength*, and *liberty*—the true and long enjoyment of themselves." In other words, no man has a right to injure his health by dissipation or "fast living." He has no right to indulge any habit which may impair his strength, his mind, or his morals.

Disease is an abnormal condition, and results from violated law. Health is the normal condition, and comes from obedience to natural law. There are degrees of health and disease, as there are of virtue and vice. Sickness is an evidence of physical sinning; it may be done knowingly, or it may be done ignorantly—the penalty is the same. If we violate a civil law, the penalty is a fine, imprisonment, or the gallows. If we violate a moral law, we must confess and repent, if we would be free from its condemnation. *There is no such thing as sinning without suffering.* Appetite, af-

fection, love of money, ambition, *all* are to be subordinated to the spiritual, and in the love and fear of God we are to do our duty by doing His will.

ACROSS THE CONTINENT.

WE TOUCH THE ROCKY MOUNTAINS BY RAIL! It is invigorating even to contemplate the vast achievements of the human mind and human hand. Under God, man is working out his salvation, physically and spiritually, in a most marvelous manner. He is glorifying God by his faith and his works. He *believed* that a railway could be built from the Atlantic to the Pacific ACROSS THE ROCKY MOUNTAINS, and lo, 'tis done! or it soon will be. We have the rails laid from Portland, Maine, to Omaha, Nebraska, over 1,800 miles, and from Omaha—500 miles west—to the base of the Rocky Mountains! Ten thousand Chinamen and others are blasting the rocks, shoveling, wheeling earth, and laying track at the west end, working toward the east; while thousands of others are working toward the west. They will meet ere long, when the iron steed will be heard rushing through the Western wilds, carrying intelligence, commerce, and civilization into the richest portion of our globe.

We are not ambitious for riches, nor even for a pecuniary interest in the gold and silver mountains; but we want the road that we may visit the aborigines in their primitive homes. We want to visit our cousins and correspondents in California. We want to "summer" in the land of the Crows, Flatheads, Blackfeet, Snakes, Diggers, and the rest. What a resort for ruralizing! Buffalo, elk, antelope, deer, wild fowl, prairie dog, fish, etc., in abundance, and in endless variety. Then what a land for farming, fruit-growing, grazing, pasture lands, among the best in the world! and may be had for the asking. Climate, the most salubrious and healthful. We are impatient to take a through ticket on an early through train. Those who want to invest in this greatest of all national enterprises, with a prospect for large profits, are referred to the advertisement of the Union Pacific Railroad.

FORMATION OF CHARACTER.—Have you ever watched the icicle as it formed? Have you noticed how it froze one drop at the time until it was a foot long or more? If the water was clean the icicle remained clear, and sparkled brightly in the sun; but if the water was slightly muddy the icicle looked foul, and its beauty was spoiled. Just so our characters are formed. One little thought or feeling at a time adds its influence. If each thought be pure and right the soul will be lovely, and will sparkle with happiness; but if impure and wrong, there will be deformity and wretchedness.

Our bodies are composed of bone, muscle, nerve, etc., all which are formed from the blood. And this is either healthy or diseased. Good

food, good drink, good air, etc., make good blood; while poor food, impure drink, filthy tobacco, and other disease-generating substances are enemies to the human system, and tend to cause disease and shorten life. We can not be too careful in what we eat, drink, and *think*.

SUGGESTIONS.—Our readers will find some excellent thoughts in the article on "Uses of Culture in the Ministry," and much interesting information in the chapter on "Europe, and its Prominent Sovereigns." "The Idiotic Trained" is an instructive contribution from the pen of a prominent New York author and editor.

IN our November number of 1867 we published a short article on the "Condition of the Earth Internally," and, as we expected, its unique character has drawn several responses, one of which we print in this edition, as furnishing a carefully prepared exposition of the theory generally entertained by the learned of the dynamic relations of our planet with other heavenly bodies. It was quite evident that the author of "Condition of the Earth Internally" ignored altogether the grand principles enunciated by Newton. It is probable that he had never read the Principia, but came out boldly in the strength of a, to him, new-found idea, and announced it as a triumph of masterly ingenuity.

ANNOUNCEMENTS.—In our next number we will give the first installment of a series of papers on "Mental Action according to the Doctrines recognized by Phrenology." We can promise the prospective reader some excellent food for thought and many interesting suggestions in the course of this series. The papers are the result of much close thinking, and of extended comparative research into the works of the most prominent writers on mental philosophy. A comparative view of the Lords Derby and Stanley, leading representatives of the English ministry, will also be published; besides an article on Principle, from a Shaker contributor at Mount Lebanon. We have in preparation a group of our most eminent American artists, which will be presented, if not in the next, in an early number.

PLEASE OBSERVE.

THE regular subscription price of this JOURNAL is \$3 a year, in advance; sample numbers, 80 cents. Canadian subscribers will remit 24 cents extra, to prepay the yearly postage. European subscribers will remit 48 cents extra for the same purpose.

Remittances should be made in current funds, in registered letters; or by draft, bank check, or post-office order made payable to the Editor.

Clubs may be made up of subscribers residing in different places, and JOURNALS will be sent to one or to a dozen different post-offices.

FITZ GREENE HALLECK.

This distinguished American poet died at his residence in Guilford, Conn., on the night of the 19th of November. He was seventy-seven years of age, having been born in Guilford in 1790. In 1818 he came to New York and entered the mercantile house of Jacob Barker, remaining in his employ for many years. He was afterward for a long time in the employment of John Jacob Astor, and was by him nominated as one of the trustees of the Astor Library. Since the year 1849 Mr. Halleck, having retired from business, has resided in his native place. When very young he began to write verses, and in 1818 his productions first appeared in print. In 1822-23 he visited Europe, and in 1827 published an edition of his poems, since which time several editions of his work have appeared. Mr. Halleck was the author of that renowned poem entitled "Marco Bozzaris," the writing of which would have been sufficient to establish the fame of any man. The chief fault of Mr. Halleck as a writer was that he wrote so little. All that he wrote was carefully and thoroughly studied; but he had the rare talent and tact to hide the labor it cost him. There is nothing loose or slipshod in his productions. Everything is pruned, compacted, and thoroughly digested. There is no evidence of carelessness, inattention, or crudeness, and, as we have said, he has not a labored style, as if he had applied every maxim of scholarship, every canon of criticism to his writings. Still, though they flow naturally, and seem to be precisely what no person could have avoided saying, they are neither stilted, extra dignified, or loaded with mannerisms. No American writer of his ability has written so little, and his reputation is as firmly fixed in the public esteem as that of any other.

Mr. Halleck was a man of medium size, remarkably well built, and very harmonious in the different portions of the physical system. His head was relatively large for the size of his body, which may account for the fact of his writing so little. Men like the late Hon. Thomas H. Benton, who have only a full-sized brain, and a body immensely large and vigorous, can supply to the brain the stimulus for action, and, as it may be said, can hammer away from day to day through a long life, and always make an acceptable effort, while men of large heads and relatively small bodies but occasionally give forth their best efforts.

PORTRAIT OF FITZ GREENE HALLECK.

The forehead, as seen in this portrait, is long, high, and amply developed in the upper portion. It is also expanded, indicating the philosophical and logical tendencies of the mind. He had strong reasoning powers, and ability to describe and analyze sharply. He had an excellent memory of facts and of ideas. Everything he saw or heard was as it were absorbed by his reasoning and imaginative powers, hence he was a sound thinker, was comprehensive in his thoughts, plans, and purposes. His Ideality being large, gave him a fertile imagination, and served to impart polish to his thoughts.

His Imitation qualified him to glide into the habits and usages of society without noise or pretension, and to make himself acceptable wherever he went.

His Benevolence was uncommonly well developed, indicating a generous nature, and sympathy for everybody in trouble.

As a reader of human nature few men surpassed him.

His Language was accurate and compact

rather than copious; clear and pertinent rather than affluent.

His Veneration was large, and he had also large Spirituality, giving a tendency toward religious contemplations and a sympathy with spiritual life. Such a head as a writer or speaker can make appeals to a higher life, and to the considerations which relate to man's future state of being with admirable effect.

Mr. Halleck had dignity, ambition, prudence, great perseverance, and self-reliance. He was strong in affection, and adhered to those who were his companions and friends with uncommon fidelity. He was by organization not a man for the common multitude, but inclined to be select in associations, comparatively retired in his habits, and to cultivate refinement, intelligence, taste, and morality, more than to mingle in the common ambitions and strifes of the times. His temperament indicated a predominance of the mental, leading to thought and sentiment rather than to physical vigor and mere force of character.

A FAMILY OF LIONS.

THE LION—CHARACTER AND HABITS.

"What, shall they seek the lion in his den?
And fight him there; and make him tremble there?
O, let it not be said!" —*King John*.

FOREMOST among the beasts which frequent the wilds of nature, the lion has obtained the admiring attention of writers ancient and modern.

The extensive travels and researches which have been made within a few years past by such men as Livingstone, Baker, and Du Chaillu, among the haunts of the largest and most powerful of the species, have served to detract much from the old respect entertained for the "king of beasts," and to reduce his grade considerably in the scale of savage brutes. Whether or not he has deteriorated in size and power since the days of his earliest mention by writers sacred and profane—which is probable—and whether or not he was accorded more honor than was really his due, we will not say; but one thing is certain, that in the organization of the lion the naturalist finds the highest carnivorous developments. He is the largest and strongest of the feline family, or *felidae*. His head is characterized by its great breadth, and by the strength and

size of the jaws, and the immense size of the mouth. As a practical proof of the capacity of the last, we would merely instance that the keepers of lions on exhibition have been accustomed to put their heads in the animal's mouth for the amusement, or horror, of spectators. A front view of a male lion is impressive on account of the immense head, massive neck and fore shoulders, and luxuriant mane, which in itself adds greatly to the apparent size of the head. From the fore shoulders backward the body tapers rapidly, so that there seems to be an absolute disproportion between the fore parts and back parts. This apparent lack of harmony is due to the fact, that from the fore shoulders backward the hair is short and close, while about the head and neck it is long and shaggy, sometimes sweeping the ground. It is probable that in the earlier ages of the world lions inhabited nearly every portion of its surface. The ancient Greek and Roman writers speak of their existence in certain parts of Europe; from which all traces of them have disappeared. They are now confined to Africa and Asia, and even in those primitive sections they are diminishing rapidly in numbers and influence. It is only in the vast and untrodden jungles of central and

southern Africa that the lion can be found in all the glory of savage freedom and ferocity.

Zoologists distinguish but two principal varieties of lions, the Asiatic and the African; the only marked difference between them being the generally smaller size and smaller mane of the Asiatic. In color, lions vary from a deep chestnut brown to gray. Some have been met by travelers in South Africa with hair so silvery as to give rise to a belief in the existence of a race of white lions. The lion of the Cape of Good Hope is nearly black; while the Nubian is of a pale fulvous or dull yellow hue.

As the lion's habits are predatory, he is an object of great fear to weaker animals. He is obliged in most cases to seize his prey by stealth. When lying in wait for or approaching his unsuspecting victim, he does so in complete silence, and when within fifteen or twenty feet of it, a tremendous leap and a sudden seizure by teeth and claw are the only premonitions of death to the poor brute, be it an antelope, a deer, a zebra, a goat, or even a powerful horse. According to Livingstone, who greatly disparages him, the lion fears man, except at night, and never attacks him unless from necessity; a large buffalo is more than a match for him; and he will not approach a full-grown elephant or rhinoceros.

Livingstone in his practical and—as compared with some who have highly panegyricized the beast—somewhat contemptuous way, as if inclined to relieve us of any remnant of admiration which we may cherish for him, says: "One is in much more danger of being run over when walking in the streets of London than he is of being devoured by lions in Africa, unless engaged in hunting the animal."

Unlike Burchell and Hunter, this sturdy traveler finds nothing very majestic in the lion's appearance, "but merely an animal somewhat larger than the biggest dog, and partaking very strongly of the canine features. Two of the largest I ever saw seemed about as tall as common donkeys; but the mane made their bodies appear rather larger." On the other hand, Gordon Cumming and M. Gerard, who have rendered themselves notorious as "lion killers," have dressed up their accounts of lion hunting in a manner well calculated to impress their readers with the regal and magnanimous character of the *quasi* monarch of the forest. It would appear evident, however, from the zest with which they carried on the sport, and the large number of lions which they are acknowledged to have slain, that the animal has not the terrific character so frequently attributed to him. Certainly an animal so gigantic in strength as to be capable of "seizing a full-grown ox and leaping at full speed with it over streams and other barriers to its retreat to the jungle," must be one approximating to the elephant in size rather than to a common donkey. However, let us consider the lion from as reasonable a point of view as a fair inference from the descriptions of different travelers will admit, and we will find in him the most compact structure and the most powerful muscular organ-

ization conceivable in an animal but little larger than a Bengal tiger. His weight, as compared with his size, is very remarkable, on account of the close texture of his frame and muscular tissue. Scarcely less formidable than his great jaws and teeth are the lion's claws, which, as is the case with all animals of the cat-tribe, can be sheathed or extended as circumstances may require. By a single blow of a paw thus armed he can rip up the side of a horse or buffalo. When quiet, or in a playful mood, these claws are concealed from view in the hair and recesses of his cushioned paw.

The average length of a full-grown lion from the nose to the root of the tail is between six and seven feet; and the height at the shoulder nearly three feet. The lioness is considerably smaller than the male, and her form is much more slender and graceful. She has no mane, but a thick furry coat of hair, which covers the entire body. In her motions more agility is displayed, and she is more impetuous in her passions. The ferocity of both the lion and lioness is greatly increased during the breeding period; and both protect their young with the utmost jealousy and suspicion. It is commonly believed that a lioness has but one cub at a birth—a notion probably founded on a fable of Esop's, which relates that there was once a great stir among all the beasts which could boast of the largest family. So they came to the lioness. "And how many," said they, "do you have at a birth?" "One," said she, grimly; "but that one is a Lion." The truth is, that she has from two to four at a litter. When young, they mew like a cat; at the age of twelve months the mane appears on the males, and at the age of eighteen months they are considerably developed, and begin to roar. The roar of a large lion, according to Burchell, sometimes resembles the sound of an earthquake (a slight one, we presume) and is produced by his laying his head on the ground and uttering a half-stifled growl, by which means the noise is conveyed along the earth. The larynx of the lion is very large, hence his powerful cry.

The average length of a lion's life has been estimated to be about twenty-two years. At the Tower of London, where lions have been kept for two or three centuries, one died in 1760, which was said to have been confined there above seventy years; and another subsequently died there, believed to be over sixty years old.

The lion, especially when captured in infancy, is susceptible of domestication and training to a considerable extent. It usually attaches itself to but one or two persons, whose kindness it returns by a strong affection. When irritated, however, the tamest specimen is a dangerous companion for any one. Many stories are on record of the generosity and magnanimous conduct of the lion even when in the savage state. Cassell relates that part of a ship's crew was sent on shore, on the coast of India, for the purpose of cutting wood. One of the company, induced by curiosity to stray to a considerable distance from his companions,

was greatly alarmed by the sudden appearance of a large lioness walking toward him. His fear was allayed by her lying down at his feet and gazing first piteously in his face and then at a tree a short distance off, and afterward walking toward the tree, yet looking back at him, as if she were asking him to follow. At length he ventured, and saw perched in the upper limbs of the tree a great baboon with two cubs in his arms, which he immediately presumed were those of the lioness. The sailor, being provided with his ax, decided on cutting down the tree, and set about it, the lioness, meanwhile, apparently watching every movement. As soon as the tree fell, she seized the baboon, tore him in pieces, and then turned round and tenderly licked her cubs. She now turned to the sailor, rubbed her head softly against him, as if thanking him for the kindness done her, and then picked up her cubs and carried them into the forest.

As an instance of the enduring affection felt by the lion for its master or keeper, it is said that Sir George Davis, an Englishman of some note, was presented a young lion by the captain of a ship from Barbary. Sir George exhibited much interest in the beast, and by careful training brought him up quite tame. When

HEAD OF A LION.

about five years old the lion occasionally did some little mischief by pawing and gripping people in his frolicsome moods, so that, finally, Sir George being apprehensive of some future catastrophe, ordered him to be shot. A friend hearing of this determination asked the lion as a present, and obtained him. Some years afterward, while Sir George was the English consul at Naples, he had occasion to go to Florence, and there visited one day the menagerie of the Grand Duke. At one end of the inclosure, in which the animals were kept, was a lion, which the keepers stated they had been unable to tame, though every effort had been made for upward of three years. No sooner had Sir George reached the cage of this fierce fellow than he ran to the gate, reared himself up, purred like a cat when pleased, and licked the hand Sir George put through the bars. The keeper was astonished, and on the visitor's demanding to be allowed to enter the cage, thought him insane. Sir George, however, persisted in his demand, and succeeded in

overcoming the keeper's scruples. The moment he entered, the lion manifested the greatest delight, threw his paws on his shoulders, licked his face, ran about him with all the joyful frolicsomeness of a pleased dog. This occurrence became the talk of Florence, and reached the ears of the Grand Duke, who, knowing the former sullen and angry conduct of the lion, requested an interview with Sir George, and witnessed a recurrence of the scene in the lion's den. It was the lion which Sir George had formerly owned.

The lion is to some extent gregarious, but is not found in herds. Two, three, or four consort together, and appear to do so in a very friendly state. It is very rare, even in those parts of Africa where lions are most numerous, to find more than two families of them frequenting the same district and drinking at the same spring. At the time of pairing, we are told by some naturalists, the lioness selects her mate, and prefers the attentions of him who is the champion of his set. Sometimes she displays coquettish tendencies, leaving one lion, with whom she may have been consorting, for the companionship of another, whose superior strength and nobler appearance attracts her attention. On such occasions a terrific combat usually takes place between the male beasts; and the jilted suitor must be vanquished before he will relinquish his claims in favor of his rival. The appearance of a lion when in confinement or in a good-humor does not convey the idea of ferocity so much as most of the other large *felidae*, and his wide head, overhanging brows, and flowing mane give him a majestic look, which, no doubt, contributed more than any special element of superiority that he may possess over other wild beasts, to the time-honored appellation of "king of beasts." Besides, when unexcited, his movement is measured and impressive, as if conscious of his strength.

Fossil remains of lions have been found, which indicate their existence at former periods in the world's history. Cuvier describes a fossil lion discovered in Europe, the remains of which were one fourth larger than the corresponding parts of the existing lion. We are told by the *savants* that this animal, like most of the other large species of carnivora which roam the forests of the East, is disappearing slowly, and that ere many generations shall have passed away, the jungles and forests of Persia, India, Arabia, and Africa will cease to resound with his terrific roar; yet we are assured by the prophet Isaiah, in his declarations concerning the New Jerusalem, that "the calf and the young lion and the fatling" shall lie down together, and "a little child shall lead them." And still further, as describing a new condition of things relating to those beasts now considered wild and ferocious, "the lion shall eat straw like the ox." Isaiah's language may be taken as figurative, as strongly expressing a new and blessed order of things in the times of "the great restoration." But taken as literal, it implies the continued existence of the lordly beast, and in relations perhaps like unto those it knew in paradisiatic times,

"Ere our first parents lost their fair estate."

CHRISTIAN F. SCHAFER, THE PEDESTRIAN.

Communications.

Under this head we publish such voluntary contributions as we deem sufficiently interesting or suggestive to merit a place here, but without incurring either the opinions or the alleged facts.

EXTENSIVE PEDESTRIANISM.

[WESTON'S recent undertaking has developed so much interest in pedestrianism, that we have been induced to take the following from the Sydney (Australia) *Illustrated News*, as a further illustration of what may be done by perseverance and a purpose. There is a large brain under that hat.—Ed. A. P. J.]

Mr. Christian Frederick Schafer, a German, who has traveled over a great portion of the globe, has arrived in Melbourne, Australia, having walked overland from Sydney. Mr. Schafer has traveled about 100,000 miles in the countries he has visited, of which nearly 60,000 were accomplished on foot. On the 6th of May he arrived in Sydney, from Batavia. Mr. Schafer is a dwarf, having met with an accident when only eight years old, which caused curvature of the spine; but, by temperate living, he enjoys uniform good health. During his travels in

America he met with President Johnson, whose guest he was for three weeks. Being a very intelligent man, his society is always acceptable in the highest circles. He was in all the principal cities of the United States, and went all the way from Portland, Maine, to San Francisco, mostly on foot. He is thirty-one years of age, and a native of Hesse Cassel, Germany, and commenced his travels fifteen years ago, with the object of writing an account of the world from personal observation. He has often walked forty miles a day, and is able, without any great fatigue, to walk that distance for many days in succession. He was three weeks in Salt Lake City, Utah Territory, and had many conversations with the Mormon prophet, Brigham Young, whom he describes as a very courteous, well-informed man, who has the *now* to flatter strangers, as he believes they will talk about him as one of the curious sights of the world. Mr. Schafer carries a diary with him, in which he notes the incidents of his travel as they happen. He has shown us the autographs of several eminent personages, among others, President Johnson, Secretary Seward, Horace Greeley, Anna Dickinson, Henry Ward Beecher, General Grant and Sherman, His Holiness the Pope, and Sir Richard Graves McDonald, Governor of Hong Kong, and formerly of South Australia. When in China,

the Emperor refused to allow him to enter Peking. Mr. Schafer has met with many changes in life. In the morning he has breakfasted with the highest personages, and in the evening has supped with a peasant. From San Francisco Mr. Schafer went to Hong Kong, and visited many places in the Celestial Empire. He then proceeded to Java. He intends to return to Europe by way of India and China, and from thence he will proceed across the Great Desert and Russian Tartary, visiting Siberia before he finally returns to Germany. He possesses nearly 6,000 photographs, and has quite a miniature museum of curiosities. He thinks that he will have finished his stupendous feat in about three and a half years, and will then devote himself to the production of his book, which he intends to publish in English.

[We have had the pleasure of entertaining, and of being entertained by, this famous traveler at the Phrenological Cabinet, 339 Broadway, New York, and shall look with interest for the book he promises to write.]

A QUAKER WEDDING.

BY J. E. SNODGRASS, M.D.

THE July (1897) number of the *PHRENOLOGICAL JOURNAL* gave an interesting article on "Quaker Courtship." I was reminded by it of a Quaker wedding which I attended, and I propose to give a description of it.

Before doing this, I must be allowed to remark that one of the most unique usages of this people, whose habits are as orderly as their customs are peculiar, is their marriage ceremony—if I may be allowed to call it a ceremony without giving them offense, for I am aware that they profess to discard ceremonials of every sort.

Although there are two schools of this sect in this country (not including those known as Progressive Friends), there is no difference among them as to this and most of their other customs. This ceremony is certainly remarkable for its simplicity, its beauty of simplicity. The daughter of a medical brother of mine was a party, and a personal interest in him induced me to attend. I omit the names of the bride and groom, as non-essential to my purpose.

Although the ceremony was performed in the meeting-house usually attended by the parties concerned, and the day was that devoted to the mid-week meeting, and their marriage "intentions" had been declared a month in advance, and the time and place were known, the attendance was not much larger than at ordinary meetings, while there were no such indications of excitement as would have been looked for at the public marriages in other sects of Christians. But among those present there was a large proportion of young people of both sexes, evidently such as had not gone through the interesting ordeal they had assembled to witness. A considerable part of those I judged, from their rather gay apparel, to be either "world's people" or "Hickory Quakers." This class posted themselves "up stairs," as the Friends call what other religionists usually designate as the "gallery," their gallery being quite another arrangement, and answering in use, though very dissimilar in form, to the more familiar pulpit of the churches. And here, again, it may be well to remark that this sect never designate their places of worship as churches, but simply "meeting-houses." In their "gallery," which is a collective designation for several elevated seats at the end of the building farthest from the main doors, their official members had, as usual, arranged themselves—that is, the "recommended ministers" and the "elders" and "overseers," who are chosen from both sexes. They faced the meeting, the men on the right side, looking toward the doors, and the women on the left; those in the body of the house corresponding in location, with the strictest reference to the *rule* of a separation of the sexes in worship, after the *rule* of the *Methodists* and still usually kept-up practice of the *Methodists*. So strictly do the Quakers adhere to this *rule* of separateness, which they deem indispensable to good order and acceptable worship, that on this occasion a young man, in his ignorance of their customs, happening to follow a lady under his charge to the "women's side," where he had costily seated himself, was instantly tapped on the shoulder. In the most gentle manner imaginable, by the door-keeper, and pointed to his proper place, to the bringing of a quiet

smile upon the faces of the young Quakeresses among whom he had seated himself!

At the appointed hour for worship (10½ o'clock), the bride and groom and their attendants—two for each, instead of half a dozen or more, as not uncommon at the marriages of "the world's people"—made their appearance in carriages, accompanied by their parents and other kinsfolk. They quietly and unostentatiously entered the meeting-house and took their seats in the following order: The bride and groom sat on a slightly elevated bench under the gallery and facing the assemblage, she arrayed in a dress of simplest bridal white, with bonnet and veil corresponding. There was the absence of everything like artificial adornments, while the pattern of her robe, if robe it should properly be called, was the plainest conceivable. On either side of the bride and groom sat their parents, while their attendants were arranged opposite, on the front seats on either side of the central aisle, tête-à-tête to them, respectively, but with their backs to the body of the meeting. All sat for about thirty or forty minutes in wrapt silence. The noise of a falling pin might have been heard amid the profound stillness of the breathless scene. At the end of the time named, the groom rose, with his head uncovered, and took his affianced bride by the hand as she arose with her bonnet on, and declared, in beautiful clearness and naturalness of voice, as follows:

"In the presence of the Lord and this assembly, I take Mary Joy to be my wedded wife, promising, with divine assistance, to be unto her a loving and faithful husband until death shall separate us."

The bride then repeated the same ceremony, with only such changes as were necessary for sexual appropriateness. This being done, the groomsmen brought forward a plain table, with equally plain writing materials, whereon was a marriage certificate. This was on parchment, in plainness and neatness of taste corresponding with the other arrangements, which they carefully unrolled. Inking one of a number of pens with great care, so that no blot should mar the document, one of the groomsmen handed it to the groom, who affixed his signature, and then to the bride for the same purpose. The clerk of the meeting—a standing official, whose duties at all business meetings simulate those of the more customary chairman and secretary in one, except that he never takes any vote, but, instead thereof, gathers the sense or "feeling" of the assemblage, and records it—now had an important duty to perform. He accordingly took his position in the gallery; and, quietly adjusting his spectacles, he first rolled up and then unrolled the certificate, reading its contents as he did so in a distinct voice. As there was nothing in it beyond the few words necessary to record the transaction, I will not take up space in copying it entire. Suffice it to say that it declared the "sense" of the meeting to be that the marriage knot was now tied according to the usage of Friends, which no doubt was the "feeling" of the bride and groom, though there was nothing in their self-possessed demeanor to indicate that they had any unusual feeling on the occasion in the ordinary sense of the word. But perhaps it would be as well to give some of the facts in the language of the certificate itself, instead of our own, as illustrative of the careful guarding of the institution of marriage by the Quakers. It certified that the parties had duly "laid their intentions" before the "monthly meeting;" that there had been nothing found "in the way" of their union, and that, in a word, all had been found right and proper between them, and as to other possible claimants of their hearts and hands; and that, therefore, the certificate had been granted to them by the meeting.

Under the certificate, on the ample parchment, there was a form for the signatures of witnesses. This was open to all present, whether outsiders, like the writer of this, or members. He did not fail to affix his sign-manual to it. And he wishes the act to stand, not merely as his certification of the fact of this Quaker marriage having been consummated in due form, but, at the same time, as his testimony to the beautiful simplicity of the ceremony throughout; for he is free to say that the whole scene did most favorably impress him, as it could not have failed to impress all other unprejudiced observers.

But it is proper to say, that the signatures of the wit-

nesses were not appended until after the meeting "broke," with the usual signal of the shaking of hands by the male "heads of the meeting," as the venerable Friends who sit nearest to the middle aisle of the "gallery" are styled, in the common parlance of the Society.

During one of the intervals of the marriage ceremony, a venerable "woman Friend" improved the occasion, as she, no doubt, was spiritually "moved" to do, with some very timely and appropriate words. These she spoke from her position in the gallery. She alluded to the solemnity befitting the occasion, and continued for fifteen or twenty minutes in a strain of genuine pathos, which could not have failed to stir a responsive chord in every heart present.

And herein I detected the great contrast between the scene which we are describing and that which too frequently marks ordinary marriage occasions. The too common levity was there hushed in a solemn stillness more befitting the serious business in hand. Not that the Quakers are wanting in mirth. They reserve their mirth for the bridal hearth. And you will vainly look there for long faces or austere countenances under the broadest-brimmed hat or the most smoothly-plaited bonnet. With their simple and quiet lives, and their orderly walk and conversation, they can afford to be cheerful, as those reposeing in the consciousness of right, and in the conviction which they have always seemed to us to carry about them, that "all things are beautiful in their time," and that "there is a time to be merry, as well as a time to be sad."

PREMIUMS.

We offer the following to all who may feel an interest in the PHRENOLOGICAL JOURNAL:

For 350 new subscribers, at \$3 each, we will give a Steinway Rosewood Piano, worth \$450.

For 100 subscribers, at \$3 each, we will give a Horace Waters five Octave Parlor Organ, worth \$170.

For 60 subscribers, at \$3 each, a Horace Waters five Octave Melodeon, worth \$100.

For 30 subscribers, at \$3 each, a Weed Sewing Machine, new style, worth \$80.

For 25 subscribers, at \$3 each, a Wheeler & Wilson's Family Sewing Machine, worth \$55.

For 12 subscribers, at \$3 each, a handsome Rosewood Writing Case furnished with materials, complete, worth \$12.

Those persons desiring our own publications instead of the premiums offered, can select from our catalogue books amounting to the value of the premium for which they would have such books substituted.

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office at prices annexed.]

LETTERS FROM EUROPE. By John W. Forney, Secretary of the Senate of the United States; Proprietor and Editor of the *Philadelphia Press* and *Washington Chronicle*. With a Portrait of the Author, engraved on Steel, by Sartain, and a Complete Alphabetical Index. One volume, cloth, gilt. Price, \$2. Philadelphia: T. B. Peterson & Brothers.

This neat collection comprises a series of letters descriptive of the journey to and through Europe, with observations on European society. Among them are the following: The Outward Bound; First Day at Liverpool; Railwayism and Factories; In the House of Commons; British Sympathy with Freedom; Reform and Revolution; London Amusements; The Peabody Fund; Spurgeon's Tabernacle; John Bright; Langham Hotel; Rebel Leaders in Exile; Westminster Abbey; American Railroad Stock; Low Wage and Little Education; Visit to Shakespeare's Grave; Free Trade and Protection; The Universal Exposition; Government of France; Tombs of Napoleon and Lafayette; Imperial Printing Office; Solferino and Gettysburg; Switzerland; Baden-Baden; Upon the Rhine; Belgium; Holland; The Irish Church; Royal Anthonship; Peoples and Places Contrasted; Foreign Capital; The Times Office; The Schützenfest; Pavements, Coaches, and Cabs.

THE PICKWICK PAPERS. By Charles Dickens. With thirty-two original illustrations, from designs by Phiz and Seymour. Philadelphia: T. B. Peterson & Brothers. Price, \$3 in cloth.

This edition of the illustrious bachelor, with his eccentric philanthropy and crusty, obstinate humor, is gotten up in an entirely new style by the energetic publishers whose names we are so often called on to record. The volume is a neat octavo, with clear type, and those fantastic engravings which so well accord with Dickens' facetious descriptions. Altogether, the edition is one of the most economical and tasteful of those recently published.

A TALE OF TWO CITIES, and GREAT EXPECTATIONS. By Charles Dickens. With original illustrations by S. Eytinge Jr. Boston: Ticknor & Fields. Diamond Edition. Price, \$1 50.

Two works of the author whom Boston appears lately to have gone crazy over, in one neat *petite* volume. Probably in no story does Mr. Dickens dwell more on the pathetic than in the "Tale of Two Cities," and in none does he exhibit more feeling. Mr. Eytinge's illustrations are excellent, and in style more to our taste than the abortions published in the English editions of Dickens.

THE PERSONAL HISTORY OF DAVID COPPERFIELD. By Charles Dickens. People's Edition. With twelve illustrations by H. K. Browne. Philadelphia: T. B. Peterson & Brothers. Duodecimo Edition. One vol., 963 pages. Price, \$1 50.

This book is said to be an Autobiography of the Author. Be that as it may, he has succeeded in investing with life-like characteristics his Aunt, Miss Trotwood, Peggotty, Dick, Uriah Heep, Micawber, Barkis, Murdstone, Steerforth, Traddles, Dr. Strong, etc. Few writers have the faculty of keeping the names of their characters more thoroughly in the mind of the reader by frequent repetitions. He is also remarkable for a judicious use of many words with which to convey the notions suggested by his imagination.

TRANSACTIONS OF THE ECLECTIC MEDICAL SOCIETY of the State of New York. For the Year 1866.

There are indications of progress in eclectic medicine if the contents of this volume are valid, and we have no reason to think otherwise. A discussion of temperamental influences by Dr. Powell is given at length, and forms one of the most interesting articles in the collection. Many other articles, considering eclectic and other theories of various common diseases, of no little value to the medical student and practitioner, are published therein. \$3.

THE PHILOSOPHY OF HOUSEKEEPING; A Scientific and Practical Manual for the Preparation of all kinds of Food, the Making up of all articles of Dress, the Preservation of Health, and the Intelligent and skillful performance of every household office. By Joseph B. Lyman, author of the "Prize Essay on Cotton Culture," etc.; and Laura E. Lyman, author of "Prize Essay on Housekeeping." Hartford: Goodwin & Betts. Cloth. Pp. xiv., 560. Price, \$2.

In this neatly and carefully prepared volume we have something of a family encyclopedia. Not only are the various articles in use as food for mankind designated, and the modes of preparing them for the table detailed, but also their chemical composition, adaptation to human necessity, physiological properties, etc., are graphically set forth. Tables are given, showing the time occupied in digesting various edibles, and the nutritive power respectively of the different meats, fruits, vegetables, and farinacea.

A hygienist might not accept some of the recipes for favorite dishes on account of the pepper, butter, and lard somewhat freely employed in them; but no doubt the great majority of our housewives would indorse them cordially, grease and all. The most valuable part of the volume, in our opinion, is that relating to the care of young children, the training of servants, and the home treatment of sudden indispositions and accidents to the person. The suggestions given with reference to clothing are eminently practical, as are also those relating to the arrangement of a dwelling and the economical ordering of its important adjunct, the kitchen. Our readers may consider the book worthy of personal consideration when we inform them that its authors are frequent contributors to the pages of the PHRENOLOGICAL JOURNAL.

THE ADVENTURES OF OLIVER TWIST; also, Pictures from Italy, and American Notes for General Circulation. By Charles Dickens. With Original Illustrations, by S. Eytinge, Jr. Diamond Edition; pp. 487. Price \$1 50. Boston: Ticknor & Fields.

The titles at once make these works familiar; for who has not read *Oliver Twist*, and the *American Notes*? In the latter, Mr. Dickens holds up a looking-glass to a few vulgar characters with whom he associated when on his travels through our country. He talks about stage-drivers, cooks, waiters, boot-blacks, tobacco-spitting politicians, etc. If he associated with the better class, he seldom mentions it. We will not be so ungenerous as to suppose he sought, from choice, those about whom he has so much to say, although there was evidently an affinity between his spirit and theirs; indeed, Mr. Dickens seldom rises above a play-actor and his class. We see nothing of the religious or spiritual in his works; was he deficient in Veneration, Conscientiousness, and Spirituality? A side remark may not be out of place here. It is often said that had there been an international copyright law between England and the United States, that the copyright on sales of his works would have made him rich. In this he loses sight of the fact, that whereas now his works are published by half a dozen different houses, in the case of a copyright they would have been published by a single house, and comparatively few copies printed. His fame has been created by this free-trade in his stories.

PRAYERS FROM PLYMOUTH PULPIT. By Henry Ward Beecher. Phonographically reported. 1 vol., 12mo, pp. 232. Price, \$1 75. May be ordered from this Office.

So far as the mechanical execution of this work is concerned, the publishers have done their duty. It is printed in good-sized type, fine paper, and is tastefully bound. In short, it is a handsome book. But what of the subject? This! the utterances of an honest, earnest mind before the throne of grace. In other words, appeals to Heaven for the furtherance of God's will on earth; for the advancement of godliness among men. Much discussion has been indulged in, in regard to the efficacy of prayer. Some will have it that the laws of God are immutable, unchangeable, and that no appeal can move Him from His pre-established purposes. On the other hand, it is claimed that the power of prayer is great; that "the prayers of the righteous availeth much," and that prayer has much to do with influencing one's own course; to opening one's mind to that which is above the reach of reason; that it lets the light of Heaven in upon his mind, as it were, through avenues above the doors and windows, by which his course may be steered; that it influences all who come within the hearing of reasonable prayers. A prayer is a desire, and when in the interest of mankind will have a response.

Many there are with praying minds without the ability to give them verbal utterance. We do not pretend to say that a silent prayer is less potent than a spoken prayer; but it is the custom in civilized society to pray aloud, to give thanks at the social board, and to sing praises to the Lord of all.

Many there are, however, who, for a want of proper education, training, and practice, know not what to say.

Roman Catholics and Episcopalians have their prayers in print, from which all who can read may learn. Why should not the Presbyterians, the Congregationalists, the Baptists, the Methodists, and the rest, print the prayers of their representative men?

If it be objected that it begets mere formal worship, we answer: the child is first taught the forms before he is expected to be visited by the spirit. The book before us gives the fullest expression of this ripe Christian, who, we may say, was almost born into the ministry, who has had a large experience, and who, whatever his peculiarities in other respects, is conceded to be a feelingful, emotional, devout, and prayerful man.

Reading his prayers can do no man harm, and they may do some of us much good. We heartily commend the book to one and all, believing it will tend to increase the spirit of prayer.

DIE MODENWALT, issued in monthly numbers by Mr. Taylor, contains fashion-plates, patterns, etc., all gotten up in handsome style. Price 30 cents a number; \$3 a year.

A THOUSAND AND ONE GERMS OF ENGLISH POETRY, selected and arranged by Charles Mackay, LL.D. Illustrations by Millais, Gilbert, and Foster. 1 vol., 12mo, pp. 600. Price, \$2. London and New York: Rutledge & Sons.

A less modest author would have named such a book as this an *ENCYCLOPEDIA*. Dr. Mackay has himself written some of the finest verses in the language, and this book contains them. It is beautifully printed on fine toned paper, and, even in plain binding, is a beautiful presentation book for the holidays, for any days, "for all times."

THE PHYSICIAN'S HAND-BOOK FOR 1868.

By William Elmer, M.D. Morocco tuck. \$1 75. New York: W. A. Townsend & Adams.

This almost indispensable work—now in its eighth year—has been thoroughly revised, and has been gotten up with a view to convenience and economy. Every physician should have a copy.

THE GUARDIAN ANGEL. By Oliver

Wendell Holmes. Published by Ticknor & Fields, Boston. 12mo, pp. 420. Price \$2.

This story, which has been so long running through the *Atlantic Monthly*, is at last finished, and published in a neat book. Praise of anything written by Oliver Wendell Holmes is unnecessary, as he always manages to say what he says that whoever begins to read will keep on to the end. He uses phrenological terms to designate character, and depicts peculiarities with much minuteness. Myrtle Hazard is the name of the heroine, and it is in very good keeping with the phases of her young life. She is introduced to the reader by an advertisement in the *Village Oracle* as having been missed from her home for the last two days, and is described as "a child, fifteen years old, tall and womanly for her age, dark hair and eyes, fresh complexion, regular features, a pleasant smile and voice, but shy with strangers." Such a "child" would be very likely to need a "Guardian Angel" in such vicissitudes as she had to pass through, and here appeared in the form of "Master Byles Gridley, A.M., a bachelor, who had been a schoolmaster, a college tutor, a professor, a man of learning, of habits, of whims, of crotchets, such as are hardly to be found except in old, unmarried students." In describing him phrenologically, Clement Lindsay—who married Myrtle Hazard—"maintained he had a bigger bump of Benevolence, and as large a one of Cautiousness, as the two people most famous for the size of these organs on the phrenological chart he showed him, and proved it, or nearly proves it, by careful measurements of his head."

"The Guardian Angel" will have a place among the most popular novels of the day.

STORIES AND SIGHTS OF France and Italy.

By Grace Greenwood. With Illustrations. Boston: Ticknor & Fields. Cloth, gilt, \$1.

A pleasing book for children—containing much historical matter, written in the style which allures youth to peruse that which will profit them. Among the more striking narratives we have *Père la Chaise*, *Story of Lavalette*, *Versailles* and *Louis XV.* and *XVI.*, *Little Angelo* and his *White Mice*, *The Tarpeian Rock*, *The Coliseum*, *The Catacombs*.

PRAYERS OF THE AGES. Compiled by

Caroline S. Whitmarsh. Boston: Ticknor & Fields. Cloth, gilt, \$2.

This is an exceedingly neat sample of Messrs. Ticknor & Fields' publications, so far as paper, typography, and binding are concerned. As to the contents, the devotional and the curious can find therein much of interest. If we would study the spirit of ancient literature in its strongest and most fervid aspect, we should contemplate those utterances of the soul, when communing with Deity, which have been transmitted to us on the conserving parchment. The reader of this book will learn how Socrates, Plato, and Veda framed their petitions, as well as St. Augustine, Mohammed, Luther, Bossuet, Jeremy Taylor, and Channing. The collection forms a volume of no mean value to any library.

THE NEW YORK Methodist is publishing sermons by Revs. Newman Hall, Henry Ward Beecher, and other clergymen. See advertisement.

THE PHYSIOLOGY OF MAN. Designed

to represent the Existing State of Physiological Science as applied to the functions of the human body. By Austin Flint, Jr., M.D., Professor of Physiology and Microscopy in the Bellevue Hospital Medical College. New York: D. Appleton & Co. 8vo, cloth, pp. 656. Price \$4 50.

Dr. Flint, as a medical practitioner, lecturer, and author, has obtained the general respect of the members of his profession. Giving his attention more particularly to the department of physiology, he has been enabled by assiduous study and investigation to accumulate an amount of data which renders his instructions and carefully prepared works of great value to the student and general practitioner. Something over a year ago the author published the first volume of his contemplated series on the subject of physiology, and its reception encouraged him to carry forward his plan with, as is evidenced by the speedy production of a second volume, considerable zeal and diligence. The great subjects of alimentation, digestion, absorption, lymph, and chyle are extensively treated in this volume. Fully appreciating the importance of correct dietetic principles, which unfortunately can not be said of the great mass of physicians, Dr. Flint has, with much pains and great clearness of statement and illustration, quite comprehended the large scope of the subject of alimentation. The details furnished with respect to digestion and absorption are very numerous and interesting, especially as practical rules and suggestions are given as guides for those who would eat and drink to the refreshing and strengthening of their bodies and not to their impairment. The articles of food in common use are each described, and their nutritive and other properties explained at length. Besides, several formulas are given for the preparation of food for the table. The facts adduced in illustration of the deleterious effects of improper and insufficient food are striking. Andersonville prison with its horrid dietary is instanced as exemplifying the pernicious results of bad and scanty provisions on large bodies of men. The reader of this portion of the work will be impressed by the remarkable and varied phenomena exhibited by the captive soldiers in relation to their worse than wretched fare.

In treating of digestion, Dr. Flint has based his statements upon accumulated experimental facts, and thus avoided the confusion and contrariety of opinion so prevalent in the works of earlier authors. Not satisfying himself with the dicta of others, he has made it a part of his work to trace important physiological discoveries to their source, and to verify also important facts, as far as possible, by personal experiment. As a review of the actual facts relating to the subjects treated, the work has no superior.

THE OLD CURIOSITY-SHOP. By Charles

Dickens. With twelve original illustrations, from designs by H. K. Browne. Price \$1 50 in cloth. T. B. Peterson & Brothers, Philadelphia.

Probably no character created by the imagination of Mr. Dickens has been more admired than *Little Nell*, the gem of this work. In point of finish, style, and cheapness, this volume, one of the "People's Duodecimo Edition," must recommend itself to all judges of book-making.

AN ESSAY ON MAN. By Alexander

Pope. With notes, by S. R. Wells, and fifteen original illustrations. 1 vol., 12mo, fancy muslin, beveled boards, gilt, very handsome. Price, \$1. The same in pamphlet form, only 50 cents. Address this Office.

Never before was this great poem illustrated, nor so handsomely printed. Paper, types, and ink are of the best, furnishing a fitting dress for the immortal thoughts. It is refreshing to read and to re-read the grand conceptions of a true poet, such as this, which lead our thoughts from the finite to the infinite—from earth to heaven. There is no finer model in the language for would-be-poets to follow. The "notes" are intended to explain certain statements which have caused no little discussion, such, for example, as this: "Whatever is, is right," and so forth. The spirited engravings give point and force to the text. The book must speedily find its way into every well-stocked library. It is a very appropriate, though inexpensive, holiday gift companion for our People's Pictorial Edition of *Æsop's Fables*. May be sent by return post, or ordered through any bookseller.

OPPORTUNITY. A Novel. By Anne Moncure Crane, author of "Emily Chester." Boston: Ticknor & Fields. Price \$1.50.

A story of Southern life, and, like the climate and scenery of the South, warm and varied. In most respects this is a chaste and unseasonal tale, adapted to the reader of taste and discrimination, and not to those entertaining prurient fancies in literature.

WHO WAS JESUS? New York: N. Tibbals & Co., 37 Park Row. 8vo, cloth, pp. 711. Price \$3.

This is an extended work, having for its evident purpose the logical as well as theological substantiation of the Divinity of Jesus Christ. The subject of the inquiry which forms the title of the book is dealt with in such a specific manner, that the author doubtless had in view a refutation of the subtle and speculative reasonings of Strauss, and the bolder but much less synthetic enunciations of Rénan. That the author has been to much pains in preparing the work is evident from the elaborate nature of its divisions, as evidenced in the table of contents, viz.: Christ in the Old Testament; Jesus in Modern History; Jesus in Ancient History; Jesus in Chronology; Jesus in the Church; Jesus in Psychology; Who was Jesus? Jesus of Nazareth, a Nazarene; Jesus in Types and Prophecy; Jesus the Messiah; Three Years' Ministry of Jesus; Jesus the Prophet; The Miracles of Jesus; Third and last Passover; The Trial, Crucifixion, and Resurrection; Ethics of Jesus. To the seriously religious this work will furnish excellent material for study and reflection. To the indifferent about heavenly things, if they will seek its pages for mental improvement only, it offers a field for the exercise of thought which few books of modern publication afford.

Many of the positions taken by the writer in the course of his argument are new, and exhibit an extent of Scriptural research very rarely met with in the ranks of the greatest commentators. The writer assumes that the Scriptures are largely allegorical, and in this view of them the testimony of Christ is to be found on almost every page. Calling to his aid mathematical computation, he introduces many remarkable calculations in confirmation of biblical chronology and the advent of Christ. The calculations are made because, as he says: "I can find no chronology extant but what conflicts with some specific statement on its pages. . . . I regarded the Old Testament, being the work of a higher power, as necessarily complete in itself; therefore concluded to ascertain whether or no the elements of a perfect chronology from Adam to Jesus were to be found within its limits; especially as such a work was essential to a correct reading of its pages, and I think I succeeded."

We think the book worth perusal simply for the examination of the author's views on Scriptural chronology, the rock on which many have wrecked their faith.

NEW MUSIC. We would acknowledge the receipt of the following new music from the publishers, Messrs. Oliver Ditson & Co., of Boston, through C. H. Ditson & Co., of New York.

"Thérèse Quadrille on Popular French Melodies," by Dan Godfrey, price 60 cents; "Tell Me Darling Quickstep," by John P. Ordway, M.D., 50 cents; "Maiden Blushes," song, music by M. Keller, 30 cents; "I Love to Sing the Old Songs," a ballad, by Charles Hodgson, 30 cents; "O'er Graves of the Loved Ones," song and chorus, by J. P. Ordway, M.D., 50 cents; "Single Gentlemen, How Do You Do?" a comicetto, arranged by George D. Spalding, 30 cents.

CHRISTMAS BOOKS AND SKETCHES. By Boz. Illustrative of Every-Day Life and Every-Day People. By Charles Dickens. With Original Illustrations, by S. Eytinge, Jr. Boston: Ticknor & Fields. Diamond Editiop. Price, \$1.50.

In these short stories Dickens' raciness is exhibited in its full vigor. A Christmas Carol, The Cricket on the Hearth, and The Hanted Man, long ago acquired an advanced reputation with the reading public, and have in no wise declined in interest since.

COUNTERFEIT DETECTOR. Messrs. T. B. Peterson & Brother, of Philadelphia, continue to publish on the 1st and 15th of each month, at \$1.50 and \$3 a year, their well-established and reliable Detector.

BARNABY RUDGE. By Charles Dickens. With twelve original illustrations, from designs by H. K. Browne. T. B. Peterson & Brothers, Philadelphia. Price, \$1.50 in cloth.

This edition of "Barnaby Rudge" is the sixth volume of an entire new edition of Charles Dickens' Works, now in course of publication by T. B. Peterson & Brothers, Philadelphia, which is called "The People's Edition, Illustrated." It is printed on fine white paper, from large, clear type, a size that all can read. It is a good and cheap edition of "Barnaby Rudge," which abounds in grotesque character and humor.

THE LONDON DAILY STAR, organ of John Bright and others of like opinions, did us the honor recently—they spell it honour—of noticing our modest monthly in terms to wit: "THE PHRENOLOGICAL JOURNAL is a handsomely got up monthly quarto, with numerous illustrations, and published by the celebrated New York house of S. R. Wells, late Fowler and Wells, and issued in London by J. Burns, 1 Wellington Road, Camberwell, S. The last two numbers, besides a rich variety of matter, give portraits and phrenological critiques of the Revs. T. Binney and Newman Hall, besides various physiognomical representations of human character. All who are interested in phrenology, physiology, ethnology, education, and social reforms in general will have a complete library of reading, for the month, in this elaborately, yet popularly conducted periodical. It is obvious neither labor nor expense is spared to make it worthy of world-wide success."

For all of which we beg to return thanks, and would venture to express the hope, that the JOURNAL may continue to increase in popularity and usefulness.

A CINCINNATI paper contains a notice written by Dr. A. Curtis, of the new edition of the "Essay on Man," by Alexander Pope. He says: "The most beautiful edition of this, the richest gem of English literature, has just been issued in New York. The poem is illustrated with cuts, and phrenological notes from S. R. Wells, which, to most readers, greatly enhance the value of the work. The type is so large and clear that it is peculiarly valuable to critics who would read it, and to their hearers who follow them in the examination and application of this beautiful and most instructive poem. I know of no other so well adapted to instruction in elocution and morals, in all our schools, as this little work." It is handsomely bound in muslin, beveled boards, gilt; price, \$1; and in plain paper, at 50 cents.

THE HOME JOURNAL—cleanest and fairest of all the weeklies—renews its youth and vigor with the new year. The editor says: "The object of *The Home Journal* is to furnish a pure, high-toned, entertaining paper of Literature, Art, and Society for American homes—a paper that shall promote a true culture and refinement, and foster at the fireside those pleasures, sentiments, and sanctities which make home the Eden of the heart. Party politics, and all matters of a sectarian, sectional, or sensational nature are carefully excluded." Terms, \$3 a year. Published by Morris Phillips & Co., at 107 Fulton Street, New York.

DEMOREST'S MONTHLY MAGAZINE for December lies on our table. It contains several full-page illustrations of the newest fashions, besides articles and tales of a miscellaneous nature. Subscription price, \$3 a year; single copies 30 cents.

HARPER'S BAZAR, a newly published weekly gazette of fashions, is likely to gain the popular favor from the fullness of its notices and illustrations touching every variety of dress. Single copies 10 cents; \$4 per year.

LE PETIT MESSENGER for December comes to us from Mr. S. T. Taylor, 349 Canal Street, replete with the most recent Paris fashions. Its expositions of the various articles included in a lady's *trousseau* are richly colored and ornamented. Separate pattern slips accompany the number. Subscription \$5; monthly, 50 cents.

THE BROADWAY MAGAZINE is a cheap monthly, devoted to such stories and miscellaneous matter as the enterprising publishers may think will sell.

Its title means simply that, inasmuch as everybody is supposed to have heard of our famous city thoroughfare, that it would prove a success when used to bait a hook to catch readers. It is written by Englishmen, printed by Englishmen, but it is expected to sell to story readers in both countries.

THE NORTHWESTERN FARMER, a handsome monthly, published at \$1.50 a year, by T. A. Bland, Indianapolis, Indiana, proposes to club that magazine with the A. P. J. at \$3 a year. We do not know how he can afford it; but that is his offer. The *Farmer* contains 28 quarto pages, with illustrations, and is intended to promote the interests not only of the *Farmer*, but of all that belongs to rural life.

THE FIFTEENTH ANNUAL REPORT of the Young Men's Christian Association of the City of New York contains *in extenso* the transactions of the organization for the twelve months ending May, 1867. The rooms of this meritorious body of young men are at 161 Fifth Avenue, where a well-furnished library and reading-room are open to all comers.

THE MARYLAND EDUCATIONAL JOURNAL. A school and family monthly. \$1.50 a year. E. S. Zevely, publisher, Cumberland, Md. It is now in the last quarter of its first year, and is pushing on vigorously the work of education in "My Maryland." Success to all well-directed efforts in this direction.

THE AMERICAN ECLECTIC MEDICAL REVIEW is edited by R. S. Newton, M.D. Published monthly, at \$2 a year, in New York. This may be regarded as the organ of the Eclectic Medical School in the United States. It is ably edited and handsomely printed.

TO BE READY IN JANUARY.

THE BOOK OF ORATORY; or, The Eloquent Speaker. Sacred and Secular. Including a Chairman's Guide. By Rev. Wm. Pittenger. Introduction by Hon. John A. Bingham. A clear and succinct exposition of the rules and methods of practice by which readiness in the expression of thought may be acquired, and an acceptable style, both in composition and gesture. \$1.50. S. R. Wells, New York, publisher.

IN PRESS.

LIFE IN THE WEST; or, Stories of the Mississippi Valley. By N. C. Meeker, agricultural editor of the New York *Tribune*.

New Books.

Notices under this head are of selections from the late issues of the press, and rank among the more valuable for literary merit and substantial information.

BREAKING AWAY; or, The Fortunes of a Student. By W. T. Adams (Oliver Optic). Cloth, \$1.40.

THE STARRY FLAG; or, The Young Fisherman of Cape Ann. By W. T. Adams (Oliver Optic). Cloth, \$1.40.

PRACTICAL ANATOMY. A New Arrangement of the London Dissector. With numerous Modifications and Additions. Illustrated. By D. H. Agnew, M.D. Second Edition, revised. Cloth, \$2.25.

POEMS OF FAITH, HOPE, AND LOVE. By Phoebe Cary. 16mo, pp. 249. Cloth, \$1.75.

THE QUEENS OF AMERICAN SOCIETY. By Mrs. Ellet. 8vo, pp. 464. Cloth, \$2.75.

GRACE IRVING'S VACATION, WITH ITS SUNBEAMS. 18mo, pp. 303. Cloth, \$1.40.

PICTORIAL HISTORY OF THE CIVIL WAR IN THE UNITED STATES OF AMERICA. By B. J. Lossing. Vol. 2. Cloth, \$5.50.

CLIMBING THE ROPE; or, God Helps Those who Try to Help Themselves. By May Mannerling. Illustrated. \$1.15.

SELECTIONS FROM THE WRITINGS OF JOHN RUSKIN. Cloth, \$2.75.

LIVES OF THE QUEENS OF ENGLAND, from the Norman Conquest. By Agnes Strickland. Abridged by the Author. Revised and Edited by Caroline G. Parker. Cloth, \$2.25.

To our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter. If questions be brief, and distinctly stated, we will try to respond in the "next number." Your "BEST THOUGHTS" solicited.

AN ORDER FOR BOOKS, JOURNALS, etc., must be written on a sheet by itself. Questions for this department—TO CORRESPONDENTS—and communications for the Editor, must be written on SEPARATE SLIPS.

SPECIAL NOTICE.—Owing to the crowded state of our columns generally, and the pressure upon this department in particular, we shall be compelled hereafter to decline all questions relating to subjects not properly coming within the scope of this JOURNAL. Queries relating to PHYSIOLOGY, PHRENOLOGY, PHRENOGONOMY, PSYCHOLOGY, ETHNOLOGY, and ANTHROPOLOGY, or the general SCIENCE OF MAN, will still be in order, provided they shall be deemed of GENERAL INTEREST. Write your question plainly on a SEPARATE SLIP OF PAPER, and send us only ONE at a time.

FISH STORY.—If a tub partly filled with water be placed on the scales and carefully balanced, and some small live fish are afterward put in the water, will the scales indicate the weight of the fish?—If not, why not?

Ans. That subject has been mooted, we suppose, for ages. We remember the story from our boyhood, and have heard it confidently asserted that a fish weighing a pound put into a pail half full of water would not increase the weight of the whole. Now, this can not be. Ten pounds of water will be indicated as ten pounds on the scales, and if a fish be put in, the scales will indicate an additional weight equal to the weight of the fish. Now, permit us to ask you a question. Why don't you try it? and then you will know, and you will thus explode an old error or establish something contrary to philosophy and common sense.

STUDENTS OF PHRENOLOGY.—There is a growing inquiry on the subject of learning Phrenology, not merely as an accomplishment or as a matter of curiosity, but an earnest wish to fathom its depths and comprehend the length and breadth of the subject. The following is a specimen of the spirit of many letters received by us.

I purpose studying Phrenology with a view to teaching it, and lecturing upon the laws that govern man. I want a thorough knowledge of every branch. I desire to understand the science of the soul and the connection of mind and matter—how the mental governs and controls the physical. I want to be able to demonstrate clearly to the world the cause of physical degeneracy and moral depravity; how to prevent disease, and how to cure the suffering.

What books do I need, and what would be their cost, and how much study will be necessary before entering your course of profession, instruction in practical Phrenology? I would like to become a member of your class this winter, but have acquired but little knowledge of the subject as yet from books, though I have a strong intuitive tendency to the subject, and do not intend to stop short of a thorough knowledge of the science.

As a general reply to all such inquiries, we may remark that we tender a cordial welcome to all who are honest and intelligent, with a fair education and good common sense, who wish to become practical teachers and disseminators of the great truths of Phrenology and Physiology as

applied to family training and culture, self-improvement, choice of pursuits, etc. Twenty dollars will buy all the works necessary to be studied preparatory to entering the field. For a more particular description of the text-books needed, and a full explanation of the course of instruction, to commence January 6th, 1868, and the expense and time required, please write for a circular entitled "Professional Instruction in Practical Phrenology."

WE are desirous of obtaining the address of Rev. J. Bradford Sax, author of "Organic Laws."

AN OFFER OF MARRIAGE.

ED. PHRENOLOGICAL JOURNAL.—Dear Sir: I am in a quandary, and appeal to you for advice. A young gentleman of respectable family, in good society, a merchant's clerk on a salary of \$1,500 a year, offers me his hand in marriage. I am sure he loves me; think I could love him. He is two years older than myself—dark complexion; I am light—a blonde. My circumstances are now at home with my parents, who are unwilling to have me leave home; still, being "of age," they will not interfere in the least with my wishes. But we are a thoroughly temperance family, while the gentleman referred to is what is termed a "moderate drinker," not habitual; to which I can not seriously object, though my friends do. The point with me is this. I have an utter loathing for tobacco, and the gentleman is addicted to its use. He smokes a pipe after his meals, and chews very moderately when about his work—says he can quit it, but it does him no harm, and is a luxury. The cost is but little. Now, what I want to know is this, will he become confirmed in these habits so as to be incurable, and must his wife always suffer the nauseous smell? If he is to become a tobacco sot, I would rather not marry him.

Ans. This is, indeed, a serious question. The habits referred to are very common among men. Comparatively few are exempt. We find chewers, smokers, and snuffers in the pulpit, in the colleges, in the halls of legislation, in workshops, stores, hotels, steamboats, railways, dining rooms, drawing rooms, everywhere. Young men and boys learn by imitation. Tobacco is loathsome to all unperverted tastes, and especially so to women—yet some coarse natures affect to "rather like the fragrance of a good cigar." Parents seeing their young sons indulging in the weed protest against it; but sonny replies, "Father smokes, our clergyman smokes, other boys smoke. Why can't I?" "But it will make you a dwarf in mind if not in body, to smoke, chew, and spit yourself away." "I'll risk it. General Grant smokes all the time, and he is not exactly a dwarf." It's very well for grown-up men to tell us boys that we should not smoke." I remember a story of a man who, with wicked oaths, flogged his son for swearing. Example is greater than precept. Our advice to the lady is this. Name your objections frankly to the gentleman, and say to him that you can not be happy with one who makes himself constantly offensive. If he will drop both tobacco and liquor you will entertain him. Then wait six months or a year, and when the habits are abandoned you may be safe in permitting him to become your husband and the father of your children. Smoking and chewing almost inevitably lead to drinking, in which there is no safety.

TRAVELER.—The cost of traveling from New York to San Francisco depends much on the route taken. The first-class fare on the steamers running to Panama is about \$350. The second-class charges are about thirty per cent. less. The difference between first-class and

second-class charges consists chiefly in the state-room accommodations, the second-class passenger being furnished a much inferior place to "bunk" in during the passage.

LOGARITHMS.—For a full consideration of these important aids in some departments of calculation, we refer you to "Loomis' Tablets of Logarithms," price, \$1 50.

A. R. R., of Lehigh Co., did not give her address. On its receipt we will write her.

EDUCATIONAL.—What constitutes the difference in qualification for the degrees of Master of Arts, of Science, and of Literature?

Ans. There are two degrees which are usually conferred by colleges on the respective students meriting them at the close of the prescribed courses of study. These are Bachelor of Arts and Bachelor of Science. Bachelor of Arts is accorded to the student who has passed successfully through the departments of English Literature, Science, and the Classics. Bachelor of Science is awarded to him who has completed the prescribed course in English Literature and Science. Master of Arts is called a degree in course, and is conferred three or more years after a student has graduated as an A.B., provided that he has pursued some scientific or learned profession, and can satisfactorily respond to such interrogatories as may be proposed to him. The degree B.S. does not entitle the possessor to that of A.M.

Bachelor of Literature is merely complimentary.

The degree of LL.D. is honorary, and is frequently conferred on eminent men not lawyers.

The text-books mentioned are all well adapted to your purpose. Arnold's Greek series is an excellent one for the student. Day's Analytical Geometry is good, and probably as clear in its elucidations as any published.

FRENCH, GERMAN, ITALIAN.

—The following are excellent text-books in these languages, and may be procured through us at prices annexed: In French, Ollendorf's Grammar, \$3; De Fives' French Reader, \$1 10; Surenne's F. Dictionary, \$1 75; Surenne's F. Manual, \$1 90. In German, Ahn's Method, \$1 40; Heldenreich's German Reader, \$1 10; Adler's Pocket G. Dictionary, \$3 25. In Italian, Fontana's Grammar, \$2; Foresti's I. Extracts, \$2; Meadows' I. Dictionary, \$3 75.

THE VOICE.—Please inform me how I can strengthen a weak voice. My parents both have strong voices, and I see no reason why I should not be equally favored in that respect.

Ans. Seek to maintain good general health, avoid spices and all heating condiments, avoid tobacco, avoid confined and impure air, especially at night, stand erect, expand the chest, and learn to use the vocal apparatus with distinctness and deliberation, and the voice will become stronger. We have a little work entitled "The Human Voice; its Right Management in Reading, Speaking, and Debating," which it would do you good to read. Price by mail, 50 cents.

THE DOLLAR MICROSCOPE, THE NOVELTY MICROSCOPE, THE CRAIG MICROSCOPE, which is best? Are they worth what they cost?

Ans. We have seen testimonials from such authorities as the *Scientific American*, religious newspapers, and from numerous private letters. We have also seen criticisms, in which it was alleged that neither

of the above would perform miracles, or answer the purposes of a thousand-dollar compound instrument. It is very much with the microscope makers as with others; each, no doubt, intends to give the money's worth, less cost for advertising, and a living profit. One may answer one purpose, another a different purpose, while all may at least be amusing and instructive. It is a lesson to learn, that the microscope reveals that which the unaided eye could never behold. So of the telescope.

MORE ABOUT TEN-PENNY NAILS.

—In the November number of the A. P. J. you ask about the "ten-penny nail," and call for a "solution." Perhaps I can answer. About twenty-five years ago, while engaged in missionary work in this Western country—Michigan—I called on two families who were *nailers*, men, women, and children; and they had brought with them from the "Old Country" their nail-making machine. The machine consisted of a frame-work and floor about seven feet by five, on which was a bellows, fire-place, anvil, rod-cutter, header, seat, etc. The nailer sat at his work, everything within his reach, drove the bellows and header with his feet, and the hammer, rod, etc., with his hands.

For my gratification one of the ladies kindled the fire, mounted her seat, and wrought specimen nails for me; first the three-penny, then the four-penny, six-penny, eight-penny, ten-penny, twelve-penny, and twenty-penny. "This is the way, sir," she said, "that we made or wrought nails years ago in the 'Old Country.' We made them, and they were sold at so much per hundred. These little fellows are lighter and shorter, and they were made and sold as three-penny (per 100) nails; and these longer and stouter, at twenty-pennies per 100, and so with all sizes per 100."

Were the late Grant Thorburn, "Laurel Todd," connected, he could have told the Farmer's Club and the wise *Independents* all about these nails. Perhaps their inquiry will be answered in the above. M. L. W.

Publisher's Department.

OUR OWN PUBLICATIONS.

We have just printed an Illustrated Catalogue, comprising all the best works on Phrenology, Ethnology, Physiology, Phrenognomy, Psychology, Hydropathy, Phonography, Anatomy, Dietetics, Hygiene, Gymnastics, etc., with prices; which will be sent to any address on receipt of two three-cent stamps. Address this office.

AGENTS may do well in selling our useful books in every State, county, and town. Send stamp, and ask for "Terms to Agents."

MIRROR OF THE MIND; OR, Your Character from your Likeness. For particulars how to have pictures taken, inclose a prepaid envelope, directed to yourself, for answer. Address, SAMUEL R. WELLS, No. 329 Broadway, New York.

"SAINTS AND SINNERS."

The articles published under the above title in our November and December numbers were written by our old correspondent and contributor A. A. G. Readers will judge for themselves the merit of this writer's productions. He gives us the first installment of "The Uses of Culture" in our present number.

THE NEW ILLUSTRATED ANNUAL OF PHRENOLOGY AND PSYCHOLOGY FOR 1868 contains: Marriage of Cousins, its effects; Whom and When to Marry; Right Age; Jealousy in all its Phases, with causes and cure; Distinguished Characters, with portraits; Bismarck, D'Israeli, Victor Hugo, the Hon. Henry Wilson, Miss Braddon, Kings and Queens; Two Paths in Womanhood, illustrated; How to Read Character; eighty pages, handsomely printed; is having a very large sale. It is a capital campaign document—full of instruction and valuable suggestions. Those interested in the dissemination of the principles we teach should place copies within the reach of all. Single copies, prepaid by post, 25 cents. Five copies for a dollar. A still larger discount to agents who buy to sell again.

REGISTER YOUR LETTERS.—When post-office orders—which are best to remit—can not be obtained, it is safer to have money letters registered.

GREENBACKS ARE NOW OUR NATIONAL CURRENCY, and we prefer them to the old-style bank notes. When fractional currency is remitted, let it be clean and genuine.

FOR SETTLEMENT IN SOUTH CAROLINA.—Mr. E. J. C. Wood, of Alben, S. C., has published a pamphlet with map, giving a full account of lands there for sale, including a description of the soil, productions, climate, society, and all that one may wish to know in regard to that locality. Those seeking homes in the South should inclose stamp, and address to Mr. Wood, of Alben, as above.

General Items.

A HAPPY NEW YEAR.

READER, the year on which we now enter will be just what we ourselves make it. If we seek our own selfish ends; if we get from others more than we give to others, we shall come far short of that fullness of happiness which comes of a generous spirit. If we do good—if we put the unfortunate in a way to improve and help themselves—we thereby add to our own happiness. It is not the prodigal or indiscriminate giver who does the most good, but the one who gives wisely—advice, service, or money.

Again, if we form good resolutions in regard to our habits, and hold to them; if we "swear off" from vices; if we pledge ourselves in the interest of mercy, justice, faith, and devotion; if we resolve to do right, to do good, and to walk humbly, and keep the resolutions, doing our duty, resisting all temptations, it will indeed be to me what I would have it to you, dear reader, and to all mankind, A Happy New Year. Let us one and all try to make it so.

AMERICAN SOCIAL SCIENCE ASSOCIATION.—The third annual meeting of this Association was held on the 8th of October, at the Old South Church, in Boston, Ex-Governor Washburne in the chair. Many interesting subjects were introduced, and discussed by persons of wide reputation and intelligence. Among the most important topics treated, was one presented in an essay by Dr. Nathan

Allen, of Lowell, upon the "Population of Massachusetts, and Changes in the Physical Organization of Women in Relation to the Laws of Human Increase." He presented a large collection of statistics, showing among other things that there is but a small increase of the purely native population. Formerly large families were the rule, now they are the exception. A comparison made between Vermont and England, showed that the birth-rate in Vermont was one in forty-nine against one in twenty-nine in England. As the primary purpose of the marriage institution is the continuance of the race, and statistics generally show that married women are more healthy and longer-lived than those that are single, it shows that efforts, more or less reprehensible, are resorted to to prevent an increase of family. As a general thing, in proportion as women become intelligent, learned, and mental in their habits, there is a tendency to a decrease in the number of their children. This is perhaps partly physiological, showing that if a great deal of nerve-force be employed in thought and study, the constitution becomes less robust and healthy, and, of course, less prolific. But with information comes the knowledge as to the means of preventing that which, to men and women with right feelings, should not be a burden, but a blessing—namely, healthy, happy children. Recently in New York a meeting of this Association was held, and subjects of a similar nature discussed.

LOOK OUT FOR IMPOSTORS.—Swindling is not confined to lottery dealers, gift enterprises, mock auctions, quack medicine manufacturers who rob and poison "indiscreet young men," cheap jewelers, counterfeiters, bogus-money makers, and scores of others; but the rascals may be found canvassing for newspapers and magazines. [We give no certificates of agency to any, preferring to depend on newsmen and on the club system.] They are also to be found in advertising agencies, offering splendid chances, with immense circulations to those who would find it more profitable to attend to their own advertising, selecting their own medium. We repeat, it will be well for all honest people to beware of the swindlers.

SIGNS OF LONGEVITY.—Dr. J. V. C. Smith, of Boston, and Dr. J. H. Grierson, of this city, were yesterday adjudged the successful competitors for the "Prize Essay on the Physical Signs of Longevity," for which \$500 was offered some time ago by the American Popular Life Insurance Company. The essay of each of the gentlemen was so good that the committee could not determine which was the better, and the prize was awarded to each.

[When published, our readers shall have the benefit of these prize essays.]

SOAP.—Large quantities of soap are every year imported into America from Europe. Now there is no more necessity for this than for importing corn and wheat. There are as fine soaps made here as anywhere, and may be had as cheaply—soaps plain and soaps perfumed. If there be a doubt on the point, ask your druggist, groceryman, or storekeeper for the best, and he will probably refer you to the sorts made by the COLGATES. At all events, in our way of thinking, they are good enough, and we may save to our country the amounts paid for a no better foreign article. We believe in good soap; think more should be used; would make

it a qualification for voting. No man should vote who uses no soap!

SHORTHAND WRITERS WANTED.—The demand for phonographic reporters is steadily increasing. We often receive applications like the following, and only regret there are not enough experts to meet the demand.

Mr. S. R. WELLS—My Dear Sir: Can you recommend to me a shorthand writer, who writes a rapid and legible business hand; who can read his notes with facility and transcribe them with accuracy; who writes not less than one hundred words per minute; who has naturally good business tact, and who would like a permanent situation in an express office at a salary of about \$1,500 per year?

To a desirable party I can give a situation.

Yours very truly, K. T. D.
[Here is an advertisement from one of the New York daily papers on the same subject.]

WANTED—A BOY FROM 15 TO 18 years of age who can write phonography and a handsome longhand; must live with his parents in New York. Address Box No. —, New York Post-office.

There are no other openings for young men which promise so rapid promotion and so liberal remuneration as this. Our advice to young men is, to learn phonography.

HOW TO HELP.—"Where there is a will there is a way." Would you add to the comfort or the means of a poor widow? A little, even a very little aid from each one's store would place her above immediate want. A cord of wood, a ton of coal, a sack of flour or meal, a barrel of potatoes, a small assortment of groceries, materials for clothing, and work to do, by which money can be earned, would beget for the givers such heartfelt thanks as would be always gratefully remembered. Rich men may educate the sons and daughters of the poor, fitting them for greater usefulness. They may also establish, or aid in establishing public libraries, reading-rooms, and open halls for instructive lectures. They may present scholarships to young men and women for scientific and literary institutions. There are many young ladies who, after attending a normal school for two or three terms, would be fitted to teach; others would study art and turn their knowledge to good account; still others would attend medical lectures and fit themselves for the practice of medicine, and to take charge of asylums and hospitals.

But even the poor may do good, and help to set the world ahead. They may live temperately, and so appropriate their spare time, when not at work, as to greatly improve themselves and others. Instead of idling, loafing, and lying around bar-rooms, oyster saloons, stables, stores, and stations, smoking, chewing, and spitting, they should read and learn. If mechanics, they may study up a useful labor-saving invention which would benefit the world and enrich themselves. If one is so very poor that he can not contribute cash for benevolent objects, let him contribute ideas or services. No one who can work is so poor that he may not contribute something to the general good. Americans are a nation of workers, not paupers nor beggars. Reader, will you not act on these suggestions, and set some useful ball in motion? Do not wait to become rich before you begin to give and to do good. Our Saviour, the Apostles, all philanthropists and benefactors commenced to do good on a very small capital. Can you not follow their example? Induce a profane man to stop his bad habit; persuade a drinking man to sign the pledge—he needs it; invite the

worldly or indifferent to attend some place of worship; form the young men and women into singing schools, reading, spelling, debating, or other self-improvement societies. Do one or any of these things to call out the faculties and develop character. If dormant or not used, both mind and muscle become weak, effeminate, helpless. If used with vigor and kept growing, we shall culminate into something near to what the Creator intended us to be—self-helpful and well-developed human beings.

Personal.

PHRENOLOGY IN PHILADELPHIA.—Our long-tried friend and former colleague, Mr. John L. Capen, is giving courses of popular lectures this winter in the Quaker City and vicinity. He will promptly respond to calls for lectures not too far from home. His office is at No. 723 Chestnut Street, where those who wish may obtain any of our publications and correct examinations, with charts and written descriptions of character.

SETH P. NORTON, Esq., the business agent of the Collins Manufacturing Company, at Collinsville, Ct., died on the 29th of October, aged 44. He was the original of "Frank Upton," the benevolent and worthy young man, a character in Mrs. Hubbell's "Shady Side of a Pastor's Life." We knew Mr. Norton for twenty-five years, and have known few more worthy than he. He leaves a wife and four children.

MRS. S. W. GRISWOLD, of Hartford, Conn., died October 27th. She had many excellences of head and heart, and her departure in the mid-day of life must make a large gap in the friendly circle of which she was the light and ornament.

EX-GOV. JOHN A. ANDREW, of Mass., died October 30th, of apoplexy. He had a full habit and a florid complexion, just the look for apoplexy; just the man who ought to have refrained from the use of coffee, spices, stimulants, and tobacco.

OBITUARY.—Died on the 17th of November last, at his residence in Chicago, Colonel Alfred Clark Hills, one of the editors of the Chicago Tribune. He was a gentleman of quiet demeanor and retiring habits, but nevertheless an earnest and forcible writer, and possessed of extensive information. Some years ago, when we published *Life Illustrated*, Colonel Hills was one of the most acceptable contributors to its columns.

LOVELL DODGE.—It gives us pleasure to state that Mr. Lovell Dodge, a recent pupil of ours, has prepared several interesting lectures. One is entitled "Temperance," another "Waking Up; or, How to Get Along in the World." He also proposes to give several lectures on phrenological and kindred sciences.

Mr. Dodge's lectures have been very favorably mentioned by the New Haven papers, and he has commendatory letters from the mayor of that city and other influential citizens. We bespeak for Mr. Dodge a cordial reception.

LIVINGSTONE NOT DEAD.—Dispatches containing the gratifying intelligence of the safety of Dr. Livingstone, the celebrated African traveler and explorer, have been received. The particulars received are few, but the Doctor is known to have been safe and well in April last. He was then exploring the wastes of Africa, hundreds of miles from the seacoast.

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED and charged according to the space occupied, at the rate of 50 cents a line.]

THE HYGEIAN HOME.—At this establishment all the Water-Cure appliances are given, with the Swedish Movements and Electricity. Send for our circular. Address A. SMITH, M.D., Wernersville, Berks County, Pa.

THE MOVEMENT-CURE.—Chronic Invalids may learn the particulars of this mode of treatment by sending for Dr. Geo. H. Taylor's illustrated sketch of the Movement-Cure, 25 cents. Address 67 West 38th Street, N. Y. city. Aug., 18.

MRS. E. DE LA VERGNE, M.D.,
235 ADELPHI STREET, BROOKLYN.

HYGIENIC CURE, BUFFALO, N. Y.—Compressed Air Baths, Turkish Baths, Electric Baths, and all the appliances of a first-class Cure. Please send for a Circular. Address H. P. BURDICK, M.D., or Mrs. BRYANT BURDICK, M.D., Burdick House, Buffalo, N. Y. 18

NEW NATIONAL RELIGIOUS PAPER.—A national religious newspaper, to be called "THE ADVANCE," will be published weekly, from the first of September onward, in the city of Chicago. It will represent Congregational principles and polity, but will be conducted in a spirit of courtesy and fraternity toward all Christians. The form will be what is popularly termed a double sheet of eight pages, of the size and style of the New York Evangelist. The pecuniary basis is an ample capital furnished by leading business men and others, to be expended in the establishment and improvement of the paper, which is intended to be second to none in the country, in its literary and religious character. The purpose of its projectors is indicated in the name: their aim being to ADVANCE the cause of evangelical religion, in its relations not only to doctrine, worship, and ecclesiastical polity, but also to philosophy, science, literature, politics, business, amusements, art, morals, philanthropy, and whatever else conduces to the glory of God and the good of man by its bearing upon Christian civilization. No expense has been spared in providing for its editorial management in all departments, while arrangements are in progress to secure the ablest contributors and correspondents at home and abroad. The city of Chicago has been selected as the place of publication, because of its metropolitan position in the section of the country especially demanding such a paper, and the fact that it is nearly the center of national population, and in a very few years will be the ecclesiastical center of the Congregational Churches. Issued at the interior commercial metropolis, "THE ADVANCE" will contain the latest market reports, and able discussions of financial subjects, such as will make it a necessity to business men in all parts of the country. The editor-in-chief will be Rev. Wm. W. Patton, D.D., who resigns the pastorate of the leading church of the denomination at the West for this purpose, and who has had many years' experience in editorial labor. The subscription price will be \$2.50 in advance. Advertising rates made known on application. Address THE ADVANCE COMPANY, P. O. Drawer 6,374, Chicago, Ill.

LITTELL'S LIVING AGE.
A MAGAZINE PUBLISHED EVERY SATURDAY.
Containing the best Reviews, Criticisms, Tales, Fugitive Poetry, Scientific, Biographical, and Political Information, gathered from the entire body of English Periodical Literature, and forming four handsome volumes every year, of immediate interest and solid permanent value.

EXTRACTS FROM NOTICES.

From the late President of the United States, John Quincy Adams.

Of all the periodicals devoted to literature and science, which abound in Europe and this country, the LIVING AGE has appeared to me the most useful.

From N. P. Willis.

"Tenderloin," "fote gras," are phrases, we believe, which express the one most exquisite morsel. By the selection of these from the foreign Reviews—the most exquisite morsel from each—our friend Littell makes up his dish of LIVING AGE. And it tastes so. We recommend it to all epicures of reading.

From Rev. Henry Ward Beecher, May, 1867.

Were I, in view of all the competitors that are now in the field, to choose, I should certainly choose the LIVING AGE. * * * Nor is there in any library that I know of, so much instructive and entertaining reading in the same number of volumes.

From the New York Times.

The taste, judgment, and wise tact displayed in the selection of articles are above all praise, because they have never been equalled.

From the Springfield (Mass.) Republican.

We can do those among our readers who love sound and pure literature no better service than by referring them to this sterling weekly. It is decidedly the best magazine of the class published in the United States, if not in the world.

From the New York Independent.

No one can read, from week to week, the selections brought before him in the LIVING AGE, without becoming conscious of a quickening of his own faculties, and an enlargement of his mental horizon. Few private libraries, of course, can now secure the back volumes, sets of which are limited and costly. But public libraries in towns and villages ought, if possible, to be furnished with such a treasury of good reading; and individuals may begin as subscribers for the new series, and thus keep pace in future with the age in which they live.

From the Syracuse (N. Y.) Journal, 1867.

The cheapest and most satisfactory magazine which finds its way to our table. It is a favorite everywhere.

From the Mobile Daily Advertiser and Register, June 30, 1867.

Of all the periodicals ever issued in America, probably none has ever taken so strong a hold upon the affections and interest of the more cultivated class of people, none has done so much to elevate the tone of public taste, none has contributed so much genuine enjoyment to its thousands of readers, as LITTELL'S LIVING AGE.

From the Round Table, New York, Aug. 10, 1867.

There is no other publication which gives its readers so much of the best quality of the leading English magazines and reviews.

From the Chicago Journal of Commerce, July 4, 1867.

We esteem it above all price.

From the Illinois State Journal, Aug. 3, 1867.

It has more real solid worth, more useful information, than any similar publication we know of. The ablest essays, the most entertaining stories, the finest poetry of the English language, are here gathered together.

Published every Saturday, at \$8 a year, free of postage, by LITTELL & GAY, 30 Bromfield Street, Boston.

The LIVING AGE and the PHRENOLOGICAL JOURNAL will be sent a year to one address, for \$9. Address as above, or, S. R. WELLS, 389 Broadway, New York. Send P. O. orders.

From the Richmond Whig, June 1, 1867.

If a man were to read Littell's magazine regularly, and read nothing else, he would be well informed on all prominent subjects in the general field of human knowledge.

From the Daily Wisconsin, Milwaukee, June 15, 1867.

The best reprint of foreign literature issued in this country.

From the Church Union, New York, Aug. 10, 1867.

Its editorial discrimination is such as ever to afford its readers an entertaining résumé of the best current European magazine literature, and so complete as to satisfy them of their having no need to resort to its original sources. In this regard, we deem it the best issue of its kind extant.

From the Boston Journal.

The weekly issues of the LIVING AGE make four octavo volumes of about eight hundred pages each, yearly; and we venture to say that few volumes published in this country comprise so great an amount and variety of good reading matter of permanent value.

From the Congregationalist, Boston.

No better present can be made for the enjoyment of a family circle through the year than a year's subscription to LITTELL'S LIVING AGE. It is always well filled with instructive articles on science, philosophy, theology from the reviews, stories by the most popular writers from the magazines, choice poems, brief biographies, and a selection of tid-bits of the most entertaining character. The bound volumes for the past year (1866) are among the most valuable books on our shelves.

From the Philadelphia Press.

The volume for October, November, and December, 1866 (being the third quarterly of the fourth series, and the ninety-first of the whole), fully sustains the high character of the work. It contains the following serials: "Nina Balata," and "Sir Brook Fossbrooke," from "Blackwood"; "Madonna Mary," from "Good Words"; "Village on the Cliff," from the "Cornhill Magazine"; and "Old Sir Douglas," from "Macmillan." The LIVING AGE, we repeat, is a library in itself, worthy of its high repute.

From the New York Home Journal, June 12, 1867.

LITTELL'S LIVING AGE, long distinguished as a pioneer in the republication of the choicest foreign periodical literature, still holds the foremost rank among works of its class. Its standard of selections is a high one, and its contents are not only of interest at the present moment, but possess an enduring value. Its representation of the foreign field of periodical literature is ample and comprehensive; and it combines the tasteful and erudite, the romantic and practical, the social and scholarly, the grave and gay, with a skill which is nowhere surpassed, and which is admirably suited to please the cultivated reader.

From the Protestant Churchman, June 27, 1867.

Age and Life are alike its characteristics. It is linked with our memories of the old library at home, and it seems to grow fresher and better in matter as it grows older in years. Once introduced into the family circle, it can not well be dispensed with; and the bound volumes on the library shelves will supply a constant feast in years to come.

From a Clergyman in Massachusetts, of much literary celebrity.

In the formation of my mind and character, I owe as much to the LIVING AGE as to all other means of education put together.

MUNSON'S MONTHLY PHONOGRAPHIC MAGAZINE for January, 1868, will be ready about December 25th. There is no other periodical in America that is printed in Phonography. Terms, \$2 a year, or 20 cents a number.

MUNSON'S "NEW CLASSIFICATION AND ARRANGEMENT OF PHONOGRAPHY" is now ready. Every teacher and learner of Phonography should have it. Price, post-paid, 15 cents. Address JAMES E. MUNSON, 41 Park Row, New York. Jan. 12.

THE CHURCH UNION.—The largest and best Religious Family Newspaper in the world.

Owing to the unprecedented reception of this paper, it is now enlarged to twice its original size.

It is devoted to Liberty and Union in the whole Church of Christ, opposes Ritualism and Rationalism, and advocates Radical Doctrines in both Church and State.

It favors universal suffrage, and equal rights for every man and woman of every nationality.

It is the organ of no sect, but will endeavor to represent every branch of the Church, and every society organized for the purpose of converting the world to Christ.

It is Trinitarian in creed, but favors free discussion by all Religionists of every faith.

It will advocate a free communion table for all the Lord's people, and a free pulpit for all his ministers.

It will print a sermon from Rev. Henry Ward Beecher in every issue. This sermon, published at twelve o'clock every Monday, will be selected from one of the two sermons preached by Mr. Beecher the day before publication. It is not copyrighted, nor is it prepared for the press by Mr. Beecher.

Terms—\$2 50 yearly. \$1 to agents for every subscriber. Sold by American News Company at 5 cents, and by Publishers.

Address, CHARLES ALBERTSON, Supt. Church Union, 103 Fulton Street, New York. Sept., 18

REV. NEWMAN HALL, HENRY WARD BEECHER, and the Bishops of the Methodist Episcopal Church. The New York Methodist publishes Sermons of the above-named divines, reported expressly for its columns. It contains, also, vigorous Editorials, ample Correspondence, News, a Children's Story every week, etc., etc.

Terms, \$2 50 per year. Office, No. 114 Nassau Street, New York.

WORKS ON MAN.—For New Illustrated Catalogue of best Books on Physiology, Anatomy, Gymnastics, Dietetics, Physiotherapy, Shorthand Writing, Memory, Self-Improvement, Phrenology, and Ethnology, send two stamps to S. R. WELLS, Publisher, No. 389 Broadway, New York. Agents wanted.

JENKINS' VEST-POCKET LEXICON. An English Dictionary of all except Familiar Words; including the Principal Scientific and Technical Terms, and Foreign Moneys, Weights, and Measures. Price, in Gilt Morocco, Tuck, \$1; in Leather Gilt, 75 cents. Sent post-paid by S. R. WELLS, New York. 18

GOOD BOOKS BY MAIL.—Any book, magazine, or newspaper, no matter where or by whom published, may be ordered at publisher's prices, from S. R. WELLS, 389 Broadway, New York.

ESTABLISHED 1861—THE GREAT AMERICAN TEA COMPANY

HAVE JUST RECEIVED TWO FULL
CARGOES OF THE

FINEST NEW CROP TEAS.

22,000 Half Chests by ship Golden State.
12,000 Half Chests by ship George Shotton.

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyane districts of China, which are unrivaled for fineness and sweetness of flavor.

To give our readers an idea of the profits which have been made in the Tea Trade (previous to the establishment of the GREAT AMERICAN TEA COMPANY), we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors.

First. The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in this country have made their immense fortunes through their Houses in China.

Second. The Banker makes large profits upon the foreign exchange used in the purchase of Teas.

Third. The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth. On its arrival here it is sold by the cargo, and the purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth. The Speculator sells it to the Wholesale Tea Dealer in the lines, at a profit of 10 to 15 per cent.

Sixth. The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh. The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth. The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so much lower than small dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages, and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same price, with the small additional expense of transportation, as though they bought them at our Warehouse in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this: Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price-List, as published in the paper, or in our circulars. Write the names, kinds, and amounts plainly on the list, as seen in the club-order published below, and when the club is complete send it to us by mail, and

we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members can divide equitably among themselves.

Parties sending club or other orders for less than thirty dollars, had better send Post-office draft or money with their orders, to save the expense of collections by express; but larger orders we will forward by express, to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for clubs of less than \$30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom-House stores to our Warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within thirty days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of clubs. They are sold at cargo prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

Oolong (Black), 70c., 80c., 90c., best, \$1 per lb.
Mixed (Green and Black), 70c., 80c., 90c., best, \$1 per lb.
English Breakfast (Black), 80c., 90c., \$1, \$1 10, best, \$1 20 per lb.
Imperial (Green), 80c., 90c., \$1, \$1 10, best, \$1 25 per lb.
Young Hyson (Green), 80c., 90c., \$1, \$1 10, best \$1 25 per lb.
Uncolored Japan, 90c., \$1, \$1 10, best, \$1 25 per lb.
Gunpowder (Green), \$1 25, best, \$1 50 per lb.

COFFEES ROASTED AND GROUND DAILY.

Ground Coffee, 20c., 25c., 30c., 35c., best, 40c., per lb. Hotels, Saloons, Boarding-house keepers, and Families who use large quantities of Coffee, can economize in that article by using our *French Breakfast* and *Dinner Coffee*, which we sell at the low price of 30 c. per lb., and warranted to give perfect satisfaction.

Consumers can save from 50c. to \$1 per lb. by purchasing their Teas of the

GREAT AMERICAN TEA COMPANY.

31 and 33 Vesey Street.

Post-Office Box 5,643, New York City.

THE GREAT AMERICAN TEA COMPANY (established 1861) is recommended by the leading newspapers, religious and secular, in this and other cities, viz.:

American Agriculturist, Orange Judd, Editor.
Christian Advocate, New York City, Daniel Curry, D.D., Editor.
Christian Advocate, Cincinnati, Ohio, J. M. Reid, D.D., Editor.
Christian Advocate, Chicago, Ill., Thomas M. Eddy, D.D., Editor.
Evangelist, New York City, Dr. H. M. Field and J. G. Craighead, Editors.
Examiner and Chronicle, New York City, Edward Bright, Editor.
Christian Intelligencer, E. S. Porter, D.D., Editor.

Independent, New York City, William C. Bowen, Publisher.

The Methodist, Geo. R. Crooks, D.D., Editor.

Moore's Rural New Yorker, Rochester, N. Y., D. D. T. Moore, Editor and Proprietor.

Tribune, New York City, Horace Greeley, Editor.

We call attention to the above list as a positive guarantee of our manner of doing business; as well as the hundreds of thousands of persons in our published Club Lists.

COMPLIMENTARY LETTERS FROM CLUBS.

MANHATTAN, KANSAS, July 25, 1867.

GREAT AMERICAN TEA COMPANY,

31 and 33 Vesey Street, New York.

Your "Advocate" is received and circulated. Please accept my thanks. You are extending a blessing to us old tea drinkers in the West.

My profession keeps me in my office, but the limited opportunities I have shall be devoted to the extension of your trade. The orders I have sent have been purely from private families. I have recommended your house to our merchants, with what success you know, not I. They might not like to have their customers see the profits they make.

I remain, very respectfully yours,

LORENZO WESTOVER.

DEARBORNVILLE, MICH., July 6, 1867.

GREAT AMERICAN TEA COMPANY,

31 and 33 Vesey Street, New York.

Gents: This day I forward you, by M. U. Express Company, \$107 50, being amount due you on one box of tea.

It may be proper here to state that the tea received gives entire satisfaction. This makes two orders from this place. Your patrons are so well pleased with the tea that you may expect to furnish us our tea and coffee. I have sent your papers to Linden, Genesee County, in this State, and other places, from whence you may expect to receive orders.

Please accept our thanks for the promptness with which you responded to our order.

Respectfully yours,

AMOS GAGE.

BRUNSWICK, MO., March 26, 1867.

TO THE GREAT AMERICAN TEA COMPANY,

31 and 33 Vesey Street, New York.

The order we sent you last month reached us in due time, and with which we are well pleased. We think there is, at least, 50 to 75 cents difference in your favor, compared with the prices of St. Louis, where we have been buying our teas for several years past. You may expect to receive our future orders.

Yours truly,

MERCHANT BEAZLEY.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the GREAT AMERICAN TEA COMPANY.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name, either wholly or in part, as they are *logos* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

TAKE NOTICE.—Clubs and quantity buyers are only furnished from our Wholesale and Club Department.

Post-Office orders and drafts made payable to the order of the GREAT AMERICAN TEA COMPANY. Direct letters and orders to the

THE PRINCE IMPERIAL OF FRANCE.

NAPOLÉON—PRINCE IMPERIAL.

THE Prince Imperial of France was born March 16th, 1856, and consequently is now in his twelfth year. His portrait, as we reproduce it from a foreign paper, may flatter him, but there are indications of a fine-grained organization and a susceptible nervous temperament. He is said to be a very clever little boy—considerably more advanced in his studies than boys of his age usually are. His parents probably spare no pains in the education of his intellect, and may ruin his prospects by overtaxing his brain. The Emperor a while ago gave his son a small printing-press with a font of type, and encouraged him to study or amuse himself with the art of "composition," so that now he is said to set type pretty well. Some reports of the little Prince's conversations and sayings, if not exaggerations, evince unusual precocity. At the late distribution of prizes to exhibitors in the great Exposition the Prince rendered himself conspicuous. Whether the performance had been previously arranged or not, we can not say. The Emperor occupied the chair of honor, and with his own hand was distributing the awards. One of the prizes had been awarded by the judges to the Emperor for an excellent design for cottages for the poor. When the Emperor came to his own name on the list, he paused, as if perplexed what to do. It did not appear proper for him to present his

prize to himself. After a momentary silence, the little Prince Imperial jumped up, and grasping the prize, gracefully handed it to his father. The Emperor smiled most pleasantly, and took the prize from the hands of the youthful Prince, who resumed his seat amid thunders of applause from the concourse of spectators. We trust that he will live to be a blessing to France, and not—as, unfortunately, most of her rulers have proved—a curse.

THE LAST CALL.

PERAMBULATING opera singers, theatrical "stars," superannuated lecturers, legerdemain tricksters, circus clowns, and other exhibitors and showmen, announce in flaming show-bills their annual final "farewell" entertainments. If you wish to ever see the great incomparable hocus-pocus, who can open her or his mouth widest, and let out the most noise, with bugle and banjo accompaniments, now is your last chance! Ten thousand wondering stupids all over the world are waiting in breathless suspense to be transported by the magic of his—or her—look or roar.

The opera season is now in full blast! Playhouses are nightly filled from pit to dome with the *élite*, who wear the very *nicest* borrowed or hired clothes, and who are perfumed to a choking—yea, even to a sneezing sensation. There was never nothing like it! such magnif-

icent waterfalls! such splendid long trails! and, oh, such gorgeous fans and other finery! Did you ever! "O my!" Now, the scheming "shentlemens," with a very foreign brogue, swarthy complexions, and hawk-billed noses, are here in America simply to "make money." They apply all the arts, cater to the lowest passions, excite curiosity, and on the strength of lagerbeer and brandy get up a tremendous excitement! or may we not say, "a tempest in a tea-pot?" Look at the posters which cover the walls, printed with the largest type in red, black, and blue! read the advertisements in all the city dailies! read the columns of kindly, appreciative—*paid for*—criticisms! and drop your tools, drop your pen, drop your baby, even, and run "like the dickens" to secure a ticket for the last great blow-out by the imported, immense, tremendous, bewildering, tragic or operatic old lady, before she retires forever once more from the public—money-making—stage! This is emphatically, positively, absolutely the last chance you will ever have of seeing an imported striped pig!

Americans are an excitable people, and are considered by European adventurers capital geese to pick. The "managers" and self-styled professors seek only to make money. Like the wily spider, they weave their webs and catch the silly butterflies of foolish fashion, who lack brains to see and escape the trap set for them.

MORAL: Don't be deceived; don't run after and be caught by mere shining brass nor tinkling cymbals.

ARTEMUS WARD had an adventure in Boston which resulted as follows:

I returned in the horse cart part way. A pooty girl in spectacles sat near me, and was telling a young man how much he reminded her of a young man she used to know in Waltham. Pooty soon the young man got out, and smiling in a seductive manner, I said to the girl in spectacles:

"Don't I remind you of some one you used to know?"

"Yes," she said, "you do remind me of one man, but he was sent to the penitentiary for stealin' a barrel of mackerel; he died there, so I conclood you ain't him."

I didn't pursue the conversation.

New volumes begin January and July, closing in June and December. Two volumes for one year are usually bound in one cover.

THE
PHRENOLOGICAL JOURNAL
AND LIFE ILLUSTRATED.

Is devoted to The Science of Man, in all its branches, including PHRENOLOGY, PHYSIOLOGY, PHYSIOGNOMY, PSYCHOLOGY, ETHNOLOGY, SOCIOLOGY, etc. It furnishes a guide in Choosing a Pursuit, and in judging of the dispositions of those around us, by all the known external signs of Character.

Payable in advance. Liberal reductions to permanent advertisers.

Job Printing, Designing, Wood Engraving and Lithographing, executed artistically and on reasonable terms.

Commissioner of Deeds for Pacific States and Territories.

To Miners, Manufacturers, Merchants, and Business Men.

THE AMERICAN MINING INDEX, which is now in its sixth volume, having been established more than two years since, is the most popular and comprehensive Mining Journal published in the United States. Its circulation is equal to that of all the other mining and petroleum papers combined. It is an illustrated 16 page weekly, large quarto size, containing valuable matter, original and selected, on the Mineral, Metallic and Manufacturing interests of the United States, Mexico, Central America, South America, British and West India possessions. The various discoveries in Geology, Mineralogy, Metallurgy and Mining Engineering, are fully noticed in its columns, and its correspondence is the most extended and reliable of any mining paper in existence. In short, it is the recognized exponent of legitimate mining on this Continent.

Notwithstanding the fluctuation of popular feeling with regard to mines and mining

stocks, there has never been a doubt in the mind of the publisher that the mining interest would be eventually one of the leading interests of the nation.

The AMERICAN MINING INDEX now has subscribers in every State of the Union, in Canada, Central America, South America, England, Scotland, and Germany. The arrangements for the future are such as to justify the premise that the paper will present an improved appearance in every department.

Inventors, Mechanics, Patent Owners and others, who desire to bring before our numerous readers their inventions and machinery can have engravings prepared in the best style of art, by merely transmitting a sketch or photograph, with a brief description thereof. Ordinary designs, if accompanied with the amount of Thirty Dollars, will meet with prompt insertion. Should the engraving require more work or labor, a proportionate charge will be added, the blocks being subject to the order of the parties ordering the work.

Mining Corporators, Capitalists and Stock Brokers will find our Lithographic and Job Printing Office the best in the city for publishing their By-Laws, Constitutions, Reports, Statements, Prospectuses and other pamphlet work.

The Only American Mining Work Extant!

The most popularly written Guide to Miners.

THE PRACTICAL HAND-BOOK

FOR MINERS, METALLURGISTS, ASSAYERS, ATTORNEYS, &c.

Y., the same will be mailed to any address within the Atlantic States, or 92 cents additional to the price above named if addressed to any name, by the Overland Route or steamer via Panama.

PHONOGRAPHY.—Thorough instruction in this beautiful System of Short-hand given by mail. Graham's Outline and Specimens sent for 10 cents. Circular free. Address, A. A. LEWIS, North Duxbury Vt.

Phrenological Journal & Life Illustrated,

IS A FIRST-CLASS MONTHLY,

Devoted to the Science of Man, including Phrenology, Physiology, Physiognomy, Psychology, Ethnology, Social Sciences, etc. It is the only Journal of the kind in America, or, indeed, in the world. Terms only \$3 a year, in advance. Sample numbers, 30 cents. Address, SAMUEL R. WELLS, 389 BROADWAY, NEW YORK.

NOTICES OF THE PRESS.

Besides the most cordial testimonials from its numerous readers, we receive many kind notices from the press; such, for example, as the following:

The *National Union* says: "One of the very best periodicals that reaches us is the PHRENOLOGICAL JOURNAL. It abounds with much that is sound and sensible, and in that particular forms a pleasing contrast to some of our trashy literature."

The *Bedford (Va.) Chronicle* says it is "the leading journal of its class in America; gotten up in the most beautiful style, every number being worth twice the amount asked for it."

The *Kanawha Republican* says: "No family can afford to be without it, and if people would devote the time usually wasted in reading trashy novels to a careful perusal of the PHRENOLOGICAL JOURNAL, it would result in incalculable advantage to them."

The *Farmington Chronicle* says: "This is one of the prize magazines of the country."

The *Cumberland Valley Sentinel* says: "We value this work above all others, for two things, good sound reading and true science. The work may be regarded in any light as one of the best, most useful and interesting of all the monthly publications."

The *North Missouri Tribune* says: "The PHRENOLOGICAL JOURNAL is filled to overflowing with the choicest miscellany."

The *N. Y. Christian Advocate* says: "It is edifying with decided ability, and its mechanical appearance is very nearly, if not quite, faultless."

The *Florida Peninsula* says: "Few monthlies have more valuable and interesting reading matter than this. It embraces almost every subject calculated to instruct and inform the mind. As to the truth of Phrenology, as a science, we have too much evidence to remain skeptical. There are single articles in the numbers before us richly worth the subscription price, \$3 per annum."

The *New York Tribune* says: "The PHRENOLOGICAL JOURNAL presents its usual copious and attractive miscellany for popular reading. It abounds in brief, piquant suggestions and rapid sketches, which to the mass of our busy population are of more account than all the labored disquisitions of the schools."

The *School-Day Visitor* says: "Among all our numerous exchanges there is no one with which we hail the arrival with more pleasure."

DEMOREST'S
MONTHLY MAGAZINE.
PROSPECTUS FOR 1868.

As we are now closing the present year, we consider it a proper time to say a few words to our readers concerning what we have done, and more of what we propose to do in the future.

We think all will agree that whatever promises we made at the commencement of the present volume have been abundantly kept. Letters from all parts of the country have constantly assured us of the high satisfaction experienced by our subscribers; and the regular and rapid increase of our already large subscription list—this in the face of a somewhat depressed financial condition of the country at large—affords flattering and undeniable evidence of the firm hold which the Magazine has obtained in the good graces of the public and the affections of families.

During the coming year, we purpose to make our great specialty of FASHIONS more full and complete than ever. In addition to our original Colored Steel Plate, we shall add large plates every month, of Cloaks, Walking-Costumes, Bonnets, or whatever may be the most interesting fashionable features for the month.

The smaller illustrations of dress, head-dresses, trimmings, needle-work, jewelry, fancy articles, and the like, will be continued with greater profusion than ever; and the descriptions, instructions, explanations, etc., always made full, complete, and practical.

The Fashion Department of this Magazine has always been unrivaled, its information not being confined to mere descriptions of dress, but embracing constant and valuable hints to mothers, to dressmakers, and to ladies who take charge of their own wardrobes, and to persons generally who wish to keep *au courant* of the changes which constantly occur in the world of fashion, society, and intelligence.

In the Literary, Musical, Household, and other Departments of the Magazine, we challenge comparison with any other periodical, while there are many features which are exclusive with us; and are made highly interesting by being liberally illustrated and intelligently and exhaustively treated.

To our Fashion and other illustrations, illustrated poems, and the like, we have lately added Illustrated Sketches of Fashionable Life, in which the faults and follies of the day have been excellently hit off by a graphic pen and pencil. These will be continued at intervals, alternating with poetic sketches of the same character, and with the lively and sparkling efforts of well-known writers, whose most brilliant fancies will find their appropriate medium through our columns.

The "Work-Basket," an Illustrated Art column, and "American Etiquette," have been among the new features of the past year. These will be continued, with other attractions, some completed, and others in preparation, for the New Year, 1868.

Try, ladies, just once. You can do anything, and we know perfectly well that you will accomplish our wishes in time; but why not make the effort at once?

Yearly, \$3, with a premium to each subscriber. Do not fail to consult our extensive list of valuable premiums, remembering that we are offering a new Wheeler and Wilson Sewing Machine for only twenty subscribers, besides the very desirable premiums to each.

Persons desiring to form clubs will be furnished with a specimen copy of DEMOREST'S MONTHLY, and a number of prospectuses for distribution, for 15 cents.

For Book Premiums, see page 379.

NEW AND SPECIAL PREMIUMS.

TWO SUBSCRIBERS AT \$3 EACH.—One pair of Silver Plated Butter Knives, the newest patterns, and the best article of plated ware manufactured, value \$2; a Lady's Memorandum Book and Card Case, combined, in Turkey morocco; package of French Imperial Note Paper, 100 sheets, and envelopes to match.

THREE SUBSCRIBERS AT \$3 EACH.—Portrait, in oil, of Abraham Lincoln, 15½ inches, by 12½ inches. This is a faithful likeness of our late President, and but a few hundred copies were printed.

FIVE SUBSCRIBERS AT \$3 EACH.—Carving Knife and Fork, ivory handle, the best article of Rogers' celebrated Cutlery, value \$4.

SEVEN SUBSCRIBERS AT \$3 EACH.—Twelve Silver Plated Tea Spoons, the newest pattern, and the best article of plated ware manufactured, value \$7.

TEN SUBSCRIBERS AT \$3 EACH.—Twelve Dessert or Tea Knives, ivory handles, the best article of Rogers' celebrated Cutlery, value \$9.

THIRTEEN SUBSCRIBERS AT \$3 EACH.—Twelve Silver Plated Dessert Forks, the newest pattern, and the best article manufactured, value \$11.

FOURTEEN SUBSCRIBERS AT \$3 EACH.—Twelve Dinner Knives, ivory handles, the best article of Rogers' celebrated cutlery, value \$13; or twelve Silver Plated Dining Forks, or twelve Silver Plated Table Spoons, the newest pattern, and the best articles manufactured, valued at \$13 each set.

THIRTY-FIVE SUBSCRIBERS AT \$3 EACH.—Twelve Sterling Silver Tea Spoons, extra heavy, Grecian or Ionic pattern, value \$33.

FIELD CROQUET.—We will send, as a premium, a complete set of Field Croquet for any number of subscribers, from ten up to forty, at \$3 each, the sets range in value from \$7 to \$29.

SPLENDID INDUCEMENTS FOR CLUBBING.

LOW RATES TO CLUB SUBSCRIBERS.

Club of 2 for one year.....	\$ 5 50
Club of 3 "	7 50
Club of 5 "	12 00
Club of 10 (and one to the getter-up) ..	24 00

No premiums can be given to subscribers at these rates, but an extra copy will be sent, without charge, to the getter-up of a club of ten subscribers for \$34.

OUR PREMIUM LIST FOR 1867-8.

One of the following valuable Premiums is sent to each and every

YEARLY SUBSCRIBER,

whether single or in clubs, who pays three dollars for the Magazine:

First.—A package of fine stationery, including two sizes of note paper, and envelopes to correspond, both stamped in color, with the initial letters from A to Z, so that subscribers can select what letter they require. All ladies require stationery, and this being of the best quality and fashionably initialed, can not fail to prove welcome and attractive.

Second.—Any four pieces of music selected from our published list in the November Magazine.

Third.—A large and fine photographic portrait of Mr. or Mme. Demorest, on an eight-by-ten card-board, ready for framing.

Fourth.—A package of Mme. Demorest's celebrated "diamond" needles.

Fifth.—A package of Mme. Demorest's Lily Bloom or Roseate Bloom for the complexion, or an everlasting perfume packet.

Sixth.—The Children's Dress Chart.

Seventh.—One dozen of Stimpson's very superior pens.

Eighth.—The Family Letter Scale.

Ninth.—A package of fine Visiting Cards, with your name, in a case.

Tenth.—A Pocket Diary for 1868.

Either of these premiums will be sent promptly on receipt of subscribers' names, with three dollars for one year, commencing with any number.

To any person sending two subscriptions for one year, at \$3 each, will be sent either of the following premiums (besides either of the first premiums to each subscriber), a morocco and gilt edge Photographic Album, for holding twenty-four pictures; or Jenny June's valuable Cook Book, or the First Volume of "Demorest's Young America," elegantly bound.

Or, to two subscribers clubbing together, and each paying \$3 for one year, to both will be sent either Mme. Demorest's Lady's Dress Chart, or a set of Dress-Loopers, in addition to either of the first premiums to both.

For a club of three subscribers to the Monthly, at \$3 each, besides the first premium to each subscriber, to the getter-up of the club either of the following premiums: a superb Photographic Album; or Peterson's Lady's Friend, for one year; or a Lady's Companion, in morocco case, containing numerous work-basket utensils, etc.; or a Morocco Reticule; or our Self-Tacking Attachment for Sewing Machines.

For four subscribers, at \$3 each, Harper's Magazine, or Godey's Lady's Book, or Atlantic Monthly, for one year; or a Mahogany Writing Desk; or a \$5 Photographic Album; or a Lady's Companion, ornamented, Turkey morocco, with drawers, and beautiful furnishings, etc.; or an elegant Reticule.

For five subscribers, a \$6 oblong Photographic Album; or a \$6 Music-Box; or one of Ives' Patent Kerosene Lamps for the hall or table, with either globe or shade.

For six subscribers, a large Photographic Album, for holding one hundred pictures; or a Lady's Companion and Dressing Case combined, in Turkey morocco, with elegant furnishings, worth \$10; or a large Mahogany Writing Desk.

For eight subscribers, a Universal Clothes Wringer, price, \$8 50.

For ten subscribers, at \$3 each, Webster's large Unabridged Dictionary, pictorial edition, with fifteen hundred engravings. Every family should possess this most indispensable work—price, \$12. Or a beautiful \$12 Music Box; or a Photographic Album, as large as a family Bible, for holding two hundred pictures, elegantly bound; or a magnificent Family Bible.

A large number of these Premiums are sent by mail, postage-paid; those not admitted into the mails are sent by express.

OUR GREAT PREMIUMS.

For Twenty Subscribers to DEMOREST'S MONTHLY, at \$3 each, requiring only \$60, will be sent a new

WHEELER & WILSON SEWING MACHINE, Price, \$55.

Any of the higher priced Machines may be had by sending the difference in money.

For Thirty Subscribers, one of Carhart & Needham's beautiful Melodeons, rosewood case, scroll legs, price \$70.

For Sixty Subscribers, a beautiful Parlor Melodeon, piano style, five octaves; or in walnut case, Parlor Organ, double set of reeds, price of each, \$150.

For One Hundred Subscribers, a splendid Parlor Organ, rosewood, paneled and carved case, double reeds, and two stops, price \$300.

For Two Hundred Subscribers, a new Piano, worth \$400.

All the above Subscribers will be entitled to either of the first premiums.

Subscriptions to either *Arthur's Magazine*, *Peterson's Ladies' Friend*, *Our Young Folks*, or the *Phrenological Journal*, will be received as equivalent to subscriptions for the MONTHLY for any of the premiums, provided the amount of \$3 is sent for each; or the *Atlantic Monthly* at \$4.

Two subscriptions to DEMOREST'S YOUNG AMERICA, at \$1 50, will count as one for the MONTHLY.

Subscriptions may be sent as fast as procured, and they will be credited as if sent altogether, to commence with any number and to any address. Persons failing to get the requisite number of subscribers, may select any of the lesser premiums.

By a special arrangement with the publishers, we are enabled to furnish DEMOREST'S MONTHLY and *Godey's Lady's Book*, one year, for \$5 50, with one of our first premiums.

DEMOREST'S MONTHLY and *Peterson's Ladies' Friend*, or *Arthur's Magazine*, for one year, \$4 50, with one of our first premiums.

DEMOREST'S MONTHLY, and *Merry's Museum*, or *Working Farmer*, one year, \$3 75, with one of our first premiums.

DEMOREST'S MONTHLY, and DEMOREST'S YOUNG AMERICA, one year, \$4.

The postage on this Magazine to yearly subscribers is only one cent each number, to be paid quarterly, in advance. In addition to the yearly subscription, *Canada subscribers must inclose twelve cents* for United States postage to the lines. Subscribers always secure it by mail several days in advance of transient purchasers. Those whose subscriptions expire, should renew them at once, as the Magazine is never sent beyond the time paid for.

FORM OF AN ORDER.

You will please send me your Monthly for one Year, commencing with the . . . Number; for which I inclose three dollars. And oblige yours,

Do not fail to give your full address. Inclose the amount in United States, or National Bank Bills, a bank draft, or U. S. Postal Order.

Be particular in giving full address of each subscriber.

Address,
W. JENNINGS DEMOREST,
478 Broadway, New York.

Send a stamp for our Annual Circular with full details, for which we have not space here.

IMPORTANT ANNOUNCEMENT!

"Sent prepaid by first Post," at prices annexed.

- The Emphatic Diaglott, or, the** New Testament in Greek, with a Literal Interlinear Translation, and a New Version in English. An interesting and valuable work. Plain..... 4 00
In Fine Binding..... 5 00

The book furnishes evidence of purposed faithfulness, more than usual scholarship, and remarkable literary industry. It cannot fail to be an important help to those who wish to become better acquainted with the revealed will of God. For these reasons I wish the enterprise of publishing the work great success.—From THOMAS ARMITAGE, D. D. Pastor of the Fifth Avenue Baptist Church, New York.

Agents, Booksellers, and others, would do well to engage in the sale of these Works, in every State, County, Town, and Village throughout the country. They are not kept by Booksellers generally. The market is not supplied, and thousands might be sold where they have never yet been introduced. For Wholesale Terms, and "Special Lists," please Address SAMUEL R. WELLS, 389 BROADWAY, NEW YORK, U. S. A.

THE Phrenological Journal

AND LIFE ILLUSTRATED

Will contain everything new and useful, with illustrations, relating to

ETHNOLOGY,

The Natural History of Man, now attracting much attention in the Old World; and we shall record, in this JOURNAL, what may be developed concerning different Races, Nations, and Tribes of Men.

PHYSIOLOGY,

in which the functions of the body, such as Heart, Lungs, Stomach, Bones, Muscles, including the Nervous System—their "Uses and Abuses"—will be amply illustrated and described in a popular manner;

PHRENOLOGY,

in its application to all the various interests of the Human Race, including man's Intellectual, Social, and Moral Nature, and how to improve it.

PHYSIOGNOMY,

with the "SIGNS OF CHARACTER, AND HOW TO READ THEM," on scientific principles, with numerous portraits of remarkable persons, will be given.

PSYCHOLOGY,

or the "Science of the Soul," including Man's Spiritual Nature, and his relations not only to *this* life, but to the life to come, will be elucidated.

OUR NEW CLUB RATES.

For a Single Copy, a year, - - - - -	\$3 00	For Fifteen Copies, a year, \$30, and a copy of "New
For Five Copies, a year, - - - - -	12 00	Physiognomy," worth \$5.

EARL OF DERBY.

LORD STANLEY.

The Journal.

Man, know thyself. All wisdom centers there; To none man seems ignoble, but to man.—Young.

EARL OF DERBY AND LORD STANLEY. FATHER AND SON IN THE ENGLISH MINISTRY.

THE House of Stanley, according to a recent English authority, is "perhaps the greatest among our Parliamentary families, the only one which in modern days has seated for three centuries the same time in the same place."

It is not only one of the most influential, but one of the oldest English noble families, dating back through a perfectly clear record to Sir John Stanley, who was born in the year 1354. By a further ascent, reasonably valid in appearance, the family is traced to Adam de Audley, who was lord of Reveney, in Cumberland, in the reign of Henry I. (A.D. 1100–1135), and whose grandson,

William, becoming lord of the manor of Stoneleigh or Stanleigh, in Staffordshire, adopted from it, after the ancient fashion, the name of Stanley.

The history of the family affords many curious confirmations of the doctrine of persistent hereditary transmission of mental qualities. For instance, the Sir John Stanley already referred to, who lived five hundred years ago, was "a cool, shrewd, and efficient man"—a description wholly applicable both to the present Earl of Derby and his son, Lord Stanley. This Sir John was, at different times, lord deputy, lord justice, and lord lieutenant of Ireland, and in 1406 he received the grant of almost all the soil, and of absolute jurisdiction over both land and people, of the Isle of Man. It was in virtue of this grant that the earls of Derby became titular kings of Man, which included 180,000 acres of land. This authority was retained until 1765,

when the "royalty" was sold to the British crown for \$350,000. It was Thomas Lord Stanley, a great-great-grandson of Sir John, and son of the first Lord Stanley, who with his brother William deserted Richard the Third at Bosworth Field, with 8,000 men, decided the battle for Henry Earl of Richmond, and with his own hand crowned the victor on the battle-field, thus changing the succession of the English crown. Henry soon created Stanley earl of Derby, made him lord steward and lord high constable, and gave him immense estates. Indeed, the new earl was almost the only English baron who had passed through the furious and bloody wars of the Roses, with advantage both to his position and property. The names of about thirty different estates are on record as having been granted to this shrewd earl, after the battle of Stoke alone—two years later than Bosworth Field.

It was a Stanley who drove the Scots out of their strong position at Flodden by the tormenting fire of his archers; and who, according to Sir Walter Scott, received part of the dying exhortation of the brave but wicked Lord Marmion:

"Charge, Chester, charge! On, Stanley, on!"
Were the last words of Marmion.

The English authority already quoted remarks, in a subsequent place: "The Stanleys continued under the Tudors what they had been under the Plantagenets—a powerful, efficient race, greatly beloved by their immediate followers and neighborhood, but with an instinct which their friends called foresight and their enemies faithlessness.

The present and the fourteenth Earl of Derby is Edward Geoffrey Smith Stanley. The name Smith, by the way, was adopted in addition to his own by James, twelfth earl, upon marrying the heiress of one Hugh Smith, who was rich.

EARL OF DERBY.

The EARL OF DERBY was born March 29, 1790, being therefore sixty-eight. He studied at Eton, and afterward at Oxford, where he gave early proof of the same classical scholarship, so ably exemplified in his translation of Homer, by taking the Chancellor's prize for Latin verse. He very soon entered upon what may be called his hereditary career as a ruler of England, entering the House of Commons in 1821, as member for Stockbridge. He was, until 1833, known as Mr. Stanley, his grandfather being Earl of Derby, his father having the "courtesy title" of Lord Stanley, and the grandsons of peers being obliged to support life without any extra "handle" to their names.

From 1821 until now—for forty-six years—almost half a century—this strong and laborious party leader has been a vigorous and busy politician. He has sometimes been out of office and of Parliament, and sometimes in; but he has always been influential from the very first, and for the last quarter of a century may be considered as having been the chief leader among the English Conservative or Tory party.

His very first speech, though only on a question about gas-light in Manchester, was so able as to call forth the praise of the celebrated Sir James Mackintosh, and he at once took high rank as a ready and powerful debater. His first office was that of Under Secretary for the Colonies, in the administration of Mr. Canning, and he has at various subsequent times been Secretary for Ireland, Colonial Secretary, and thrice Prime Minister. His premierships were from February, 1852, for ten months only; during another period of not far from the same length, in 1858-9; and thirdly, for the yet unexpired term, which began after the death of Lord Palmerston.

Lord Derby, while straightforward, frank,

and manly in public action, is not so broad and philosophical as his son, Lord Stanley, who is a politician rather than a statesman, a partisan rather than a patriot; a statesman rather than a great administrator, a strenuous fighter entitled to part or all of the title of victor; he is excellent measures. He was creator of many liant, and effective advocate of a peaceful, brilliant Emancipation and reform of the Catholic great contest of 1832-3, and was in the those days engaged in violent single combats with O'Connell and Shiel, the former of whom seems to have hated him bitterly, and conferred upon him the ugly nickname of "Scorpion Stanley." His Colonial Secretaryship in 1833 was accepted on purpose to accomplish the emancipation of the slaves in the British West Indies, and it was done accordingly. During his first premiership some salutary measures of reformation were accomplished in the English Court of Chancery; and it was at the same period that the celebrated *corridors*, or "corridor understanding," was established between the English and French governments, which was sealed by a kiss of Queen Victoria upon the cheek of the Emperor Napoleon, and which has kept the two governments quite closely connected ever since. During his second premiership, again, he brought forward a scheme for further political reform, but without success.

"The present Earl," says our English authority, speaking of the family tendency to keep on the wind side, which has made them rich and powerful ever since Bosworth—"has the hereditary failing, and more than the hereditary strength, having, after jumping on a table" (in 1832), "to protest against taxes, till the Reform Bill was passed, gone over to the Conservative side, and risen to its lead. He and his son, Lord Stanley—Whig in opinion, Tory Cabinet Minister, in fact—have rebuilt the political influence lost with the execution of the seventh Earl" (by Cromwell in 1651, after the battle of Worcester), "and maintain to the full that respect and affection from their tenantry, which, save to that one man" (viz., the executed Earl), "have never failed."

The physiognomy of the Earl of Derby, as will at once be seen on examining our engraving, is a truly British one, but it would much sooner be taken for the face and figure of some energetic and successful capitalist and manufacturer, who had begun life without a cent, than for that of a man of vast hereditary wealth, and one of the very oldest and most aristocratic English families. The large brain, massive intellectual lobe, full propelling powers, strong and active combativeness, and the density, firmness, and tenacity of the whole physical structure, exactly fit Lord Derby for the cool, yet fierce and strenuous contentions of party politics and Parliamentary debate, where force, fearlessness, stubborn perseverance, and unyielding attack and defense, ready common sense and large intellectual acquirements, form the proper combination for a successful leader.

The Earl, however, possesses other good qualities besides those of a party leader; and in one whose public employments have been so weighty and engrossing, they become peculiarly meritorious. These are, genuine love of literature, and great ability as a classical scholar. The Earl, some years ago, printed, privately, a number of remarkably skillful and spirited translations from Latin poets, and in 1863, published a very able translation of Homer's *Iliad*. The *Review*, in January, 1865, begins an article on the Earl's translation, with the following very handsome summary encomium of his scholarship:

"The Chancellor of the University of Oxford" (for the Earl holds that partly literary, partly ecclesiastical, and partly political office), "not long ago established a peculiar claim to the highest academical dignity of the country by addressing the heir apparent in an oration of the purest Latinity; and he has now crowned a career of daring, if not successful statesmanship, of splendid eloquence, and of the highest social distinction, by no mean contest for English literature."

And in a subsequent portion of the same article, the *Review* says, with a very justifiable pride:

"It is honorable to letters, it is honorable to English education, that notwithstanding the incessant calls of a great station, a great fortune, and a lofty ambition, time remains to him to complete such a task as the translation of the *Iliad*."

This praise is high, and well deserved. It is much to be desired that elegant scholarship and literary culture might be as highly esteemed and as much sought for by our own public men as by those of England. As Horace (in substance) remarks on a not very different point, such attainments "would polish their manners, and keep them from being such brutes" as they too frequently are. Men like Daniel Webster and our present Chief Justice Chase, it is true, possess something of these good gifts; but in England they are rather the rule than the exception. It must be confessed that this can hardly be said of our own political leaders.

LORD STANLEY.

EDWARD HENRY SMITH STANLEY, eldest son of the Earl of Derby, and who is commonly known by the courtesy title of Lord Stanley, is perhaps the best specimen of the characteristic English statesman and of one trait. This is, however, to his advantage, and its possession is a reproach to his class. It is a lack of blind, unconditional devotion to his "order." Lord Stanley is too practical and too fully aware of the spirit of the age, the demands of humanity, the irresistible progress of enlightenment and of republicanism, and is too conscious that these vast forces must be yielded to and only guided, rather than stiffly resisted and obstinately fought, to be a complete representative of the spirit of the English governing oligarchy. That oligarchy, on its principles, resists good, as the Scriptures command us to

resist evil—"striving even unto death." As a class, it has never yielded a privilege or granted a liberty either to the "lower classes" at home or to the subjects of the British empire abroad, except under the absolute immediate pressure of force. From the time when King John yielded *Magna Charta* to the military force of his barons, down to to-day, when the English Government is yielding the right of peaceable meeting by the people in Hyde Park—not because it was a right, but because the Government does not dare risk the result of a popular uprising—during all those seven centuries the rule of the English governing class has been one and the same: never to give up power except before greater brute force.

Lord Stanley was born July 21, 1826, and is therefore in his forty-second year. His school training was at Eton and Rugby, and at the latter place he undoubtedly felt the influence of the clear and powerful common sense and kindly piety of Dr. Arnold. He afterward graduated at Cambridge, the mathematical university—Oxford being reckoned the classical one—but apparently not from any preference for mathematical studies, as he took a "first class"—a high graduating achievement—in classics.

The better and abler class of young English noblemen most commonly find politics the best career which is open to them. Accordingly, Lord Stanley turned his attention in this direction, and made his first attempt to enter political life in the spring of 1848, becoming a candidate for the representation of Lancaster. He was beaten, however, and without troubling himself much about it, he shortly made a voyage to Canada, the United States, and the West Indies in company with one or two other young men of his own class, for the purpose of seeing and understanding the social and political life of the western hemisphere. While absent he was elected to Parliament for Lynn Regis, or King's Lynn; and after taking his seat, showed that he had used his recent opportunities well, by making a very able speech on the sugar colonies. Soon afterward he made another journey to India, to study that portion of the British Empire, and while absent, in March, 1852, was appointed Under Secretary of State for Foreign Affairs, in the first Derby Ministry, of which his father was the head. He was again elected for Lynn in 1852, and has continued to represent that place down to the present time. Soon after his re-election, he showed what he had been to India for, as he had before shown why he went to America, for he soon brought a motion before the House, intended to effect a thorough reform in the British government of India.

Both in foreign and in home affairs, although nominally a conservative, Lord Stanley had by this time shown that as a public man he sought in good faith to accomplish good objects for good purposes. Accordingly, while laboring in Parliament to improve the state of affairs in the foreign dependencies of England, he was

equally zealous, and was laborious, judicious, and useful in aiding the progress of social and legal reform at home. He was a vigorous advocate of the abolition of the odious and oppressive "church rates," which extort money to support the Church of England from those who belong to it and those who do not, alike. He was one of the chief laborers in the establishment of the English mechanics' institutes and public libraries; and has been a good friend to the efforts which have been made to improve the means of popular education in England.

At the death of Sir W. Molesworth in 1855, Lord Palmerston offered Lord Stanley the position of Colonial Secretary, but being in the opposition, Lord Stanley declined, for the sake of remaining faithful to his father's party. When, however, the Earl of Derby came into power in February, 1858, Lord Stanley accepted office under him, and in May became president of the Indian "Board of Control." Under this administration the project of reforming the government of India, which he had entertained six years before, was resumed and effectively carried forward by the dissolution of that vast and unprincipled empire within an empire, the East India Company.

This body, after a wicked, bloody, and rapacious career of two centuries and a half, gave up the ghost in August, 1858, and its vast dominions, including by some estimates a hundred and twenty millions of inhabitants—or nearly one-eighth of the population of the world—passed under the direct authority of the English Government. Upon this change, Lord Stanley became Secretary of State for India, and remained in that office until June, 1859, when the Derby Ministry retired.

Under the hardy leadership of the unprincipled, but most energetic and intrepid, Mr. Disraeli, Lord Stanley has again become a member of the English Cabinet, as Secretary of State for Foreign Affairs. In this post he has shown all the mental breadth, vigor and common sense, good dispositions, practical tact and appreciation of the significance of political changes, and national movements generally, that have distinguished his previous political career, and he is one of the strongest and soundest English statesmen at the present day. A good instance of his plain, straightforward sense was his remark, a little while ago, in answer to urgent appeals that Parliament should pass resolutions expressing horror, or some such feeling, at the death of the fillibuster emperor Maximilian. Lord Stanley said he saw no propriety in the proposed action, and that it would be well for the gentlemen to remember that they were not the Parliament of world, but only that of England; which was quietly saying, Let us mind our own business.

Lord Stanley's steady and reasonable management of foreign affairs is in very strong contrast with the insincere policy of Lord Palmerston; and he is equally prompt and wise in supporting the new Reform Bill. This measure has been taken up by the Tories, now

holding office, and made extensive, so that if any credit comes from it, the Tories can have it instead of the opposite or Liberal party, who might naturally be expected to be the originators of reform measures. This dextrous piece of thunder-stealing is Mr. Disraeli's contrivance, and is exceedingly unpopular with the English nobility and aristocracy, who, however, do not dare prevent it. They may well be disgusted, for the Bill will double the number of persons entitled to vote at English elections, and is therefore an important step forward toward a really free government.

The qualities of Lord Stanley's mind, and the facts of his career hitherto, are such as render it extremely probable that he will continue to be very prominent and influential in shaping the home and foreign policy of England.

CONSCIOUSNESS AND MENTAL ACTION.

BY R. H. WASHINGTON, M.D.

It is intended to treat this subject hypothetically; and before developing thus the phrenological method of analysis, we shall quote from Sir William Hamilton the conditions of a permissible hypothesis: "An hypothesis is allowable only under certain conditions. Of these, the first is that the phenomenon to be explained should be found actually to exist." This condition is fulfilled, for no one will dispute that consciousness and mental actions exist. "The second condition of a permissible hypothesis is, that the phenomena can not be explained otherwise than by an hypothesis." Mental manifestations are of such a character that they can not be investigated like physical phenomena, and metaphysicians have promulgated theories for two thousand years concerning them, and have never yet been able to present a theory which would harmonize with and explain the phenomena requiring explanation. "But the necessity of some hypothesis being conceded, how are we to discriminate between a good and a bad, a probable and an improbable, hypothesis? The comparative excellence of an hypothesis requires in the first place that it involve nothing contradictory, internally or externally, that is, between the parts of which it is composed or between these and any established truths." "In the second place, an hypothesis is probable in proportion as the phenomena can be by it more completely explained." "In the third place, an hypothesis is probable in proportion as it is independent of all subsidiary hypotheses."

We shall undertake to show that the Phrenological hypothesis complies strictly with these conditions, and that if the Copernican hypothesis is preferable to the Ptolemaic, because it harmonizes with, and satisfactorily explains, certain physical phenomena, so, likewise, the Phrenological hypothesis is preferable to the Metaphysical, because it harmonizes with and explains mental phenomena which have baffled metaphysicians for many centuries.

Some years since, while engaged in conversa-

tion with a gentleman, a very large man, who was sitting on his horse before me, he suddenly exclaimed in the midst of a sentence he was uttering, "Catch me, I am falling." We looked up and found that a very violent congestion of the brain had supervened, and he was falling sure enough. By the assistance of a friend near, he was removed from his horse, and remedial agents quickly applied. In the course of half an hour he was sufficiently relieved to converse, and he stated just as he commenced falling, he saw everything he had ever seen, thought, said, or done in the whole course of his life, all at once—everything became visible at a single glance, without confusion of thought.

We have also read an account (where, we do not now recollect) of a man who had an important law-suit on hand, which he was likely to lose for want of certain valuable documents which could not be found.

Having accidentally fallen into a river, he came near being drowned, and actually reached the same stage approaching death as my friend above mentioned, and could see at once everything he had ever thought, said, or done in the whole course of his life; in that river he saw where he had placed the missing documents; for fear they might get misplaced, if left with other papers, he had placed them within a particular book in his library, so that he could always put his hands on them at a moment's notice, but had completely forgotten where he had placed them. In that view of his life, he distinctly recalled in memory the book and documents represented as he had placed them, and on his recovery found the documents in his library just as pictured in his memory, and eventually gained the suit in consequence. Dr. Carpenter (Human Physiology, p. 803) says: "The only phase of the working state in which any such intensely rapid succession of thought presents itself is that which is now well attested as a frequent occurrence, in which there is imminent danger of death, especially by drowning, the whole previous life of the individual seeming to be presented to his view, with its important incidents vividly impressed on his consciousness, just as if all were combined in a picture, the whole of which could be taken in at a glance."

"I was once told," says De Quincy, "by a near relative of mine, that having in her childhood fallen into a river, and being on the very verge of death, but for the critical assistance which reached her, she saw in a moment her whole life in its minutest incidents arrayed before her simultaneously as in a mirror, and she had a faculty developed as suddenly for comprehending the whole and every part."

"This, from some opium experience of mine, I can believe. I have, indeed, seen the same thing asserted twice in modern books, and accompanied by a remark which I am convinced is true, viz., that the dread book of accounts, of which the Scriptures speak, is in fact the mind itself of each individual; of this, at least, I feel assured, that there is no such thing as forgetting, possible to the mind. A thousand acci-

dents may and will interpose a veil between our present consciousness and the secret inscriptions on the mind; accidents of the same sort will also rend away the veil; but alike, veiled or un veiled, the inscription remains for ever."

And Voltaire had no doubt reached that stage in which he could read at a glance the long, black catalogue of the sins of nearly a century; the deliverance of his Conscientiousness that he was a responsible being, which he had scorned and rejected for many long years, spoke out in that last sad hour in a manner not to be misunderstood, evaded, or suppressed; and he therefore asked his medical attendant the fearfully agonizing question, "Doctor, why is it that though I am dying, and feel that my legs are already dead, that this I, this thinking I, is more active than ever?"

The above facts will justify us in concluding that at some point, or more properly points, (for the duplex action of the halves of the brain would render two necessary), there is a grand central station, from which the particulars which have been treasured up by the various parties during past life are visible at once, and which may properly be considered the organ of Consciousness. Our muscular movements requiring guidance, there must necessarily be also an associative organ of volition, from which volitions in harmony with "the dominant idea" in consciousness are issued to the several muscles required to perform any desired acts, and we will therefore assume that there is an organ of volition contiguous to the organ of Consciousness, from which, in the normal state, volitions are issued in harmony with "the dominant idea" in consciousness.

We can notice the play of this organ in cases of insanity, where the actions will constantly vary according as one faculty or another may gain the sway in consciousness.

As the cortical portion of the brain is by all parties admitted to be the material organ of the mind, we will further assume that certain fibers radiating from this organ of Consciousness to the organs in the cortical portion keep up communication with them. The operations of our own minds show us, beyond a doubt, that in the ordinary state all these communications are not kept open with consciousness simultaneously, but that some organs which may be necessary for the acquisition of any specific knowledge are kept in communication with this grand telegraph station, while with all others, incongruous, the circuit is broken.

The control of these communications must either be voluntary or automatic, or both. All will readily acknowledge that when it is necessary to use any particular organs, we are not conscious of any special volition being separately issued to each particular organ not needed, so as to cut it off from consciousness; we may therefore reasonably conclude that there is an automatic law for the control of those communications, as in the case of other portions of the nervous system.

On the other hand, we are conscious of a

certain degree of control of our mental actions, and we may also justly assume that there is a law of voluntary control of those communications between consciousness and the various organs. As each particular faculty has its own peculiar functions, and none others to attend to, we will assume that the automatic law of control spontaneously connects all the organs necessary to acquire any specific knowledge with the organ of Consciousness, at the same time shutting off all others not needed, and that all the particulars which may then be brought to the cognizance of the individual are read off from the organ of Consciousness by the several faculties, each one appropriating whatever may properly belong to its own peculiar functions, and those particulars are forever afterward linked together in a chain of associative memory, so that if at any time afterward any one of the particulars thus required shall be recalled in consciousness in reminiscence, that all the others will spontaneously re-appear. For example, we may witness an event occurring at a particular place, and if at any time afterward the organ of Locality should in reminiscence furnish to consciousness a picture of the place, then the organs of Eventuality, Individuality, Form, Size, and Color, etc., will furnish their quotas, secured at the same time, and we shall have the picture completed with all the images of the actors spontaneously furnished; they being, as it were, indissolubly chained together, thus preventing that inextricable confusion which would otherwise necessarily result from the arrangements of such particulars being confided to our voluntary control. The labor of mental action is thereby much lightened; in truth, it would be absolutely impossible for us to retain all particulars acquired at any time in memory, and voluntarily re-arrange all the quotas furnished by the several faculties engaged; it is generally difficult enough for us to retain our knowledge in memory, when we have the aid of that automatic law, and the management of all the minor particulars being rendered subject to the law of voluntary control would cause our minds to become like those of madmen, overpowered by an inextricable confusion. The same automatic law comes into play in regard to the gratification of any one of the emotional or animal organs. Suppose that Alimentiveness has made a call at consciousness for gratification; immediately all dispatches from organs not needed in its gratification are automatically shut off, while the organs of Form, Size, Color, Odor, and Taste are retained in communication with consciousness, and the individual revels in the glowing images of savory viands and luscious fruits developed in consciousness by this automatic and harmonious law of action. If the individual shall determine to gratify the call of Alimentiveness, then the intellectual faculties necessary to devise the ways and means (which had been previously shut off as unnecessary) are again immediately thrown into communication with consciousness, and the means having been decided upon, from the or-

gan of volition, the necessary volitions are issued to the nerves of motion, and immediate, efficient action is the result. Again, suppose an individual is reading one of the choice Psalms of David, and as the various sentences are apprehended by the intellectual faculties, the faculties belonging to the spiritual or emotional group are appropriately and harmoniously affected, and a corresponding thrill of adoration, love, hope, etc., will be sent to the heart, hence we have so much said in the Scriptures concerning the heart; for the emotional faculties never accomplish anything in determining the actions of men unless the heart is affected.

These spiritual or emotional feelings are, however, under voluntary control, and an individual can determine that there shall be no emotions corresponding to the subject-matter apprehended by the intellectual faculties, and may cut off all communications of the emotional faculties with consciousness; for example, a grasping extortioner can look on unmoved by the tear in the eye of the widow, and hear with perfect indifference the cry of the orphan; or a man in a church having determined to do so, can voluntarily do as Pharaoh did, "harden his heart," and can listen to the most impassioned appeals of the most eloquent orators unmoved, simply because he has under his control the communications between his emotional organs and the organ of Consciousness.

As an example of the counterplay of the faculties in reading of whatever may be appropriate to their own peculiar functions, we will suppose that at the dead of night some extraordinary noise is heard; immediately Cautiousness is on the alert and sends a telegraphic dispatch to consciousness that it is time to be on the *qui vive*, and consciousness responds by sending through the appropriate nerves an exciting thrill, and the individual is wide awake in an instant. Or in the case of moral agencies, Felix trembled when he heard and comprehended the words of Paul, and thought of his own future destiny.

In other cases, much louder sounds might be made in suitable hearing distance of the sleeper, and the auditory nerve would be just as ready to convey the sounds, but those sounds not being of a character calculated to cause alarm, the faculty of Cautiousness gives no alarm, and the sleeper continues sleeping; for instance, thunder may pass unnoticed, while the distant cry of fire will awaken the sleeper, though the loudness of the sound may be far inferior to that of the thunder.

If the control of the communications between consciousness and the various organs had been left to our voluntary control, then the largest organ would afford the gratification, and would obtain the sway in consciousness so often that the others would be rendered comparatively useless; it has therefore been wisely ordained by the Creator, that under the automatic law of control, the time that any faculty shall possess the sway in consciousness shall be short, so as to allow all the faculties a

fair opportunity to make known their calls in consciousness for gratification. Hence those individuals in whom the voluntary control is weak, show in their conversation very clearly the play of this automatic law, for they frequently wander abruptly from one subject to another, as each succeeding faculty expels its predecessor from and in turn gains the ascendancy in consciousness; such individuals are always considered by their neighbors as "rather flighty," and are sometimes said to be "a little crack-brained."

It is this play of this automatic law of control which, by frequently changing the sway of the faculties in consciousness, makes us feel so foolish sometimes; just as we are about to say something to a friend, some other faculty comes into the sway in consciousness expelling the faculty previously in possession, which had suggested the thought we desired to express, and we are forced awkwardly to confess we can not recollect what it was we desired to say.

For the voluntary control of the communications between the cerebral organs and consciousness, we are provided with the organ of Concentrativeness, which, if largely developed, will enable the individual to carry on mental operations for hours without a single intruding communication from other faculties not necessary for the subject then undergoing investigation. So much for the laws governing the communications between the organs in the cortical portions of the brain and the grand central telegraph station in the organ of Consciousness.

[TO BE CONTINUED.]

CLAP ON THE BRAKES!

BY JOHN NEAL.

"I AM going to my own funeral!" said an old man to another, who blamed his loitering through a broad, rich landscape, "I am going to my own funeral—why should I hurry?"

As if we were not all, the youngest as well as the oldest, going to our own funerals: but is that a reason why we should not stop long enough on the way to enjoy the wonders and beauties about our path? to help one another, and to encourage the down-hearted and the foot-weary? On the contrary, is it not a good reason for loitering and lingering, when our attention is arrested by any of God's creatures wanting help or counsel?

God never hurries; why should man? The stars and the plants never hurry, nor do any of the great forces we hear so much of—not even the cataract, nor the storm, nor the lightning itself. In fulfilling their appointed task, they have but one law, and that law they obey. Does the earthquake hurry, or the tornado? Not if we mean by hurrying what men mean by hurrying their fellows. Would you hurry the growth of trees, or the tides, or the precession of the equinoxes? If you find yourself so inclined, clap on the brakes, or you will be doing yourself a mischief before you know it.

Does the hunted hare hurry? Not more

than the tortoise. Or the race-horse when he stretches away over the appointed course? *Not much!* If he did, he would soon be out of breath, and fall astern of his fellows. Hurry unsettles and confuses and dislocates, instead of achieving and overcoming. Steadfastness and smoothness of action, without flurry or change, are the signs of power. Spasmodic paroxysm and vehemence are but signs of weakness. Watch the boatman who pulls quietly and steadily without a variation. He it is that wins, other circumstances being equal. Watch the pedestrian who walks for thirty days upon a stretch, at the rate of more than fifty miles a day. Can he afford to hurry? No more than the trip-hammer forging anchors weighty enough to hold a principality. No more than the sewing machine, or the town-clock, or the watch. To hurry, is to break away from the law that gives unity of purpose, will, steadfastness, and celerity of motion to all the works of man, and all the purposes of God.

When physicians open their offices in graveyards, and lawyers theirs in lunatic asylums, then the rest of the world may venture to throw off their masks and hurry to the consummation. For the sake of truth, and such truth, one might well forgive precipitation. "Aint you a little in a hurry, mamma?" said a child, as he saw his mother pitch through the skylight instead of taking the garret stairs. In all such cases, hadn't we better clap on the brakes? A little sluggishness, a very little hesitation, can do no harm.

But we are all in search of truth—if we are to be believed. No matter what our business or profession may be, the truth, the whole truth, and nothing but the truth, say the wisest and best of men, to justify themselves for a life of uninterrupted self-denial. And so say the silliest and the worst, by their actions, if not by their words; for who, of all that walk the earth, would be satisfied with untruth, or even with a qualified truth, if he knew it? Truth, then, is the "immediate jewel of the soul," to be coveted of all men, to be searched for as hidden treasure, as the pearl of great price. Hence in our hurry and eagerness we overlook even what we believe to be truth.

But what *is* truth? The question has been asked from the beginning, and never answered—*never*. Apart from the lower mathematics, there is no universally acknowledged truth. Even miracles, God's truth—nay, God himself, has never been acknowledged by the masses. Counterfeits, and archetypes, and resemblances, more or less truthful, are accepted for God himself and for the teachings of God.

Is there any truth in music—the best of music? If so, where is it to be found? In the song of birds, in the under-base of a great ocean, the sway of tree branches when the wind is up, or in the roll of thunder? Do we mean voice or sound only? or is there not something beyond or above both voice and sound, to constitute a truthful music? Otherwise, whatever might be the sound, or the noise, it would still be music, and neither proportion nor rhythm would be an element.

Is it in the grand old anthems of another age—the Hallelujah Chorus for example? Or in the Hunting Chorus of Von Weber? Or in the largest work of Rossini, or Beethoven, or Mozart? Or in the piping roundelay, the song of triumph, or in the roll of drums, the roar of cannon, or the “trumpet’s dread hurrah?” Or shall we look for it in “Bonny Doon,” or “Cherry Ripe,” or “Black-eyed Susan?” Truth there must be in all these—what men *call* truth—but where is it, and what is it? Does it lie in the resemblance which these artificial noises bear to the noises of nature, as in the “Creation” of Handel? If so, the natural sounds only are true, and all the others but imitations and counterfeits. And we have as many judgments as we have pairs of ears; and then, where shall we look for a standard?

“But I have no ear for music,” says my neighbor. Nonsense! If you have ear enough to distinguish one voice from another, you have ear enough for all the common purposes of life. You may not be able to “turn a tune,” but if not, it is your own fault. With ear enough to distinguish Maria’s voice from Bobbie’s or Nellie’s, you have as much as you need in searching after truth in music.

And so with painting. Is there truth in painting? And if so, in what does it consist? A litter of pigs in a tumble-down pig-sty, wallowing in the wet straw, is no very captivating sight; but give them to Morland to paint, and the picture of them—true to nature—will be hung up in your dining-room and paid for with gold enough to cover the canvas. Look at the confusion of thought here. If the picture were absolutely true, it would be turned away from with abhorrence and loathing. But being *untrue* to nature, though called true, and being not a copy, but an imitation, a counterfeit, it must be tried by another standard,—the truthfulness of *painting*, and not the truthfulness of *nature*,—and received as a new creation, having a truth of its own to give it value. But people are in such a hurry! They will not be persuaded to clap on the brakes, and stop awhile on their way through a wilderness of wonders, to think for themselves; else they would see that whatever truth may be or may not be, everything in nature has a truth of its own, by which all departures and all success may be measured. To try an oratorio by the echoing thunder, the bleating of sheep, the lowing of herds, or the rush of water, is to substitute one standard for another. To judge of a painting by its absolute truthfulness, would be like measuring the perfume of a flower bed with a foot rule, or an apothecary’s weight.

An illustration occurs to me. My attention has just been called to a controversy which has been raging for a twelvemonth or so, between Mr. Cook, of the New York *Tribune*, and Mr. Louis Prang, the great *manufacturer* of chromolithographs. Mr. Cook deals harshly with them, and speaks slightly of the manufacturer, upon the ground that they are not originals, not even copies, though so wonderfully like and so wonderfully fine, but simply imita-

tions, counterfeits, cheats, and for that reason likely to deaden the appetite of those who are beginning to desire pictures. But Mr. Cook is in too much of a hurry. He’d better clap on the brakes. He would have what he calls “an *individual and independent* result.” “A clever imitation,” says he, “is nothing but an *imitation* after all.” And what, pray, is a copy? What are Page’s copies of Titian, worth at this moment more than their weight in gold? What were Hazlitt’s wonderful copies of many an old master, before he threw aside the pencil for the pen? And what are all the copies made by Teniers, many of which are so admirable, and so characteristic of the painters to whom they are ascribed, that they sell for the price of originals, and keep the greatest connoisseurs in a perpetual *feez*? What is to become of Miss Linwood’s wonderful copies in *needlework* of Carlo Dolci, Northcote, and others, so much like the original paintings as to deceive the best eyes at a proper distance?—one of them, a Magdalen of Carlo Dolci, having been sold to the Emperor Alexander for five or ten thousand guineas, I forget which. And what of the Gobelin Tapestry and the woven copies of Raphael’s Cartoons, hardly to be distinguished from the originals in Hampton Court, and much more highly prized? And what of other large copies in mosaic, which could not be bought for hundreds of thousands? They are “nothing but *imitations* after all.” Do they “*hinder progress*?”

If these are “only *imitations* after all,” imitations must have their value, else they would not bring such prices.

And if these are only *imitations*, what are copies by the artist himself who painted them? And what are portraits? Are they not “*imitations*, after all?” And what is a bust modeled in clay or plaster, or cut in marble? Is it not an imitation? And why should the imitation of an imitator be undervalued, if it be really good enough to satisfy, especially if it be not intended to deceive, but is openly acknowledged for what it is, an imitation? Of counterfeit treasury-bonds or bank-notes, offered as money, we have a right to complain; but if only offered as specimens of engraving, or evidence of what may be done in a new field of art, where’s the harm?

“But,” continues Mr. Cook, an “*imitation* can teach nobody anything, nor benefit anybody.” Really, then, the sum and substance of all human acquisition is worthless, for what know we, but through *imitation*? Then that marvelous faculty, whereby we learn, as the birds and beasts do, from others, older and wiser than ourselves, language, the arts, and all that binds men together, is utterly worthless in our economy. Better clap on the brakes, my friend, and the sooner the better, if you wouldn’t run up the next inclined plane.

“And,” continues Mr. Cook, “as every art has its own peculiar application and field of work, *we hinder progress* by every effort to wrest it to the cheap imitation of the results of some other art.” Indeed! then what becomes

of all our engravings, and photographs, and copies of statuary in alabaster, or clay, or plaster of Paris? But enough. Such criticism is exceedingly hurtful, and the writer, who appears to understand his subject, up to a certain boundary, is doing himself a mischief, by using a false standard. Mr. Prang is not to be tried as a painter, nor as an engraver, but as a manufacturer and *artist*, who is working wonders in a way that deceives nobody, though it might well deceive the wariest, or at any rate puzzle the wariest? Are we to denounce the sewing machine because, forsooth, it *imitates* the movements of women’s fingers armed with a needle? or the piano, because it *imitates* the warbling of birds, or the sound of tumbling surges, or a full band? It is this very imitation which we value, and which sets these instruments apart from all others as a great invention, and the manufacturers as men of true genius, artists, and the benefactors of their race. And this may justly be claimed for Mr. Prang. Not only is he a manufacturer, but an *artist* and a prodigious inventor. Success to him, we say, and success will be sure, and all the more sure by-and-by for these very misunderstandings. Mr. Cook himself will be ready to do him justice after a sober second thought. All he wants is to see the truth, and to prepare a standard suited to the results of chromo-lithography.

These rash and hasty opinions are playing the mischief with us every day. While one man acknowledges, or even boasts, that he has no ear for music, though he can distinguish the voices of all the men, women, and children he is acquainted with, and even their cough and step; a man who is never at a loss when asked what noise is that? and never mistakes the tom-tom for a kettle-drum, nor the sound of chop-sticks in rapid play for that of knives and forks, nor the twittering of swallows, the chatter of a bob-o-link, or the cooing of doves, for the warble of the blackbird or the song sparrow, the rattle of castanets for the ivories of negro minstrelsy, nor the tambourine for a drum,—all which proves that he has an ear, and ear enough, too, for all the common purposes of life, though he may not be a musician—and though it is his own fault if he does not both understand music, and relish music, and enjoy music, just as he may be able to know that a watch suits him, or a shoe, or a toothpick, without being able to make either a watch, a shoe, or a toothpick,—another will declare that he is no judge of painting, and why? Because, forsooth, he can not run over the names of Correggio, and Titian, and Rubens, and Domenichino, and Raphael, at sight, on seeing a picture that other people are in ecstasies over, or because he can not give a reason for his liking.

Preposterous! Will he go out into the open air, and with all the woods and waters of a crowded picture about him—a magnificent panorama perhaps, girdled by the horizon, and tell me that he is no judge of landscape? No judge of landscape! What were eyes given to him for? What business, indeed, has he to

open them on earth, sea, or sky, or even to walk abroad, if he can not so far judge of a living landscape, as to be able to say whether he likes it or not—*without giving his reasons?* When he sees a beautiful woman, a magnificent tree, or a fiery horse, will he tell me that he is no judge of either because he can not give a reason for his liking? Must he be able to paint a landscape, or a woman, or a horse, before he enjoys either? Or to make a shoe before he pronounces judgment on it? May he not be able to distinguish one man's handwriting from another's, without giving satisfactory reasons?

But people do buy bad pictures and hang them up in their sitting-rooms, where they are most likely to mislead and corrupt the whole family. And of course you will say it is because they are no judges. No such thing—for every human being with eyes and ears is a judge both of music and painting, just so far as he honestly acknowledges his inward preferences, and does not go beyond his depth. Does he want any help in choosing a wife, or in judging of beauty in a dog, a horse, or a flower? No, indeed—but for the same reason that people go to the opera, and listen to what they do not understand, nor feel, nor enjoy, because others do, and they want to pass for connoisseurs, or at least for amateurs; turning away from "The Last Rose of Summer," "The Lakes of Killarney," or "Down the Burn, Davie, Love," to bother over the complications of Bellini, or Verdi, or Rossini; or, while the first go to their hearts and linger in their memories like "something Heaven hath sung," and the last leave no impression but weariness, disappointment, and a secret wonder how people can ever be so much pleased with what seems to them so *difficult*, that like Dr. Johnson, they wish it were *impossible*—for the same reason they buy bad pictures, which they neither understand nor like, simply because others do, or because they resemble what others hang up in their halls and galleries, and pay enormous prices for.

Now in all such cases, if the uneducated and inexperienced would not be in such a hurry; in other words, if they would clap on the brakes, and stop long enough to understand themselves before they offer their bids upon the judgment of another, they would be no more likely to make themselves a laughing-stock in buying a picture, however limited their knowledge of art, or a piece of music, than they would in choosing a wife, a dog, or a saddle-horse. But when they do, it will be found ninety-nine times out of a hundred, that it is because they have disregarded the promptings of their own nature, the instincts of that individuality which characterizes every human being, the elective affinities, the governing laws of phrenology, and taking the advice of others, who can not judge for them in such perilous matters, have rushed headlong to a conclusion—forgetting to clap on the brakes.

What business, I pray you, has any man to say that he is no judge of anything that lies forever in his path, that waylays him at every turn, and appeals day after day, and year after

year, to the holier instincts of his nature? What are his many faculties given him for? What are his senses worth, unexercised, uncultivated? and how shall he answer for his folly hereafter, in paralyzing, or smothering, or profaning so many of his higher gifts?

But he can not learn everything, he says. Not everything to perfection, so as to be distinguished in everything, I admit. Still he may learn so much more of everything than he is now satisfied with learning, as not only to astonish himself, but others. Let him read twenty pages a day, every day of his life, and at the end of a few years he will find that he has read through a pretty decent household library, and of course that he has made himself acquainted with, perhaps, a general chart of history, a wide range of travels, and if so disposed, with political economy, the drama, the poets, and general literature, together with geology, mineralogy, and the natural sciences, and all this, without labor and without interruption to his ordinary business. Men have acquired languages, even the most unmanageable, over the blacksmith's forge. Elihu Burritt did this, and others have studied the higher mathematics amid the whirr of machinery, and the rushing of tumultuous waters. And so with all other subjects of human knowledge—with the fine arts, and the mechanic arts, as with the sciences. They learned early to clap on the brakes, and not jump at conclusions. They did not begin with deciding against themselves, that they were good for nothing but to make money, or manage cases at law, or build houses, or run hotels; and so with the women that have distinguished themselves in a thousand ways. Instead of allowing themselves to be persuaded that they were made only "to suckle fools and chronicle small beer," they took it for granted that all their faculties and opportunities were but so many talents, for the right use of which they were to be answerable to their heavenly Father.

But enough. Be in no hurry to decide against yourself. If you like a thing, say so, without troubling yourself to give a reason, any more than you would for liking a peach, or a grape, or a flower. It is nobody's business why you like the one or the other, or why you prefer one to another; and it is a piece of unpardonable impertinence for anybody to ask you why you prefer one piece of music to another, or one picture to another, as much so, indeed, as to ask you why you chose the wife you are living with, or why you preferred her to her sister. You had your reasons, and that was enough. There being no unquestionable standard of taste or opinion, why have not you as good right as another to judge for yourself, and choose for yourself, provided you do it honestly, deliberately, and according to your natural instincts? Instead of choosing a picture because it resembles another picture, choose it because of its faithfulness to nature, as you see nature. If George Washington should reappear on earth to-day, alongside of Stuart's portrait of him, he would be declared an impostor, such complete possession has the

portrait taken of the public mind both abroad and at home. Yet Peale's Washington is the truer by far, though somewhat Frenchified and over-labored. Be true to your own preferences and instincts, and though you may be sometimes laughed at, you have nothing to fear. You remember the story in Don Quixote, of the clown who denounced a mountebank for his misrepresentation of a pig, saying he could do it better himself. He was challenged to take the stage, and went up amid a general shout of derision, and gave what he called his *imitations* of a pig. The multitude only laughed the louder. When they had got through, he pulled out a sucking pig from underneath his gabardine, and set him squealing before their eyes. But still, if I remember aright, they were not convinced, and drove him off the stage for an impostor. And although it may be true that no one has a right to be wrong, still you have as much right as another to be wrong, and as there is no inflexible, undeviating standard of right in most matters of opinion or taste, all you have to do, when questioned about music, or painting, or architecture, or poetry, is to decide for yourself, without regard to fashion, and to say that you like this or that picture or composition, without pretending to give a reason. In other words, when you are hurried, clap on the brakes, and come to a full stop, if need be, before you commit yourself. When the king of the Sandwich Islands was in London he ordered music one day, having heard some that he liked prodigiously. The band tried piece after piece, but no, his Majesty only shook his head. At last they began tuning their instruments. "Ah!" said he, jumping up, "*that's him!*" Of course, he knew enough to say what suited himself, and was so far a judge of music, unless, to be sure, he pretended to like what he saw others enraptured with, out of deference to them.

AN ELOQUENT PASSAGE.—"It can not be that earth is man's only abiding-place. It can not be that our life is a bubble cast up by the ocean of eternity to float a moment upon its waves, and sink into nothingness. Else, why these high and glorious aspirations which leap like angels from the temple of our hearts, forever wandering unsatisfied? Why is it that the rainbow and cloud come over us with a beauty that is not of earth, and then pass off to leave us to muse on their loveliness? Why is it that the stars which hold their festival around the midnight throne, are set above the grasp of our limited faculties, forever mocking us with their unapproachable glory? And finally, why is it that the bright forms of human beauty are presented to our view and taken from us, leaving the thousand streams of our affections to flow back in Alpine torrents upon our hearts? We were born for a higher destiny than earth. There is a realm where the rainbow never fades, where the stars will be spread out before us like the islands that slumber on the ocean, and where the beautiful beings that pass before us like shadows, will stay forever in our presence."—G. D. Prentice.

Religious Department.

Know,
Without star, or angel, for their guide,
Who worship God shall find him. Humble love,
And not proud reason, keeps the door of heaven;
Love finds admission where proud science falls.
—Young's Night Thoughts.

THE ABUSES OF CULTURE IN THE MINISTRY.

BY A. A. G.

THERE is nothing more wonderful or beautiful than the power that God has given to every man to enrich and cultivate his whole being through the human faculties. Man is finite and God is infinite, and yet the Creator, in planning and making man on so magnificent a scale as he did, and in giving him such glorious powers with which to carry on the work of self-culture, allied him to himself, and formed him in his own divine image.

Yes, men, as the work of God, as the sons of God, are divine. We may even dare to say that the blood of the kingly, divine Father runs in their veins, for what *son* is there who is not thus related to his father? But everywhere are seen men marring their own divinity. We speak not now of those numerous vices that disgrace or ruin men, or of that most evident turning away from God that has blighted so large a part of the human race. We speak of that *wasting*, of that *throwing away*, or using for inferior purposes what they have gained, through a long and severe process of self-culture, and, professedly, for the highest purposes.

If we should say that this unholy abuse of culture characterized one class or profession of men more than another, we might possibly err widely from the truth.

The good and true are, we think, prejudiced in favor of, rather than against, those whose profession is that of the Christian ministry. The men whose business it is to bring divine things down to men are not a mark to be shot at, at least not by the good. To say, as has often been said, that there are no more good men in the ministry than in any other profession—that love of money, dishonesty, and all evil are as common among ministers as among other men, would be stating a falsehood, and a falsehood that could most easily be refuted. We have no such sweeping charges to bring against those whose profession it is to teach men the best and holiest duty of life, the duty of laying hold upon everlasting life.

And yet it can not be gainsayed or denied that, as there are spots on the sun, so there are spots on the great, luminous, far-shining profession of the ministry, and that that spot which has cast one of the darkest shadows upon those who love the light is the abuse of culture.

It should, in justice, be said that one reason why the abuses of culture in the ministry are more evident than in other professions, is that it is like "a city set upon a hill." And still another reason is, that there is in it more

culture to be abused than in any other profession. The man who thoroughly educates and cultivates himself for the ministry has a great deal to use or abuse, and there are few people so blind that they can not see it.

But what are the abuses of culture?

A clergyman, eminent for learning, and for a great variety of the richest treasures of knowledge, was once called to a large parish in a prominent town. His labors had, for many years, been confined to a village, and all the good he had accomplished had been done among "simple villagers." The high hills about the little village had hemmed him in, and the "plain people" had often led him to ask himself, "How can I continue to waste my gifts, my talents, and all the varied knowledge I have heaped up, upon such a people? If I had known," he said, "that I was to be buried, for a large part of my life, in a *village*, I would never have toiled, as I did, to fit myself for the ministry. But now I have had a loud call, and I must go."

He did go, and went with his head well-nigh crazed at the prospect of *celebrity*. For the time, at least, he forgot to say: "My meat and my drink, it is to do the will of God." It was constantly in his thoughts that he was going to a high post of *honor*. He was going to preach to an *entirely different class of people*. He was to have a church and congregation of *taste*, and they would know how to appreciate his cultivation. They would be the very people to bring into use his high culture.

But disappointment stands waiting everywhere for all ambitious souls, and the expectant of honor and fame was not a little chagrined to find soon after his settlement that his new church had not the name of being the *first* church. The people of whom he had become the pastor were, most unmistakably, something below the *first* people of the town. They moved in *lower* circles. The poor pastor, who, in all his long course of study and preparation for the ministry, had kept his eye on a *high* post, and expected to make himself known and felt among *eminent clergymen* and *prominent churches*, was really tormented at the prospect before him. So he determined to work his way through all obstacles and struggle up into notice. "I'll make the church grow," he thought to himself. "I will draw in people from the *first* class. I'll make it the *first* church." So he flattered the wealthy and the fashionable, those who loved the world and lived for it, and there were, occasionally, a few accessions to his church from the *first* people.

A lady in the church, who was of a kindred spirit with him, said to him one day:

"This church is not what it ought to be. The better class of people keep away from it." And she added, with an expression of disgust on her face, "The people who compose the congregation are not such as I have been accustomed to call *my* circle."

"Well," he replied, "we must attract the *first* circle to it. We must build another church—we are abundantly able to do it—and we must

have the finest organ and the finest choir in town, and then the church will grow. He didn't say "grow" in *grace*, for that did not happen to enter his mind or to weigh heavily on his heart just then. He was thinking, rather, that a man of his culture ought to be listened to, every Sunday, by the *first* people, and then all that he was and all he had acquired would be put to a good use, and no longer be wasted. He had forgotten those words of everlasting truth: "But God hath chosen the foolish things of the world to confound the wise; and God hath chosen the weak things of the world to confound the things which are mighty. And base things of the world, and things which are despised, hath God chosen, yea, and things which are not, to bring to naught things that are." Forgetting all this, he had surrendered himself to ambition, and to the most foolish of all ambitions, and had thus turned aside his culture from its highest and its legitimate use, and made himself a living demonstration of the truth that there is such a thing as abuse of culture.

The writer of this article would not be too severe, or make the impression upon the reader that he loves to spy out the faults of clergymen, for he views them with a kindly eye and a warm heart, and believes that the truest, the noblest, and the best men are to be found in the ministry; but he is speaking of the abuses of culture, and must be allowed full freedom, and the liberty to speak of still another abuse of culture—eccentricity. Where eccentricity is perfectly natural, not affectation, but a part of the man,—something he was born with, something he grew up with, and which he can not correct any more than he can unmake himself, neither the tongue nor the pen should blame him. But it can not be denied that there are many men in the ministry whose eccentricities are simply affectation. They have constantly in their eye certain clergymen of almost world-wide fame, remarkable for the eccentricities of genius; and every time they enter the pulpit, they seek to make themselves, by odd, unnatural expressions, appear as men of genius. They forget that these men of genius do not seek to be eccentric, but clothe their thoughts in language that is perfectly natural. Nothing is further from their minds than the wish to be eccentric. Forgetful of all outward appearance, these men of true eccentricity are aiming simply and solely at the redemption of the race, and are spending the whole force of their natures on winning souls. To display those eccentricities which are often inseparable from genius, and thus prove to the world that they are men of genius, is no part of their aim in preaching. If they pour out their thoughts in language unlike that of other men, it is not self nor self-seeking that gives it force, but the native power of the mind, inspired by the purest and highest love of men. But it is very different with these imitators of genius. They are often men of culture, but not satisfied with their culture, or with the impression it makes upon men, and not being able to win the repu-

tation of men of genius, they clothe themselves in the eccentricities of genius, or rather, in imitations of it, which, at the best, are nothing more than oddity or coarseness; and thus they hide or abuse the true culture, which, if allowed to shine out and appear to be just what it is, might work great good among men. All worldly ambition in the ministry, whatever name it bears, is an injury and a hindrance to true culture.

We might speak of vanity, that vanity of the pulpit that so sadly mars the simplicity and purity of true culture. Oh, how often has it been seen and felt by the hearer! and how often has it filled with pain hearts that were full of the love of God, and that longed for a pure and perfect ministry!

The pulpit is a high and holy place, and those who stand in it should realize how high and holy it is, and what responsibilities they have assumed. And they should also watch well, lest the truest and highest and holiest effect of culture be lost upon men, through the weak and unworthy ambitions of life.

May the time not be far distant when the pulpit will become fully redeemed, and radiant with light, even with that light which is the reflected beauty and glory of the Redeemer.

CHARLES F. DEEMS, D.D. PORTRAIT, CHARACTER, AND BIOGRAPHY.

This portrait indicates a combination of the qualities of fineness, elasticity, and endurance. We judge that he inherits his mother's physiognomy, her peculiar fineness and sensibility, her keen, quick, and accurate intuitions, and that these qualities tend to leaven the whole character, or give it color, tone, and peculiarity. He inherits, evidently from the father, a sharp intellect, strong will, dignity, determination, and executive force. Thus, having a combination of feminine susceptibility and intuition with masculine vigor, energy, independence, and logical power, he is able, more than most men, to range over the whole sphere of mentality. Those who are strictly masculine in temperament and phrenological development are apt to be hard, rough, harsh, and stern. Those who inherit from the feminine side of their parentage mainly, are often too sympathetic, loving, intuitive, and impulsive. When we find combined in one the masculine and feminine qualities as above indicated, the person is able to illustrate the tenderness of St. John, the force of St. Peter, and the logic of St. Paul. The very large Benevolence in this head shows uncommon sympathy—the desire to help and bless everybody;

PORTRAIT OF CHARLES F. DEEMS, D.D.

and with his high Spirituality and Veneration we recognize the tendency to seek divine aid, and to aim for the prosperity of men in spiritual and divine things. If he were not a clergyman, he would be at least a philanthropist, seeking out the suffering and ministering to the temporal, social, and, so far as possible, the moral wants of the community. Cultured and trained in the sacred profession, he is able to more fully evince his Sympathy and Spirituality in seeking to save men, first religiously, afterward temporally.

We find here a full share of perceptive intellect, which gives him the ability to gather knowledge from every quarter. He has an excellent memory, so that what he has learned he can recall and use to a good advantage.

He has discrimination and power of analysis and criticism; ability to reason by analogy, and also to take hold of the logical forms of thought and bring them to the comprehension of practical people through his own practical and analogical faculties. His logic, though strong, is not dry, but is clear, and about as simple as the Scripture parables.

His large Constructiveness and strong

Imagination, joined with his large Causality, impart the power to organize and govern, to combine apparently contradictory elements and qualities and make them harmonious. He has the power of centralizing the forces of a family, of a school, or of a church. He has the elements of eloquence and poetry. He has an appreciation of the romantic and the fanciful. He has excellent talent for imitation, and can adapt himself to the usages and customs of others without friction and without difficulty or delay. When he goes among the poor and unlettered, he has not only the power of impressing them with the strength of his character, but also the ability to approach the destitute and the ignorant in such a way that their poverty and want do not seem magnified by contrast with him; and while he has dignity and talent enough to feel himself the equal of the great, he does not despise those of low degree, nor make them feel their meanness and want through any lordly or egotistical manner of his own. The poor incline to look upon him as an elder brother; children are fond of him; woman confides in him; and he has also the elements of general popularity and power. Nothing discourages

him, and his firmness is equal to almost any task to which he may be called. He is watchful without being timid; is brave without being rude, overbearing, or cap-tious. He is strong in his friendships; stands by those whom he loves through all trials and obloquy; opposes wicked-ness, but seeks to save the wicked.

His Language is large enough to give him freedom of expression, and his Faith and Hope reach forward to the beautiful, the spiritual, and perfect. He always has a word for the encouragement of the depressed. Speaking with full emotion, he reaches the emotional nature of those who listen, and while he gives a strong trellis work of argument, he does not leave the trellis bare. With his moral, and social, and imaginative faculties, he is able to embellish and fill up the argu-ment with rich illustrations, with varied fancies, and with those hopeful and so-cial emotions which seem to make all men of one brotherhood.

In the social circle he can make him-self a center of attraction, but he never is merely the recipient of affection and in-fluence. He gives more than he gets. He is able to put his whole soul into his style and manner, as a speaker or in the social circle. It is not often that we find so much power of will, thought, force, and aspiration so clothed with the esthet-ical, spiritual, sympathetic, and affection-ate.

His brain being rather large for the body, he should rest and recreate, and not allow himself to work up to the full measure of his strength; for as he be-gins to wane into age, he will find him-self easily exhausted. He should take life more easily; guard against excessive brain work and against exposure, and lay up a stock of vital stamina for future years.

BIOGRAPHY.

CHARLES F. DEEMS, D.D., Pastor of the "Church of the Strangers," in New York, and one of the distinguished divines of the day, was born in Baltimore, Md., December 4th, 1820; his father is a preacher in the Meth-odist Episcopal Church.

In 1839 he graduated at Dickinson College, Pennsylvania, and before attaining his major-ity he was appointed general agent of the American Bible Society for the State of North Carolina. While still very young, not twenty-three years of age, he accepted a professorship in the University of North Carolina, in which he gave universal satisfaction for five years, when, against the earnest wishes of the trustees

of the University, he accepted the chair of Natu-ral Science in Randolph Macon College, Vir-ginia. The year following he returned to North Carolina, and was stationed in Newbern. Soon after, he was elected a delegate to the General Conference of his church, held in St. Louis; while there he was elected President of the Greensboro' Female College, in North Carolina, and succeeded in placing the college "on a permanent basis of prosperity," which it main-tained until the buildings were destroyed dur-ing the war.

When only thirty-two years of age, Dr. Deems received his degree of D.D. from Ran-dolph Macon College, being then the youngest D.D. in North America. In 1858 he was re-elected to the General Conference, at the same time President of Centenary College, Louisiana, It is said that he was elected either president or professor of eight other institutions, being also presiding elder to the Wilmington district. The next year Dr. Deems and Dr. Hawks were elected to professorships in the University of North Carolina, of which Dr. Hawks was a graduate. Both gentlemen declined. In 1860, Dr. Deems spent six months in Europe, the first "rest" he had taken in nineteen years of a laborious ministry.

Notwithstanding his various other duties, he has found time to write or edit twelve volumes of various works, one of which, "The Home Altar," was translated into French, and of which a new and elegant edition has just been published by Hurd & Houghton.

A speech of his delivered at Petersburg, on the trial of a distinguished citizen, was pro-nounced to be, by judges and learned men, who either heard it, or had read it in pamphlet form, "a master-piece of forensic eloquence."

Among his original works is one which has never been fully brought before the public, but which far surpasses in merits, many popu-lar works of the same subject; the title is, "What Now," a book of counsel to young ladies just leaving school to enter upon the duties and trials of life. It contains many acute and valuable remarks, presented in a style to attract and retain the attention of the young. We learn it is now out of print. Per-haps of all his works, the one that deserves the most attention, and the one upon which he spent the most labor, is the "The Annals of Southern Methodism," a historical compila-tion of events, facts, and statistics connected with the Church.

This work, a distinguished historian of this city pronounced a monument of labor and in-dustry, a source to which American ecclesiast-ical history would be deeply indebted for many facts. It certainly shows that originality and brilliancy do not incapacitate one for the te-dious labor of separating the chaff from the wheat in writing a historical and religious work. Such works are not, and can not be, appreciated except by the learned, but they are never-theless most useful and valuable to the student.

Dr. Deems first attracted public attention as a lecturer by his lecture on "The True Basis of

Manhood," delivered at Hampton Sydney Col-lege, Va. Of this effort a distinguished logi-cian of the South said: "It shows the highest capabilities as a thinker and as a writer." Dr. Deems has, since coming to New York, de-livered several lectures, which have increased his reputation as a popular teacher of truth. His lecture on "Husbands and Wives" ought to be repeated in every community.

In December, 1865, he came to New York for the purpose of fulfilling some literary en-gagements, and in July preached for the first time in the small chapel of the University, to a congregation of forty-three. Gradually this room grew full, until it was crowded to over-flowing. Strangers visiting the city, from every part of the world, flocked to hear him. It soon became necessary to secure a more spacious hall; the large chapel of the Uni-versity, formerly occupied by the congregation of the Rev. Dr. Hawks, was hired for the pur-pose, and has since been filled with an appre-ciative audience Sunday after Sunday.

The Bible doctrine, declared with simple earnestness, is heard from the pulpit, without any special reference to the cold forms into which the schools and the sects cast it.

Scholars, artists, and tradesmen listen with interest to these discourses, for the minister thoroughly understands the art of giving variety to his style, diversity to his forms of language, and a rapid transition to his ideas. He frequently rises to heights of sublime elo-quence when dealing with the majestic and magnificent mysteries of the spiritual world; he pours his withering sarcasm and fearless censures against that mighty and potent thing called Fashion, that corrupt and corrupting goddess that almost invariably freezes to death the nobler qualities of the human heart in its benumbing embraces; he thunders his denunciations upon hardened hypocrites, and makes tender and solemn appeals to the prodigal sinner to return to his Father's house.

He passes from argument to illustration, from imagination to logic, and from pleasantry to solemnity, with so much ease and grace that the tastes of the most fastidious and critical of his congregation are never shocked or offend-ed by it. The most brilliant intellect and the humblest mind are alike interested and edified by his fresh, powerful, and original sermons. Endowed with much sound learning, guided by judgment, gifted with fervid eloquence, pos-sessed of a creative imagination, and above all a character clothed with genuine piety, this true-hearted minister of the Gospel is an orna-ment not only to the pulpit, but society.

Dr. Deems, although slightly below medium height, is striking in his personal appearance, and impresses one at once with a sense of his intellectual superiority. His eyes are gray, ex-pressive, and piercing. Complexion fair, fore-head high, hair thin, such as is generally found in persons of rare mental and nervous organ-ization. His manners are genial, pleasant, and fascinating. His voice is soft, persuasive, and delicately modulated, and while not great in

volume is of considerable compass. His step is quick, nervous, energetic, and determined. He is sometimes subject to spells of despondency, but is generally cheerful, happy, and hopeful, and has a sanguine, excitable temperament. He is particularly happy in his domestic relations, his family being declared a model of good government, and an example of purity, confidence, and domestic love.

Dr. Deems' powers of endurance, considering his organization, are wonderful. He preaches twice on Sunday, hold two services at the Tombs on Monday, conducts a meeting for conference and prayer on Wednesday, has open house on Friday evenings, when the little parsonage is often thronged. He has been known to spend fourteen hours a day in pastoral visiting, and afterward return to the work of the desk.

He writes much for the press, but seldom a simple sentence for the pulpit, all his sermons being delivered from briefs. His memory of verse is so defective that it is said he knows only one hymn. All the quotations made in his discourses are carefully read.

His success has been almost marvelous, and were New York to build him a great church, that he may be permanently established here, it is highly probable that he would prove invaluable, for his influence is great over every class of people he comes in contact with.

Early in his ministry Doctor Deems became a warm advocate for the introduction of lay representation into the polity of his church. The dignified, able, and persistent manner with which he labored for it, went far toward winning over to his opinion many of the most influential clergymen in his church, and thus securing its ultimate success. At the last General Conference of his church, held at New Orleans, in April, 1866, he had the satisfaction of assisting in the passage of the ordinance which introduced lay delegation into its councils. On that occasion a distinguished and gifted divine turned to the Doctor and said, "Posterity will not forget the part that you have taken in this matter." In a special meeting of the lay representatives of the North Carolina Conference, during the session of a conference at Wilmington, N. C., December, 1867, the following preamble and resolutions were adopted by a rising vote, and a copy of the same ordered to be presented to Dr. Deems:

Whereas, We remember with much pleasure the earnest and forcible manner in which Rev. C. F. Deems, D.D., advocated the introduction of lay representation into the councils of our church, at a time when its advocacy was unpopular, and when it was strenuously opposed by most of the leading journals and ministers of our church; therefore resolved, that we hereby heartily congratulate him on the final success of the principle for the expediency of which he contended against such odds. Resolved, secondly, that we deem it appropriate to thus express to him our congratulations on this occasion, as we now have the pleasure of meeting him for the first time as members of the same body of which he has been for many years so honored a member.

JOHN F. FOARD, *Secretary*.

J. B. LITTLEJOHN, *Chairman*.

RELIGIOUS STATISTICS OF THE UNITED STATES.

A REPORT on the state of religion in the United States, said to have been prepared by Henry B. Smith, D.D., of New York, was presented to the General Conference of the Evangelical Alliance recently in session at Amsterdam. The following statistics are taken from said report:

NUMBER OF CHURCHES, ETC., IN THE U. STATES.

	Churches.	Communicants.
Roman Catholic	3,800	4,000,000
Methodists	10,460	2,000,000
Baptists	17,220	1,690,000
Presbyterians	5,000	700,000
Lutherans	2,900	323,800
Congregationalists	2,780	267,400
Protestant Episcopalians	2,300	161,200
German Reformed	1,160	110,000
Dutch Reformed	440	60,000

United Brethren about 3,000 societies.

Moravians about 12,000 communicants.

Unitarians about 300 churches.

Universalists include about 600,000 of the population.

Friends or Quakers, Orthodox, about 54,000 members.

Friends or Quakers, Hicksites, about 40,000 members.

From what source the reverend compiler obtained his data we are not aware; but there are, so far as our knowledge of the matter goes, evident inaccuracies in his figures. For instance, Methodist churches are rated at 10,460; whereas, according to the United States Census of 1860, over seven years ago, there were 19,883, with over 2,000,000 communicants, while to-day, it is probable, such has been their rapid increase, that there are not less than 22,000 churches and 2,500,000 communicants in the different branches of the Methodist denomination.

The Episcopal Church also, in 1860, numbered upward of 2,500 churches, besides numerous mission stations, and over 200,000 communicants. The present condition of that Church it is difficult to estimate, on account of imperfect parish returns, but it can not be less than 230,000 communicants.

The census of 1860 gives the Roman Catholics 2,442 churches. They seem, according to the report above mentioned, to have gained 1,380. But as to "communicants," the Roman Catholics are put down at 4,000,000, which is all they claim as their entire population, including men, women, and children; when, as in the case of other denominations, actual communicants, or adults, only are counted. Subtract three fifths, or 2,400,000 from 4,000,000, for the children of Catholics, and we have 1,600,000 left as the adult Catholic population; and even this is an over-estimate by hundreds of thousands. There are not more than a million and a half of adult Catholics, at most, in the United States to-day, while there are at least as many Baptists, and not less than a million more of adult Methodists.

At any rate, we can claim for the United States a great growth in her various religious organizations.

SELF-HELP.

"God helps them that help themselves," is an old and good motto. By self-help alone can a man make his life a true success. It is not the indolent man who sits lazily in his chair, and thinks that Providence will help him without the necessity of helping himself, who succeeds. No. It is he who goes resolutely out into life's battles, and strives and struggles manfully against adversity, rising step by step, beginning at the bottom and working onward and upward, steadily but surely, until at last he reaches the goal of his ambition. These are the individuals that constitute a nation's heart; these are the men who bring a nation prosperity. The nation can not make the people; but it is the people that make the nation. And as every individual is an atom, a wheel, in the great national life, it behooves each and every one to "help himself," and by so doing he not only elevates himself in the scale of humanity, but helps to exalt the nation of which he is a unit. Intelligence must be among the people, or the nation will not be very exalted. To obtain this, self-help is necessary; national help has little to do with it, except to offer facilities. Sir Robert Peel says: "Self-help alone makes a man succeed. If he has confidence in himself he may despise the world, because he is sure to get on by his own determination to succeed."

Knowledge here is within the reach of the poorest. Our system of national education is not for the rich alone—it is offered to all who choose to partake of its advantages. But we see daily that boys *are* untaught and men *are* ignorant, simply because *they* have not helped themselves.

Surely no encouragement is needed to study, more than the examples of the thousands of eminent men who, by helping themselves, have risen to their present positions. Instances could be cited without end in illustration of this fact. The best men of history have got their education, not in the college, not in the common school even, but by the flickering light of the wood fire of an obscure log cabin, or by the pale light of a candle in the cold, starving garret. Some of our most useful theologians have graduated on their saddlebags; their best discourses were their thoughts by the way. When a person seeks for the truth, and searches diligently until he find it; if he searches day and night after wisdom, there must be an inner impulse which he carefully nourishes and feeds. All that is beautiful, all that is delicate, all that is worth having, all that is honorable, all that is chaste, ennobling, and enduring in life, must be won. Wealth can not purchase it, and once obtained it can not be altogether lost. It is no royal gift; kings and queens are not the exclusive possessors of it, for the humblest may vie with the greatest in intellectual and moral attainments.

All our faculties need to be developed by self-help. Nature may have endowed us with

excellent talents, but if we do not use those talents, if we bury them, then they deteriorate.

Some men, it is true, have been endowed with finer organizations than others, but history has proved that they who win the race of life are they who have had most difficulties to encounter, and who have fought and mastered them. One difficulty conquered, the next becomes far easier to surmount, and thus the self-helper, rising from obscurity, has won the foremost rank. Knowledge of a man's weakness is the only way to inspire extra exertion to overcome that weakness by self-help. The history of self-help is the history of the world. The lives of kings and queens have no influence on the history of a nation's life. This is carried forward alone by the talent, genius, and self-help of the people. If we would make "our lives sublime," as individuals, then we must help ourselves, and God will help us. We can all do it—the watchword is "Self-Help."

Our Social Relations.

Domestic happiness, thou only bliss
Of paradise that has survived this fall!
Thou art the nurse of virtue. In thine arms
She smiles, appearing as in truth she is,
Heav'n-born, and destined to the skies again.—Chapman.

A HOME OF THEIR OWN.

BY MRS. GEORGE WASHINGTON WYLLYS.

"ONLY think of a home of one's own—a nice, pretty little cottage somewhere, with a sloping roof, and plenty of honeysuckles and all that sort of thing climbing up the eaves, and a nice wide piazza for a fellow to lounge on summer evenings, and plenty of room for one's friends; that's my idea of solid comfort!"

That was the way the man looked at it!

"A home of my own—dear little double parlors papered in white and gold, with a cottage piano, and French windows draped with white muslin—lilacs and laburnums by the gate, and robins to sing all day in the branches of the elms! Oh, I don't see how I have endured these close, cramped city rooms all my life!"

That was the way the man's wife looked at it!

A home in the country—a place all to themselves—stairways up and down which they might stalk without meeting half a dozen of the "other boarders"—rooms in which they might sing and dance and speak several semitones above their breath, with "Mrs. Smith's compliments, and she really must beg a little more consideration for her poor head!"—green lawns whereon they might walk without an ever constant dread of lynx-eyed policemen and uncompromising placards, "Keep off the Grass!" Who can blame the disfranchised city people for feeling as if they were entering on a new life? Who can wonder if they go into the country, rejoicing, as the Children of Israel went into the Promised Land!

And then the preparatory flourishes; the visits to cabinet ware-rooms and house-furnishing bazars, where they are tempted to provide

lavishly for wants of which they never before were conscious! Alas! if they could only lay to heart the wise old saw, "Where ignorance is bliss, 'tis folly to be wise!" it would be better to them than five hundred dollars in the savings bank! Who wants to discover suddenly that they have been living in semi-barbarism all their days? People *did* once exist before patent egg-beaters were, and drank coffee contentedly from tall tin pots, and relished asparagus from ordinary blue-edged "vegetable plates." Fancy Martha Washington in a modern House Furnishing Depot! Imagine Solomon's "wise woman" out shopping for patent skillets and potato-parers! And yet they were both of them pretty good housekeepers in a steady-going, old-fashioned sort of way. Of course they would be considered woefully behind the times in the nineteenth century; but nobody found fault with them in their own day and generation.

And then furnishing a country house is so very different an affair from fitting out a city residence. No hot moth-eaten carpets—only cool, delicious matting; no rosewood or brocatelle, but cane and bamboo and chintz-covered sofas; enameled "cottage sets"—white muslin instead of heavy satin or tamboured lace for the windows, and plenty of blue ribbon to loop them back with! There is something quite similar to the last chapter of a novel in the whole thing—something that suggests to the husband the idea, "Why, it's as good as a play, my dear!" and makes the wife think, with a smile and a sigh, of her little sister's "baby-house" at home.

If people could only dream on in this world! But there it is—nobody ever drifted off into a delicious nap yet, but he was rudely waked just at the most delicious crisis of the dream! It's the way, in this mundane planet.

And so our Babes in the Wood—our young couple who never yet had "a house of their own," pack their trunks and engage their expressman, and go their ways exulting to "that very desirable cottage residence," concerning which the real estate agent had been so enthusiastic!

Well, suppose it to be, really and actually, a pretty place. What place does *not* look pleasant in the month of June with budding shrubbery around it, and birds in the branches, and the grass all starred into dandelions? So far so good; but while Philemon is deciding where he will have the croquet ground measured off, Baucis comes to him, timidly, "My dear, I think there's something the matter with the chimneys—Bridget says all the smoke rushes out into the room!"

"Probably they have not been swept!" says Philemon.

"And the ceilings are so dreadfully low," goes on Baucis, despondingly, "and the parlor walls are papered with great gaudy bunches of red flowers!"

(Alas for the visions of "white and gold" paper.)

"And there is a lot of hens in the kitchen,

and Mike says the hennery is all in ruins, and Bridget is clamoring for water, and I don't see a sign of a well or a cistern!"

"My dear, my dear," interrupts Philemon, "you must remember one can't have everything in the country!"

No—not quite everything. There is a charming view from the up-stairs window, if you are willing to bring your head in contact with the sloping walls to get a peep at it; but the said walls are dilapidated, and the wood-work has settled away from the perpendicular in a manner sorely aggravating to a mathematical eye! There is a nice piazza; but the boards can't be scrubbed off without water, and there is no water short of a "gurgling stream" in the glen, full a quarter of a mile off! There are lilacs all ready to burst into purple spikes of blossom; but one can't eat or drink lilacs; and the faithless expressman who was to bring the groceries has perjured himself, and fails to make his appearance! There is a lovely sunset, all gold and pearl and pink, behind the line of western woods, but there are only empty lamps, and nobody thought of bringing oil wherewith to feed them.

"Send out for some!" suggests Philemon. Send where? Oil doesn't grow in the woods, neither does it burst forth from green croquet lawns. The chimneys resolutely decline to perform any other function than that of smoking, the fire consequently sulk, smolders, and goes out. The furniture arrives—is piled on the piazza in a confusion which only newly moved people can imagine. The Tower of Babel might have been confusing, but there was no furniture in the Tower of Babel! And just as it grows dark, the much-tried Baucis comes crying to her husband:

"Bridget says she won't stay another hour in a house where there is neither wood nor water to work with!"

"Tell her to go about her business, then!" says Philemon, with a courage which is but too plainly assumed. Bridget goes about her business accordingly, and these two miserable adventurers are left all to themselves "in a house of their own!"

Nor is this the last of their tribulations. The new toy is soon tired of—housekeeping loses its charm when the dismal rainy days come and the muslin curtains grow limp and bedraggled, and the enameled bureaux get chipped and warped, and the matting is stamped through and stained and soiled, and the French china tea-cups have lost their handles! Poor little Mrs. Baucis realizes the difference between coming down to dinner in a blue silk dress at the chime of the boarding-house bell, and personally supervising the preparation of said dinner in dust and ashes, to say nothing of smoke and steam! While her better half discovers by degrees that the country is not only a place to smoke cigars and play croquet in! He becomes conscious that "friends from the city" involve much before-time preparation and many carefully considered arrangements! Chickens are nice—so are new-laid

eggs; but to have one's newly planted lettuces and cucumbers scratched ruthlessly up as fast as they are put in the ground is a *little* too much. The cow would be delightfully rural if she did not eat off all the rarest shrubberies and get lost in the swamps at least once a week! Philemon thinks over the matter, and comes hastily to the conclusion that "a house of one's own don't pay!" And as a man must grumble at somebody, and Mike has gone to the city to buy sweet potato plants, he turns on his wife with a mildly reproachful air:

"Things didn't go on so in my mother's family. We had a farm of a hundred acres, and everything went by clockwork. My mother was a housekeeper of the old school."

"It's a great pity you couldn't have married your mother!" retorts the wife with acerbity.

"My dear," says Philemon—wise man, he knows when he is worsted—"let's go back to the city and board again!"

And so ends the dream of Philemon and Baucis, as many another dream has ended. They have had quite enough of "a home of their own!"

THE FAST YOUNG MAN. A SKETCH FROM LIFE.

BY JOHN COLLINS.

He struts on the crowded pavement,
Swinging his useless cane,
The choicest Havanas puffing,
With looks of lofty disdain.
Flashes the diamond breastpin,
Fixed in his faultless shirt;
The only treasure about him—
A jewel lying on dirt.

Rings on his fingers betoken
Conceited self-love alone;
No feminine charms can soften
That obdurate heart of stone.

He bows to each giggling maiden,
His person and dress to display,
But passes unheeded the tailor
Whom he has forgotten to pay.

His curling moustache he moistens,
And twitches again and again;
His hair is so rich, rank, and glossy,
The crop has exhausted his brain.

Arm in arm, with a rowdy companion,
He chatters and simpers and winks;
"What a fool! whispers each one that sees him,
"Ah! how they admire me!" he thinks.

He rises at ten, weak and weary,
Worn out with last night's debauch,
And, bolting a hot smoking breakfast,
Complains he has eaten too much.
He goes to the barber, whose office
Is daily his whiskers to trim,
Talks politics—studies his toilet,
And swears that the mirrors are dim.

He calls for a two-forty courser,
And, languidly mounting his back,
Plies the whip and the spur, till nothing
But dust marks his furious track.
He stops at a *café* and orders
Brandy-punch and a well-seasoned stew,
Smokes his pipe, sips his coffee, and yawning,
Declares he has nothing to do.

Returning, he meets on the highway
A friend who has lent him some cash,
He intends to stop now and pay it,
But his horse passes on like a flash.
A plain country cousin salutes him
And bids him his galloping heed;
He smiles in derision, and answers,
"Pretty talk from a rustic, indeed!"

The animal, reeking and jaded,
Is left uncared at the door,
While the greater brute that abused him,
Takes a glass, his strength to restore.
Oysters, gin-sling, and billiards
Consume the rest of the day,
Not unlike the reprobate Hebrews
Who ate, drank, and rose up to play.

At five, he sits down to dinner,
Served up in exquisite style,
Fills his meerschaum, and plays deep at poker,
The tedious hours to beguile.

When day's busy cares are all ended,
His hours of folly begin,
Flushed with drink and seeking excitement,
He delights in convivial din.

He is mostly seen at the concert,
The ball, or the dancing saloon,
Or, lounging around the theater,
Humming an opera tune.
He sings, smokes, swears, and carouses,
Till stupor his revelry ends;
Then drags himself slowly homeward,
Escorted by tottering friends.

Night and day, to pleasure devoted—
Her willing and sensual slave,
His brain becomes weak and chaotic,
While his passions new stimulants crave.
Thus passes, in wild dissipation,
The years of the fast young man;
Life to him is so tiresome a burden,
He spends it as soon as he can.

At twenty, his health is so broken,
He can not in business engage;
At twenty-five, hopes to be better,
But at thirty dies of old age.
A worthless and ignorant creature
As ever the sun shone on,
The world will not mourn his departure,
Nor miss him when he is gone.

DON'T BE A LOAFER!—Young man, pay attention. Don't be a loafer; don't keep loafers' company; don't hang about loafing places. Better work than sit around day after day, or stand about corners with your hands in your pockets. Better for your own health—better for your own prospects. Bustle about if you mean to have anything to bustle about for. Many a poor physician has obtained a real patient by riding after an imaginary one. A quire of blank paper tied with red tape, carried under a lawyer's arm, may procure him his first case, and make his fortune. Such is the world! to him that hath shall be given. Quit dreaming and complaining; keep busy and mind your chances!

POWERS, the sculptor, is worth \$200,000, and we are glad of it.

OF SUCH IS THE KINGDOM.

The wind drove hard across the bay,
Lashing the waves to foam;
And threatening clouds, in dark array,
Sailed o'er the heaven's dome;

And while the storm fell heavily,
One of our little band
Was tossing on the restless sea,
Out many leagues from land.

In gloom we watched the wind that swept
Around in antics wild,
And in our fear we would have wept,
But for a little child,

Who pressed her forehead with a sigh
Upon the window pane,
Yet softly turned a beaming eye
Out on the beating rain.

"The clouds are heavy overhead,
But that will soon pass by;
And God will send the light," she said,
"To play along the sky."

With such a trustful smile she turned,
It lent her features grace,
And we in humble wonder learned
A lesson from her face.

MARIE S. L.

A MOTHER'S INFLUENCE.

THE MANNERS OF THE MOTHER MOLD THE CHILD.

THERE is no disputing this fact—it shines in the face of every little child. The coarse, bawling, scolding woman will have coarse, vicious, bawling, fighting children. She who cries on every occasion, "I'll box your ears—I'll slap your jaws—I'll break your neck," is known as thoroughly through her children as if her unwomanly manners were openly displayed in the public streets.

These remarks were suggested by the conversation in an omnibus—that great institution for the students of men and manners—between a friend and a schoolmaster. Our teacher was caustic, mirthful, and sharp. His wit flashed like the polished edge of a diamond, and kept the "bus" in a "roar."

The entire community of insiders—and whoever is intimate with these conveyances can form a pretty good idea of our numbers, inclusive of the "one more" so well known to the fraternity—turned their head, eyes, and ears one way, and finally our teacher said: "I can always tell the mother by the boy. The urchin who draws back with doubled fist and lunges at his playmate if he looks at him askance, has a very questionable mother. She may feed him and clothe him, cram him with sweetmeats, coax him with promises, but if she gets mad she fights.

"She will pull him by the jacket, she will give him a knock in the back; she will drag him by the hair; she will call him all sorts of wicked names, while passion plays over her red face in lambent flames that curl and writhe out at the corners of her eyes.

"And we never see the courteous little fellow with smooth looks and gentle manners—in whom delicacy does not detract from courage or manliness, but we say that boy's mother is a true lady. Her words and ways

are soft, loving, and quiet. If she reproves, her language is 'my son'—not 'you little wretch—you plague of my life—you torment—you scamp!'

"She hovers before him as a pillar of light before the wandering Israelites, and her beams are reflected in his face. To him the word mother is synonymous with everything pure, sweet, and beautiful. Is he an artist? In after-life, that which with holy radiance shines on his canvas will be the mother face. Whoever flits across his path with sunny smiles and soft, low voice will bring 'mother's image' freshly to his heart. 'She is like my mother,' will be the highest need of his praise. Not even when the hair turns silver and the eye grows dim will the majesty of that life and presence desert him.

"But the ruffian mother—alas, that there are such—will form the ruffian character of the man. He in turn will become a merciless tyrant, with a tongue sharper than a two-edged sword, and remembering the brawling and cuffing, seek some meek, gentle victim for the sacrifice, and make her his wife, with the condition that he shall be master. And the master he is for a few sad years, when he wears a widower's weed till he finds a victim number two."

We wonder not that there are so many awkward, ungainly men in society—they have all been trained by women who knew not nor cared for the holy nature of their trust. They had been made bitter to the heart's core, and that bitterness will find vent and lodgment somewhere. Strike the infant in anger, and he will, if he can not reach you, vent his passion by beating the door, the chair, or any inanimate thing within reach. Strike him repeatedly, and by the time he wears shoes he will have become a bully, with hands that double for fight as naturally as if especial pains had been taken to teach him that art of boxing.

Mothers, remember that your manners mold the child. Who will not say that mothers ought to be thoroughly educated, whether their sons are or not?

HOW TO CHOOSE A WIFE.

REV. HENRY WARD BEECHER, in one of his discourses, while commenting on the twenty-eighth chapter of Genesis, said:

Jacob's father forbade him to take a wife from the daughters of Canaan. Why? Because he knew that with the wife he would take the religion; that had he brought into his house the fairest and discreetest of wives he would have brought in the cause of a long train of miseries with her. It is an old proverb, that a man is what his wife will let him be; and old Isaac was a wise man when he said, "Don't go among the Canaanites to get a wife." Canaan nowadays is everywhere. It is every house where there has been no family prayer, where mammon is God; wherever there is a godless household, there is the land of Canaan. A man that marries a good wife has very little more to ask of the Lord till he dies. A good wife is a blessing from the Lord, and there are very few blessings that he gives now or hereafter that are comparable to it. And marriage

is a thing not heedlessly to be rushed into, but slowly, discreetly. It is anything but a fancy or a calculation. It is a matter of moral judgment and duty as high as any duty that lifts itself between you and the face of God. At Ishmael, he gets married out of spite. There have been a good many men who have married out of a rebound of passion, of whom this is a typical instance. It is not the first time that a man has forsworn his own good out of spite to somebody else. Men will repeat stories, will make themselves the common sewers of village rumor, just to spite somebody. Political parties do the same thing. I think, for a period of thirty years in Indiana, the United States Senator was always a man elected for the sake of splitting the party that sent him there. All this is a law of human nature; it is old Esau in man yet.

In respect to the marriage relations, they that enter into this sacred state ought to feel themselves bound to do it upon moral grounds, not upon the calculation of secular advantages. The public sentiment of this Christian country derides the man who would desecrate the sanctity of married life for reasons of pecuniary or ambitious calculations; for although one may find a wife come to him now and then that is a joy and a blessing of his life, ordinarily such marriages result in arid married lives, if not in contention and unhappiness. Nor should the pleasure of fancy influence one's selection; neither should one form a marriage connection upon mere sentiment—I mean the mere sentiment of affection. There are many persons that kindle quick and burn out quick. There are many kinds of wood that kindle slowly, but, once on fire, keep all night long. Therefore, when a man would found a household, which is the beginning of his own organized life, it ought to be done on moral grounds. It should be done with the full advisement, not of conscience only, but of religious feeling. Such a man will be apt, indeed, to make a household blessed. And in this matter you must remember that natural traits are more to be considered even than artificial ones. A person may have excellent experiences in religion, and yet make a very poor wife. First choose, then, good-nature, cheerfulness, gentleness. As Baxter said, the grace of God could live with persons that he couldn't live with. . . . They that marry for interest without regard to moral considerations lose usually even that; but they that select for moral considerations, gain first the moral ends that they sought, and then work out the other ends that they did not seek. . . . It is not wise to mix religions. A man who marries a wife of a different religion to his own, thinking afterward to bend her to his views, has very little idea of timber.

In addition to "good-nature, cheerfulness, and gentleness," we should include health. We should also have reference to temperament, age, culture, and adaptation. A knowledge of Phrenology, etc., would reveal the natural disposition and true character of each. Then why act blindly? why not consult it?*

SELF-KNOWLEDGE, which is only to be found in Phrenology, lies at the bottom of the doctrine of motives; for one will exert himself for praise; another, to gratify his large Acquisitiveness; a third, from an innate sense of duty; and a fourth, from excessive constitutional activity, making rest painful to him.

* For a complete discussion of the question of "Marrying Cousins," or who may and who may not marry, see *The New Annual of Phrenology and Physiognomy* for 1886, just published. Price 25 cents. May be ordered from this office.

THE HOMES OF THE METROPOLIS.

THE throng of all sorts of people indiscriminately jumbled together in the streets of a great metropolis like New York very naturally suggests the question, Where do all these people come from? where do they live? Every morning they emerge from various hidden quarters and unite in the busy whirl of city life. At night nearly all disappear into some retreat which each one calls by the sacred name—home. Did we single out one here and there and follow him or her to that retirement, how different would be the scenes of interior life presented to our gaze! The man of fortune goes at nightfall to a home which even an Eastern pacha might envy. All that skill and imagination can devise is there to welcome and refresh him. The appointments of luxury, the tempting viands, and the obsequious attendants there minister to his capricious wish. He eats and drinks from services of massive plate, reclines on voluptuous couches, and wherever his eye turns, it rests on exquisite masterpieces of art in painting and statuary. But in all this magnificence, with so much to enjoy, so much to charm the sense, we look in vain for that serenity which symbolizes a satisfied heart. Anxiety and care have stamped their searing impress upon his brow, and the restless eyes indicate a troubled, discontented spirit. Surely, you will say, here can be realized to the full the joys of domestic relationship! But no; fashion here holds sway, and seeks in ostentation to gratify excessive vanity.

Let us follow to the home of him whose moderate income scarcely supplies the common comforts of existence. There we are more likely to find domestic happiness, and that substantial contentment which is an enduring source of pleasure in itself.

Here the "convenient food" nourishes the body and solaces the heart. In such a home, where mutual dependence is felt and encouraged, and true affection winds its tendrils round unselfish natures, influences are born and developed which exert a power in the outer world. From such households emerge men who are the pillars of our republic. Their industry is the source of wealth, and their virtue and intelligence are the palladium of civil justice and the bulwarks of public safety.

Shall we go to the house of poverty, where hunger, cheerlessness, and desponding toil brood continually? What comfort is there here? What apparent relief from severe, ill-compensated labor? And yet to the weary, haggard seamstress this bare floor and scanty furniture afford a ray of solace, for here she may enjoy some respite from toil. But, oh! the pinching, blighting influence of want! driving those who lack the stern resolution of inflexible integrity often to infamy and death. Yet from the cheerlessness of the home of indigence may proceed a moral power mighty enough to revolutionize civil society and shake a nation.

There are other homes, and they are not a

few, which we shudder to recall. Can we term them homes? They are rather the abodes of crime, where want and guilt strip off the mask of civilization and exhibit all the savage in the human heart. Vice unfettered, passions stimulated by intemperance, riot there. Misery and woe is the unspeakably bitter cup which the degraded *habitudes* of such dens drain to the dregs. From such homes proceed influences which openly demoralize humanity at large. Backed up and in a great measure produced by the corner gin shop, they scatter broadcast the seeds of vice and crime, and render poverty ignoble and but a synonym for ignorance, filth, and degradation.

Such in brief are the homes of the metropolis. How little do ye who draw your cushioned armchairs near the bright fire and bid defiance to the howling blasts and driving snow without, know or dream of the bitter lot of those who in some desolate attic shiver the long night through and sigh for the day—"cold, bitter cold, no warmth, no light." They huddle together, striving by contact of their half-naked limbs to obtain mutual warmth; perhaps in their despair muttering imprecations on the Power which made their circumstances to differ from those of the pampered child of fortune. Oh! this is terrible! Well may the eye moisten and the purse-string loosen at the recital of such misery. And though such oft-told tales may compress the lip of the incredulous, yet a little investigation of the homes of our metropolis will disclose facts more painful than words may describe. To this brief sketch we would add a few statistics. The number of persons in the city of New York who are accounted wealthy, together with those who are in comfortable circumstances, or in the receipt of an income sufficient for the respectable support of their families, does not exceed 175,000. The number of those who barely subsist, in which we include the great army of seamstresses, sewing girls laborers, petty clerks, etc., is upward of 180,000. Many of these, in times of scarcity, are thrown on public or private charity.

Of the lowest class or type of humanity to which we have alluded, and who live by soliciting alms or pilfering, and from whom the subjects of our public charities are chiefly derived, there are about 75,000—an alarming record for one city.

TEMPERANCE vs. INTemperance.—During the late war for the preservation of our glorious Union, the Temperance Cause may have lost ground; but just now the tide is turning, and the liquor drinkers are likely to be left high and dry on shore. Our neighbor STEARNS, of the National Temperance Society, is publishing papers, pamphlets, tracts, pledges, etc., as ammunition with which to charge the Temperance guns, and real execution may be expected by those who do not beat a hasty retreat. Those interested should send \$5, \$10 or \$50, for Temperance documents for distribution in every neighborhood.

On Physiology.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—*Cuvier*.

My people are destroyed for lack of knowledge.—*Isaiah* lv. 6.

NATURAL INSANITY.

A CORRESPONDENT asks, Are any persons so organized by nature that they instinctively take a vicious course? *Ans.* In Psalms lviii. 3 we read, "The wicked are estranged from the womb! They go astray as soon as they are born, speaking lies." This would indicate that some, unfortunately, inherit such strong tendencies to wickedness, or to a perverted action of the animal propensities, that they do not live a moral life, but are morally unsound, unbalanced, insane. We know that there are physical cripples, intellectual imbeciles; that there are genii in talent and goodness; why, then, should there not be those morally imbecile, with predominant passions, with these tendencies inborn, inherited? The world accepts the motto relative to the poet, "*nascitur non fit*"—he is born, not made; why, then, should it be startled at the idea that the tendency to vice is inborn, not merely the result of bad associations? The following case, which we copy from an exchange, seems a strong illustration of inborn perverseness:

The trial of Lemaire, the young Frenchman who killed a girl because he feared his father intended to marry her, is one of the most remarkable in the annals of crime. In the murder itself there were no unusual incidents. Lemaire, having decided to kill her, proceeded about it without strategy or efforts to conceal the crime. He put her out of the way with as little compunction as though she had been an animal whose existence was no longer desirable. He was apprehensive the girl would come between him and his patrimony, and he would probably have killed any other woman who menaced his future in the same way.

The interest in this case attaches to the criminal himself. When brought to trial he courted conviction, asked for it, and absolutely pleaded for it. He seemed to have no consciousness of having committed a crime. He simply recognized the fact, that the law declared it a crime punishable with death.

The act itself was to him no more criminal than the killing of a chicken. He asserted this in court and at all times, and it was impossible to arouse in him any consciousness of a wrong deed done, for the doing of which he ought to be stricken with remorse.

Lemaire was, however, conscious that in the want of moral nature he differed from mankind in general. He regarded himself as an anomaly, and believing that there was, as he expressed it, something curious in the formation of his brain, he desired that, after his death, it should be examined. This was among his last expressed wishes. Accordingly, after his execution, a *post mortem* examination was held, and attended by many distinguished physicians, surgeons, and men of science. Inquiry has of late been directed to the physical causes of crimes, and Lemaire furnished a capital subject for pursuing the investigation. A more pronounced case of apparent want of moral nature, from some physical or mental deformation, was never placed on the dissecting-table. The examination was minute, and here is the result, according to the account of a writer who took especial interest in the case:

"The cerebral mass, which was unusually large, and showed extraordinary intelligence, was deformed by large protuberances in that section where science has located the sanguinary instincts (Destructiveness, particularly); and after the examination the eminent doctors gave it as their opinion that the vice of murder had been transmitted to Lemaire; that it was fatally transmissible, like diseases of the skin and blood, and that, had Lemaire lived to have had grandchildren, they would, inevitably, have been brutal and impulsive in nature, and would, doubtless, have been guilty of shocking crimes." [This is true only in part.]

This puts the case too strongly, and is the language of the surgeons, not of phrenologists. Had Lemaire had children, they would have inherited, doubtless, something of the father's severity. Lemaire's "sanguinary instincts" may have been enhanced by circumstances, by culture through conversation or reading, or observation. Should such a man marry, he ought to select for a wife a woman very deficient in the force elements, which would serve to modify, perhaps, to a proper size and strength the forceful organs of the children. Proper culture and guiding restraint of children do much to modify naturally excessive faculties or propensities. The better qualities of mind and heart can be strengthened by moral and religious culture. Is it unreasonable to suppose that wrong influences shall strengthen the "house of Saul" in the soul?

AMERICAN SURGICAL APPARATUS IN THE PARIS EXPOSITION.

In the field of surgery, America can be considered scarcely behind those nations of Europe which have had their established schools of medicine and chirurgery for nearly two centuries. Dr. Mott compelled the admiration of Europe by his bold and wonderful essays on living subjects; and Doctors Carnochan and Wood would not hesitate to attempt anything in vivisection which their transatlantic cotemporaries thought within the bounds of probable success.

The important department of operative surgery is scarcely more worthy of consideration than that branch of the same science which has for its object the invention and adaptation of apparatus to remedy malformations, or deformities resulting from injury to the person. In orthopedy, the French surgeons have generally taken the lead; the inventive genius of Americans has not shown any special interest in that branch of art, and those among us who are studying to perfect new and original devices for the relief of the crippled and deformed, can be counted easily on one's fingers. Yet some of these who took the trouble to send their appliances to Paris, and had them in the Exposition, have received testimonials of the highest character. The sanitary collection of Dr. Evans procured the highest prize awarded to orthopedic apparatus. The "Howard Ambulance" obtained a silver medal, and the Imperial Commission, in its official report on surgical instruments and apparatus, awarded to Dr. Charles F. Taylor, of New York, the

honor of having in the Exhibition the only improvements in apparatus for supporting and correcting curvatures of the spine. The following extract of the report will explain the nature of the apparatus:

"The orthopedic corset (*corset*—spinal apparatus) of Dr. Taylor is very remarkable, and differs entirely from analogous apparatus in the Exposition. We can not do better than reproduce the remarks of Dr. Bouvier, one of our most competent French surgeons, made to the Academy of Medicine.

"The apparatus which I have the honor to present to the Academy," said Dr. Bouvier, has been on exhibition in the American section of the Exposition. It differs essentially, as may be seen, from those ordinarily employed in the treatment of angular curvature of the spine. It combines all the advantages of horizontal position, while at the same time it gives the patient the advantage of exercise and fresh air. With this brace Dr. Taylor endeavors to protect the diseased vertebræ, as is done in the recumbent position, without the aid of the instrument. Like a bed securely attached to the back, the brace makes an equable pressure on the vertebral column, as would result from the patient's weight when in bed. This force is uniformly antero-posterior. The apparatus is a simple lever, which raises the superior part of the spinal column by using the transverse processes as a fulcrum, so that while pressure on the articulations of the transverse processes is safely increased, pressure on the bodies of the diseased vertebræ is considerably diminished. The instrument is hinged, and acts as a supplementary vertebral column. Its arrangement enables the physician to appreciate exactly and to modify the degree of force employed, and also to render the treatment constantly and regularly progressive. It also favors the contractions of the spinal muscles. The ability of the patient to be in the open air, while the seat of disease is protected from all shock—this constitutes the superiority of this mode of treatment.

"The other apparatus is for counter-extension in hip-disease. The idea of counter-extension originated with Dr. Davis, of New York; but this instrument is, nevertheless, the invention of Dr. Taylor. It consists, 1st, of a belt, to which are attached two straps, which embrace the perineum, producing extension from above; and 2d, of a long extensible splint, one end of which is received under the foot by a strap, which is a continuation of the adhesive straps which are applied to both sides of the thigh and around the limb. This strap produces counter-extension. Elongation is accomplished by a lateral screw. Not only is the muscular tonicity overcome, and the joint preserved from pressure or shock, but, during locomotion, the weight of the body is sustained by the instrument, because the body rests on the straps which embrace the perineum.

"The result of Dr. T.'s experience shows that when the tonicity of the muscles of the hip is completely overcome, and the parts are

guarded from pressure and shock, locomotion is not only free from danger, but, on the contrary, it is very advantageous, as the patient can thus profit by the potent measures which hygiene places at our disposal."

THE INDIAN WEED.*

The official catalogue of the London Exhibition, vol. 1, page 180, contains the following curious remarks on tobacco smoking: "The total quantity retained for home consumption in 1848 amounted to nearly 17,000,000 lbs. North America alone produces annually upward of 200,000,000. The combustion of this mass of vegetable material would yield about 340,000,000 lbs. of carbonic acid gas; so that the yearly increase of carbonic acid gas from tobacco smoke alone can not be less than 1,000,000,000 lbs.; a large contribution to the annual demand for this gas made upon the atmosphere for the vegetation of the world. Henceforth let none twit the smoker with idleness and unimportance. Every pipe is an agricultural furnace—every smoker a manufacturer of vegetation, the consumer of a weed, that he may rear more largely his own provisions."

The Dean of Carlisle, in a recent lecture on the use of tobacco, calculated that the entire world of smokers, snuffers, and chewers consume 2,000,000 tons annually, or 4,480,000,000 lbs. weight—as much tonnage as the corn consumed by 10,000,000 of Englishmen, and actually at a cost sufficient to pay for all the bread corn eaten in Great Britain. Five millions and a half of acres are occupied in its growth, chiefly cultivated by slave labor, the product of which at twopence per pound would yield thirty-seven millions of pounds sterling. The time would fail to tell of the vast amount of smoking in Turkey and Persia. In India, all classes and both sexes indulge in this practice; the Siamese both chew and smoke. In Burmah, all ages practice it—children three years old and of both sexes. China equally contributes to the general mania; and the advocates of the habit boast that about one fourth of the human race are their clients, or that there are certainly 100,000,000 smokers!

It costs more than education or religion, the army or navy. It costs England and America a sum sufficient to support 50,000 ministers with a salary of \$1,000; or more than 100,000 missionaries. The students in one college pay more than \$6,000 for cigars yearly. It tends to idleness, poverty, strong drink, and the whole family of vices. It tends to debility, dyspepsia, palsy, cancers, insanity, delirium tremens, and sudden deaths. It weaves a winding sheet around 20,000 in our land every year!

It is estimated that in New York city more than twice the amount is puffed away in cigars than is expended for bread!

Some eighty diseases are traced by Dr. Shew to the use of this vile narcotic.† It injures the

* We commend this statement as worthy of republication in all magazines and newspapers.—ED. PHRENO. JOUR.
† See prize essay on Tobacco, published at this office.

health of the body, mind, and soul! The habit is indecent—the example is pernicious on the rising youth. The expenditure is wicked, the gratification of a vitiated appetite. It leads to strong drink. Said a poor Indian: "I want three things: all the rum in the world, all the tobacco, then more rum. I smoke because it makes me love to drink." The use of this poisonous drug blunts the moral sensibilities, grieves the Holy Spirit, hinders prayer. "I beseech you as strangers and pilgrims, abstain from fleshly lusts which war against the soul."

The excuses for using the dirty tyrant are frequent. One uses it for his teeth; another, for his general health; a third, for his corpulency; a fourth for his leanness; a fifth for a watery stomach; a sixth, to help digestion; another, because some ignorant, sottish, wine-bibbing, tobacco-chewing, or smoking doctor recommends it:—thus and thus, till the catalogue of excuses and subterfuges is filled out.

It is a matter of devout and hearty thanksgiving to God, that the most respectable, learned, and eminently successful of the medical faculty, with united voice, veto the "*accursed thing*," warn their patients to lay it aside forever.

"Friend, do not excuse yourself," says the Hon. Gerrit Smith, "by saying that some great and good men use tobacco. The great and good men who do so are in danger of sinking into very little and very wicked men before they die.

"Tobacco and Rum—what twin brothers! what mighty agents of Satan! What a large share of the American people they are destroying!"

"As Paul said to Timothy, so say we to you, 'Keep thyself pure.' Be clean in your person, and be clean in your heart. But, depend upon it, you can be neither if you use tobacco."

"Where lurk ye, thou blot on thy race?

Still dwell ye with civilized men?

Why crawl ye not into some desolate place,

The lair of a wolf, or a den

In the clefts of the rocks, in the desert away

From the gaze of mankind and the light of the day."

OUR HAND-BOOK FOR HOME IMPROVEMENT. The *Highland Democrat* says: "This valuable compendium of information necessary to every man of any pretensions to respectability in life, deserves the attention of everybody. It tells how to write letters, how to write compositions upon any and every subject, how to prepare copy for the printer, and contains, besides, a multitude of suggestions from which many great men might derive wholesome instruction to their own benefit and others, especially the poor printer who has to revise and guess out their manuscript. The anecdotes in this book are exquisite specimens, some of which illustrate points of etiquette admirably, and in such a way that any one who reads 'How to Behave' can not fail to become 'a wiser and a better man.' Every boy, girl, young man, or young woman especially, should read this book, and it is so written that if they once read it, they will forever remember the valuable suggestions it contains." Price, post-paid, \$2 25.

A LARGE HEAD.

EDWARD HAYCOCK, the child represented in the portrait, is about five years of age. His head is of great size, having been hydrocephalic in early infancy; otherwise his general health has been good up to the present time. When about three months old his head commenced to expand rapidly, and at the expiration of a year had attained a circumference of twenty-six inches. Since that time no further growth in its size has been observed—the disease having apparently suspended its activity.

His mental abilities do not appear to be seriously impaired. He was a little backward in learning to talk, but his memory is excellent, and he seems to understand things as well as children of his age and opportunity. Of course his knowledge is limited, the great size of his head rendering him unable to walk and sustain himself independently, and thus preventing him from much of that personal observation and experiment which children are inclined to.

He has a fine clear eye, a clear and healthy complexion, but his limbs and general frame are small and his flesh very spare. The expansion of the head has occasioned a very appreciable separation of the bones of the skull; the fontanel, or opening in the tophead, is about two and a half inches in diameter, and at this opening the pulsations, as usual, are distinctly seen and felt.

He appreciates keenly any efforts on the part of others to amuse him, and when not embarrassed by the notice of strangers, is lively and talkative. Should there be no further hydrous secretions in the brain of this boy, a sufficient growth of body may ensue to render him in a few years able to balance his large head, and to dispense with the now indispensable assistance of others. Our portrait was engraved from a photograph taken at our request by Mr. Abraham Bogardus, the enterprising photographer of Broadway, this city.

TEMPERANCE IN MENTAL MANIFESTATION.

ALL physiologists and students of human nature call attention to the fact that temperance in our various mental manifestations, and an even, pleasing disposition, tend to prolong life, and in a corresponding degree make it enjoyable. To be happy, we must obey the laws of nature in regard to both our minds and bodies. We must neither exercise them too much nor too little, too violently nor too sluggishly, always preserving that happy medium which shall render us ever ready but not forward, make us love work, but which shall keep us from overworking, make us kind but not officious, beautiful but not showy, which is in fact that "jewel of the first water," propriety.

We should avoid extremes; we must curb our passions and control our thoughts. Violent expressions, whether of sorrow, joy, remorse, or anger, must be restrained until reason resumes her throne, or disturbances of the nervous system will be the result. Public speakers have expired in a burst of eloquence. Long continued grief, or sorrow in excess, is radically defective of the life functions.

We may overwork the mind by too long intense application on a highly exciting subject, but not without very materially injuring its present healthfulness and future usefulness. Nature's laws are paramount. They demand exercise, and then rest; neither in excess, but in equal proportion. Cheerfulness and equanimity of temper are not less than virtues, and they are aids to both spiritual and physical growth.

How beautiful in old age is one who has his mind preserved in almost its youthful vigor and force, susceptible of joyous impressions as in days gone by, and as such a living proof that "wisdom's ways are ways of pleasantness, and all her paths are peace." J. A. R.

CHANGES.

BY ADELAIDE PROCTOR.

MOURN, oh, rejoicing heart!

The hours are flying;

Each one some treasure takes—

Each one some blossom breaks,

And leaves it dying.

The chill, dark night draws near

Thy sun will soon depart

And leave thee sighing.

Then mourn, rejoicing heart,

The hours are flying.

Rejoice, oh, grieving heart!

The hours fly fast;

With each some sorrow dies—

With each some shadow flies,

Until at last

The red dawn, in the east,

Bids weary night depart,

And pain is past.

Rejoice, then, grieving heart,

The hours fly fast!

HUMAN DECADENCE. THE POOR WHITES OF THE SOUTH.

MAN is undoubtedly subject to a general law of progress. The great tide of life on our globe tends, and probably will forever tend, steadily onward; but as within the resistless current of the mighty Mississippi the voyager encounters eddies, whirlpools, and minor counter-currents, so in the general forward movement of mankind there occur recessions and retrogressions innumerable, affecting larger or smaller numbers. Individuals sink into degradation; families deteriorate; nations revert from civilization to barbarism; and even races fall from a higher to a lower position in the ranks of humanity.

The advancement and even the perpetuation of civilization depend on certain fixed conditions, one of which seems to be the association of many individuals in a permanent community. Sparse populations and migratory tribes are apt to decline rather than rise in culture and the arts, and individuals, left to themselves, are sure to adopt the usages of the savage—in some respects at least.

The refined and cultivated dweller in cities finds his silver fork and napkin indispensable, and is disgusted with the rudeness of the country boor, who crams his food into his mouth with his knife, or takes a chicken bone in his fingers at the hotel table. But throw this cultivated and refined individual into some mountain forest, with a dog and a gun as companions, and mark the change. Look at his fingers, begrimed with smoke and shining with grease! See him tear the half-roasted flesh from that bone with his teeth. Perchance he brought his silver fork and napkin with him, but he has no use for them here; and as for feather beds and downy pillows, he soon learns to look upon them with contempt. Give him half a dozen associates in this wild life, and, provided there be no women among them, his manners will not be improved. On the contrary, the whole party will fall into many of the ways of the savage; and that not merely as a matter of necessity, but readily and from choice.

Of course these men do not become savages by assuming temporarily the habits of savages, but they thus take the first step backward or toward rude nature. Whether they are, or not, losers by this step I will not stop here to inquire.

It may be remarked, further, that civilization is sustained and advanced only where incitements to bodily and mental activity are provided. Here in the South, we had formerly a class of persons from whom a certain amount of bodily activity was required—who were subjected to compulsory labor, but from whom its rewards were partially withheld. If they made any advance, it was simply through contact with their social superiors.

There was another class who, through the operation of causes which will be set forth hereafter, were effectually debarred from the *privilege of labor* and, through the poverty thus

induced and perpetuated, from all social consideration.

The results of this deprivation of all inducement to exertion either of mind or body are seen in the present condition of the "poor whites" of the late slave States, whose miserable cabins seem like so many ugly patches on the fair face of this pleasant country, and whose uglier selves cross my path at every turn, tempting me to exclaim with the poet—

"These are no brothers of my blood;
They discredit Adamhood.

The actual origin of the class variously denominated "poor whites," "poor white trash," and "mean whites," in the South, is involved in some obscurity. It seems probable, however, that the difference which separates this class from the dominant or planter caste dates back beyond the earliest settlement of this country—that the progenitors of our poor whites were the servants, followers, and dependents of the proud and wealthy cavaliers from whom the higher class claims descent. It would seem impossible that the few generations which we can count on American soil can have created so wide a gulf as now exists between these classes.

The causes which have widened and deepened this gulf, by constantly elevating the one class and as persistently depressing the other, are evident enough.

The introduction of slavery at once created a monopoly in the hands of the wealthy. The poor man could not enter the field at all in competition. His poverty prevented him from owning slaves, while the existence of slavery not only entirely superseded the demand for his services, but, by degrading labor, created a strong antipathy against it, and engendered a love of idleness and sloth. So the poor whites were from the first not only debarred from the privilege of labor, but predisposed to reject it with scorn had it been offered.

It will be readily seen that no career was opened for this class. Life had no purpose beyond the gratification of the mere animal wants. Having no chance to rise out of their debased condition, and unable to sustain themselves even on the low plane on which they stood on their introduction into the country, they sunk gradually lower and lower, till they reached a depth of degradation almost incredible; while the causes which led to their decadency, was elevating to the loftiest heights of opulence and culture the dominant or planter class.

Here and there an individual of the lower class, endowed with a better organization than his fellows, rose above the general level and, becoming a mechanic (a very poor one, in most cases) or a small trader, laid the foundation of social respectability for his descendants; but cases like this were rare.

Such a class as I have described could exist only in a mild climate; but here, where the absolute necessities of life, with such people at least, are few, their acquisition involves very little exertion either of body or mind.

Being generally squatters on the vast estates of the planters, and paying no rent, there is

little call for cash outlay. A small patch of corn, a few rows of sweet potatoes, and a little garden, given up mainly to "collards" and turnips, and cultivated by the women and children, supply their bread-stuff and vegetables. In most cases they own a few hogs and a piney-woods cow or two, which it costs nothing to keep; or if they do not, their richer neighbors do, which often serves their purpose quite as well. For the rest, a little hunting and fishing, which their laziness sometimes permits, helps them to keep soul and body together.

A late magazine writer, an intelligent and trustworthy gentleman of the planter class, who is familiar with the condition and habits of the poor whites, after dwelling on the causes which have led to the existence, perpetuation, and continual retrogression of the class, continues:

"No statement of causes, however potent, nor any mere general description, could prepare the mind of one unaccustomed to the South for the reality of the condition of this people, as it was exhibited in those sections where this state of things existed in its fullest development. * * * Their habitations were uncomfortable structures built principally of logs, not at all superior, in many cases, to the wretched huts of the poorer class of peasantry of Ireland. Many of these tenements were so small as to contain but a single room, within the narrow limits of whose crazy walls whole families, men, women and children, indiscriminately, were to be found crowded together.

"The appearance of these people accorded with their miserable condition. Ignorance and vice stamped their features with a brutal and forbidding aspect. The poverty and insufficiency of their food and their uncomfortable mode of life, added to the effects of an unhealthy climate, rendered them, with hardly an exception, lean in person and pallid in complexion,* while a proverbial uncleanness and raggedness of attire completed the revolting traits of the unhappy picture."†

The ignorance of these people is profound and almost past belief. To say that few of them can write or even read conveys no adequate idea of their lack of education. In the language of the writer just quoted, "They are all so utterly devoid of the simplest elements of information, that they have no definite idea as to what portion of the earth they occupy." But, further than this, they have no *desire* to learn anything, believing firmly that all education is utterly useless.

Of the moral character of this degraded class, it is painful to speak or even think. The former I will not trust myself to do, but will quote again from Mr. Seabrook, merely expressing a hope that his picture is rather too darkly colored. He admits that there are many exceptions, but declares that "the portraiture is unhappily too faithful to the class at large."

* I think the climate has little to do in producing the emaciation and pallor of which the writer speaks, for I find these characteristics just as strongly marked here among the pine hills of Middle Georgia (as healthful a region as can be found in the world) as in the "low country" of South Carolina.

† E. B. Seabrook.

"The utter absence of the sentiment of honesty among them was shown in the universal disposition to petty theft, and in the continued series of robberies and depredations by which they unconsciously made reprisal upon their richer neighbors for the benefits which the latter enjoyed at so fatal a cost to them. The records of the courts showed an astonishing frequency of those flagrant crimes which are more apt to fall under the contemplation and penalty of the law, such as murder in all its degrees, even including forms to which the instincts of the human heart are opposed, as of parents by children and children by parents. That higher spirit which seems native to the inhabitants of warmer climates, and which was displayed in the case of the planters in a traditional valor and a chivalrous sensitiveness to injury and insult, declined in this class into a prevailing ferocity, which too often was evinced in the most signal instances of personal violence and outrage. Their personal encounters, prowess in which was almost the sole object of their pride and ambition, left their traces in the hideous disfigurement of many a ruffianly countenance; and cases of murder have been known, so marked by wantonness, that juries have hesitated to convict, almost willing to believe that the utter absence of motive must, of itself, have proved the insanity of the wretches who seemed merely to have obeyed the wicked caprice of a savage disposition.

"A promiscuous debauchery proved their insensibility to the obligations of virtue, or to a feeling of modesty; and the history of many localities was disgraced by instances of the grossest and most revolting incest.

"To complete the melancholy picture, that must be added which enhanced all their vicious propensities, the almost universal prevalence of intemperance to a degree which knew no limits or restraint, except from the insufficiency of the means."

A dark picture, truly! but a ride of a few miles through our "piney woods," any fine day, will give you a glimpse of the living reality from which it has been sketched.

Here we come upon one of their cabins in the midst of the forest, with its little clearing (if "deadening" the pines makes a clearing) surrounded by a dilapidated fence of rails or brush. You need not go in. The whole family is arrayed on the "lot" stupidly staring at us.

The master of the house, a blear-eyed, sullen, ferocious-looking fellow, with a bushy beard and long unkempt hair, sitting on a log, calls off the dogs, three or four of which threaten us from the roadside. They are as lank as their master, and nearly as ill-looking. The mother and two or three grown-up girls, in home-made cotton, somewhat the worse for wear, and with dirty bare feet and ankles, block up the doorway. They are rather less sinister in their physiognomical expression, but scarcely less ugly and untidy than the head of the family. The children form an intermediate group in the *tableau*, and are not unworthy of their parentage. Their hair is almost invari-

bly of a yellowish white tint, and their complexion is of the same hue, their faces having the appearance of half-dried clay. You will look in vain for the faintest tinge of healthy color on cheek or lip. No roses bloom here, nor lilies either, for their pallor is not whiteness.

You may find red-faced men occasionally, where bad whisky can be had, but blooming women and children, never; and it must be remembered that I am not writing in the unhealthy regions of the "low country," or referring to the denizens of swampy and malarious districts, but describing these people as I see them going and coming every day among the pines, in one of the most salubrious regions in the world. It would not be proper to describe them as walking corpses, for their appearance is far more sickly than that of a dead person. They seem to be victims of a permanent torpidity, nothing being alive in them except the lowest instincts and passions of human nature.

The heads of these people are small, broad at the base and narrow above, with low foreheads, usually hidden under coarse bushy or long straight hair. Their eyes are small and dull; thin noses, often of the class called "snub," and always coarsely cut; their mouths gross; and their chins weak and retreating. Every feature bears a record of their abasement—an authentic and legible inscription commemorative of human decadence.

What is to be the ultimate destiny of this singularly unfortunate class of people?

Mr. Seabrook, in the article from which I have already quoted, predicts their gradual elevation under the new order of things consequent upon the abolition of slavery and the decline of the planter class. He argues that the opportunities for employment now opened will breed habits of industry, and that with them will come higher aspirations, a desire for education, and an appreciation of the comforts and refinements of civilized life. "Already," he says, "their services are for the first time in general demand, and simultaneously all over the country many of them have been taken into employment. They are recovering the place from which they too long have been driven, and this point reached, they will stretch upward to higher aims and better attainments."

Let us hope so.—EX.-ED. DOWN IN GEORGIA.

BRITISH WORKMEN.

In a London letter to one of our city dailies we find the following allusion to British manufacturing, and some of the stupid usages of trades unions. As it will be seen, the letter was written some time ago, during the Paris Exposition. Are not the tradesmen of our large cities adopting these European customs too much?—or, rather, are they not being planted here by workmen from foreign shores?

The revelations of the Paris Exposition relative to the superiority of foreign over English manufactures have caused much excitement among all reflecting Englishmen. The

British manufacturers have been beaten in their own departments, and notably in that of machinery, upon which they fondly prided themselves. There is now a loud clamor for scientific schools, and many employers are writing letters to the papers urging workmen to visit the Exposition. Cheap trains are being run, and one employer (Bennett, of watch-making fame) advises workmen to pawn their watches and go to Paris. All this will do no good unless the present trades unions be better regulated. The true British workman prefers the alehouse to a scientific school, and has no watch to pawn. No wonder that he should be excelled at every point when he resists every improvement and joins trades unions to murder those who will not "strike" for higher wages. Only recently a man who has invented a machine for paper-hanging was fairly driven out of London, in fear of his life. He had been decoyed into various places in order to be beaten, and the models of his machine were repeatedly smashed. This was done, not by men confessedly uncivilized, but by professedly respectable workmen, who are earning good wages and have just been admitted to the right of suffrage by the Reform bill. Such men can not be reclaimed. England's only hope is in the rising generation, redeemed and educated by a system of free schools like that in America.

You have heard a great deal about the outrages of the trades unions—how they blew up refractory workers and hired assassins to kill off non-unionists; but there is another phase of the unions almost equally remarkable. The masons of Manchester, for example, will not allow stone worked at the quarries to be brought into their district, under penalty of a "strike." If it come from Yorkshire it may be worked on one side; otherwise it must come in the rough. Now, the stone can often be better worked at the quarries; it is cheaper when thus worked, and of course it is easier to convey, and the freightage is less; "but, no matter," say the Manchester mason, "we will strike work if you do not bring us the rough stone and let us work it." One firm was bold enough to buy some delphstone steps, worked at the quarries, because Manchester masons often refused to work this stone; but forthwith the masons struck, and the stone had to be reworked by the union men. Another firm had stone polished elsewhere, and these had to be actually defaced so that the Manchester masons might repolish them, or else work would have been stopped. The brick masons are equally tyrannical, and will not permit brick to be sold or used in any district in which they are not made—the said districts being determined by the unions. The manufacturers are watched, and if this rule be infringed, the bricklayers "strike" at once. In several cases employers have been compelled to pay union men for the time they would have worked, because non-unionists or unionists of other districts had been allowed a certain job. These facts are taken from the sworn evidence before a royal commission.

How can labor prosper in any country where laborers perpetrate such outrages?

A NEW SUBSCRIBER, residing at Hartford, Conn., says: "After a careful perusal of a few past numbers of the PHRENOLOGICAL JOURNAL, which I have purchased from newsdealers, I am obliged to say that it takes the lead of any reading matter that I have examined, for solid knowledge, such as will promote the mental growth of him who is earnest in his efforts at self-cultivation."

EMINENT BUSINESS MEN OF THE CITY OF NEW YORK.

PORTRAITS, CHARACTERS, BIOGRAPHIES.

NEW YORK CITY is the great commercial center of the Western world. From the earliest settlement of Manhattan Island, by the Dutch, to the present time, trade has flourished here in the most conspicuous manner.

The merchants of New York have ever been characterized by their shrewdness, tact, and sagacity; and some of them for boldness of venture and extent of business operation have been surpassed by none in the large commercial cities of the old world. In no other city have fortunes been realized from business enterprise in so short a time as in New York city; and in no other city is the proportion of wealthy merchants so large. Among our active business men are many who, though advanced in years, still hold the helm, and administer affairs successfully. From these we have selected some who, for industry, energy, temperance, and integrity, are eminently worthy of the thoughtful consideration of all our readers, and especially of our young readers, who long to ascend the slippery ladder of fortune. We present in this number three gentlemen, each a business man, but in a different sphere, viz., a manufacturer, a banker, and a steam-boat manager.

PETER COOPER.

This gentleman has naturally a strong and vigorous constitution, and exhibits qualities of endurance both in his physi-

PORTRAIT OF DANIEL DREW.

cal and mental organization. The motive temperament is well indicated by the strong frame and large muscles; and the mental temperament also is well mani-

festated by the size of the brain and the general fineness of the constitutional texture. A careful and abstemious life has developed a naturally good organization, and now, at the advanced age of seventy-seven, he enjoys vigorous health, and is able to attend to the administration of a

PORTRAIT OF PETER COOPER.

large estate and of a prosperous business. Perseverance and determination are among the most prominent qualities of his character. Whatever he determines to do, he follows earnestly and persistently, and with difficulty is turned aside from any object which he entertains. There are also the indications of a strong moral sense, and the appreciation of those responsibilities which devolve upon him as a member of society. Inclined to be cautious—disposed to avoid public prominence—and to adopt those measures only which commend themselves for their honesty, integrity, and safety, he is not by any means rash, headlong, or careless. He is a practical man in the main, appreciative of the actual—the tangible. He takes into account all the details of whatever subject claims his attention, and is seldom mistaken in his impressions of things. He is a good judge of qualities, conditions, and general characteristics. He is no imitator; not inclined to follow the customs and usages of others; not given to conforming to the ways and usages of society; but rather “*individual*,” or, in the estimation of the world, eccentric, following the bent of his own in-

clinations, acting out his own opinions and in his own way. He would adopt, in his mode of dress and manners, that which appeared agreeable to his taste and common sense, without reference to their harmony with the prevailing custom of the day.

He has considerable natural force and impulse of character. The organs which minister to executive-ness and activity are large. As a business man, he would be energetic, prompt, and thorough; while his carefulness, responsibility to the obligations which devolve upon him in the progress of his calling, would command the respect and esteem of those with whom he had dealings.

He has a rather warm, social nature. Is cordial in his friendships; appreciative of the pleasures and ties of *home*, and usually retains those whose affection or regard he has acquired.

With such elements of character, having fair opportunities in life, he would not fail to make it successful.

BIOGRAPHY.

This eminent New York philanthropist was born on the 12th day of February, 1791. His father was a lieutenant in the Revolutionary army during the war for independence. The business of his father was that of a hat manu-

PORTRAIT OF CHARLES A. MACY.

facturer; and in early youth Peter was employed in the business, and labored assiduously until he had attained the age of seventeen, when he was apprenticed to Mr. Joseph Wardwell, a coach-maker. In a few years he became

skilled in this trade, and at the expiration of his apprenticeship, continued working as a journeyman until the opening of the war of 1812, when he abandoned coach-making for the manufacturing of machines for shearing cloth.

This last business he carried on successfully to the close of the war, and then entered into the manufacture of cabinet ware, which he subsequently quitted, and opened a grocery store. This business, however, he found to be rather out of his line, and he soon returned again to manufacturing. The department which now interested him was that of the preparation of glue and isinglass for the market, a business which he carries on at the present time.

He became interested, while yet a young man, in the development of the American iron interest. In 1830, he established extensive iron works near Baltimore; and afterward started a rolling and wire mill in the city of New York, where he made the first successful attempt at the adaptation of anthracite coal to puddling iron.

This mill was afterward removed to Trenton, New Jersey, where it was from time to time enlarged, until it became the most extensive rolling mill in the United States. Vast quantities of railroad iron and wire have been turned out of this manufactory.

At present, the business of this establishment is in the hands of a company, of which he is a prominent manager. The first locomotive in general use on this continent was built by Mr. Cooper, at Baltimore, after his own designs, and worked on the Baltimore and Ohio Railroad.

Having at heart not only the manufacturing, but also the scientific interest of his country, Mr. Cooper has ever prominently identified himself with all important public undertakings tending to the development of science.

He was warmly interested in the electric telegraph from its earliest conception; and invested liberally in enterprises having in view its establishment.

He has also been associated with the city government of New York, and won a prominent position by his earnest efforts to promote the welfare of the community.

He has made his name particularly famous, however, through his many large charities. The cause of education, has ever found him a warm advocate. His sympathy in this matter finally culminated in the erection of a splendid building in the central part of this city, at great cost, and devoting it to the free education of the working classes. His designs in this respect have been carried out, and thousands of worthy but needy youths have been educated in the higher branches of knowledge in THE COOPER INSTITUTE. In connection with the educational advantages thus thrown open to the public, Mr. Cooper has established a large and neatly appointed reading-room, which is open to all comers, and contains a large and valuable collection of books, and the current periodical literature of the day.

DANIEL DREW.

We have here a strongly marked head and face. The brain is something above the ordinary size—high, broad, long, and full. It is especially large in the region of the moral sentiments, the more prominent of which is Conscientiousness, which gives a sense of justice and integrity. It is large in Hope, which lifts one up in times of adversity, and inspires him to put forth every energy to accomplish a purpose. There is large Benevolence, indicating a broad charity, earnest philanthropy, and brotherly kindness.

We do not perceive any deficiency in intellect, in Constructiveness, mechanical ingenuity, or in economy, regard for property, and appreciation of money's real worth.

There is also great executiveness, indicated by the breadth of brain immediately above the ears, with strong Firmness, giving stability, steadfastness, decision, and perseverance.

There are, also, method, order, a correct eye for measuring forms, sizes, proportions, and distances; a good general memory, especially of principles and experiences, if not of minor facts and details.

There was originally very strong affection in this character, but these feelings were always subordinate to the intellectual and moral sentiments. Nor is there any indication of the sensualist, but every indication of temperance and self-regulation.

Such a brain, with its fine quality, being fairly educated, would almost inevitably become a power in the world, making its own way, originating, planning, contriving, and managing, rather than imitating or running in a rut. His accountability would be first to his God, next to himself, then to others. He could not knowingly violate his own sense of justice. Such a nature, however, is liable to become rigid, opinionated, and, in a measure, austere. But while permitted to pursue his own course without interruption, with no one to thwart or disturb him, he would go on peaceably to the end. If competitors cross or wrong him, they will wake up a lion, who will clear his track and free himself from the annoyance.

Conscious of being governed by correct motives, seeking to be governed by

high principles, he is comparatively indifferent to praise or blame. This is a type of the energetic, go-a-head, self-made American, and the following biographical sketch confirms our statements, and must prove instructive to the reader.

BIOGRAPHY.

The subject of our phrenological remarks just stated was born at Carmel, Putnam Co., N. Y., July 29, 1797. His early years were passed on his father's farm, and his education in youth was such as a country district school afforded. When fifteen years old his father died, leaving him to carve a fortune for himself. He directed his attention chiefly to the personal driving of cattle to market, and selling them, until 1829, when he made New York city his permanent residence, and there continued the cattle trade by establishing a depot, and purchasing largely through agents and partners. In 1834, Mr. Drew was induced to take a pecuniary interest in a steamboat enterprise. From that time his history is identified with the inception and growth of the steamboat passenger trade on the Hudson River. By shrewd management, low rates of fare, and good accommodations, the line which Drew promoted grew in favor with the traveling community notwithstanding the powerful opposition brought to bear on it by other steamboat men, among whom was Commodore Vanderbilt. Competition ran so high, that at one time the steamboat Waterwitch, in which Drew had invested his first venture, carried passengers to Albany for a shilling each.

In 1840, Mr. Isaac Newton formed a joint stock company, in which Drew became the largest stockholder. This was the origin of the famous "People's Line," which commenced business by running new, large, and elegantly fitted-up steamboats, and from time to time added new and improved vessels to their running stock. When the Hudson River Railroad was opened in 1852, it was confidently expected by many that the steamboat interest was doomed. Drew thought otherwise, and refused to accept the advice of his friends, who admonished him to sell his boats and withdraw from a business about to fail. The event justified his course. The railroad served but to increase travel, and rendered the steamboats more popular than ever. The large steamers now attached to the "People's Line," which command the admiration of every visitor and traveler on account of their superb decorations, and the extent and comfortable character of their accommodations, attest the prosperity attendant upon the management, a leading spirit of which Mr. Drew has been from the beginning. The Dean Richmond, St. John, and Drew are unsurpassed for model, machinery, speed, and finish by any river steamboats in the wide world.

Mr. Drew has not only boldly adventured in "steamboating," but has won reputation and wealth in the much more uncertain sphere of

stock-brokerage. In 1840 he formed a copartnership with Mr. Nelson Taylor and Mr. Kelly, his son-in-law, in that business, which was carried on with marked success for more than ten years. Both these partners, although much younger than Mr. Drew, are sleeping in the tomb, while he is still employing some of his large capital in the same line through confidential hands.

The noble deed which has brought him into special prominence, and rendered his name, like those of Cornell and Peabody, a synonym for active benevolence, is the founding of the Drew Theological Seminary, at Madison, Morris County, New Jersey. To this end Mr. Drew, at the recent centennial of Methodism, offered half a million dollars. The property purchased for the seminary is pleasantly situated in one of the most thriving towns, and in the midst of some of the finest scenery in northern New Jersey. Its distance from New York city is only twenty-eight miles.

Besides this large benefaction, Mr. Drew has contributed extensively to various religious and educational institutions, among which the Wesleyan University and the Concord Biblical Institute are prominent.

In Putnam County he owns upward of a thousand acres of land, on which large numbers of cattle are raised for the market. The pursuit of his early manhood has for him still strong attractions, but here again his management is marked by a generous spirit. On this estate he has been chiefly instrumental in the building of a church and school-house. In the latter, the advantages of a good education are afforded gratuitously to the children of the place.

In form and physiognomy Mr. Drew is not especially impressive. His height is about six feet, his person slender, and his general expression and manner unassuming and mild, but firm. He stands before us an example of the persevering, energetic, shrewd, and successful business man, and not only that, but also as an example of the practical workings of an earnest and sincere philanthropy.

CHARLES A. MACY.

This is a symmetrically made man. He stands six feet high, weighs about 170 lbs., and has a well-developed frame, a healthy body, and a good-sized brain.

We have in this gentleman an excellent example of temperate habits and perfect health. It will appear in the following biographical sketch that health has been the rule of his life. Free from dissipation in eating, drinking, or in other matters, he has lived a regular and even life, enjoying all that belongs to human existence, and escaping those infirmities which arise from excess. There is no dyspepsia, no consumption, no headache, sideache, backache, or heartache here,

but each organ of the body performs its function regularly and healthfully; so each organ of the mind performs its office in the same clock-like manner.

This is a splendid head on a splendid body. It is long, high, and sufficiently broad; but the upper portion predominates, and he lives in the intellect and in the moral sentiments rather than in the passions and propensities. As a reasoner, he would be sensible and sound. As a business man, industrious, methodical, persevering, and prudent. As a Christian, he would be devotional, kindly, charitable, trusting, and honest; socially, he would be affectionate, mindful of those depending on him, surrounding himself with all the comforts of life, contributing as liberally as his means will permit for charitable objects, and gaining the respect, esteem, and affection of all with whom he comes in contact.

But there is resolution as well as kindness here. He would trifle with no one—no one would think of trifling with him. He is youthful, jovial, and playful, yet always respectful and dignified.

Language is well indicated here, but he would talk sound thoughts rather than empty words.

There is dignity without austerity, decision without obstinacy, resolution without severity, force of character without malice, and economy with liberality and generosity. There is also integrity without rigidity or censoriousness, benevolence without prodigality, and devotion without bigotry. Altogether, we present this as a model character, and an excellent example for our young men to follow. Indeed, there are no faculties of the brain or body wanting in this man, and we present him as one possessing fewer faults than is common to one of our kind. It is no flattery to say that Mr. Macy may be pronounced one of the handsomest men in America.

BIOGRAPHY.

Charles A. Macy, son of Josiah and Lydia Macy, was born upon the island of Nantucket, Mass., on the 3d of July, 1808. There he lived and was educated until the spring of 1823, when his father with his family removed to New York. Immediately on arriving in this city he entered the counting-house of Isaac Wright & Son (who were largely engaged in the shipping business), and remained as a clerk with them until the 1st of January, 1831, when he entered into business for himself with his father and brother (Josiah Macy & Son), who

were engaged in the shipping and general commission business. In this connection he continued until the 1st of January, 1834.

From that period until 1855 he was engaged in the auction and dry goods commission business, most of the time as a partner in the house of Corlies, Haydock & Co.

In 1855 the New York Co. Bank was established in 14th St., corner 8th Avenue. Of this Mr. Macy took the presidency. When the Park Bank was organized in 1856 and commenced business, he was appointed cashier, and acted in that capacity until the summer of 1863, when he retired, and with Mr. R. W. Howes commenced the business of private banking under the firm name of Howes & Macy. In this business he is at present engaged. Having been blessed with a good constitution and lived temperately, he has been constantly employed, and for a period of upward of forty-four years has not been absent from business for any cause at any one time over two weeks, and very rarely as long as that.

Mr. Macy was married in 1831 to the daughter of Benjamin Corlies, a Quaker gentleman and an old resident of this city.

In religious matters, Mr. Macy accepts the tenets of the Friends or Quakers, and is attached to that portion of the Society known as Hicksites.

Strictly retiring in his habits, he has never taken any part or been identified with any political party, though his predilections have been with the Democratic interest.

The following interesting extract from the History of Nantucket relates to the ancestor of Mr. Macy, who settled in New England among the earliest emigrants:

"In the year 1640 Thomas Macy, being then a young man, moved with his family from the town of Chilmark, in Wiltshire, England, and settled in Salisbury, county of Essex, Massachusetts.

"He lived here in good repute twenty years, where he acquired a good interest, consisting of a tract of land of one thousand acres, a good house, and considerable stock. But when this part of the country became more thickly settled by the English, dissensions arose among the people in regard to religion and religious denominations. Notwithstanding the purpose of their emigration from the mother country was that they might enjoy liberty of conscience in religious matters, they themselves commenced the work of persecution, and enacted laws to restrain people from worshipping God according to the dictates of their consciences. Among other restraints, a law was made that any person who should entertain one of the people called Quakers should pay a fine of five pounds (\$25) for every hour during which he so entertained them. Thomas Macy subjected himself to the rigor of this law by giving shelter to four Quakers who stopped at his house in a rain storm.

"This act was soon sounded abroad, for, being influenced by a sense of duty, he had used no means to conceal it. He could now live no

longer in peace and in the enjoyment of religious freedom among his own nation; he chose, therefore, to remove his family to a place unsettled by the whites, to take up his abode among savages, where he could safely imitate the example and obey the precepts of our Saviour, and where religious zeal had not yet discovered a crime in hospitality, nor the refinement of civil law a punishment for its practice. In the fall of 1659 he embarked in an open boat with his family and such effects as he could conveniently take with him, and proceeded along shore to the westward; when they came to Boston Bay, they crossed it, passed round Cape Cod, extended their course by the shore until they were abreast the island to the northward, thence crossed the Sound and landed on Nantucket, without accident. The same undaunted courage which enabled our forefathers to breast the storm and dare the wave in search of a free altar and a safe home, prompted him in search of the same blessings to meet the same dangers.

"He sacrificed his property and his home to his religion; he found both in a remote region hitherto hardly known. His religion, we mean, not its name, but its spirit, has been transmitted to the present generation unsullied by the crime of persecution or by the disgrace of inhospitality."

At that time the island was inhabited by about fifteen hundred Indians.

"Thomas Macy, being cited to answer for the offense, addressed the following letter to the Court, the original of which is preserved in the cabinet of the Nantucket Athenæum:

"This is to entreat the honoured Court not to be offended because of my non-appearance. It is not from my slighting the authority of the honoured Court, nor fear to answer the case; but have been for some weeks past very ill, and am so at present; and notwithstanding my illness, yet I, desirous to appear, have done my utmost endeavour to hire a house, but cannot procure one at present. I, being at present destitute, have endeavoured to purchase one, but at present cannot attain it—but I shall relate the truth of the case, as my answer would be to the honoured Court; and more cannot be proved, nor so much. On a rainy morning, there came to my house Edward Wharton and three men more; the said Wharton spoke to me, saying they were travelling eastward, and desired me to direct them in the way to Hampton, and I never saw any of the men afore except Wharton, neither did I enquire their names or what they were; but by their carriage I thought they might be Quakers, and said I so, and therefore desired them to pass on in their way, saying to them I might possibly give offence in entertaining them; and soon as the violence of the rain ceased (for it rained hard) they went away, and I never saw them since. The time that they staid in the house was about three-quarters of an hour; they spoke not many words in the time, neither was I at leisure to talk with them: for I came home wet to the skin immediately afore they came to the house, and I found my wife sick in bed. If this satisfy not the honoured Court, I shall submit to their sentence. I have not willingly offended. I am ready to serve and obey you in the Lord.

"Signed, THOMAS MACY.

"27th of 8th Month, '59 (1659)."

FAMILY RECORDS.

ONE of the most important, as well as interesting, considerations relating to the social position of all enlightened human beings is a knowledge of their ancestral history. Every male and female who properly appreciates their standing in the present world, and who feels an interest in the antecedents of the family of which they constitute a branch, can not but be desirous of knowing through what line of humanity their existence was derived, and who were their progenitors for as many generations as can possibly be ascertained. Every child has a claim upon its parents for knowledge of the names, nativity, and other circumstances of the lives of its ancestors to the greatest possible extent, and every parent should record, for the benefit of his children, all the circumstances of their infantile and juvenile history, and also his or her own, in order that each may be well acquainted with his or her own life, and that of their parents, to enable them to appreciate to its fullest extent the value of life and their duties to the family and to society at large.

The biographical details of every individual, from the first to the last day of his existence, are matters of interest not only to himself, but also to his family and descendants; especially should every adult know the history of his and her own growth, the means supplied by the parents for their education and position in society, and the sources of physical, moral, and intellectual development, so that those subsequently dependent upon them as fathers and mothers may profit by their experience.

As every individual has two parents, four grandparents, and eight great-grandparents, it is very plain that without a systematic and continuous record of each, it is impossible for an individual to keep a knowledge of his ancestral relations, or of the details of their lives, beyond a very limited extent.

To insure this important matter, and to secure to all future generations a full knowledge of the antecedent line of each individual, together with the details of the biography of each member of the family, an ingeniously arranged Family Record has recently been prepared by a professional gentleman of New York, the simplicity, completeness, and comprehensiveness of which must attract the attention of, and prove valuable to, every intelligent person. It is entitled *The Biographic and Photographic FAMILY RECORD, arranged for recording in detail the Personal Incidents of each Member of the Family*. By John H. Griscom, M.D.

The first page, besides containing the record of the names, birth, marriage, etc., of both husband and wife, and a space for the photographs of each, to be inserted at several different ages, is arranged for recording the name, date, and place of birth, and death of the parents and grandparents of each, including three generations. In addition to which there are spaces for recording other incidents in the life of each.

The remainder of the volume is appropriated to the records of the descendants of the first-named parties, an entire page being devoted to each, containing the name, date, and place of birth, with space for five photographs, at different ages; also for the character and period of whatever diseases they may have, and the height and weight at different ages, with the schools, occupations, and other events of their lives. An additional blank page for each child enables the parents to record whatever other incidents may seem desirable to be remembered.

The superiority of this ample form of record over the very meagre ones usually contained in Bibles, must be apparent to all parties, and being a separate book, the persons using it are enabled to record a great number of events which would be inadmissible in the Bible record, because the latter must necessarily be subject to the observation of strangers as well as of the family, while the separate Family Record may be always kept private. Especially will this be valuable to the female members of the family who may not desire to communicate their ages to others.

Without such a record as this, almost every adult is necessarily ignorant of very many of the incidents of his early life, because of the indifference or forgetfulness of the parents. For instance, how few persons now living at the age of twenty-five are enabled to say whether they

have ever had the diseases incidental to juvenile life! There are many who know not the places of their own nativity, and some are ignorant even of the precise date of their birth. Very few are able to recite any of the circumstances of their physical growth, of their early family connections, or to respond to inquiries respecting the ages, nativity, and other circumstances, of their grandparents, and much less of their previous progenitors. By the use of the systematic Family Record herein alluded to, the individual of every generation of the family may know the history of every progenitor; and every succeeding generation, by its steady use, will of course increase the numbers recorded, so that each century will render the members of at least three additional generations fully cognizant of all their predecessors.

Without some such record as this, almost every orphan child must pass through life without any distinct knowledge of its parents, leaving it an isolated human being in respect to ancestral relations; but if left in possession of such a record, containing the history of its parents, and their photographic likenesses, it has a substitute for their persons almost equal to the reality. This form of Record is, in fact, a happy verification of the sentiment contained in the following verses from a poem by Charles Sprague, entitled

THE FAMILY MEETING.

We are all here!

Even they the dead—though dead so dear.

Fond memory to her duty true,

Brings back their faded forms to view.

How lifelike, through the mist of years,

Each well-remembered face appears!

We see them as in times long past;

From each to each kind looks are cast;

We hear their words, their smiles behold;

They're round us as they were of old—

We are all here!

We are all here!

Father, mother,

Sister, brother,

You that I love, with love so dear.

This may not long of us be said;

Soon must we join the gathered dead;

And by the hearth we now sit round,

Some other circle will be found.

Oh! then that wisdom may we know,

Which leaves a life of peace below!

So in the world to follow this,

May each repeat, in words of bliss,

We're all—all here!

Another very valuable consideration connected with such a Family Record relates to the life insurance interests of the family. Every company that grants a policy therefor, requires information concerning the health and longevity of the ancestors of the applicant, and also his private sanitary history. Such a record as this at once answers the questions, and it would be to the interests of every family, the members of which are likely to apply for life policies, to have such a record to satisfy the company's medical inquiries.

Moreover, every family needs such a felicitous arrangement for recording the history of their individual lives, to enable them to appreciate to its full extent the value of their own existence, and the importance of a good record for future use. And by putting on record the incidents of the life of their children, every parent would present to them an incentive to good conduct in all their social, moral, intellectual, and business relations in after-life.

In the marriage record of the parents, on the first page, a space is appropriated for the signature of the clergyman or officer who performs the ceremony, thus making it a *Certificate of Marriage*.

The Publisher of the *Phrenological Journal* has it in contemplation to issue the work above referred to, and it will be put to press on the receipt of a sufficient number of subscribers to warrant the outlay for a very handsomely printed and substantially bound work. Its price will not exceed two dollars, and initiatory subscribers will be supplied with it at 25 per cent. discount therefrom. All persons procuring ten subscribers therefor will be entitled to an extra copy.

Address Editor of the PHRENOLOGICAL JOURNAL, 389 Broadway, New York.

NEW YORK, FEBRUARY, 1868.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous precipice of telling unbiased truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*De Foe*.

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED is published monthly at \$3 a year in advance; single numbers, 30 cents. Please address, SAMUEL R. WELLS, 389 Broadway, New York.

WHAT IS THE USE OF IT?

The New York *Daily Times* publishes the following:

"PHRENOLOGY IN THE MONTREAL POST-OFFICE—A CURIOUS STORY.—*From the Montreal Telegraph, December 12.*—The post-office is not a place that would be suspected as a source of fun, far less as the field for the acting of a serio-comic drama. It appears that phrenological qualification is now necessary to retain a position in that office. For some time past the postmaster was not satisfied that all was right, and being a firm believer in the development of certain bumps, the significance of which is explained by a class of men distinguished as phrenologists, he had the heads of the clerks of the establishment examined, and the result was most unsatisfactory in the case of three of those employed in the office. The moral and intellectual bumps were found deficient, so much so that it was impossible to retain these gentlemen any longer as public servants. The interests of the public must at all times be protected, and it will be a delightful satisfaction that a science so much abused by some, can be applied with such conclusive results. It is not known whether the same experiment will be made in the other branches of the public service."

The Montreal postmaster is right. In his case the new Dominionists have evidently "PUT THE RIGHT MAN IN THE RIGHT PLACE," and he will see to it that his clerks and other subordinates are adapted to their several places of care and trust. This is applying science and common sense in a practical manner. Now, if Phrenology is good for anything, it is good for just this. The ability of men

to read character depends on knowledge; while one is easily deceived—imposed on by every bogus pretender and wicked quack, another is comparatively shrewd in surmising, inferring, or *guessing* what manner of man he meets; and another, with more knowledge and a larger experience, can generally detect a rogue and avoid him. But, give the same knowledge and experience to one who possesses an intimate acquaintance with Phrenology, and he would read a stranger through and through "like a book"—he becomes a ready detective. Now, this postmaster found among his clerks men of doubtful integrity, or those deficient in capacity. He may have been already satisfied in his own mind as to the facts, while others, in interest, differed from him; and having confidence in Phrenology, he resolved to have it applied, in order to confirm or refute his impressions, and to settle the doubt which may have existed in the minds of all. We see nothing "funny" or "serio-comic" in this, but rather the proceeding of a sound and sensible man.

Certain it is, we have in all our public departments, civil and military, any number of incompetents; and all see clearly the results in their indiscreet acts. Letters are lost or delayed, post-offices robbed, mail matter put in the wrong bag or box, and sent to China instead of Chicago. All have suffered more or less from one or the other of these causes. Stupid postmasters, dishonest clerks, ignorant letter-carriers, need not be imposed on a long-suffering community. A wise application of Phrenology and good common sense would correct the error and remove the evil by selecting those adapted to the work.

If one individual has a gift for literature, poetry, or art, another may have an aptitude for business, may be born for a banker, a broker, a merchant, or for a sea captain. And owing to the all-prevailing ignorance on the subject of choosing pursuits, and character-reading, few men ever find their right place, and most men pass through life mere ciphers—accomplishing nothing beyond "getting a living," while thousands of others live all their poor lives but one degree above the starving-point. Why? we repeat, simply because they do not know what to do, how to find out their aptitude.

Here is a thief in a situation where only one of the highest integrity should be placed. Of course he fails, and falls; a prison opens to him, and he is lost. Here is a middle-aged man, of good education and natural ability, doing a boy's work. He began life with means and high hopes; but owing to misplaced confidence, trusting those not worthy, he was easily swindled out of his property, and had not sufficient confidence in himself to try again. He will struggle on, suffering for many of the necessities of life, but will always be dependent. Another, high-minded, ambitious, generous, and spirited, had all the qualities for success but one. He could not say the monosyllable "No." He was invited to smoke, drink, and take part in a social game of chance, where, to give it zest, a small sum was at stake. He played, he won, and was popular. His higher senses, "the still small voice," whispered, "*do so no more*," and he silently resolved to obey; but his resolution was easily overcome by boon companions, jovial fellows, and he yields to please them. He had too little dignity, manliness, decision, stability. "There was a screw loose." He was wanting in self-esteem and firmness.

Another is bright and brilliant, but fickle. He first tries this, then that, then something else; becomes a sort of "jack at all trades, and is perfect in none." He would like to marry, engages to one, then regrets, begs off, tries another, and deserts in disgrace; all for the want of steadiness of purpose and moral principle. He gets a situation, tending bar, peddling peanuts, cigars, and the like; but with all his versatile brilliancy, he is regarded as of "no account."

We could go on and give the history of all classes of men, tracing their success or failure to organization, habits, education, training, circumstances, and surroundings, pointing out the particular rock on which this, that, and the other were stranded—showing, when too late, in many cases, how they could have escaped and cleared the capes, shoals, rocks, and the numerous whirlpools into which the ignorant and unsuspecting are cast away or swallowed up.

But the indolent world is wedded to its idols; old customs, old superstitions are in the way—and we repeat, "the errors of the age." Careless switchmen

misplace the rails, and a train is thrown off the track and smashed; a careless engineer explodes a boiler, and the ship and all on board find a watery grave; a careless driver neglects his team, and a collision, a crash, and broken bones ensue; a careless stoker sets fire to the engine frame, and the building is destroyed; a patriotic though heedless boy tosses a fire-cracker into a heap of rubbish, and a city is burned to the ground—*small Cautiousness!* Our prisons are filled with criminals, who, had they been rightly placed—away from temptations when young and weak—and wisely directed through childhood, would, many of them, subsequently have made useful and honorable citizens. Our poor-houses and hospitals are filled with the unfortunate, many of whom could have been made self-supporting by timely aid and proper direction.

That society is sadly out of joint all may clearly see; but few, very few, like the Montreal postmaster, have the knowledge and sagacity to apply the remedy.

We anticipate the inquiry, "What is to be done with the three discarded P. O. clerks?" We answer, apply the same test to discover "*what they can do best.*" If Phrenology indicates what they ought not to do, or to be trusted with, so also it will indicate what they can do most successfully; and this each and every one of us ought to be most *thankful* to learn. We have seen too much human suffering, too many miserable failures in the different callings and pursuits of men, not to feel a lively interest in any and in every means looking toward a remedy. We believe there will be fewer mistakes, fewer blunders, accidents, explosions, and fewer crimes, when a knowledge of Phrenology becomes general. At the worst, it can do no harm. It certainly has the promise of doing much good.

We commend the example of the Montreal postmaster to others. We recommend our merchants to learn whether or not their confidential clerks, cashiers, and others have the organs of Conscientiousness, Cautiousness, Firmness, and other necessary faculties, to insure integrity and reasonable care in their several departments. Equally useful will it prove in the selection of apprentices to learn particular arts and trades.

TIMELY TOPICS.

MAKING MAPLE SUGAR.—This is the season when enterprising men living near maple groves prepare for making their year's "sweetening." Many tons are made throughout the Northern and Middle States. Maine, Massachusetts, New Hampshire, Vermont, New York, Michigan, Ohio, and the Canadas make the most, and to a limited extent it is made in the Middle and some of the Southern States. A few trees will often produce many pounds of delicious sugar if rightly tapped and attended.

We have often been impressed with the desirableness of our farmers planting maple trees in rocky regions or in portions of their lands which could not be otherwise cultivated. A nook or a corner here and there would grow a dozen or more sugar-maple trees, and a side-hill in a glen or gorge as many more. Indeed, such trees should be set along our public roadways. Millions can thus be grown to the great benefit of all and the injury of none. The sugar maple is a beautiful shade tree in summer, and when old may be converted into timber, tools, furniture, or fuel. And we would here suggest that a young farmer can not do a better thing for himself, his town, or his State, after planting a fruit orchard, than to plant a grove of maple trees. Who will act on this suggestion? If only a few individuals be induced to do this, others will shortly follow the good example, and in time we shall have within our reach, all through the United States, the means by which we can obtain all of this kind of sugar and sirup that we need. Farther south sugar-cane and sorghum will be produced, supplying the sugars of commerce. It may be interesting to our readers to know how many pounds of maple sugar and how many gallons of molasses—sirup—treacle—were produced in the year 1860, in the United States and Territories. Doubtless a considerable more was made than was reported to the census taker. It may surprise our Northern readers to learn that maple sugar and maple molasses can be made in several of the Southern States. But some of the territory is mountainous, and the maple tree grows there.

Pennsylvania	114,310	2,767,385

	Gallons Maple Molasses.	Lbs. Maple Sugar.
South Carolina	205
Tennessee	74,372	115,620
Vermont	16,253	9,877,781
Virginia	99,605	938,108
Wisconsin	83,118	1,584,451
Nebraska	275	123
Utah	40
Total	1,597,589	40,120,905

Thus more than a million and a half gallons of delicious maple sirup, and over forty million pounds of maple sugar, are produced in our country in a single year. If we estimate the sirup at one dollar a gallon, we have the snug sum of \$1,597,589, and the sugar at 15 cts. per pound, \$6,018,030 75; total, \$7,615,619 75.

This is no small matter when viewed in the aggregate, and coupled with the pleasure of making the sugar, and the domestic joy connected with its use, the maple-sugar business assumes proportions which it is a great pleasure to contemplate. We all have "a sugar tooth," and everybody loves maple sugar. Then tap the trees, boil the sap, sugar it off, and send us a cake!

ARE WE POOR?

WE hear and read of hard times and ruin ahead, of heavy taxes, and enormous public debts. Foreign writers were sure a democratic people would not bear taxation, and that we never could pay off our great war debt. The experience of the last two years, in consolidating our national debt and in raising revenue, shows in strong light the resources and capabilities of the country. We have paid all our expenses and reduced our aggregate debt from \$2,874,000,000 in the fall of 1865 to \$2,491,000,000 as given in the Treasurer's recent Report, or \$383,000,000 in two years. When it is considered that this occurred just after a long and exhaustive war—that nearly half the country was prostrate in its finances and business facilities, the nation, we think, does not deserve to be called bankrupt. Such elasticity and enterprise is a great surprise to the people and governments of the Old World.

Let us look a moment at the resources of the single State of New York. The assessed valuation of taxable property in the year 1866 was \$1,640,000,000, the real value of which is supposed to be three times that amount. From the State Census of 1865 we take a few items—

is not more than a third part of the personal property is insured, it will be safe to assert that the cash value of the property in the State of New York can not be short of \$6,000,000,000. The aggregate of taxes, direct and indirect, of the people of the State of New York in 1866 was about as follows:

State and school taxes	\$12,000,000
City, county, and town taxes....	50,000,000
Internal revenue and customs ...	53,000,000
	<u>\$115,000,000</u>

New York is evidently able to pay her debts easily; and no doubt all other States—at least those which did not join the rebellion—are equally able and willing to meet and redeem their liabilities. We are a young, energetic people, with room for all, and abundant natural resources in soil, climate, mines, etc., to reward industry and to invite labor from every part of the world. As a nation, then, we are not poor, and, God be thanked, we are not in fear of bankruptcy.

If Americans will stop smoking, chewing, and drinking for a few years, they can pay all their debts, and have a surplus.

"THE WORLD MOVES."

THE New York daily *World* newspaper recently gave expression to the following progressive idea, which is in keeping with the laws of growth and reconstruction taught in the PHRENOLOGICAL JOURNAL. Read this political philosopher.

"The Democratic party must be wise enough to recognize the molding influence of great events on public opinion, and the permanence of some of their consequences. Even in the most tranquil times society and public opinion are in a state of constant, and in a new country like this, of rapid growth. In a period of convulsive turbulence and upheaving, opinion advances with an accelerated velocity. It is not possible that the mighty struggles of the last six years should not leave a deep imprint on succeeding times. The future of this country is not to depend on the opinions of men who were over forty when the war broke out, but on the opinions of those who were under thirty. Though built after the same plan, our older men will say, like those of Israel, that the second temple is not like the first. We must, nevertheless, recognize facts. It is a fact that all the flower of our young men were engaged in, and educated by, the war. All the youthful vigor, daring, enterprise, love of adventure, thirst for honor, pride of country, marched with our armies. In the army they lived a deeper life than falls to the lot of ordinary sluggish generations. Their whole manhood was a hundred times put to the proof; the experience of four years was more than the common experience of a life. And it came at an age when the character is yet pliant and yielding, when the opinions are either not formed, or are not settled into dogmatic stiffness. The mold was applied while the clay was yet soft, and it will continue to bear impress. There is an ineffaceable difference between the generation of men that is going out and the younger generation that is coming in; and no party which ignores this difference will be in sufficient sympathy with the rising future to guide its politics. Our elderly men, whose habits of thought became fixed before the war, will be every year deserting, in obedience to a summons they can not resist. As between the old epoch and the new, they will be a constantly dwindling minority; but as between the liv-

ing and the dead, they are 'passing over to the majority.' Their indurated habits of thought will pass with them, and the country will be ruled by the generation whose character was shaped in these later stirring times."

HISTORY ON CANVAS.

MR. THOMAS NAST, the artist, whose portrait, character, and biography we published last October, has recently given to the public a panorama, with views of important events in our national history, commencing with the discovery of America, and continuing to the close of the civil war; including a look—in a picture—at our new Russian possession!

But Mr. Nast is a humorist. He is the Mr. Punch of America, without the drawbacks to the London man. Mr. Nast caricatures everything and everybody, save sacred subjects. These he would not, could not profane, for he is himself a man of high moral principle and deep religious convictions.

The interest which will be taken in this panorama by a spectator will, in a great measure, depend on his political opinions, the direction in which his sympathies lie. The artist, we may state, is a staunch Republican. That many of the representations, aside from the burlesque vein which ramifies them, are faithful portrayures of sectional or public sentiment, as the case may be, it can not be denied.

The series of paintings is lengthy, comprising thirty-three on canvas, nine feet by twelve. Among those which the spectator usually considers most noticeable, are "Columbia and Jonathan at Home," "Hunting in the Swamp and the Underground Railroad," "King Cotton," "The Uprising of the North." (There is something grand in this representation.) "Contraband of War," "Peace in New Orleans." (In these last two pictures Ben Butler's countenance wears very significant expressions.) "The Ogre of Andersonville," a reproduction from life. "Ulysses the Giant-killer," "Sherman's Bummers," a spirited and effective caricature, "Palace of Years," "Reconstruction."

So far as the paintings themselves are concerned, they manifest a great expenditure of time, color, and industry. Some of the scenes are elaborate and striking, and required no little patient consideration for the perfection of their designs. Altogether, the panorama will be regarded as a powerful campaign device, and will do real service in its way. If exhibited in the country, it must attract large audiences.

THE RESURRECTION.

FROM one of our foreign exchanges, *Le Mouvement Medical*, of Paris, we translate the following paragraphs, which occur in a discussion on the nature of the soul. The statements are interesting, as they furnish the views of an eminent French medicist on the resurrection:

"On the day of the general resurrection the

immortal souls will repossess the bodies which they occupied during their mortal life, and they will reanimate the bodies to die no more, with the characteristics which they had, or which they would have had, at the age when Christ's resurrection took place. The diversity of the difference of the sexes will be maintained, but the bodies of the elect will be endowed with great privileges: they will have no defect, and will enjoy all the completeness of their sensibilities; they will be *undisturbed*, that is to say, they will be sheltered from all physical suffering as well as freed from all intellectual and moral infirmity. They will be *luminous*, that is to say, they will shine as the sun; they will be active, that is to say, they will be able, at the monition of the soul in her desires, to transport themselves instantly from one place to another; they will be *subtle*, that is to say, they will be able to obey with the greatest facility the inclinations of the soul.

"Here is what you would know if you had not forgotten your catechism, or if you had read Bergier; this is what you will learn some day, if ever you find a place among the elect, which I doubt.

"Such is the belief which divine revelation imposes on us; and behold the consequences which this dogma sets forth according to ascetic theology. Belief in the resurrection of the body ought first to cause us to give thanks to God, because he has, in his good pleasure, revealed this mystery to us. Second, it ought to console us on the death of our parents and friends. Third, it ought to be a sort of compensation in all physical and moral infirmities incident to mortal life. Fourth, it ought to incite us to merit, by good works, our admission into Paradise."

THE VIRTUOUS LIFE.

THE virtuous life may be likened to a pillar of mosaics; so long as the process of construction is going on—so long as there is one incomplete spot where the rude masonry and the unwrought material are exposed, so long we fail to mark the beauty of the whole. However rich the design, however exquisite the execution as far as completed, however solid the masonry or sturdy the material, as long as the symmetry of the whole is marred by a blemish, so long we fail to recognize the merit of the work. We are always watching the builder, we see the temporary scaffolding—the litter of waste material, but we do not observe that beauty which in the end will be presented to our view, because we are too occupied or too idle to exercise that philosophy which enables us to judge the superstructure from the foundation.

So when the virtuous life is finished—when the litter and the scaffolding are taken away—we behold with surprise and admiration the work of the builder.

Then let no one despond if engaged as conscience dictates. Let him push on to the last, and as sure as the last is to come, when the builder descends from the shaft and lays aside his tools, he is sure to receive a just reward.

JOHN DUNN.

PLANT A GARDEN.

THIS is the season of the year to obtain seeds, and for preparing the ground so as to be ready for early spring planting.

Ladies may now design their flower gardens. Take paper and pencil, draw a plot; arrange it on scientific principles, and very soon the time will come to plant the seeds, shrubs, and vines. Every dwelling, every church, every school-house, and, indeed, every railway station, ought to have its flower-beds—as they have in the old countries. We remember a young lady who, when advised to plant flower seeds, replied, "What is the use? we can neither eat nor wear them." In other words, "they are neither food nor clothes," therefore useless. We do not envy that young lady's taste; but this is a rare exception, and belongs not to high civilization, but rather to low heathenism.

If wives would exert a silent though powerful influence over their husbands and sons, if daughters would secure the approval, not to say the affection of those whom they would win, let them cultivate flowers. Men may sometimes ridicule the thing, but they are nevertheless influenced by fragrant flowers.

There is no culprit so hard, no human being so low, but would be touched by this beauty of nature; and though they may not turn aside or go out of their way in the least to cultivate them, they can not help but admire them, and cherish the heart and hand that cultivated them.

With the view to beautifying our homes, parks, churches, and school-houses, we have arranged with leading seedsmen in New York to supply all that we can use; and we publish in our advertising department a list of various seeds—flower and vegetable—with prices, which will be sent in packages, post-paid, by mail. A few shillings will get a small assortment; a few dollars, enough to beautify a large garden or a small park; and we commend the subject to all our JOURNAL readers. Let every one cultivate flowers, and thereby cultivate their finer sensibilities, all of which will tend toward lifting up and purifying them. We regard this one of the means, however slight, of bringing about purity, refinement, and even a higher civilization. Then plant a flower garden, plant a vegetable garden, plant trees, shrubs, and vines, plant with care, with taste, with hope and with faith, and God will bless your good works with rich luxuries, and with health, beauty, fragrance, and love.

BEGIN RIGHT.

BY CRAYON BLANC.

BEGIN right! First the alphabet—then the printed volume; first the tiny blade, then the ear of corn fully ripe. A little time, a little patience, and then all will come out straight, if only you begin right!

"Ten minutes more sleep can't do a fellow any harm," says drowsy Tom, and so he rolls

over for another nap. He is late at breakfast, late at school, late all day long, and more probably late through life—one of those people who are always arriving at depots after the cars are gone, and calling to stage-drivers to "wait!" If he had only learned how to begin right!

"I'm worked to death," says the poor household drudge, as she sinks into a chair at the day's end, too weary to care whether her hair is smooth or her collar straight. "And after all, there has Mr. Mite rushed out and left his newspaper on the sofa for me to fold, and his slippers in the middle of the floor, and his pipe on the table, and his hair-brush on the mantle-piece. It's too discouraging!"

Well, ma'am, you did not begin right with Mr. Mite. You have followed him round through life, picking up and putting up after him, when you should have let him do it for himself. "But it wouldn't get done." Yes, it would. Mr. Mite would not rest quiet very long in such a chaos if he wasn't waiting for you to reduce it to order. There was a time when he was younger than he is now—a time when you might have made what you would of him, but you did not begin right!

Is your boy disobedient, careworn parents? Does he set your wishes, even your commands, openly at defiance? Why should you wonder? Do you remember the days of his babyhood, when you laughed at his freaks of temper, and allowed him to over-ride all rules and regulations, "because he was only a child?" How many tears and pangs you would have saved yourselves had you only begun right!

What's the matter, friend? Is it an unlucky day when everything comes out wrong and disasters thicken around you, and nothing is as it should be? Man, there is no such thing as luck. The day is all right—it is you that are wrong. Did you commence it with a prayer? Did you take God's hand in yours before you left your room, and gather strength and calm from its contact? No! you did nothing of the sort; you tumbled out of bed and into the breakfast-room; you scalded your mouth with boiling coffee, and snubbed your wife when she asked you a question. You went off to business with such a face that your children breathed freer when you were gone! And yet you are not by any means an unprincipled man or a bad husband and father. Yesterday all went smoothly, and your temper was as serene as May sunshine. To-day, things were entirely different—you did not begin right!

There is a right and a wrong end to everything, and if you only get hold of the right one, how nicely the "chain-stitch" of life unravels. Nothing is too difficult for a man of ordinary resolution, if only he begins right. Some people begin in the middle—some people begin where they ought to have left off, and some people never begin at all! Luck gets the blame often—Providence sometimes—the wrong scapegoat always. It is so easy to slip off the responsibility on to somebody else's

shoulders, whether it belongs there or not. But in nine cases out of ten, if a man comes to grief, you can trace the chain of misfortune back to his own hand—he did not begin right.

ONE-SIDEDNESS.

SOME persons seem to be really "cut on the bias." Their thoughts, aims, purposes in life, their characters, even, seem to be hopelessly askew. To convince them of any error is almost an impossibility—it would be, in point of fact, like "cutting across the grain."

In order to get along with such people, one must sacrifice many personal peculiarities, and consent to become a nonentity. If you have any ideas of your own, you might as well keep them to yourself in their presence, unless you are fond of wordy discussions—quarrels, I call them—and do not mind being thrown "hors de combat" mentally, if not physically.

One-sided people have Combativeness large. Galileo had to deal with just such kind of persons I am describing, and his reiterating "It does move, though," may have strengthened his own convictions, but had no effect on theirs. True genius will not allow itself to be biased by the opinions of others, for genius is synonymous with power, and one must meet opposition with opposition in order to cut a path for himself.

One-sidedness is a fault in personal education; one of those excrescences which, if allowed to grow, will destroy the beauty and uniformity of the most promising character.

It is not according to nature, and one needs to guard himself against leaning too far away from the true center, just as much as the tree needs to be straightened and propped that misses the guiding stake. VIRGINIA VARLEY.

THE PRESENCE OF GOD.

Oh, evening winds! whose restless feet
Now wander to and fro;
Oh, stars! whose radiant gems complete
The crown on Nature's brow;
Oh, bright-eyed moon! whose golden disk
Swings in the vault of night,
And like a hooded friar walks
The star-begirt height;
Oh, forest deep, and mountain high,
And ocean wide and free,
The presence of the living God
Is manifest in thee!

I hear His voice amid the rain
That patters on my roof;
I see His eye amid the flowers
That weave a golden woof.
I feel His presence in my soul,
His hand upon my heart;
My life is subject to His will,
Of His own self a part—
A tithe, ev'n, of the wondrous skill
His handiwork displays.
And with all Nature will I lift
My voice to hymn His praise.

NELLIE A. MANN.

Why is the letter D like a drunkard's life?
Because it always ends bad.

ACQUISITIVENESS vs. BENEVOLENCE.—No. 2.

BENEVOLENCE, as has been shown in a previous article, must look to Acquisitiveness for all the money she wants to spend, but it is none the less true that Acquisitiveness must look to Benevolence for health. If it be true that it is not good for Benevolence to be alone, and that, indeed, she can not live without frequently putting her hands into the pockets of Acquisitiveness, it is just as true that Acquisitiveness can not live and be in health without the help of Benevolence. So their mutual relation is plain. Benevolence is weak and almost helpless without Acquisitiveness, and Acquisitiveness is sick and diseased without Benevolence.

It is not forgotten that Benevolence can give much else besides money. Charity, patience, gentleness, kindness, sweet words, and sweeter looks are all her gifts, and for these she does not have to look to Acquisitiveness; but when she wants money to feed the hungry, and clothe the naked, and build asylums, she must ask Acquisitiveness for it, and, therefore, divorced from Acquisitiveness, she can not perfectly fulfill her mission to the world. But Acquisitiveness, as has been said, suffers quite as much without Benevolence.

On a slightly eminence, on the brow of a hill, there once stood a palatial residence. It was "carved within and without." It shone in splendor within and without, and its rich owner was the talk of all his friends and his enemies. He was a very *industrious* man. He never, even for a day, neglected the care of his money, and his time and thoughts were so absorbed in this one great care, that he was obliged to give out that he "never read *begging* letters," and "never received calls from philanthropists or from beggars of smaller size."

"My time," he wrote to a friend, "is actually all taken up with my money. I have acquired an *immense* property, and I must now see to it—in other words, I must be 'diligent in business,' according to the Scripture command, and that leaves me no time to read the *begging* letters that pour in upon me by hundreds and thousands, or to see those who are always 'seeking an interview with me,' that they may lay before me this or that charitable object. It may be I am thought a very hard man, but my money, and, I might add, my house and grounds, consume all my time. I am even cheated of my rest at night, and can not be said to *enjoy life*. So no one ought to complain that I do not answer *begging* letters. I can not answer them, nor even read them. And much less can I see those who are continually trying to see me 'on *business*.' I always know exactly what their '*business*' is, and as their 'name is Legion,' I never see any of them. My letters and my calls are, I think, beginning to grow less, for it is coming to be understood now that I have *no spare time*."

Now, what was the matter of that man—of that *conscientious* man, who felt that he "must be 'diligent in business,' according to the Scripture command?" He was simply diseased, diseased in the organ of Acquisitiveness. And how came he so? "There is a sore evil which I have seen under the sun, namely, riches *kept* for the owners thereof, to their hurt." Eccl. v. 13. Here you have the answer. The man "*kept*" his money. When his money began to accumulate, he "*kept*" it. When more and more had been accumulated, he "*kept*" it, and when the burden of his riches grew so great that he could not "*enjoy life*," and had "*no spare time*," he refused to lighten the burden—he "*kept*" it all—"kept it to his hurt." His widowed sister, in a neighboring town, *sews* for her support—yes, sews, sews early and late, sews the year round, and her rich brother has "*no spare time*" to send her any money—"no spare time" to write to her and tell her to stop sewing and live on him.

You, poor man, and you, man of moderate means, who have not been tempted to nurse your organ of Acquisitiveness into disease, will no doubt execrate the man who can thus close his heart against the duty and the luxury of Benevolence, and you will perhaps ask if such a *monster* really lives.

Yes, and such as he is you may become if, having an opportunity to roll up a fortune, you allow your organ of Acquisitiveness to grow faster and grow larger than your organ of Benevolence. It may be thus that some phrenologist has examined your head, and putting his hand on the organ of Benevolence has said, with an ominous shake of the head, "Small, very small."

Now, what are you to do in such a case? Will you sit down and do nothing? Will you say that you believe more firmly in *fate* than ever?—that a man is just what he is *fated* to be? Will you come out, unblushingly, and say that Phrenology makes *fatalists*, or will you go to work like a man at that poor, half-grown organ of Benevolence, and work at it until it assumes the majestic proportions that the organ of Benevolence should have on every man's head? Cease to prate about an unfortunate mental constitution, and begin to work bravely to bring up that weak organ to the size of health. If you make money—and you are no doubt trying to make all you can—*give away* as much of it as you can possibly spare. Let your money slip through your fingers easily, and don't give it a farewell pinch as it drops. Don't be afraid to give—don't be afraid you'll not have enough laid up for "*a rainy day*." These *rainy* days that some men are always preparing for sometimes never come, and the owners of bonds and mortgages and vast estates suddenly pass away after "heaping up riches," without knowing "who shall gather them," and without having gathered anything but these perishable riches for themselves. Therefore, don't look too far into the future, or lay up too much of what, in a few years, you must lay by.

It may be that your organ of Benevolence is

so small that you feel no inclination to give of your substance. Well, no matter. Give until you do feel the inclination. Give simply in self-defense, if for no other reason. Give to prevent the organ of Acquisitiveness from becoming diseased, and by-and-by you will feel in your soul the healthful glow of benevolent feelings, and will enjoy earning money just for the sake of giving it away. And then, if the phrenologist put his finger on your "bump" of Benevolence, he will tell you that it has taken a start, and will tell you no more than the truth, for *you* have taken a start, a start in the right direction. You have become a benevolent man, and therefore (now laugh, oh, unbeliever, at our credulity) the *shape of your head has changed!*—yes, *positively changed!* and you will find that you may build what you will in your brain. Phrenology says to no man: "You are what you are, and nothing can change you." On the contrary, it shows a man in what he needs to be changed, and how he may be changed, and shakes a warning finger at those whose brains are being developed too much and too fast in the wrong direction. It seizes men on the verge of ruin and pulls them back. And surely none more need to be thus suddenly arrested than those whose course in life has been such that the organ of Acquisitiveness is large, and the organ of Benevolence small, for they are on the *verge of ruin*. If they continue to be successful in heaping up riches, and heed not the calls of Benevolence, their testimony at last will be that they "do not *enjoy life*," and that they have "*no time to spare*" for anything but taking care of their money.

The organ of Acquisitiveness, when divorced from the organ of Benevolence, is a dangerous foe in a man's brain, but let Acquisitiveness and Benevolence live together and work together, and the man is saved from the ruin of "*riches kept* by the owners thereof, to their hurt."

MEN ONE WOULD RATHER NOT MEET.—Men that tell stories that run into one another, so that you find it very difficult to get away at the end of any of them.

Men who have quarreled with all their relations.

Men who have been betrayed and abandoned in the most heartless manner by all their friends.

Men who have been persecuted and swindled by a general conspiracy of everybody.

Men who imitate popular actors.

Men who are always asking "Don't you think so?"

Men who are always "putting a case."

Men who agree with you too much.

Men "who feel inclined to join issue with you there."

Men who oppose Phrenology, and have never examined it.

Men who will not subscribe for the PHRENOLOGICAL JOURNAL, but prefer to borrow yours, "just to look it over," before you have had an opportunity yourself to examine it.

"Signs of Character."

Of the soul, the body form doth take.
For soul is form, and doth the body make.—Spenser.

SIGNS OF CHARACTER IN THE HAIR.

COARSE black hair and dark skin signify great power of character, with a tendency to sensuality. Fine hair and dark skin indicate strength of character along with purity and goodness. Stiff black hair and beard indicate a coarse, strong, rigid, straightforward character. Fine dark brown hair signifies the combination of exquisite sensibilities with great strength of character. Harsh upright hair is the sign of a reticent and sour spirit, a stubborn and harsh character. Coarse red hair and whiskers indicate powerful animal passions, together with a corresponding strength of character. Auburn hair, with florid countenance, denotes the highest order of sentiment and intensity of feeling, purity of character, with the highest capacity for enjoyment or suffering. Straight, even, smooth, glossy hair denotes strength, harmony, and evenness of character, hearty affections, a clear head, and superior talents. Fine, silky, supple hair is the mark of a delicate and sensitive temperament, and speaks in favor of the mind and character of the owner. Crisp, curly hair indicates a hasty somewhat impetuous, and rash character. White hair denotes a lymphatic and indolent constitution; and we may add that besides all these qualities there are chemical properties residing in the coloring matter of the hair tube which undoubtedly have some effect upon the disposition. Thus, red-haired people are notoriously passionate. Now red hair is proved by analysis to contain a large amount of sulphur, while very black hair is colored with almost pure carbon. The presence of these matters in the blood points to peculiarities of temperament and feeling which are almost universally associated with them. The very way in which the hair flows is indicative of the ruling passions and inclinations, and perhaps a clever person could give a shrewd guess at a man or woman's disposition by only seeing the backs of their heads.—*Exchange*.

[Our neighbor is too arbitrary in his ascriptions of character to the different colors and qualities of hair above specified. That there is much of character evidenced by the hair is undoubted, but we would not attempt to assign positive mental characteristics so unequivocally to this or that quality and color.]

BARON WODEHOUSE, LORD-LIEUTENANT OF IRELAND.

BARON WODEHOUSE has a large brain, symmetrically formed; and he would pass anywhere for an evenly-balanced, well-organized person. We see nothing in excess—nothing which would mark him as peculiar. He is fond of display; ambitious to rise and shine. If dressed like a plain, democratic republican, he would pass for a good fellow; perhaps he

PORTRAIT OF BARON WODEHOUSE.

would be esteemed rather "nice." He was born to position, and there was no special occasion, we presume, for any extraordinary effort on his own part; and he would be likely to take life easily, his wants being already anticipated and supplied.

The Right Hon. John, third Baron Wodehouse, Lord-Lieutenant of Ireland, was born in 1826, and was educated at Eton and Christ Church College, Oxford. In 1846, on the death of his grandfather, his father having died in 1834, he succeeded to the English peerage, and in the same year took his seat in the House of Lords. In 1852 he was elected to the office of Under Secretary for Foreign Affairs, which position he held for four years, when he accepted the post of Envoy Extraordinary and Minister Plenipotentiary to the Court of Russia at the conclusion of the Crimean war. In this embassy he continued until March, 1858. He afterward returned to his former position of Under Secretary for Foreign Affairs. In 1863 he was selected as Envoy from England to the Court of Denmark, to negotiate with reference to the Schleswig-Holstein question. On his return, he represented the East India Department in the House of Peers; and in 1864, on the death of the Earl of Carlisle, he was appointed to the lord-lieutenancy of Ireland.

Baron Wodehouse is decidedly liberal in his opinions. He possesses a conciliatory spirit, indefatigable industry, a strong love of truth, and a vigorous and practical mind. By an honorable career, both in public and private life, he has acquired a good reputation among his countrymen generally.

BISHOP CLARK, of Rhode Island, saw only five drunken persons in all Europe. Of course the Bishop kept the best of company.

NEW PHYSIOGNOMY.*

BY REV. BENJAMIN ROGERS.

Its name indicates its character; but the book itself must be examined before any idea can be formed of the vast field over which it ranges for its facts and the sources of its information; and if, as all naturalists declare, any given bone of an animal is so indicative of its whole structure, that from it all the others can be designed, and so the animal be reproduced as far as form and features are concerned, though its species may have been lost from the earth for a thousand years, and at last but a single bone found from which to judge of what it was, and if it is true that the form indicates the character in the lower animals, and is, as it were, but the clothing of the spirit of man, then it is but reasonable to suppose that there is, or may be, a science of **PHYSIOGNOMY** as certain, as well defined, as readily attained as any other; and if it be so, then it should take precedence of most others, since it opens to every person the true characters of those around them, and enables us to select our friends, companions, agents, and servants from such as will neither abuse our friendship nor betray our confidence. A good physiognomist is rarely cheated, and need never be betrayed.

It is undoubtedly true, that mentally, physically, morally, we are largely molded and shaped by our own efforts. In other words, our lives form our characters. We become very largely in all respects what we choose to make ourselves. The man who gives his life to reflection, is every day expanding his reflective organs more than others, and every line in his face is drawn into sympathy with them. Reflection becomes the habit of his life. He shows it in everything—in his head, his features, his countenance, his deportment; and what is true of reflection is equally so of the exercise of any faculty or passion. There is one type of head and features peculiar to the clergyman, another to the lawyer, another to the soldier, another to the gambler, and in each case they become more marked in their own direction by length of time and activity of exercise. If this is so, then each person not only molds his own character, but he makes his own head, shapes his own features, gives character to his own form, and so himself gives to the world infallible signs by which to read and know him as he is.

Physiognomy was earlier taught than Phrenology, by some centuries; but as the features receive character from the brain, it is only now taking its legitimate position as the younger sister of Phrenology, rather than an independent science, and it is so treated in the book of Mr. Wells. For the multitude, the "New Physiognomy" is well treated, being broken

* "NEW PHYSIOGNOMY; OR, SIGNS OF CHARACTER AS manifested through temperament and external forms," by Samuel R. Wells, New York, is a handsome octavo of 768 pages of clear, good-sized type, good paper, fair margins, and 1058 illustrations. Price in muslin, \$5. Heavy calf, \$8. Turkey morocco, gilt, \$10.

up into short chapters, each bearing directly upon the signs of character, and thus keeping alive the interests of the inquisitive reader.

Among the most interesting and instructive chapters are those treating upon "Good Principles," "The Law of Correspondence," "The Law of Homogeneity," "The Law of Quantity," "The Law of Quality," "The Law of Temperament," "of Form," "of Functions," and "of Latency." The various Doctrines of Hippocrates, Gall, and Spurzheim, the Systems of "Lavater," "Walker," "Hall," and others. "The Effect of Climate upon Character," "National Characteristics," "Ancient Types and the Physiognomy of Classes," all of which abound in evidences of research, are full of facts, and handsomely illustrated by apt examples. There is no other book like it. It comes from good authority, and should be read by every one who cares to know either himself or his neighbor.—*Austin (Tex.) Jour.*

THE SEASONS OF LIFE.

Like the green buds unfolded, just peeping to view
In the Spring of the year with the morning's fresh dew,
Is the mind of the child in his new-born estate,
As with joy we behold, and its progress await.

And the warmth of Love's sun with a joy-beaming face,
As it nurtures, develops each sweet, gentle grace;
And the heavens are cloudless, the deep azure skies
Are reflected again from smiling blue eyes.

And the little mind grows more and more every day
Under tears that Love's showers, while rainbows display
In their rose-colored hues the bright promise of joy,
As the mind of the babe becomes that of the boy.

And the trees break in blossoms as May tripping past,
Sees the youth with his books to the school hieing fast,
And the voice of the lad with a merry peal rings;
'Tis the time of the year when the lark gayly sings.

And now June, all effulgent, adorned as a bride,
Thou art welcomed with warmth and a joy-giving pride;
There's no rose-bud so lovely, nor lily so meek,
As the glance of thine eye and the blush on thy cheek.

And the young man of heart with the prize of a wife,
Nerves himself for the heat and the battle of life;
Like the horse clothed with thunder, his eyes flashing fire,
He delights in his strength, while he curbs fierce desire.

But at last comes July like a hot fever pest,
As the spark of Ambition flames up in his breast;
There are clouds that are rising, with low thunder's din,
Clouding heavens without, and the heaven within.

Soon it darkens, and gloom like a pall overspread,
Now descends like a type of despair and of dread;
In his bosom there wages a fiercer campaign
Than the war of the elements, thunder and rain.

But the torrents of feeling and doubt will subside,
For as Time speeds along there's an ebb in the tide;
And the voice of the Victor will sing a new song,
As the days of September come gliding along.

Rich and varied are now the thoughts that transpire,
Like the leaves of the forest in Autumn attire;
And the stillness of Indian summer's calm sleep
Does but herald the truth that "still waters run deep."

Now the fruits of the great Tree of Life are in store,
For the winter's approaching, with wafts from Death's door;

And the leaves are all drooping, the air waxes chill,
And the blood does but feebly its office fulfill.

Ay, the snows are now whit'ning December's last page,
As the hairs of the veteran are silvered with age;
And the fierce northern blast, with its icy-cold breath
Sweeps along, neither sparing destruction nor death.

And yet Nature but sleepeth; not dead are the trees,
For within there's a life that no mortal eye sees,
And the shadowy "Valley of Death" 's but the door
That shall open to view blooming spring evermore.

WM. HENRY FABER, Brooklyn.

A NEW FRENCH STRAWBERRY.

If size alone were the measure of greatness or goodness, the above would, no doubt, be the best strawberry in the world. But is it as good as it is big? It is not unusual to meet with a great, big, lubberly man who is so dull, sleepy, and lazy that a smaller and more supple man leads him in all things. But we grant that *size and quality*, other things being equal, are the measure of power.

The above engraved illustration shows one thing very important for all to know, viz., the *effects of culture*. Compare this with the common wild berry, and note the difference. So is an intelligent, cultivated, developed man as much superior to the ignorant, uncultured savage. If there be a limit to the growth and improvement of man, animal, or plant, we have not yet discovered it. It is safe, therefore, to continue our efforts in the culture and perfection of all things, including strawberries and man. The French lead the world in foolish fashions and in large strawberries. Be it ours to grow the best specimens of humanity. To succeed in this we must turn over a new leaf, correct our bad habits, stop dissipation, and conform to the laws of life, health, and longevity. The Philadelphia *Gardener's Monthly*, an excellent two-dollar magazine, to which we are indebted for the use of the engraving, says: "This fruit was raised by Dr. Nicaise, of Chalons-sur-Marne, from seed in July, 1861, ripening its first fruit in June, 1863. It is the 'largest that has been known until this day,' does not fruit all at once, but has a less sensible 'diminution of the volume of fruit from first to last' than a great number of others. Leaves 'abundant and vigorous,' yet 'permitting all the fruit to receive the rays of the sun.' Color bright red, flesh white and juicy, very sweet and highly perfumed."

Americans! can we not equal this piece of French enterprise? We grow the best pears, apples, plums, and peaches in the world. Why not the best strawberries? Let us try.

"MAN IN THE IMAGE OF GOD," ETC.

Prof. AGASSIZ and many other prejudiced religionists claim "that man is made in the image of God." It is idle to assume, by any, that this passage is intended to convey the spiritual image of God, as such perversion of language has no meaning which can elevate to it the modern conception of Deity. Image is exclusively a material, a copy, likeness, or resemblance of material form; and all form, prototype, or copy is, necessarily, material. Nine tenths who accept that passage do so in the true sense of the word, a material image or form, and they can have no other defined conception of it. This general material impression, based on Prof Agassiz' clear

adoption of it, while, exclusively, lecturing on comparative animal forms, claimed man's superiority to be "in the image of God." I thus wish to controvert this degrading doctrine.

If man is the image of God, then God is, necessarily, the prototype of man; the form of man; like unto the whole body of man in form, exteriorly at least. If man is an animal, then such doctrine presumptuously degrades the Creator of all to the form of His created, a mere animal form. Is it not presumption for the finite to conceive the infinite, further than His self-evident attributes of infinite wisdom, power, and goodness, which we see in all the works of creation? Has man any power of conception of form which has not its representation in created things, that are tangible to his senses? and does he claim that God is tangible, that he thus conceives His form? Does man, in claiming that God has a form like himself, imagine that He is ubiquitous, omnipresent? then he must imagine, consistently, that such form is expanded into all space, interpenetrating and embracing everything within His form. Can man's wildest imagination grasp such an idea of form, still retaining the form which man has?—impossible!

God has no definite form to finite, rational conception; it is only His three attributes which we can take cognizance of, and those three, to our comprehension, are *always* infinite wisdom, power, and benevolence—therefore eternal. If God is infinite, and man finite, then God is infinitely beyond man, so that comparison is infinitely impossible.

Man can not conceive of any form not known in existence, even superior to his own, because we have no power of creating, and what we do not know of as created, we can not possibly conceive of, as such conception belongs exclusively to a creator. If we, then, can not conceive the unknown finite, how immeasurably and presumptuously impossible to attempt to conceive the Infinite being infinitely in advance of the finite! Such attempted conceptions are simply resolvable into prejudice; and this prejudice has its root only in early Jewishal inculcation. All attempts at conception of infinite form is simply going back to image worship—idolatry. If God works by will, that, only, then form would not avail Him.

Prof. AGASSIZ says: "Chemical and physical agencies act now as they have from the beginning." Previously he says, "that carbon, during the carboniferous era, existed in such quantities that the presence of warm-blooded animals would have been impossible." Again he asks, "Are, then, the different animals which have existed at different times the result of causes which do not vary—which ever act in the same way? Again, he says: "It is not logical to ascribe the diversity which exists among living beings to causes which exhibit uniformity of nature and action." Putting these sentences together, in his last New York lecture, points the most inconsistent and contradictory doctrines imaginable; is such Prof. Agassiz' logic? or only his antagonistic prejudice finding hasty expression in place of his usual calm, consistent reasoning on tangible matters?

Prof. Agassiz limits creative power to the existing form of the human brain! He says, speaking of the human brain, "Beyond this there is no progress possible." What should prevent the very great enlargement of the existing human brain, on the present pattern, and that organ and its nerve connections made so immeasurably more sensitive, as to permit an immense increase of mental power; and what limits the further extension of the same of man to mere adaptable purposes? certainly, in neither case, nothing short of the exercise of creative will, as far as finite minds can foresee. Presumptuous finite man must be a creator, equal to the infinite, before he can set bounds to infinite powers—a self-evident contradiction.

I regret that so worthy and estimable a scientist as Prof. Agassiz should allow his religious prejudices to convict him of such inconsistencies before a world of scientific inquirers after simple truth.

Communications.

Under this head we publish such voluntary contributions as we deem sufficiently interesting or suggestive to merit a place here, but without indorsing either the opinions or the alleged facts.

PRINCIPLE.

THE word principle is used to a great extent; therefore it is necessary that every person using that word should have a correct conception of its meaning.

All central facts—truths—are principles; but every fact is not a principle. The sun is the principal source of light, but a ray of light is not the sun; yet they are both facts.

The principal person in a school is the teacher; from him instruction and order flow as do rays from the sun. Instruction does not flow from the scholars.

In all machines there is a principle involved—a central idea. In a plow the central idea is, that it can turn a furrow over; but the pin which attaches the plow to the whiffletrees is not a principle, it is an item, bearing a relation to the central idea.

The central fact on which a steam-engine is built is that steam is expansive, and every wheel, screw, and bolt about a steam-engine bears a relation to the principle of expansion. The builders of these engines are ever careful that no wheel, screw, or bolt shall be introduced into their engine that will in the least degree militate against the principle on which the machines are built.

Philosophy is the conception of principles. Science actualizes principles, and so renders them subservient to human wants—gives them tangibility and use.

The cultivation of the soil involves two opposite principles; consequently, as either the one or the other governs the cultivator, the land retains or loses its fertility. The soil, in connection with its surroundings, contains the elements which constitute our bodies. The grain-bearing grasses—corn, rye, barley, wheat, rice,—are but the means, the mechanical and chemical instrumentalities, to extract human food from the soil. These cereals can not supply us with food if the land loses its fertility. Land which once yielded thirty bushels of wheat to the acre, and now yields but ten, has been cultivated on the wrong principle, unwisely, unscientifically, and ultimately such cultivation will prove unprofitable. Land so treated is cultivated in violation also of a great moral law, or principle, enshrined in the words, "Do unto others as ye would others should do unto you." Land lessened in fertility imposes increased labor on those who succeed us in its culture. "Love your neighbor as yourself," is the Christian precept. The next generation is neighbor to this.

It is scarcely ever thought of that the financial practices and money laws of a country affect the fertility of that country. The Scriptural injunction, "Thou shalt take no usury," had a direct tendency to induce the farmers of Judea to invest their capital in improving their land and beautifying their homes. The direct tendency of the financial practices and money laws of this country is to induce the farmer to get all out of his land he can, and invest his nett proceeds in stocks, bonds, and mortgages. He reasons thus: "I can only get about three per cent. by investing in my farm—I can get six or more by investing elsewhere; therefore I will get all out of the farm I can and put the proceeds at interest—at usury. The consequence is, the farm runs down, his home lacks beauty, and, after a while, his stocks, bonds, etc., take to themselves wings and flee away. Here we learn that there are false principles as well as true ones, bad as well as good. The same manner of operating that runs a farm down, if universally carried out, would ruin and depopulate a country.

"Owe no man anything." These four words contain a rule of life—a principle by which to govern human action, of more weight and magnitude than is visible to every eye. The disregard of this Apostolic injunction by what is called the Christian world is rapidly hastening modern civilization to a crisis. The enormous public and private debts of the so-called Christian nations press with so much weight on the masses that there is no assurance of the stability of European civilization for a single day. Many millions die before their time, and

millions of human lives are in jeopardy, because this rule of Christian life is set aside.

Usury, the everlasting concomitant of debt, has practically enslaved those nations who are nominally free; and has as thoroughly poisoned the moral atmosphere of Christendom as does the choke damp the air of a coal mine.

The indebtedness of the Southern States to the North—put the peace and safety of the latter (during the progress of the great rebellion) in much peril. The question of civil war among ourselves at a certain time hung in suspense. The attitude of the chief magistrate of this State in those critical hours increased the danger and caused much uneasiness. Had the efforts of certain parties at that time prevailed, and the North been unable to put down the rebellion, the slave power would have assumed the ascendancy on this continent; the ruling powers of Europe and it would have coalesced, and crushed out from this planet all liberal ideas based on truth and right. And had such a catastrophe occurred, it would have been mainly due to the fact that the injunction, "Owe no man anything," was disregarded.

"Owe no man anything," shall be the watchword of the righteous, the harmless, and the pure. He who lends, hoping for an increase of gain, is practically a slaveholder (see Prov. xxii. 7), and in that particular is not in the work of "Peace on earth, good-will to man."

It has been observed that the steam-engine involves one principle. The human body is also a machine, but it involves more than one; in it we find the principle of vegetative or involuntary growth, and the principle of voluntary action. To keep this machine in running order requires the united action of several departments or functions of vital power, and each department involves some principle, and some of the functions involve chemical as well as mechanical principles. Indeed, the human body is an assemblage of living co-operative principles, powers, or functions—a vital co-operative wonder of mechanical skill and chemical action. These functions all act in harmony for the common good. This wonderful machine, this embodiment of principles, is committed to the care of a man or a woman, as the case may be, who lives within it. And if it gets a good start—a good constitution to begin with—and the person inside of it makes no other use thereof than to live rationally, it will run about a hundred years, and sometimes longer, but generally does not run quite so long.

Earthly things, we see, involve principles; moral and spiritual things involve them also. The Government of these States involves a great moral principle—a great central fact—"all men are equal." This principle, not being carried out by all the States, brought about an awful disturbance of the moral machinery of the country. And more loss, havoc, ruin, and suffering have ensued than can be covered by the past labor of the bondman. Hence we may learn that "there is no wisdom in wickedness;" nor profit either, in the final summing-up of any wicked thing.

The principles we have been looking at are important in their places, but their scope and sphere are subordinate to some others. There are principles which embrace the whole range of human action. Jesus the Christ established one, and for nearly two thousand years he was but in part comprehended. At length a woman comprehended the Divine Man, and squared her spirit accordingly. And in obedience to the Divine Pattern Christ, she brought forth an order of people—a Church, embodying the same principles which brought forth the Pentecostal Church, but more complete and perfect in its details. Jesus couched that principle in these words: First, negatively, "Call no man on earth father." Second, positively, "Those who do the will of my Father who is in heaven, the same is my brother, sister, and mother." In these few words He abrogated in His Church the Adamic—the procreative order, and instead thereof He established the divine order of human society—the brotherhood and sisterhood of Christ—the angelic form of life upon this earth, as it is in heaven. "Those who neither marry nor are given in marriage are as the angels are in heaven." The testimony of the Shakers against the generative life is founded on the above principle. And when any one within the sound of that testimony hankers after fleshly things and fleshly relations, they hanker after that which is an abomination

in God's house, and at variance with the Divine requirement.

Here we have in Jesus an explicit and practical avowal of a Divine principle. Set it aside, and the religion of Christ is a nullity. Put it fully and faithfully into operation, and a new social order—the new heaven and the new earth—springs into being.

Jesus was strictly practical; he did not give his mind merely to the conception of principles and then deal them forth in swelling words, as did the ancient philosophers, and as do those of our day. Those who lived as Christ lived can not be philosophers after that fashion. They are called to be doers of the heavenly word—to be earnestly and devotedly engaged in carrying out every moment of their lives, first, divine principles; second, correct earthly ones, with an eye single to God's glory, being neither time-servers nor self-seekers. It is easy to go with the current, but it requires energy and might to stem the tide.

D. FRASER.

SHAKER VILLAGE, MOUNT LEBANON.

PREMIUMS.

We offer the following to all who may feel an interest in the PHRENOLOGICAL JOURNAL:

For 350 new subscribers, at \$3 each, we will give a Steinway Rosewood Piano, worth \$650.

For 100 subscribers, at \$3 each, we will give a Horace Waters five Octave Parlor Organ, worth \$170.

For 60 subscribers, at \$3 each, a Horace Waters five Octave Melodeon, worth \$100.

For 30 subscribers, at \$3 each, a Weed Sewing Machine, new style, worth \$50.

For 25 subscribers, at \$3 each, a Wheeler & Wilson's Family Sewing Machine, worth \$55.

For 12 subscribers, at \$3 each, a handsome Rosewood Writing Case furnished with materials, complete, worth \$12.

For 10 subscribers, at \$3 each, a Clothes Wringer, the Universal, worth \$10.

For 7 subscribers, at \$3 each, a handsomely finished Stereoscope, a beautiful and useful article for home amusement, with 12 views, worth \$6.

Those persons desiring our own publications instead of the premiums offered, can select from our catalogue books amounting to the value of the premium for which they would have such books substituted.

Or for premiums of or under the value of \$12 we will send such book or books as may be selected from any New York publisher's catalogue, the regular price of which is that of the premium rate.

All subscriptions which have reference to premiums must commence with the January number.

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office at prices annexed.]

PREVENTION AND CURE OF CONSUMPTION by the SWEDISH MOVEMENT-CURE, with directions for its Home Application. By David Wark, M.D. New York: S. R. Wells, publisher. Price, post-paid, 30cts.

The author says that pulmonary consumption can be cured with appropriate exercise of the various parts of the body. Rubbing, we know, will sometimes remove lameness and bruises; why should not rubbing serve to promote health in the tissues, whatever may be the complaint? As we increase vital power, the facilities for the removal of disease are increased.

The Movement-Cure is becoming popular—can be brought into use everywhere; and thousands suffering from tendencies to consumption, rheumatism, dyspepsia, or general debility, can be improved by the methods herein laid down. There are various engraved illustrations in the book, which make the processes easily understood.

SEXOLOGY AS THE PHILOSOPHY OF LIFE; Implying Social Organization and Government. By Mrs. Elizabeth O. G. Willard. 12mo., 483 pp. Price \$3. This is a most remarkable work, and we must defer a notice till another number.

THE POETICAL WORKS of Henry Wadsworth Longfellow. Diamond edition. Complete. 363 pages. Price \$1 50. Boston: Ticknor & Fields, 1867.

Anything more than a simple announcement of this work would be superfluous. The name and fame of our Longfellow has a world-wide reach, and it is enough to state that a very handsome edition of his poems may now be had for the *insignificant* sum named above. "Evangeline," "Hiawatha," "The Courtship of Miles Standish," "Tales of a Wayside Inn," etc., are each the delight of a true lover of poetry. The volume is portable, well adapted for one to take with him when on the wing.

NEWMAN HALL IN AMERICA. His Lectures on Temperance and Missions to the masses; also, an Oration on Christian Liberty, together with his reception by the New York Union Club. Reported by Wm. Anderson. One volume, 12mo., 137 pp. Price \$1. For sale at this Office.

The speeches, orations, addresses, and sermons of this distinguished Englishman, delivered in America, would make a huge volume. But we have here the gist, as it were, the substance, in a nut-shell; and those who would have a memento of the ripe scholar, the eloquent orator, and the genial Christian philanthropist, may secure it in this handy handsome pocket edition. It will be sent by return post on receipt of price.

THE DAY OF DOOM, or a Poetical Description of the Great and Last Judgment, with other Poems. By Michael Wigglesworth, A.M., Teacher of the Church at Malden, in New England, 1662. Also a Memoir of the Author, Autobiography, and Sketch of his Funeral, by Rev. Cotton Mather. From the Sixth Edition, 1715. New York: American News Co., 1867. 12mo., 120 pp. Price \$1.

A literary curiosity, which would be readily inferred from its title. It is in this that its chief merit consists. Mr. Wigglesworth was evidently a very pious man, but this does not imply that he was either a prophet or the "son of a prophet." His aim, however, was in the right direction. Peace to his ashes.

THE WIDOW'S SON. By Mrs. Emma D. E. N. Southworth. 12mo., 649 pp. Price \$2. Philadelphia: T. B. Peterson & Brothers, 306 Chestnut St., 1867.

One of the most prolific story writers in this or any country is Mrs. Southworth. It would be unnecessary for her to change her occupation. It seems to be as easy for her to produce a book, as for a child to blow soap-bubbles. But she has her admirers among a large class who, it may be hoped, will take to stronger meat after nursing time. The widow's son was very much like anybody else's son, and there was the same amount of mystery, revelations, investigations, surprises, and mutual admirations, as falls to the lot of most young men. The story begins as many stories do, with some startling natural phenomena. "It was a wild night! Never had a storm burst upon the earth with more fury, than that which raged over the land and the sea upon that memorable 15th of July of the year in which this strange story opens; and nowhere was its devastating violence felt with more fatal effects than along the sea-coast and water-courses of the lower counties of Maryland and Virginia. The sky was black as soot! the earth was drenched with rain! the rivers rose to flood tides! the sea roared! the wind howled, and the thunder crashed and rolled as if at every peal a planet had exploded!" etc. Rather grand, if not sublime, and quite an appeal to one's cautiousness. Wonder if this lady understands Phrenology?

THE TEETH—their Health, Disease, and Treatment. By J. P. H. Brown, Dentist, Augusta, Ga.

We must pronounce this a well-written treatise on a subject of painful importance to most people nowadays. The observations on Treatment are free from professional technology, and sufficiently practical to recommend the work to all readers.

CHILD-PICTURES. From Dickens. With Illustrations by S. Eytinge, Jr. Boston: Ticknor & Fields. Cloth. Price \$1 25.

Those interesting children in Dickens' novels are here collected and described by appropriate selections from the author's text. Little Nell comes in for a large share of attention. The ragged, be-thumped, and half-starved Marchioness finds also a prominent place, while Master Paul Dombey, the fat boy, tiny Tim, Smike, and Oliver Twist are brought before the reader in the minute and characteristic delineations of the writer elocutionist.

LOEW'S BRIDGE, a Broadway Idyl. By a Lady. New York: M. Doolady, publisher. \$1 25.

A beautifully illustrated little poem, in which sundry objects are Idyl-ized by the vivid imagination of the fair authoress. We regard this as simply a promise of a more elaborate effort.

POEMS. By John Hutcheson Millar. Paisley, England: Alex. Gardner, publisher.

A copy of this new collection of poems has been recently received from the author. Mr. Millar is evidently a young man of some cultivation, but there is a freshness and a simplicity of style in many of his verses which commend them. Some of the poems are very sweet. One of the happiest is the "Delights of Nature," commencing:

"'Tis sweet to smell the scented air
Upon a lovely morn in Spring,
When Nature's face is fresh and fair,
And birds are on the wing;
To hear the merry plow-boy's song,
And blackbird's note so sweet and clear,
While from the fold the lambkin's bleat
Falls plaintive on the ear."

He has attempted nothing of a lengthy character, but gives us in a few metrical sentences his sentiments on any chosen subject. An excellent photographic portrait accompanies the volume.

THE ATLANTIC ALMANAC, 1868. Edited by O. W. Holmes and D. G. Mitchell.

Instead of a business analysis of the past year's doings; instead of the usual statistics published in annuals, we have here a kind of sketch book, with handsome pictures, representing scenes common to each month in the year, and very pretty pictures of other scenes, drawn from different publications, such as, Owen Meredith's "Lucille," Lowell's "Sir Launfal," Whittier's "Snow-Bound," the "Lover's Diary," etc., making altogether a very handsome and a very readable octavo pamphlet. It is sold for fifty cents, and is well worth the money.

CHRISTMAS STORIES. By Charles Dickens. People's Edition. With Illustrations by H. K. Browne. 12mo., 511 pp. Price \$1 50. Philadelphia: T. B. Peterson & Brother.

OUR MUTUAL FRIEND. By Charles Dickens. People's Edition. With Illustrations by Marcus Stone. 12mo., 933 pp. Price \$1 50. Philadelphia: T. B. Peterson & Brothers.

Messrs Peterson & Brothers have displayed their usual good taste and enterprise in the publication of these portly volumes. The type is large enough, the paper white and good, the illustrations numerous, the binding substantial, and those who wish to stock their libraries with this author's literature, need look no further.

THE FAMILY SAVE-ALL, supplying excellent Dishes for Breakfast, Dinner, and Tea, from cold fragments, as well as a large number of new Receipts for cooking and preparing all kinds of Soups, Fish, Oysters, Terrapins, Lobsters, Meats, Poultry, Game, Tea-Cakes, Jellies, Rolls, Preserves, Pies, Puddings, Dessert-cakes, Pickles, Sauces, etc., with miscellaneous Receipts and invaluable Hints for Economy in every article of household use. By author of "The National Cook-Book." 12mo., 675 pp. Price \$2. Philadelphia: T. B. Peterson & Brothers.

Another popular Cookery Book, useful to inexperienced or "to-be" housekeepers. There is little danger of our people knowing too much about proper cookery. Nor do we pretend to say that this author bases her teachings on hygienic principles. She goes about her work, however, in good earnest, to teach what she knows, or rather what she thinks she knows, and sensible persons would get useful hints and suggestions from this handsome volume.

THE ILLUSTRATED ANNUAL OF RURAL AFFAIRS FOR 1868, with nearly 150 Engravings. By J. J. Thomas. Albany: Luther Tucker & Son, publishers. Price, post-paid, thirty cents.

Of all the American agricultural literature, this series of annuals is the best. There are now four handsome volumes, which sell for \$1 50 each, embracing the twelve annuals. The four volumes contain nearly 1,300 pages, and 1,700 illustrations, which may safely be pronounced the best agricultural library, considering its dimensions, now extant. The work complete may be ordered from this office at \$6, or the single Annual of 1868 for thirty cents.

RUSKIN'S WORKS are much in demand, and we give a brief list, with prices, in advertising department.

AMERICAN NOTES. For General Circulation. By Charles Dickens. Philadelphia: T. B. Peterson & Brothers. Paper. Twenty-five cents.

Now that Mr. Dickens is in the United States a second time, after a long interval, no book of his could be more significantly read than this.

ON BOTH SIDES OF THE SEA. A Story of the Commonwealth and the Restoration. A sequel to "The Draytons and the Davenants." By the author of "Chronicles of the Schonberg-Cotta Family." New York: M. W. Dodd. Price \$2. 12mo. Cloth.

The appearance of the "Schonberg-Cotta Family" gained for the talented authoress (Mrs. Charles) the immediate recognition of the literary world for sterling worth as a writer. Since that time no production of hers has struck the vein of popular interest with more effect than the "Draytons and the Davenants," a pleasing picture of domestic life in the civil war which lost Charles I. his head. The sequel, with which we head these remarks, is apt, and continues the train of incident pursued in the "Draytons and Davenants." The historical features of the times, of the Protector and of the restoration of royalty, are so nicely woven in with the narrative that they seem to give it spirit and point.

THE STUDY OF THE HUMAN FACE. Illustrated by twenty-six full-page steel engravings. By Thomas Woolworth, Esq., Historical Engraver to the Queen. London: William Tweedie. Royal octavo. Price, post-paid, \$5 50. Address this Office.

In this very striking work we find characters, dispositions, and faces associated. Pride, tyranny, cunning, conceit, grave and gay, envy, spite, affectation, amiability, and the many other passions, feelings, and emotions to which the human mind is subject, are portrayed with a facile and accurate pen. Beauty—abstract, intellectual, spiritual—is elucidated and illustrated. Plainness with and without intellectual indicia is also described. The merits of the long, short, round, and oval face are discussed at considerable length, and the many perplexities which exist on the subject of various faces acknowledged as beautiful but very unlike each other, are artistically exemplified and naturally explained. Artificial beauty, too, finds a place in the book, and its chief constituents are carefully defined. Many valuable suggestions occur in the progress of the work: how grace may be acquired; how the features may be naturally improved; how to dress becomingly, and how to choose colors to suit the complexion and figure. The artist will gather much instruction from the careful observations of the writer of this handsome book, and be enabled, if a true artist, to work more successfully in the tasteful disposition of his figures and in the portraiture of feeling.

THE NEW REPUBLIC, OR THE TRANSITION COMPLETE, with an approaching change of National Empire, raised upon the Commercial and Industrial Expansion of the West, together with Hints on National Safety and Social Progress. Second Edition. By L. U. REAVIS. Octavo pamphlet, 124 pp. Price fifty cents.

One who has not visited the West, knows little or nothing of the spirit of Western men. There is an all-pervading zeal, energy, ambition, push, and go-ahead, seen nowhere else. The blood of a Western man courses more rapidly in his veins than in the Eastern man or in the European, and he thinks, talks, and acts on a large scale. The Western farmer wastes more in a year than the Eastern farmer saves. He may lack refinement, but he has a generous heart for his friends, and a deal of pluck for his enemies. His religion is less sectarian, less bigoted, and more broad, catholic, and truly Christian. The pamphlet under notice is written in this spirit. It glorifies the great West—it cannot magnify it—and proves to the satisfaction of Westerners that *theirs* is to be the center of the Western world! It will do every one good to read it, and if circulated in Europe it will induce emigration to these shores. The New Republic is printed in St. Louis, Mo., but may be ordered from this Office.

LE PETIT MESSENGER, for January, contains the newest fashions for ladies and children. Price \$5 per year. Fifty cents a number.

DIE MODENWALT, for January, appears freshly charged with *modes* for the new year, and is extensively illustrated. Price \$3 a year. Thirty cents a number.

THE UNCOMMERCIAL TRAVELER, and additional Christmas Stories. By Charles Dickens. With Original Illustrations by S. Eyttings, Jr. Diamond Edition. 18mo., 323 pp. Price \$1 50. Boston: Ticknor & Fields.

This completes the works of Mr. Dickens in the handsomest and most compact style in which they have ever before been produced. We say handsomest and most compact—just the size for the pocket—but we commend it simply as the smallest and most portable. Its type is quite too fine for ordinary eyes, and will do them more harm than the reading of the stories can do the mind good. This volume is made up of matters not before collected, and completes the author's works to date. The Boston publishers have done the author much honor by the exquisite style in which they have published his works.

THE PULPIT is a spirited—as well as in many respects spiritual—monthly, published at \$1 50 a year, in Chicago, Illinois, by "The Pulpit Co." The January number contains Rev. Stephen H. Tyng, Jr.'s great sermon, "The Liberty of Preaching;" "Exegesis of the Epistle to the Ephesians," by the Dean of Canterbury; "Eulogy on Gov. John A. Andrew, of Mass.;" "Speech of Bishop Simpson in favor of the Lay Representation in the Methodist Episcopal Church," and other matters, especially interesting to preachers, lecturers, and others. Twenty cents will secure a sample copy, post-paid, by return mail.

The *Skandinavisk Post*, a New York weekly, says: "The Illustrated Annual of Phrenology and Physiognomy for 1868" är utkommen och innehåller en rik samling af originella, såväl praktiskt nyttiga som lärorika och underhållande artiklar, hvaribland en, 'the Marriage of Cousins,' är af särdeles intress, om den också för den bildade läsaren ej utvecklar någon ny ide. Utom dess innehåller den i typografiskt hänseende väl utstyrd boken följande: 'Advancement of Phrenology'; 'Circassia and Circassians'; 'Jealousy—Its Cause and Cure'; 'The Rulers of Sweden' (med medaljör-porträtt af alla svenska regenter ifrån och med Gustaf Wasa till och med Carl XV.); 'George Peabody'; 'Senator Wilson'; 'D'Israeli'; 'Peter Cartwright'; 'Victor Hugo'; 'Miss Braddon'; 'How to become a Phrenologist'; 'Monsieur Tonsen'; med 12 illustrationer; 'Mind limited by Matter'; 'Two Paths of Womanhood'; med 8 illustrationer; 'Bismarck'; 'To Phrenological Students'; 'Phrenology and its Uses.'—Hela kalendern är försedd med talrika illustrationer, och innehåller, utom medaljör-porträtten af 19 svenska regenter, porträtt af Peabody, Senator Wilson; D'Israeli, engelska statsmannen; Rev. Peter Cartwright; Victor Hugo; Miss Braddon (ett väl träffadt porträtt af den beömda engelska författarinnan). Pris blott 25 Cents, och till salu hos alla tidningshandlare, samt hos förläggaren S. R. Wells, 389 Broadway.

A SOUTHERN JOURNAL OF EDUCATION, monthly, \$1 a year, John T. Heam, Shelbyville, Ky., publisher, is announced. On receipt of the numbers we will make a further notice of this periodical.

MESSRS. TICKNOR & FIELDS, publishers, of Boston, enter upon the new year with enterprise and vigor. The *Atlantic Monthly* enters upon its twenty-first volume with new attractions, and may be said to represent New England literature. It contains 130 octavo pages, and the terms are \$4 a year.

OUR YOUNG FOLKS—same publishers—is a first-class monthly magazine, now in its fourth volume. Terms \$3 a year.

EVERY SATURDAY—same—now in its second year, gives the best light literature from European magazines, and is published at \$5 a year. The aim of this house is to furnish, through their serials and books, a class of unobjectionable reading matter.

YOUNG ENGLAND. This is an English miscellany of over 750 pages, quarto style, handsomely bound, gilt, containing portraits and biographical sketches of some of the most distinguished personages of the day, and historical likenesses of all the kings and queens of England, from the Conqueror to Victoria. It

has a history of all the British birds of prey, with accurate drawings of each from nature, a description of all the postage stamps in the world, an account of ships from the earliest time to the present. It has also an easy introduction to gardening for boys and girls, with full instructions as to tools and how to use them, the ground and how to prepare it, the plants and how to set them. The young naturalist, through many delightful and easy chapters, is allowed to ask all sorts of curious questions, and obtain ready and pleasant answers. The amusements are various and abundant—round games (or games played in a party) not a few, for the new year, common games for any time, picture puzzles, and original riddles in profusion. Price, post-paid, \$6 50. Address this Office.

MESSRS. PETERSON & BROTHERS, of Philadelphia, are issuing a cheap edition of Dickens' works. The entire series may be had at \$4 in paper covers, or a story complete in one volume for twenty-five cents. We should judge that there must be great competition among the publishers of Dickens' works, and that these Philadelphia gentlemen have decided not to be underbid in the cheapness of these publications. We have received the "Christmas Stories," "Dombey & Son," "Nicholas Nickleby," "Martin Chuzzlewit," and are promised the balance in rapid succession. The edition is entitled "Peterson's Cheap Edition for the Million of Dickens' Works."

THE LADIES' FRIEND is a popular monthly magazine of literature and fashion, edited by Mrs. Henry Peterson, and published at \$2 50 a year, by Messrs. Deacon & Peterson, of Philadelphia. Send twenty-five cents to the publishers, and ask for a sample number, by which the reader can judge whether or not he may desire the work. We infer that it is adapted to the most moderate capacity—say to that of young school girls and other misses.

New Books.

Notices under this head are of selections from the late issues of the press, and rank among the more valuable for literary merit and substantial information.

BEGINNING LIFE. Chapters for Young Men on Religion, Study, and Business. By John Tulloch, D.D. \$1 25.

THE NEW LIFE. By Horace Buehnell, D.D. Upward of twenty thousand sold. 75 cents.

THE SUNDAY EVENING BOOK. Short Papers for Family Reading. By Rev. James Hamilton, D.D., John Eadie, D.D., Thomas Binney, J. R. Macduff, and others. 85 cents.

THE THREE GARDENS, EDEN, GETSEMANE, AND PARADISE; OR, Man's Ruin, Redemption, and Restoration. By W. Adams, D.D. 12mo., 284 pp. Cloth. \$3 25.

A HOUSEHOLD BOOK OF POETRY. Compiled and Edited by A. C. Dana. Eleventh Edition. Illustrated. Royal octavo, xxvii., 816 pp. Morocco, full gilt. \$3 50.

DAY BY DAY. A Book of Private Prayers. Cloth. 30 cts.

CHRISTMAS STORIES; AND SKETCHES BY BOZ. By Charles Dickens. Diamond Edition. Cloth, \$1 25. Illustrated, \$1 50.

POSTHUMOUS PAPERS OF THE PICKWICK CLUB. By Charles Dickens. Globe Edition. Illustrated. Cloth. \$1 75.

SKETCHES BY BOZ. By Charles Dickens. Library Edition. Illustrated. Cloth. \$2 25. (London print.)

BOY ARTISTS; OR, Sketches of the Childhood of Michael Angelo, Mozart, Haydn, Watteau, and Sebastian Gomez. From the French of Mme. Eugénie Foa. \$1 25.

ORIGINAL LETTER WRITER. A Complete Collection of Original Letters and Notes upon Every Imaginable Subject. With a Table of Synonyms. By S. A. Frost. Boards. 60 cents.

THE SKATER'S MANUAL. A Complete Guide to the Art of Skating. Revised Edition. By E. L. Gill. Illustrated. Paper. 15 cents.

A BOOK OF REMEMBRANCE. A New Year's Gift. By Prof. C. W. Shields, D.D. Cloth, full gilt. 90 cents.

WHO WAS JESUS? Octavo, 711 pp. Cloth. \$3 80.

AN ELEMENTARY GRAMMAR OF THE GERMAN LANGUAGE. With Exercises, Readings, Conversations, Paradigms, and a Vocabulary. By J. H. Workman. Cloth. \$1 75.

THE CHURCH ALMANAC FOR 1868. Paper. 12 cents.

LES INÈRES DE MADAME AUBRAY. Comédie en quatre Actes, en Prose. Par A. Dumas fils. Paper. 70 cents.

THE HANDBOOK OF HISTORY AND CHRONOLOGY. Embracing Modern History, both European and American, for the Sixteenth, Seventeenth, Eighteenth, and Nineteenth Centuries. For Students of History, and adapted to Accompany the Map of Time. By Rev. J. M. Gregory. Cloth. \$1 50.

FAIRY BELLS, AND WHAT THEY TOLLED US. Translated from the German by S. W. Lander. Illustrated. Cloth. \$1 40.

LOVERS' (THE) DICTIONARY. A Poetical Treasury of Lovers' Thoughts, Fancies, Addresses, and Dilemmas. Indexed with nearly Ten Thousand References, as a Dictionary of Compliments, etc. Cloth. \$4.

MASONIC RITUALIST; OR, Monitorial Instructions in the Degrees from Entered Apprentice to Select Master. By A. G. Mackey, M.D. Cloth. \$1 40.

BOOK OF LOVE LETTERS. With Directions How to Write and When to Use Them, and One Hundred and Forty Specimen Letters. Suitable for Lovers of any Age and under all Circumstances. With the Author's Comments. By Ingoldsby North. Boards. 60 cents.

THE SCIENCE OF SELF-DEFENCE. A Treatise on Sparring and Wrestling. Including Complete Instructions in Training and Physical Development. With a Course for the Reduction of Corpulency. By E. E. Price. Boards. 90 cents.

A PRACTICAL METHOD FOR THE INSTRUCTION OF CHORUS CLASSES. By F. L. Richter. In Two Parts. Part I. Paper. \$1 25.

BOOK OF COMIC SPEECHES AND HUMOROUS RECITATIONS. For School Exhibitions and Evening Entertainments. 16mo., 192 pp. Boards, 60 cents. Paper, 30 cents.

YOUNG FARMER'S MANUAL. Volume 2. How to Make Farming Pay. Giving Plain and Practical Details of General Farm Management. With a Chapter on Soils. By S. E. Todd. Portrait. Cloth. \$3 75.

ORTHODOXY; ITS TRUTH AND ERRORS. By James Freeman Clark. Muslin, pp. 512. \$1 25.

A NEW TRANSLATION OF THE HEBREW PROPHETS. Third edition, with a new introduction and additional notes. By George R. Noyes, D.D. Hancock Professor of Hebrew, etc., and Dexter Lecturer in Harvard University. 2 vols., 12mo. \$3 50.

A NEW TRANSLATION OF THE BOOK OF PSALMS AND OF THE PROVERBS. With introduction and notes, chiefly explanatory. By the same. \$1 25.

A NEW TRANSLATION OF JOB, ECCLESIASTES, AND THE CANTICLES. With introduction and notes, chiefly explanatory. By the same. \$1 25.

A NEW AND PRACTICAL SYSTEM OF THE CULTURE OF VOICE AND ACTION, and a complete Analysis of the Human Passions. With an appendix of readings and recitations designed for public speakers, teachers, and students. By Prof. J. E. Frohisher. \$1 75.

RUDIMENTS OF THE GERMAN LANGUAGE. Exercises in Pronouncing, Spelling, and Translating. By Dr. F. Ahn. American Edition, Improved and Enlarged. Boards. 45 cents.

REPLY TO DR. MARSH ON TRINITARIANISM. By D. R. Thomason. Including a Letter from Howard Crosby, D.D. Paper. 20 cents.

To our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter. If questions be brief, and distinctly stated, we will try to respond in the "next number." Your "Best Thoughts" solicited.

WHAT is the meaning of the star on the symbolical head printed on the cover of the JOURNAL?

Ans. It means simply that the function of that part of the brain is *unascertained*.

RIGHT AGE TO MARRY.—I wish to know if there is any disadvantage in a man marrying a woman three years older than himself? I am twenty-four, and am engaged to a lady three years my senior.

Ans. Being engaged, of course you must marry her. But you should have asked advice before committing yourself. It would be better for the gentleman to be three or four years the senior. So far as companionship is concerned, we do not suppose there will be much incompatibility in disposition, though the lady be two or three years the elder.

WANTS TO MARRY HIS COUSIN.—A young friend of mine is about to engage himself to marry his first-cousin. I am fearful the result may not prove for the best. How can I convince him?

Ans. If he is already committed; if the two have promised, the only way to proceed is to appeal to their reason—convince their judgment, by giving them facts and knowledge. Show them the effects on offspring of consanguineous marriages; and leave it for them to take the consequences of their own acts. If they be not *infatuated*, they will consider, and obey the laws of nature and of God.

The best thing we can now suggest for their enlightenment is the new *ANNUAL OF PHRENOLOGY AND PHYSIOLOGY* for 1866, covering the ground of the question, "May I Marry my Cousin?"—stating who may and who may not marry.

ORIGIN OF RACES—WHITE AND BLACK.—If the curse of Noah (as many thousands contend) made Ham black, where did he get his negro wife?

Ans. We do not belong to that array of many thousands who without much of a foundation on which to sustain their opinion, endeavor to maintain that the negro derived his color and racial characteristics from the malediction pronounced on Ham by Noah. We can not subscribe to such bigotry and to such evident lack of ethnological information. If the negro owes his dusky hue and low mental condition to the operation of a curse, to what must we attribute the color and equally low, if not lower, mental capabilities of the South Australians, the Fuegians or the Boros Indians? The two latter are enumerated among the indigenous races of the earth, and accounted among the descendants of Japhet, while the Australian is supposed to be a descendant of the honorable Shem. It will be remembered, perhaps, that an old darkey, when asked how he became black, replied, "That the Almighty one day took a piece of clay and made a man, but before he had breathed into his form the breath of life, he left him lying on the ground a few minutes to attend to something else, and during the interval the devil thought he would seize a good opportunity to mar the Creator's work, so he hastily daubed the inanimate

shape with black mud. When the Creator returned, He found his subject changed very much in color, but approving rather than disliking the alteration, on account of the variety which would thus be introduced into the human race, He gave it life." The question mooted brings up the much discussed subject of the unity of races. In relation to this we quote the words of a great authority, Wilhelm Von Humboldt. He says: "Whether the gregarious condition [of the human race—Ed.] was original or of subsequent occurrence, we have no historic evidence to show. The separate mythical relations found to exist independently of one another in different parts of the earth, appear to refute the first hypothesis, and concur in ascribing the generation of the whole human race to the union of one pair. The general prevalence of this myth has caused it to be regarded as a traditionary record transmitted from the primitive man to his descendants. But this very circumstance seems rather to prove that it has no historical foundation, but has simply the identity of human conception, which everywhere leads mankind to a similar explanation of an identical phenomenon. * * * Vainly would thought dive into the meditation of this first origin: man is so closely bound to his species and to time, that one can not conceive a human being coming into the world without a family already existing and without a past." This opinion is entertained also by Alexander Von Humboldt, and quoted in "Cosmos." Some of the ablest ethnologists of this century maintain similar opinions. Johannes Muller and Dr. Morton hold, in their writings, that mankind is one species, existing in diverse forms, which perpetuate themselves, but that to trace the existing races of man to one or many primitive pairs is not within the scope of human experience.

Dr. Nott and Mr. Gliddon, in their "Indigenous Races of the Earth," have collected a mass of authorities on this subject, and consider the historical individuality of Adam not satisfactorily sustained, but look upon him as "the general representative of a race-of humanity." Some comparative physical geographers allege that the diverse complexions and cerebral phenomena of the different races are due mainly to the influence of climate and geographical location. This opinion, however, does not bear a close scrutiny. Mr. Prichard, in his "Natural History of Mankind," urges, with many interesting illustrations drawn from recorded phenomena in animal and human propagation, the unity of the human species. He says: "We contemplate among all the diversified tribes who are endowed with reason and speech the same internal feelings, appetencies, aversions; the same inward convictions, the same sentiments of subjection to invisible powers, and, more or less fully developed, of accountability or responsibility to unseen avengers of wrong and agents of retributive justice, from whose tribunal men can not even by death escape. We find everywhere the same susceptibility, though not always in the same degree of forwardness or ripeness of improvement, of admitting the cultivation of these universal endowments, of opening the eyes of the mind to the more clear and luminous views which Christianity unfolds of becoming molded to the institutions of religion and of civilized life; in a word, the same inward and mental nature is to be recognized in all the races of men. When we compare this fact with the observations which have been heretofore fully estab-

* On the Varieties of Languages and Nations.

lished as to the specific instincts and separate psychical endowments of all the distinct tribes of sentient beings in the universe, we are entitled to draw confidently the conclusion, that all human races are of one species and one family."

So much difference of opinion exists among the most eminent scientists with reference to the diversity of races and their distribution, that it would be difficult for any one to determine which has the greater weight of evidence on his side. But assuming the unity of the human family, can we find greater variety between individual members of it than between individuals belonging to the same species of the lower animals, or between some specimens belonging to the same variety of vegetable growth? The spaniel and Danish dog are more unlike than the dog and the wolf; and some members of the same species of fruit trees differ more from each other than from trees of another variety. Instances are on record of negroes turning white, and of white persons becoming black. The cases of white children being born of black parents are not infrequent, and that, too, in Africa, where probabilities of racial intermixture could not be entertained. Albinos now excite but little comment, yet the phenomenon seems no weak argument in support of the negro claim to an affinity with the "fair skinned" races. We can not own that weak pride which many confess to, but will, without esteeming it a condescension, accord "Cuffy" a place among the tribes of the earth, and account him one of the links in the great chain of humanity.

INDUSTRIAL COLLEGE.—We are informed that in Story County, Iowa, there is an Agricultural College in process of erection. The building is soon to be completed, and is intended to be sufficient to accommodate two hundred students. A thorough course will be taught, and each student can pay his tuition, and a portion of his board, by working a few hours a day, in a garden or on a farm. Students will be admitted in the spring. Will the managers of the college send us their announcement that we may give it a more specific notice?

SPELLING.—Should a pupil pronounce the word after the teacher, before spelling? If so, what would be the benefit?

Ans.—We are not aware that this is generally practiced, but we think if it were, it would be beneficial in several respects. It would show that the pupil understands the word, and if he mispronounced it through mis-hearing, that mistake would be corrected; and if he pronounced the word correctly and distinctly, it would be a great aid to him in the spelling of it. Half of the bad spelling comes from the mispronouncing of words; and half of the bad pronunciation comes from ignorance of the just mode of spelling. It could perhaps be set down as a fixed fact, that those who pronounce badly, spell badly; and that their bad pronunciation is occasioned by their not understanding how to spell. We happen to know a family the members of which are all poor spellers; not so much from a lack of general education, or of opportunity to learn spelling, as from an apparent defect or incapacity to spell, which runs through the whole family. They generally pronounce their words correctly, but such spelling as they make in writing! For instance, science is written by one of them "clince." If they wanted to find out how to spell the word by consulting a dictionary, they would not know whether to look under the head of "S" or "C." It costs a

good deal of labor to learn to spell in the English language, because, unlike other languages the pronunciation does not always indicate the spelling. In most cases, the spelling is not phonetic. In other languages, the spelling is to a great extent phonetic, the same sound generally appertaining to each letter. The sound "O" is not spelled "ow" nor "ou," "h." If we had a phonetic method of spelling, and no silent letters, the pronunciation would always indicate the spelling, and poor spelling would be henceforth unknown.

WHITTINGTON AND HIS CAT.—Whittington, the hero of this old English legend, was a poor country lad who went to London and obtained a situation in a merchant's family as cook's scullion. Here he led a somewhat unhappy life, being abused by the cook, and obliged to sleep in a garret that was infested with rats and mice. Having obtained a penny he purchased a cat, which soon rid him of his nightly tormentors. Shortly after his purchase of his cat, his master having loaded a ship with a cargo for the East, gave his servant's permission to make a trial of fortune by sending something to be sold on their account at the ports where the vessel stopped to trade. Whittington had nothing besides his cat to venture, so he sent that. In the course of the ship's voyage it was driven by a storm to the coast of Barbary, where the officers were kindly received by the king, and invited to dine with him. At dinner a swarm of rats and mice invaded the table, and annoyed the company that the ship's captain sent for Whittington's cat, which, on being released in the dining-hall, made such a fierce assault on the vermin that they were driven completely out. The king was so much pleased with the cat's performance that he offered a very high price for it, and obtained it. The money thus acquired by Whittington started him in business, and he succeeded so well that he married his old master's daughter, was knighted by the king, and became finally Lord Mayor of London.

Publisher's Department.

LIBRARIES SUPPLIED.—It will give us pleasure to fill orders for books for public or for private libraries. We have facilities for collecting all works published in America or Europe, on the most favorable terms. Sunday-schools, district-schools, seminaries, and colleges will have our prompt attention.

LAST YEAR'S VOLUME.—A few complete sets of the A. P. JOURNAL for 1867, handsomely bound, may now be had, at \$4 a volume, post-paid. A few odd numbers or broken sets yet remain. These will be sent as long as they last, to complete imperfect volumes, at 80 cents each. We offer no premiums to single subscribers.

OUR PREMIUMS and Club rates will remain open up to the 1st of May next. Many clubs have been completed, and duplicated—while others remain but partially filled; and additional time is asked to go over the ground again. This we cheerfully grant, promising to supply all additional subscribers with all the numbers from the beginning of the year and volume. We shall be glad to have the lists in as soon as convenient.

BIND YOUR JOURNALS.—It is worth while to have the numbers bound at the end of each year. Any book-binder can do it at a cost of a dollar, if in plain muslin; or in Morocco backs, with marbled sides and edges, at \$1 50; more elegantly, at from \$1 50 to \$2. We can furnish a few copies for 1867, nicely bound in embossed muslin, lettered on the back, at \$4 a copy.

Personal.

MR. J. C. SMITH is lecturing on Phrenology in Dundee, Scotland.

THEOPHILUS FISKE, formerly a preacher and lecturer, fell dead in the street, before his own door, in New York, Dec. 18th.

MR. JAMES VICK, of Rochester, N. Y., has published the seventh edition of his beautiful Guide for the Flower Garden and Catalogue of Seeds, full of illustrations and instructions.

DR. E. C. ANGELL has erected a Turkish Bath at 51 Lexington Avenue, New York, which must prove a great convenience to up-town residents.

General Items.

HOW TO GET A FLOWER GARDEN.—SPECIAL PREMIUM FOR LADIES.—For every two new subscribers to the JOURNAL, at \$3 each, during the months of February and March, we will give the worth of \$1 25 in flower seeds—including not less than twenty varieties of seeds. Please bear in mind, this proposition is made with a view, first, to increase the circulation of the JOURNAL and place it in the hands of those not now among its readers; and, second, to give every lady the means by which she may possess a beautiful flower garden, the fragrance of which shall be a rich perfume for the enjoyment of the minds and hearts of thousands.

NEBRASKA AGAIN.—A Correspondent, referring to our article on Nebraska, published in the August number of the PHRENOLOGICAL JOURNAL for 1867, calls our attention to certain points of interest to those contemplating a settlement in the West. He specifies Dakota City as likely to become one of the most flourishing cities in the State, and Dakota County as affording superior advantages to the business man and agriculturist, on account of its geographical position, fertility, and general adaptation to the production of fruits and vegetables. Nebraska has already taken a great stride in the line of progress and improvement, and will probably lead the Rocky Mountain States ere long. The Pacific Railroad has given affairs in the extreme West a tremendous ameliorating impulse, and we may look for a rapid growth there in all that constitutes American civilization.

THE GARDNER INSTITUTE, & Boarding and Day-school for Young Ladies, is one of the most prominent institutions of its kind in the country. Its advantages in the various departments of academic training are unsurpassed, while its charges are comparatively reasonable. Pupils who board at the Institute and receive instruction in all departments, including French and Latin, pay \$650 per annum. Day pupils pay from \$30 to \$180 per annum, according to the grade of scholarship and the number of branches pursued. The school year commences in September, but new pupils are charged from the time of entrance. The circular of the Institute bears upon it the indorsement of many distinguished clergymen and others. Send to Rev. C. H. Gardner, principal, 34 West 32d Street, New York, for a circular.

COULDN'T DO WITHOUT IT.

—Letters like the following from old subscribers are not rare visitors at this office:

"Mr. Editor—I send you \$3, for which please enter my name as a subscriber for the AMERICAN PHRENOLOGICAL JOURNAL for the following year. My subscription closed with the July number of last year; and my expenses in sustaining my family being about as much as my limited income can meet, I thought I would try and get along without the JOURNAL. But my experience during the six months past without it has been such that I have determined upon taking it for the remainder of my days; we find it impossible to get along without it. The instruction and the profitable entertainment afforded by its columns are indispensable in any well-regulated family. Yours truly and obligingly,

A. R. JR."

ORATORY IN THE WEST.

It is an encouraging fact that oratory is extensively cultivated in the West, where the unfettered minds of young and vigorous men are developing with wonderful strides. If the East is the human garden and nursery, the West is the farm and the orchard. In the University of Chicago they have a special department devoted to the study of oratory, at the head of which is PROFESSOR NATHAN SHEPPARD, a ripe scholar and a fine speaker. PROF. SHEPPARD not only instructs his class, but gives popular lectures before associations on useful themes. His lectures on "The Tongue," "The Disposition," "Motives," "The Pathos and Humor of a Human Life," "The Bending of the Twig"—a lecture to young men, "The Love of Money"—a lecture to business men, "The Manliness for Woman," have been well received wherever delivered. We commend the subject of oratory to all Americans who would work and talk their way through the world.

EXPOSITION UNIVERSELLE.

The intelligence and judgment of the Imperial Commission, in the matter of awards, are clearly evinced in the following extract from

THE EXPOSITION UNIVERSELLE ILLUSTRATED.

("Publication authorized by the Imperial Commission"):

"By their skill, universally recognized, Messrs. Wheeler & Wilson added to Howe's system of sewing machines important modifications, which have placed them in the front rank of manufacturers.

"The gold medal which has just been awarded them affirms, moreover, that none of the machines from the workshop of Howe, or of the principal tributaries, unite the qualities of simplicity and solidity of mechanism by which these machines are distinguished above all others.

"In their machine, remarkable for its form and elegance, they have substituted for the shuttle of Howe a small flat disc, which revolves vertically with unvarying swiftness. Hence this machine is the most simple of all, and notwithstanding its great precision in operation, its price is not above that of the most imperfect systems.

"Elegance, perfection of work, simplicity, solidity of mechanism and facility of management, such are the essential qualities united in the Wheeler & Wilson machine, constituting a superiority which the jury has, with unanimity, recognized and proclaimed.

"To these gentlemen the gold medal was awarded as manufacturers of machines; to Mr. Elias Howe a similar medal was awarded as propagator. The distinction made by the jury explains itself.

"The original machine of Thimmonier only needed to pass into the skillful hands of Wheeler & Wilson to receive the highest perfection. To-day, thanks to its cheapness, their machine is accessible to all. Its simplicity assures it not only a place in the chamber of the seamstress, but its elegant form wins its admittance into the most sumptuous parlor."—*Evening Mail.*

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED, and charged according to the space occupied, at the rate of \$1 a line.]

THE HYGEIAN HOME.—At this establishment all the Water-Cure appliances are given, with the Swedish Movements and Electricity. Send for our circular. Address A. SMITH, M.D., Wernersville, Berks County, Pa.

THE MOVEMENT - CURE.—Chronic Invalids may learn the particulars of this mode of treatment by sending for Dr. Geo. H. Taylor's illustrated sketch of the Movement-Cure, 25 cents. Address 67 West 38th Street, N. Y. city. Aug., 1f.

MRS. E. DE LA VERGNE, M.D.,

NEW NATIONAL RELIGIOUS

PAPER.—A national religious newspaper, to be called "THE ADVANCE," will be published weekly, from the first of September onward, in the city of Chicago. It will represent Congregational principles and polity, but will be conducted in a spirit of courtesy and fraternity toward all Christians. The form will be what is popularly termed a double sheet of eight pages, of the size and style of the New York Evangelist. The pecuniary basis is an ample capital furnished by leading business men and others, to be expended in the establishment and improvement of the paper, which is intended to be second to none in the country, in its literary and religious character. The purpose of its projectors is indicated in the name: their aim being to ADVANCE the cause of evangelical religion, in its relations not only to doctrine, worship, and ecclesiastical polity, but also to philosophy, science, literature, politics, business, amusements, art, morals, philanthropy, and whatever else conduces to the glory of God and the good of man by its bearing upon Christian civilization. No expense has been spared in providing for its editorial management in all departments, while arrangements are in progress to secure the ablest contributors and correspondents at home and abroad. The city of Chicago has been selected as the place of publication, because of its metropolitan position in the section of the country especially demanding such a paper, and the fact that it is nearly the center of national population, and in a very few years will be the ecclesiastical center of the Congregational Churches. Issued at the interior commercial metropolis, "THE ADVANCE" will contain the latest market reports, and able discussions of financial subjects, such as will make it a necessity to business men in all parts of the country. The editor-in-chief will be Rev. Wm. W. Patton, D.D., who resigns the pastorate of the leading church of the denomination at the West for this purpose, and who has had many years' experience in editorial labor. The subscription price will be \$2 50 in advance. Advertising rates made known on application. Address THE ADVANCE COMPANY, P. O. Drawer 6, 374, Chicago, Ill. 8.6t.

TEMPERANCE IN CONGRESS.

—Ten-Minute Speeches delivered in the House of Representatives on the occasion of the First Meeting of the Congressional Temperance Society. One 12mo vol. sent by first post for 25 cents, by S. R. WELLS, 389 Broadway, N. Y.

Read what the papers say.

From the *Republic*: "The title of this book is decidedly refreshing, assuring one that there is such a thing as Temperance in Congress, and its matter cheers one as he reads it, and is encouraged with the hope that a movement has commenced that will ere long absolutely prohibit persons addicted to the use of intoxicating liquor from holding seats in our National Council Chamber. These speeches, short and pithy, are truly interesting and instructive."

The *Clearfield Republican* says: "A reformation could not have broken out in a better place, as the intemperance of Congress for years has been a disgrace to the country."

The *Halifax (N. S.) Morning Chronicle* says: "Our temperance societies could not do better than procure a few thousand copies of this work for circulation."

The *Christian (Va.) Sun* says: "We would gladly see a copy in the hands of every young man in the country."

The *Texas Vindicator* says: "It is made up of ten-minute speeches, which abound in facts and fancies that can not fail to warm the heart of the genuine temperance reformers."

THE CHURCH UNION.—The largest and best Religious Family Newspaper in the world.

Owing to the unprecedented reception of this paper, it is now enlarged to twice its original size.

It is devoted to Liberty and Union in the whole Church of Christ, opposes Ritualism and Rationalism, and advocates Radical Doctrines in both Church and State.

It favors universal suffrage, and equal rights for every man and woman of every nationality.

It is the organ of no sect, but will endeavor to represent every branch of the Church, and every society organized for the purpose of converting the world to Christ.

It is Trinitarian in creed, but favors free discussion by all Religionists of every faith.

It will advocate a free communion table for all the Lord's people, and a free pulpit for all his ministers.

It will print a sermon from Rev. Henry Ward Beecher in every issue. This sermon, published at twelve o'clock every Monday, will be selected from one of the two sermons preached by Mr. Beecher the day before publication. It is not copyrighted, nor is it prepared for the press by Mr. Beecher.

Terms—\$2 50 yearly. \$1 to agents for every subscriber. Sold by American News Company at 5 cents, and by Publishers.

Address, CHARLES ALBERTSON, Supt. Church Union, 108 Fulton Street, New York. Sept., 1f.

Fish, Leaping Fish, Flying Fish, and Shooting Fish; Robert Bonner and the Secret of his great "Ledger" Success; Modern Physical Degeneracy; Japanese Magic, wonderful Butterfly Trick; Training for Health and for Athletic Contests; How to Tame Birds; Cures for Intoxication; Youatt's Cure for Hydrophobia; Rich Men of the World, and How they Gained their Wealth; How People See Ghosts; Art of Fortelling the Weather; Maple-Sugar Making; Artificial Honey; Wasteful Advertising, showing how advertisers are fleeced; Exposures of Humbugs, by the author of the celebrated and widely circulated book, "Rogues and Rogueries"; Recipes; Miscellany; etc., etc., in January number of

HANEY'S JOURNAL.

A neat, medium-sized, moderately illustrated paper of interesting and valuable reading for farm, household, workshop, or store. Its aim is to *benefit and help* its readers, warning them against frauds and impositions, and telling them whatever we think will prove *useful, interesting, or profitable* to them. Only 25cts. a year, or 5cts. a copy—none free.

HANEY & CO., 119 Nassau Street, New York.

GUIDE TO AUTHORSHIP, a

practical and valuable aid to all who wish to engage in Literary Pursuits of any kind for pleasure or profit; with hints for securing success, and preparation, value, and disposal of MS. Also, Editing, Proof-reading, technical terms, estimates for publishing, etc. 50cts.

"It will save them asking a great many questions, or making a great many blunders."—*N. Y. Eve. Mail*. "Will be of great service to those who contemplate a trial of the pleasures and pains of a literary life."—*Godsey*. "Useful to all, old and young, who write for the press."—*Phrenological Journal*. "Were the instructions in this little work carried out, we should have more writers and fewer scribblers."—*Yankee Blade*. "Gives some rather amusing details of the technique of literary handicraft."—*N. Y. Tribune*.

SECRETS WORTH KNOWING,

tells how to make medicine, perfumery, toilet and dental articles, cosmetics, soaps, dyes, vermin remedies, candies, wines, cordials, cheap and delicious temperance beverages, veterinary remedies, manufacturers' secrets, and many articles in universal use, made at trifling cost and sold at large profits. 25cts.

ROGUES AND ROGUERIES,

new, revised, and enlarged edition, exposing all tricks and traps of cities, and all swindles and humbugs. Illustrated. 25cts.

PHONOGRAPHIC HANDBOOK,

for Self-Instruction in the modern, improved, and simplified art used by practical reporters. Easiest and best. 25cts.

HANDBOOK OF VENTRILO-

quism, and how to make the Magic Whistle. 15cts.

"Really a valuable aid."—*Boston Wide World*. "Will enable any one to produce the most wonderful vocal illusions."—*N. Y. Atlas*.

HOW TO MAKE BAD MEMORY

Good and Good Better, a new art valuable to all, teaching how the most wonderful feats of memory may be performed, and how all defects may be remedied. Useful to all, especially students (particularly when preparing for examination), teachers, clergymen, and all professional men. 15cts.

COMMON-SENSE COOK BOOK.

A reliable guide for the preparation of a wide range of dishes suiting all tastes and all purses. One decided attraction is the number of delicious but inexpensive preparations which are included in the work. The proportions of ingredients are carefully given, as well as their manipulation and proper serving up. The book contains a very large amount of matter for the price, and even if you already possess a good cook book, you can not fail to find many things in this one amply worth the cost. 30cts.

ORPHEUS C. KERR'S COMI-

CALITIES, with 150 humorous illustrations. 25cts.

To be had of all booksellers, or free by mail on receipt of price. HANEY & CO., 119 Nassau Street, New York.

AMERICAN JOURNAL OF MINING, FOR 1868.

THE BEST AND LARGEST PAPER OF THE KIND IN THE UNITED STATES.

Of the numerous sources of wealth which this country possesses, none are more important, either in richness or extent, than her minerals. These have added largely to her prosperity, and afford a profitable means of investment for capital, and an extensive field for labor. The AMERICAN JOURNAL OF MINING is acknowledged by the public and the press to be a faithful and accurate exponent of the important interests dependent on Mining; and to more fully meet the demands of circulating valuable and reliable information, it is now increased in size to sixteen large quarto pages, thus making it the largest paper devoted to mining on this continent.

It contains: Illustrated descriptions of the latest improvements in Mechanical appliances used in opening, working, and draining mines; crushing and treating the ore. Original Papers on Geology, Metallurgy, Assaying, Chemistry, and various Scientific subjects, contributed by able Scientists, in a popular style and with scientific method and exhaustiveness.

A Summary of Mining News, collected from all parts of the continent, and classified geographically and mineralogically.

Original Editorials, devoted to a review of the legislation affecting mining, to a denunciation of fraudulent speculation, to an advocacy of such measures as will advance the interests of miners or will increase public confidence in legitimate mining, and to a consideration of all other matters of value to those interested in mines.

Interesting Correspondence, giving the opinions of the public on topics of the day. Miscellaneous Articles, culled from a selection of the leading scientific publications of Europe and America.

Reviews of New Publications on Science, Statistics, and other subjects immediately connected with the objects of the paper.

Reports of the Proceedings of the Polytechnic Branch of the American Institute, and other Scientific bodies.

Statements of the formation and progress of Mining Companies, of their meetings and dividends, assessments, etc.

A comprehensive and correct Market Review of Stocks and Metals.

Reports on the Slate Trade, now rapidly increasing in importance.

Coal Trade Reports that will be found to surpass in extent and accuracy those given by any other paper, comprising accurate tables showing the shipments of Coal over the principal roads and canals during each week, and the increase or decrease as compared with the same period of the preceding year, the prices of coal, home, provincial, and foreign, the rates of transportation, and the various tolls.

Iron Trade reports and statistics, which, in point of completeness and accuracy, deserve the favor they have received. Each week contains carefully prepared statements of Iron imports and productions in various sections of the country; Market prices in New York, Boston, Cincinnati, Pittsburgh, and London; miscellaneous statements of great value, and special items of news invaluable to every iron merchant or manufacturer, besides a correct and unbiased review of the Market for the past week.

Reports on the Foreign Metal Markets.

Notices of Patent Claims interesting to Miners and Metallurgists, etc., and lists of Scientific Books.

The advertising columns afford a very full directory of the chief Manufacturers of Machines used in Mining, of Chemists, Assayers, Scientific Publishers, etc.

As soon after the close of every year as possible, there will be published, in the AMERICAN JOURNAL OF MINING, a complete and accurate review of each of the various Mining interests of the United States. These reviews will comprise carefully compiled statistics, which will show at a glance the progress, extent, and operations of the whole country in every Mineral during the year past.

Each number of the AMERICAN JOURNAL OF MINING is printed in the best possible manner, on an excellent quality of paper, contains 16 large solid pages, two volumes a year, each containing 416 pages, forming a valuable book of reference to all interested in Mining, Milling, Geology, Chemistry, etc.

Published every Saturday morning.

Lessons in Life. A Series of Familiar Essays	1 75
Letters to the Joneses	1 75
Plain Talks on Familiar Subjects	1 75

PRAYERS FROM PLYMOUTH PULPIT.

By Henry Ward Beecher. One vol., 12mo. Cloth, plain, \$1 75; gilt, \$2 50.

In this volume there are permanently preserved a large number of these prayers, selected from those offered in the course of his regular ministrations during the last ten years, and they are given precisely as they were made, each one being complete in itself, and all form a collection which has no equal and hardly a parallel in our literature.

THE RACES OF THE OLD WORLD.

A Manual of Ethnology. By Charles Loring Brace. One vol., post 8vo., \$2 50.

The manual is in eight divisions: the first treats of the leading races in the earliest historical period; the second, of the primitive races in Europe; the third, of the leading races of Asia in the middle ages; the fourth, of the modern ethnology of Asia; the fifth, of Oceanic ethnography; the sixth, of the ethnology of Africa; the seventh, of the races of modern Europe; and the eighth, of the antiquity of man, and the question of unity or diversity of origin. The work is sufficiently comprehensive in itself to give the student a clear understanding of the science of which it treats, while it may at the same time serve as an incentive and guide to a wider range of investigation.

These works will be sent post-paid to any address on receipt of price by S. R. WELLS, 389 Broadway, N. Y.

MME. DEMOREST'S EXCEL-

SION SYSTEM OF DRESS CUTTING, always awarded the First Premium, and now used and endorsed by nearly all the best Dress-makers in the United States. The Model, with full instructions, \$1 each. Mailed free.

Jersey Lovers, 30cts.—For violin, 15cts.

Pianos and Melodeons, Sheet Music, Music Bound, Musical Instruments and Instruction Books. Strings and Books sent free to any address in the U. S. on receipt of the marked price.

FREDERICK BLUME,

1125 Broadway, New York, second door above Twenty-fifth Street.

ESTABLISHED 1861—THE GREAT AMERICAN TEA COMPANY

HAVE JUST RECEIVED TWO FULL CARGOES OF THE

FINEST NEW CROP TEAS.

22,000 Half Chests by ship Golden State.
12,000 Half Chests by ship George Shotton.

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivaled for fineness and sweetness of flavor.

To give our readers an idea of the profits which have been made in the Tea Trade (previous to the establishment of the GREAT AMERICAN TEA COMPANY), we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors.

First. The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in this country have made their immense fortunes through their Houses in China.

Second. The Banker makes large profits upon the foreign exchange used in the purchase of Teas.

Third. The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth. On its arrival here it is sold by the cargo, and the purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth. The Speculator sells it to the Wholesale Tea Dealer in the lines, at a profit of 10 to 15 per cent.

Sixth. The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh. The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth. The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so much lower than small dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages, and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same price, with the small additional expense of transportation, as though they bought them at our Warehouse in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this: Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price-List, as published in the paper, or in our circulars. Write the names, kinds, and amounts plainly on the list, as seen in the club-order published below, and when the club is complete send it to us by mail, and

we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members can divide equitably among themselves.

Parties sending club or other orders for less than thirty dollars, had better send Post-office draft or money with their orders, to save the expense of collections by express; but larger orders we will forward by express, to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for clubs of less than \$30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom-House stores to our Warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within thirty days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of clubs. They are sold at cargo prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

OOLONG (Black), 70c., 80c., 90c., best, \$1 per lb.
MIXED (Green and Black), 70c., 80c., 90c., best, \$1 per lb.
ENGLISH BREAKFAST (Black), 80c., 90c., \$1, \$1 10, best, \$1 20 per lb.
IMPERIAL (Green), 80c., 90c., \$1, \$1 10, best, \$1 25 per lb.
YOUNG HYSON (Green), 80c., 90c., \$1, \$1 10, best \$1 25 per lb.
UNCOLORED JAPAN, 90c., \$1, \$1 10, best, \$1 25 per lb.
GUNPOWDER (Green), \$1 25, best, \$1 50 per lb.

COFFEES ROASTED AND GROUND DAILY.

GROUND COFFEE, 20c., 25c., 30c., 35c., best, 40c., per lb. Hotels, Saloons, Boarding-house keepers, and Families who use large quantities of Coffee, can economize in that article by using our *French Breakfast* and *Dinner Coffee*, which we sell at the low price of 30 c. per lb., and warranted to give perfect satisfaction.

Consumers can save from 50c. to \$1 per lb. by purchasing their Teas of the

GREAT AMERICAN TEA COMPANY,

31 and 33 Vesey Street.

Post-Office Box 5,643, New York City.

THE GREAT AMERICAN TEA COMPANY (established 1861) is recommended by the leading newspapers, religious and secular, in this and other cities, viz.:

American Agriculturist, Orange Judd, Editor.
Christian Advocate, New York City, Daniel Curry, D.D., Editor.

Christian Advocate, Cincinnati, Ohio, J. M. Reid, D.D., Editor.

Christian Advocate, Chicago, Ill., Thomas M. Eddy, D.D., Editor.

Evangelist, New York City, Dr. H. M. Field and J. G. Craighead, Editors.

Examiner and Chronicle, New York City, Edward Bright, Editor.

Christian Intelligencer, E. S. Porter, D.D., Editor.

Independent, New York City, Henry C. Bowen, Publisher.

The Methodist, Geo. R. Crooks, D.D., Editor.

Moore's Rural New Yorker, Rochester, N. Y., D. D. T. Moore, Editor and Proprietor.

Tribune, New York City, Horace Greeley, Editor.

We call attention to the above list as a positive guarantee of our manner of doing business; as well as the hundreds of thousands of persons in our published Club Lists.

COMPLIMENTARY LETTERS FROM CLUBS.

MANHATTAN, KANSAS, July 25, 1867.

GREAT AMERICAN TEA COMPANY,

31 and 33 Vesey Street, New York.

Your "Advocate" is received and circulated. Please accept my thanks. You are extending a blessing to us old tea drinkers in the West.

My profession keeps me in my office, but the limited opportunities I have shall be devoted to the extension of your trade. The orders I have sent have been purely from private families. I have recommended your house to our merchants, with what success you know, not I. They might not like to have their customers see the profits they make.

I remain, very respectfully yours,

LORENZO WESTOVER.

DEARBORNVILLE, MICH., July 6, 1867.

GREAT AMERICAN TEA COMPANY,

31 and 33 Vesey Street, New York.

Gents: This day I forward you, by M. U. Express Company, \$107 50, being amount due you on one box of tea.

It may be proper here to state that the tea received gives entire satisfaction. This makes two orders from this place. Your patrons are so well pleased with the tea that you may expect to furnish us our tea and coffee. I have sent your papers to Linden, Genesee County, in this State, and other places, from whence you may expect to receive orders.

Please accept our thanks for the promptness with which you responded to our order.

Respectfully yours,

AMOS GAGE.

BRUNSWICK, MO., March 26, 1867.

TO THE GREAT AMERICAN TEA COMPANY,

31 and 33 Vesey Street, New York.

The order we sent you last month reached us in due time, and with which we are well pleased. We think there is, at least, 50 to 75 cents difference in your favor, compared with the prices of St. Louis, where we have been buying our teas for several years past. You may expect to receive our future orders.

Yours truly,

MERCHANT BEAZLEY.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the GREAT AMERICAN TEA COMPANY.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name, either wholly or in part, as they are *bores* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

TAKE NOTICE.—Clubs and quantity buyers are only furnished from our Wholesale and Club Department.

Post-Office orders and drafts made payable to the order of the GREAT AMERICAN TEA COMPANY. Direct letters and orders to the

GREAT AMERICAN TEA COMPANY,

Nos. 31 and 33 Vesey Street, New York.

Post-Office Box, 5,643, New York City.

A JAPANESE FUNERAL.

WHO ARE THE USEFUL MEN?

In a building, the outer superstructure attracts the eye—the foundation is hidden. A tree's leaf makes more noise than its trunk; and its roots are all concealed beneath the ground. Yet the tree shakes off its leaves each autumn. But it holds its roots forever, and even bares itself of foliage when winter comes, in order that the roots may be covered and nurtured below, and so glorify its Maker and itself in the future spring.

So in society. It is not the apparently great men, doing public things, who bless the world. Not many succeed in attracting attention and winning applause. Men do not all run to leaf, merely to get up to that green thinness which rustles for a summer, and then crisps and falls to the ground as a mere nurturer of the strong but modest roots below, that live and grow through all the years.

It is no evidence of real greatness to get into high elevations, to work on to public platforms, into legislatures, into pulpits, or even to the Presidential chair. God's universal plan is to keep the individual humble that he may be useful and happy. Each one is made for all. Yet every soul is a greater creation than a sun. You are appointed there, I yonder, somebody else between, or beyond, and each one of us must bear his own accountability, living and working according to our chances, doing everything for a purpose—man's general good and God's especial glory. Every individual in the race is a free agent, and in religion as well as in all other relations should be recognized as a unit, equal in will

and right, to every other. There is a Methodism in Christianity that votes and works with a purpose, not to glorify men by making them "lords over God's heritage," but rather to honor their individuality and prompt them to discharge every duty as it defines itself, to God's glory, and not to man's. ALEXANDER CLARK.

THE JAPANESE.

THESE singular people have exhibited so much interest in the United States during the past ten years, that we have become even better acquainted with them than their opposite neighbors, the Chinese. In manners, customs, and general intelligence they are superior to the Chinese, although belonging to the same racial type. The empire of Japan comprehends four large islands—Nipon, Sikoh, Kiusiu, and Yesso, besides a great number of small ones, the area of which is about 206,500 square miles. Agriculture is the chief occupation of the people, and their farms are said to be kept in a very neat and attractive condition. The government partakes of the highest form of aristocracy. The imperial sway is hereditary, but the emperor scarcely exercises the authority of the chief executive officer, who is known as the *Tycoon*. In connection with the throne there are two councils of state, which are composed of the *daimios*, or territorial lords and princes. The higher council consists of five, and is termed *Go to sei*—"Imperial old men;" the lower, of seven, termed *Waka tosiyori*—"Young old men." Physically, the Japanese are well made and

robust. In physiognomy, they are much more striking than the Chinese, having oval faces, high foreheads, a light olive complexion, and an animated expression. The upper classes are proud, sensitive, and punctilious with respect to their notions of honor. They wear flaming dresses of rich silks, and also shave the head about three inches in front. In some parts of the country the peasantry go almost naked, but having their bodies elaborately tattooed with figures in different colors.

Among the more remarkable customs of the Japanese is that of *Harrikari*, or *Hara wo*

kiru, a mode of suicide permitted by law only to the aristocracy. It is performed by making two cross cuts on the abdomen with a sharp knife. This is a method of dueling in vogue among the nobility, and, as may be expected, usually terminates fatally on both sides. The marriage custom is also peculiar. When a girl is wedded, her teeth are blackened, her eyebrows pulled out and other extraordinary measures resorted to with the intent apparently of rendering her as ugly as possible.

The engraving represents a Japanese funeral procession. At the head walk the priests and their attendants; then follow men bearing the coffin, which is circular, and in shape like the native sedan chairs. It is made thus because the dead are buried in a sitting posture. After the bearers come the male mourners, and then the female portion of the family, in covered sedans. All the mourners are dressed in white, the Japanese token of grief. They exhibit a great regard for the dead; their cemeteries are laid out with much taste, and those of long standing contain many costly and beautiful monuments of granite. The Japanese are a leisure-loving people; they have many holidays, and liberally patronize their theatrical or other exhibitions. The "national game" with them is wrestling, and they excel in feats of legerdemain, spinning tops, and jugglery. The population of Japan has been estimated to be nearly 33,000,000.

Man, know thyself. All wisdom centers there;
To none man seems ignoble, but to man.—Young.

BENJAMIN D'ISRAELI AND JOHN BRIGHT,

THE CHAMPION OF THE CROWN AND THE CHAMPION OF THE PEOPLE.

THERE probably are not among men now living two more shining instances of success in public life than are found in the lives of the great English statesmen whose faces head this article.

Coming, one from a despised race, the other from the great middle classes, they

have risen by the sheer force of ability to fill the eyes of the English nation and to be the representatives of the two great parties which embrace all her subjects, those who contend for the maintenance of the royal prerogative, and those who continually demand larger liberty for the common people.

The political career of Mr. D'Israeli thus far is one of the most extraordinary in English history. Of Jewish parentage, unaided by family, wealth, and connections, he has by his own peerless genius bearded the sneers of the world heaped upon his race, and fought his way up,

first to literary reputation and then to political influence and power, till now he controls the finances of the mightiest commercial nation on the face of the globe.

Look at his face. The leading record there is glorious ability. What can not such an eye as that pierce? what of human knowledge can not that brain master? What problem so intricate, so difficult, or so perplexing that it will not be patiently, persistently, steadily wrought out, and the solution recorded in letters of light?

Next to ability in this face we read towering ambition. The eyes seem ever fixed on some distant glittering height, and this ability and ambition based on self-appreciation, exhaustless patience, and unflinching industry *must* work out the grand result—world-wide fame.

Mr. D'Israeli never forgets—never allows others to forget—that he is of that race whence all our prophets came and Jesus Christ himself was born. If we can imagine that face glowing with *divine* inspiration as it is with intellectual power, we may almost see another Isaiah with lips touched by burning coals from God's altar. On one occasion, when taunted with being a descendant perhaps of the thief on the cross, he replied, in proud and soul-stirring words, "My blood thrills with the traditions of my race! My ancestors were lords of the tabernacle and princes in Israel when his were naked savages in the woods of northern Germany."

With aristocratic sympathies thus running back through kings, and princes, and patriarchs to the plains of Mesopotamia, it is not surprising that Mr. D'Israeli should ally himself with the party supporting the royal prerogative, the conservative rather than the reforming party, in English politics. Yet so cautious, so sagacious, so clear-sighted a politician is he, that he makes just concessions enough to soothe the popular mind. Indeed, in 1859, he advocated the extension of suffrage to the whole body of the educated class, without regard to property. But this measure was defeated in the House of Commons.

Let us study this face phrenologically. The brain is large and fully developed in both the cerebrum and cerebellum. The intellectual faculties are splendidly developed. The organs which lie above the eye are large, as Form, Size, Color, Order, making the man when taken in connection with full Ideality and Sublimity, an artist in the highest sense of that word. And Mr. D'Israeli is an artist. Not pigments and pencils are his tools, but he paints with words,

drawing from his well-filled armory every weapon of brilliant rhetoric, weighty argument, keen invective, and polished satire. The fullness of the cerebellum gives him strong motive power and active recuperation, so that he can accomplish marvels of industry without undermining the force and vigor of his constitution. In him we find a rare union of the mental, motive, and vital temperaments, one imparting activity and intensity, the others solidity, power, and recuperation.

Mr. D'Israeli is one of the finest instances of the power of industry and perseverance in conquering the obstacles in the path of an aspirant for political honor and distinction. Four successive attempts to enter Parliament were failures, but on the fifth he achieved the great object of his ambition. His first speech called forth only laughter and ridicule in the House. He closed it with these famous words: "I have begun several times many things, and I have often succeeded at last. I shall sit down now, but the time will come when you will hear me." For two years he was silent, and when he again opened his mouth in Parliament his speech was listened to with attention, and warmly applauded for its ability.

In person, Mr. D'Israeli is of medium size, with intensely black eyes and glossy raven hair. He dresses with artistic elegance and perfection in the finest of velvet and broad-cloth; gems of rare value adorn his person, and he never appears but in exquisite toilette. In public, the air of solitariness ever hangs about him. He always sits alone, stands alone; other members may be seen chatting together pleasantly and familiarly; but with Mr. D'Israeli, never.

As our eyes turn from this face to that of Mr. Bright, what a striking contrast do we find in every feature and in the whole character of the man! Mr. Bright is the representative and embodiment of the middle classes of English people. There are no traces of ancient lineage or of ancient culture in the face. But two or three generations back, and Mr. Bright's ancestors were sons of the soil, bred to industry of the hand and arm, of the muscle rather than of the brain. From this class has arisen the finest names in English annals, names whose luster came, not from a long line of titled nobility and royal blood, but from a nobler origin and by the imposition of a mightier power—Shakspeare, Milton, Macaulay, the two Chathams, Sir Robert Peel, Wellington, Nelson, and a long roll of bright names, in every department of civil, military, and political distinction. At their birth the great Dispenser of gifts presided, and inspired one with the spirit of poetry, another with the love of knowledge, another with thirst for supremacy in political power, and all with unflinching perseverance, unwearied application. To John Bright, he gave an earnest love of Englishmen, and the mission to labor for their elevation, comfort, free speech, and to secure them the largest degree of personal liberty.

Mr. Bright owes his proud position in the

hearts of the English people to his ability and philanthropy. He is not personally ambitious, his eyes seem not like those in the other face, to gaze upon some distant pinnacle of power, but rather to view great measures looking to the permanent interest and advancement of his constituents. For this end he labors, forgetful of self, yet made everywhere to feel that thus he has become the very idol of the English people and the exponent of their will and power.

What a development in the region of Benevolence do we see in his head! Other organs of the intellect are also large and full. Language, as seen by his eye, is well developed. He is bold, cautious, self-relying, conscientious, firm, progressive. Once satisfied as to the justice of his cause and its utility, he pushes right on, overcoming one obstacle after another to the goal of success.

Mr. Bright is eminently a social man and warm domestic instincts, but so ardently devoted to the interests of the people that he seldom indulges himself in the delights of home. "Mother," said his little daughter, "who is that pleasant gentleman that sometimes comes to see you and stays all night?" "That, my daughter," was the reply, "is your father."

Much as we may admire the sheer force and ability by which D'Israeli has risen once and again and again to be the Chancellor of the Exchequer and the Prime Minister of England, when we see John Bright unselfishly devoting himself soul and body, not to his own aggrandizement and the achievement of ambitious personal designs, but to the highest good and largest happiness of his people, our hearts are touched, and in our inmost souls we do him reverence. The Israelite is a brilliant, splendid, successful man! but the Englishman is a glorious philanthropist; and Jesus Christ has taught us by his life and by his death which we should most admire, which most earnestly strive to imitate! In these two behold the contrast between Judaism and Christianity; the one shut up in itself, exclusive, aristocratic, stationary; the other diffusive, all-embracing, genial, progressive!

Though liberally educated, Mr. Bright is not at all a literary man. His successes are not with the pen, but in the line of business activity, promotion of great reformatory measures, and public speaking. He is noted for force and earnestness rather than rhetorical finish and oratorical elegance. He has written nothing to charm the scholar and delight the esthetic reader as D'Israeli has, but he has stirred the English heart to its depths and carved his name thereon in ever-during capitals.

In person Mr. Bright is stoutly built, with light complexion, blue eyes, hair brown and silky, skin fine and ruddy, presenting in all these points as marked a contrast to the Prime Minister as is found between their aims and characters.

Mr. Bright was born in 1811, in Greenbank, Lancashire, and is now fifty-six years old. His

father, a cotton spinner and manufacturer, gave his son a liberal education. After pursuing his studies for several years he went into the manufacturing business, under the firm name of John Bright & Brothers. Seeing the great evils growing out of the excessive use of ardent spirits among the operatives in the manufacturing districts of England, especially in Lancashire, he commenced a series of lectures on Temperance, which were very beneficial in their effects, and brought Mr. Bright into public notice. This was in 1836.

Soon after (in 1838) we find him vindicating, both with tongue and pen, the principles of the Anti-Corn Law League, and second only to Mr. Cobden in his position and influence with that philanthropic body. In 1843 he became a candidate for Parliament from Durham, and though at first defeated, a vacancy occurring, he was elected. He took part with ability and success in the exciting discussions on free trade, with which Parliament was chiefly occupied from 1843 to 1845, and divides with two or three others the honor of bringing Sir Robert Peel over to the free trade party, and causing the repeal of the heavy duties on imported breadstuffs. From 1852 to 1857 he represented Manchester in Parliament; and as a member of the Society of Friends and a leading member of the Peace Society he strenuously opposed all warlike measures, and earnestly supported the deputation sent to the Russian Emperor to dissuade him from the Crimean war. In 1858 we find him representing Birmingham, and prominent in the overthrow of the Palmerston cabinet. He was a warm advocate of the reduction of the military establishment, and as strenuous an opponent of the policy of Asiatic conquest. Mr. Bright, though peculiarly injured by the stagnation of manufactures in England arising from the great Rebellion, earnestly sympathized with the North in the gigantic struggle, and in Parliament advocated measures tending to aid the United States in subduing its internal foes.

An intelligent, wise, and all embracing philanthropy seems to be the motive power of Mr. Bright's character. Temperance, free trade, peace, stability of government, enlarged suffrage, the fundamental pillars upon which the prosperity and happiness of the race depend—of these Mr. Bright is the champion, to secure these he devotes his ability and his life.

Mr. D'Israeli was born in London in 1805, and is the eldest son of Isaac D'Israeli, author of *Curiosities of Literature*. He was educated at a private academy in London, and while very young became the clerk of an attorney, where he remained three years. Weary of this drudgery, and aspiring to higher position than he could hope for in the legal profession, through his father's distinguished friends he obtained admission into the best society in London. Here he soon became a decided favorite on account of his personal beauty, his elegant manners, and his brilliancy in conversation. When nineteen he visited Germany,

and on his return to England entered upon his literary career, which was remarkably brilliant and successful. Ambitious of political as well as literary renown, after repeated failures he at last obtained a seat in Parliament, and has gone on up conquering one obstacle after another, until for years he has been the leader of the House of Commons and minister of finance in the English cabinet. L. E. L.

CONSCIOUSNESS AND MENTAL ACTION.

BY B. H. WASHINGTON, M.D.

[CONTINUED FROM FEBRUARY NUMBER.]

THE next question for consideration will be whether there are any facts which will enable us to determine the location of the organ of consciousness and its associative organ, volition. Dr. Carpenter locates the organ of consciousness in the sensory ganglia. He says: "The sensory ganglia must be collectively regarded as forming the organ through whose instrumentality the mind is rendered conscious of impressions made on the organs of sense; and reasons have been advanced for the belief that it also serves as the instrument whereby the consciousness is affected by cerebral changes which in so far as they take place independently of the will, are the cause, and not the consequence, of mental activity." In another place, Dr. C. says: "Hence we may fairly regard the thalami optici as the chief focus of the sensory nerves, more especially as the ganglionic center of the nerves of common sensation which ascend to it from the medulla oblongata and spinal cord. On the other hand, the corpora striata are implanted on the motor tract of the crura cerebri which descend into the pyramidal columns; and their relation to the fibers of which that tract is composed appears to be essentially the same as that which the thalami optici bear to the sensory tract. Upon the precise nature of that relation anatomists are not agreed; but there are several considerations which render it probable that there is not that continuity between the fibers of the crura cerebri, and those which radiate from the thalami optici and corpora striata to the surface of the hemispheres, which a superficial examination would seem to indicate; but that the fibers which ascend from the crura cerebri, for the most part, if not entirely, terminate in the vesicular substance of the former bodies, and that the radiating fibers of the latter take a fresh departure from them. * * * The thalami optici and corpora striata, as is well known, are very closely connected with each other by commissural fibers; and if the preceding account of their respective offices be correct, they may be regarded as having much the same relation to each other as that which exists between the posterior and anterior peaks of vesicular matter in the spinal cord, the latter issuing motor impulses in response to sensations excited through the former." It is clear, then, that Dr. Carpenter's location of the organ of consciousness in the thalami optici

and the corpora striata will not suit our purpose, for as the two former attend to sensation, and the two latter to motion, it would render four points necessary instead of two, which would not correspond with the duplex structure of the brain.

We must then seek other facts and anatomical relations to guide us. We have the following: 1. Horner (*Special Anatomy and Histology*, Vol. 2, p. 366), in speaking of the optic nerve, says: "Its adhesion to the crus is considered by many anatomists another of its origins." 2. We know that when it is desirable to perform any particular action (for example, a performer on the piano may wish to touch a particular key), a general volition is issued from the organ of volition, while the special volitions to each particular muscle necessary is left to be carried on by other anatomical and automatic arrangements. We will analogically assume then, that in regard to the cerebral actions, a similar arrangement obtains, the general result of the dispatches received from the various central organs being communicated to consciousness, while the special communication between each faculty and consciousness is left to automatic arrangements in other parts of the anatomy. 3. We know in mesmeric or biological experiments, the subject, after gazing intently upon a coin or other object at a suitable distance, is thrown into the "biological" state, and can be imposed on in any manner the mesmerizer may choose, not being able to distinguish a glass of water from a glass of wine. We will therefore conclude that the optic nerve being much wearied by the intense gaze, is cut aloof from its ordinary communication with the organ of consciousness. 4. In 1840, the author was severely afflicted by dyspepsia, and frequently in undertaking to listen to a public speaker, the optic nerve would become much wearied, and in a short time he would not comprehend a single word the speaker uttered, though the eyes remained open, and a friend sitting by would suppose we were intently listening, and would make remarks concerning the address to us, supposing we had treasured it up carefully in our memory; this was especially the case if we undertook to listen while the process of digestion was going on. This was a wondrous puzzle to us, and we never could find a satisfactory exposition in any work we read.

As in mesmeric or "biological" experiments (the optic nerve having been thrown out of communication with consciousness by the intense, wearying gaze) the subject seems utterly incapable of using his intellectual faculties, and can be imposed on in any manner; and as in our own case we could not comprehend the words of a public speaker when our eyes had been wearied with an intense gaze, we are therefore justified in concluding that the communicating fibers from the intellectual organs reach the organ of consciousness at or near one of the origins of the optic nerve. As before remarked, we are barred from locating the organ of consciousness as Dr. Carpenter does, in the thalami optici and corpora striata, for that re-

quiring four points would not correspond with the duplex structure of the brain; we must, therefore, locate it in some other point.

To determine the location of the organ of consciousness, 1. There must be only two points to correspond to the duplex structure of the brain. 2. They must be in such a situation that they can take cognizance both of sensation and motion from all parts of the body. 3. They must be in such a situation that communications from the cortical portions of the cerebrum can reach them. 4. They must also be in such a situation that communications from the cerebellum can reach them. 5. They must be in such a situation that communications from all the nerves of special sense can reach them. 6. They must be near one of the roots of the optic nerve.

There is one spot, and only one, where all these conditions can be fulfilled, and that is in the crura cerebri, where the optic nerve crosses, and from which Horner says one of its roots arises; we will therefore assume, or, more properly, logically conclude, that the organ of consciousness is located at that point.

We will further assume that, as Dr. Carpenter says, the fibers communicating from the crura cerebri to the thalami optici and corpora striata for the most part terminate in those bodies, and the radiating fibers from those bodies take a fresh departure, and communicate with the cerebral organs, and the sensory nerves generally through the thalami optici, and with the nerves of motion through the corpora striata. We have also assumed that the organ of volition is located contiguous to the organ of consciousness, and we may conclude that the general volitions are issued from the organ of volition (which volitions will in the normal state always be in harmony with "the dominant idea" in consciousness), while the special volitions to each particular muscle are automatically issued from the corpora striata without the intervention of consciousness. We can hence readily perceive why it is that in cases of chorea, when the general volition is issued from the organ of volition, the fibers in the corpora striata to which the automatic arrangement for the dispatch of the special volitions to each muscle are allotted, being out of order, the wrong special volitions are issued, and the individual can not perform the action desired, the arms or legs being thrown about at random.

We will also assume that, in like manner, certain fibers for the automatic management of the special communication radiate from the optic thalami to the organs in the cortical portions of the brain, while the general result is communicated by other fibers from the thalami optici to the organ of consciousness in the crura cerebri. And that it is from this organ of consciousness that all the stores of memory are viewed and in it all new thoughts developed. The ability to view all the acquisitions of life at will can be considered as the normal state of but very few individuals; occasionally extraordinary men like Scaliger or Napoleon Bonaparte seemed to be blessed with such a capacity, but generally the proportion of our past acquisitions which can be recalled is very small compared to the whole amount.

The location of the organ of consciousness near one of the roots of the optic nerve harmonizes with the fact that the optic nerve in mesmeric experiments is severed from consciousness; with the fact that no one can learn or think readily in a bright light; and most great students prefer burning the "midnight oil," and *vice versa*, with the fact that no one can close his eyes in sleep while there is intense activity of thought in consciousness; and the capability of the spirit to review all the acquisitions of past life at once, will give us the long-sought explanation of the fact, that singleness of vision can be accomplished through duplicity of organs, for it would be the merest trifle imaginable for the spirit capable of inspecting a million or two of thoughts and facts at once, to look through a couple of eyes and not be troubled with double images.

Had the optic nerve originated entirely from the crus so near the seat of consciousness, then the effect of the light would have been felt in its full intensity and the consequences would have been the same they now are under a dazzling light, extremely disagreeable and utterly subversive of everything like a continuous train of thought; but by the arrangement adopted, the individual is kept properly under the steady stimulus of light, thus warding off the tendency to drowsiness resulting from the absence of light, while the images brought within the range of the eye can be transmitted to the brain through the other roots of the optic nerve in the thalami optici without any disagreeable consequences.

If, now, the above hypothesis in regard to the organ of consciousness and the organs in the cortical portion of the brain, and the laws concerning the communications between them, will give us a clear explanation of, and harmonize with mental phenomena, both normal and abnormal, we may claim that the metaphysical theories which will not explain or harmonize with them should be rejected, and the phrenological hypothesis be adopted instead thereof.

The automatic law of control of the communications of the various faculties with consciousness, linking irrevocably together all the particulars read off by the faculties from consciousness, will give us a clear insight into some of the intricacies of "spontaneous suggestion," which have baffled the metaphysicians for so many years.

[TO BE CONTINUED.]

ECHOES OF THE WEST.—Mr. E. D. F. writes us from that far-off region, Dakota: "You may consider me a life subscriber, and I shall do all in my power to promote the circulation of the JOURNAL, which, I think, is the very best periodical published in America, or in the world. Except my Bible, there is nothing in print that I prize more highly." We would not object to one hundred thousand such subscribers.

ACROSS THE RIVER.

BY FRANCIS L. KEELER.

Ah! why do we sigh for the joys that are fled?
We know they are flown forever;
And we can not go back to bury our dead.
Across Time's rapid river;
We see them die and are hurried away
Across the pitiless river,
And our pleadings are vain with them to stay
In the silence across the river.

But still we reach our helpless hands
Back across the river,
To phantom forms in viewless lands
That lie across the river.
We listen long for low replies
To float from o'er the river;
Weeping, we watch with wistful eyes
For light across the river.

And oh! 'tis well for all to cast
At times across the river,
A backward glance into the Past
That sleeps beyond the river.
Alas! for those who drink no joy
While sailing o'er the river;
Whose gold of life is all alloy,
Whose mourning lasts forever.

Cheer up, cheer up! unhappy life!
Look forward to the morrow;
Forget earth's bitterness and strife,
And banish thoughts of sorrow;
For oh! beyond the treacherous tide
Of Time's tempestuous river,
Away upon th' eternal side,
Our joys will live forever.
CATUGA HEIGHTS, N. Y.

WHAT AND HOW SHALL A MAN PREACH?

BY A. A. G.

MR. QUICK-WITTED—the man who always has an answer ready for every question—and Mrs. Clear-Sighted—to whom everything is as clear as a bell—will both exclaim, no doubt, when they take up this number of the PHRENOLOGICAL JOURNAL, and glance at the heading of this article, "What and How Shall a Man Preach?" "Why, preach the Gospel, of course! what else should a man preach? The command is as plain as daylight, 'Go ye into all the world, and preach the Gospel to every creature.' I'm sure that's easily understood."

But perhaps when Mr. Quick-Witted and Mrs. Clear-Sighted begin to compare views, they will find that their ideas about the Gospel differ widely. Gospel means good news, glad tidings, and it may be that Mr. Quick-Witted and Mrs. Clear-Sighted will agree that the Gospel, as it is called, in the pulpit, and out of the pulpit, means good news, glad tidings, of Jesus Christ; but then, as the Gospel, in their view, includes a great deal, and a great variety of truths, they will fail to think alike.

And while they are talking, Mr. Over-Care-

ful, and Mr. Languid-Frame, and Mr. Look-Ahead, and Mrs. Touch-and-Go may happen, one after another, to drop in, and oh, what a talk will there be then! and a hundred-and-one opinions will be expressed about that blessed Gospel, which is simplicity itself. Possibly, before the discussion is ended, Mrs. Fastidious will make her appearance, with her sister, Mrs. Watch-Well, and there will be a Tower-of-Babel confusion, and it will all be about the Gospel—what is, and what is not, included in the Gospel, what their minister ought, and what he ought not, to consider as the Gospel. In one thing they will very likely agree, and that is that not everything that is lugged into the pulpit is a part of the Gospel; but just where they agree they will differ, for one will think that certain subjects ought to be considered as the very marrow of the Gospel, and another will say that those subjects belong neither to the marrow, nor to any other part of the Gospel. And after the question "What Shall a Man Preach?" has been looked at, in every possible point of view—after it has been racked and tortured and made to let out all it will let out, the question "*How* Shall a Man Preach?" will be brought forward and put on the rack, and every one present will have a hand in torturing it. With regard to the first question—"What Shall a Man Preach?"—Mr. Over-Careful will say, for he has said it a thousand times, "It is never necessary for a man to go out of the beaten track to preach the Gospel. If he only keeps to the well-traveled road he will find it easy-going, and every one who follows him will find it easy-going, and all will go on and have a quiet, pleasant journey."

Mr. Languid-Frame, with whose face and speech everybody is familiar, will wake up, and stay awake long enough to tell what he thinks, and it will be very amusing to see that he hasn't the most remote suspicion that his opinions have been well known for years.

"I am a hard-working man," he will say—and it is the very language he has used before—"I toil six days in the week, and sometimes a most irresistible languor steals over me on the seventh day. Yes, my brethren, I am occasionally very sleepy, and it is then that I lose all power to hold up my head and hold open my eyes. And, ah, it is then, when I can no longer direct my thoughts or my eyes to the pulpit, that I want to know that the preaching is *safe*. It is true that I shall not, at the time, be conscious of it, but it will be delightful to think, as I pass through the valley of Languor into the land of Nod, that all is *safe* on high, in the pulpit." Mr. Look-Ahead, who is a near relative of Mr. Languid-Frame, although he is never troubled with drowsiness—for he don't belong to the sleepy branch of the family—will say—he has been heard over and over again to say it—"My brethren, I am rightly named—I always look ahead. I have a very peculiar temperament, and, like my brother Careful, I think that ministers should be cautious, lest they venture *outside* of the Gospel, and thus make trouble for themselves and their hearers.

The Gospel of our Lord Jesus Christ is, as I view it, a Gospel of *peace*, and whatever makes a stir, an excitement, has nothing in it of the quietness of peace."

During this exchange of opinions, Mrs. Touch-And-Go's voice will be heard—and she'll say just what she always says when she talks about ministers.

"I always want a minister to remember—that is, if I am listening to him—that the Gospel can be proclaimed in a few words, and in a few minutes. I never could sit long at a time, anywhere, at least not in *church*. It makes me *nervous*."

When Mrs. Touch-And-Go has relieved her mind, Mrs. Fastidious will speak, as she often has, of the *delicacy* and *refinement* of her tastes, and of the great fastidiousness of her nature. "What and How Shall a Man Preach?" she will exclaim, raising her little white hands and making a gesture of disgust, as the memory of some sermon she has heard comes over her, "Why, he must preach what *people of taste* love to hear. I do abominate *common*, *inelegant*, preaching. It may save common, inelegant people, but no others."

Mrs. Watch-Well will also take her turn, and tell the little cluster of brethren and sisters that from her earliest years she was a critic; and that she never went to meeting in her life without feeling uneasy all through the sermon, because ministers are so apt to put things into their sermons that they had better leave out.

The truth is, Mrs. Watch-Well is one of those who "watch and pray," but then she has an original way of obeying the Scripture command. She watches her minister and prays he may make no mistakes.

But Mr. Love-Good and Mr. Do-Good—the twin brothers—have a very poor opinion of Mrs. Watch-Well, and also of Mr. Quick-Witted, and Mrs. Clear-Sighted, and Mr. Over-Careful, and Mrs. Fastidious, and all the others who undertake to tell what and how a man shall preach. Now, Mr. Love-Good and Mr. Do-Good are full of charity—their faces shine with it, but they insist upon it that nobody has a right to put a minister into a strait jacket and compel him to wear it. "Let every minister take his own way," they say, "for there is nothing in the world so hard for a man as to be some one else. Let him take the responsibility of preaching what he believes to be the Gospel, and if it hits you, brother Quick-Witted, or sister Clear-Sighted, don't hand it over to the next pew. Let it stay in *yours*, and let it do its work there, and when you see your minister again, thank him for the sermon that hit you and hurt you."

Most earnestly do the brothers Love-Good and Do-Good enjoin it upon all who go up to the "courts of the Lord" not to be busybodies, or meddlers with what belongs to the pulpit, and to the minister who stands in it.

"Don't burden him with *your* convictions," they say, "when he is already burdened with his own, and particularly with the great, oppressive conviction that you are not what you ought to

be, that you are not as self-denying, not as benevolent, not as full of good works as you ought to be. That is the heaviest conviction he has to carry, and it is so heavy that its weight gives him anxious days and restless nights; and you had better not add your conviction that his preaching is too plain, too close, too rousing, or not calculated to please the popular taste. Take what he gives you, take it like a man, and let it work in your spiritual nature and give you new health and strength—take it as *medicine*, if need be, and bless the doctor. As to your minister's reputation among men, let the good Lord see to that, for most tenderly does he guard the reputation of his servants."

Both Mr. Love-Good and Mr. Do-Good are men of a very cheerful countenance. They often smile—yes, even laugh—over their work, and they can not think, as Mr. Sobriety and Mr. Solemn-Face and others do, who attempt to tell not only *what* a man ought to preach, but *how* he ought to preach.

"If your minister does his work well, if his whole heart is in it, let him do it with a short face instead of a long face, if he sees fit," say these good brothers. "And if he chooses to sing songs, and make merry with his friends, and be glad as he journeys to the land of Canaan, don't talk to him about the dignity and solemnity of his holy office—in short, don't be so unholy as to tell your minister what or how he shall preach."

EXTEMPORARY PREACHING.*

THE author of this work is an English clergymen, who read his sermons for fourteen years, and becoming convinced that he was doing no good, resolved to change his plan. The candor of his confessions in regard to these fourteen years is wonderful. He says that he felt a sense of mortification every time he left the pulpit. For six years he did not write a single new sermon, but rehearsed the old ones. The effect of this upon the congregation may well be imagined. So at last he made a bold effort and spoke without even notes. The change was a difficult one, but he persevered, and after many years was so well satisfied with his course that he took up his pen to persuade others to follow his example.

No one can read this book without being convinced of the thorough earnestness of the writer. There is no wavering in his convictions. Some of the arguments which he uses to enforce the undoubted superiority of spoken sermons are carried too far. He tells his brethren of the Established Church that they alone have been guilty, to any great degree, of neglecting extempore speech. But the practice of reading is far from uncommon in this country; and in France, reciting from memory has been the custom of nearly all their great preachers. The fact is, that reading and reciting, which ought always to be

* "The Duty and Discipline of Extemporaneous Preaching." By F. B. Zincke. Reprinted from the London edition. Scribner & Co. Price \$1 50.

classed together, have peculiar seductions, and these have been felt everywhere. He also assumes that no good can be done by those who follow these methods, which is certainly not warranted by the facts; Edwards, Chalmers, Massillon, and others, accomplished much, although it is possible that they might have done still more by other modes of speech. With the exception of these overstatements, and a few other immaterial matters, we can cordially indorse the book, and recommend it to the attention of the class for whom it is designed.

There is one argument in favor of extempore preaching which we have never seen insisted on. It is, that the best sermon readers are those who imitate most closely the style of delivery that belongs to extemporaneous efforts. Imitation is always inferior to what it imitates. If written sermons improve just in proportion as they approach the fire and animation of spoken addresses, the inference is almost irresistible that the latter is the higher mode of speech.

On page 75, the author, in noting his own experience in extemporizing, refers to a phenomenon that apparently puzzled him not a little, but which would not have been so mysterious to a phrenologist. He finds that he can think and talk at the same time, and wonders how it can be. He hesitates between two explanations. One is, that the brain is in two hemispheres, each of which may act separately. The other is, that the mind attends first to one subject, then flies to the other, and back again, like a weaver's shuttle. The latter would be certainly a hand operation; and if the thought of the discourse would have to be let go while the speaker was searching for words to clothe it in, we fear that extempore speaking would be a very uncertain process. The first explanation is no more satisfactory, for the operations of the mind that one carried on simultaneously are not two-fold, but manifold. Let us see what a few of them are. First, the subject is dwelt upon; second, comparisons are sought for to illustrate it; third, proper language is found in which to dress the whole; fourth, the voice is intelligently controlled, modulated, accelerated, or retarded; fifth, the gestures of the arms and body, the expressions of the face, are fitted to the subject; sixth, the feelings of sorrow, love, indignation, etc., are called into play; and seventh, the audience is closely observed. All these, and still other operations must be performed at once, and without confusion, in a good extempore speech. Truly, if the brain was a single, or even a dual organ, it would have enough to do, and those who seek to relieve it by having their words all on paper, would not be unphilosophical. But how easily are all these things explained by phrenological science. Each organ does its own work continuously, and no other one interferes with it. Every good speaker knows that he can observe the audience, attend to his words, make the proper gestures, reason closely, recall facts in his memory, and choose what he

PORTRAIT OF BISHOP HOPKINS.

wants from them, without embarrassing effort. Causality and Comparison, reason and illustrate; Eventuality and Individuality furnish the basis of fact; Language clothes thoughts in words; the perceptive generally observe what affects the organs of sense; Time and Tune key the voices; Imitation controls the gestures, and thus all goes on harmoniously—that is, if the faculties have been trained to work together; otherwise the activity of one stops another, as talking prevents some men from using their arms. But if in speaking we attempt to carry on two processes simultaneously, that involve the use of the *same organs*, it will be widely different. Let any speaker try to carefully note the faces of his audience, while at the same time he brings some object up before his mental eye, and tries to describe its form, color, and position. He may use the *words* that describe these qualities easily enough if he has previously placed them in his memory, for that only involves the use of the organ of Language. But if he attempts to describe from the mental conception and at the same time to keep his eye on the audience, he will feel all the confusion of the shuttle process. We have been often surprised, after speaking upon subjects that did not require the use of the observing faculties, and looking familiarly into the faces of those who were near at hand, recognizing them, and noting the effects of what was said on them, to find that as soon as we ventured on an earnest description of natural objects, the faces before us would fade as completely as if a cloud had intervened. A few experiments of this kind would make any opponent of Phrenology take a humbler tone.

WM. PITTENGER.

BISHOP HOPKINS.

THE RIGHT REVEREND JOHN HENRY HOPKINS, D.D., Bishop of Vermont, and Presiding Bishop in the Episcopal Church of the United States, died on the 9th of January last. Although in 1866 we gave a brief sketch of him, his high official position and eminent mental attainments merit some notice by us, now that he has departed from this sphere of action. Of his phrenology we reproduce the remarks formerly expressed, as their correctness has been generally admitted by his acquaintances.

"Bishop Hopkins has a decidedly strong

facial configuration, and should be known for his strength of will, tenacity of purpose, and boldness in the expression of his sentiments. He is a man of rather strong likes and dislikes, his first impressions usually controlling to a great extent his views of character and subjects. He is not an unsteady, transitive, fluctuating person, but decided, disposed to carry his point where he can by forcible measures, strong declarations, and convincing argumentation. He possesses considerable policy; he can be easy and frank, or shrewd and evasive. He has, however, considerable respect for public opinion, the claims of general sentiment, but he is far from caring to have his opinions and authority ignored or questioned. In matters pertaining to his profession he shows foresight, steadfastness, and fidelity. Having once taken his stand upon a point of doctrine, he would be one of the last men to yield or waver. He is more a Roman than a Greek, and in character lion-like. Possessing a large brain and good physical forces, he is enabled to perform the duties connected with his office, and fully meet the expectations entertained by the laymen of the Church of which he is one of its highest officers."

From the New York *Tribune* we take the following succinct biography:

"Bishop Hopkins was born in Dublin, January 30, 1792. His parents were of English extraction, and emigrated to this country when he was only eight years of age. His early education was received mainly from his mother. He was intended for the law, but, after receiving a classical education, he passed a year in a counting-room in Philadelphia, and for a short time assisted Wilson, the ornithologist, in the preparation of the plates for his work. In his nineteenth year he embarked in the manufacture of iron in Western Pennsylvania, but this business was much prostrated by the peace of 1815, that two years afterward he failed, and betook himself to the study of the law. After six months' preparation he was admitted to the Pittsburgh bar; he practiced until 1823, when he quitted the bar for the ministry. He had previously married a daughter of Caspar Otto Müller, a retired merchant of Baltimore. Immediately upon his ordination in 1824, Mr. Hopkins became Rector of Trinity Church, Pittsburgh, and so remained until 1831, when he went to Trinity Church, Boston, as assistant minister on the Green foundation. In 1827 and 1829 he was clerical deputy in the General Conventions of the Church, and took a prominent part in the debates. He was a candidate for the assistant Bishopric of Pennsylvania in 1827, but there being a tie vote between his opponent, Dr. Onderdonk, and himself, he decided the contest by casting his own vote in favor of the other. In the same year that Mr. Hopkins removed to Boston, he became Professor of Divinity in the new Theological Seminary of Massachusetts, and the next year—1832—he was elected the first Bishop of Vermont, an office he filled until his death. He accepted at the same time the rectorship of St. Paul's, Burlington, which he retained un-

til 1856. One of his first acts in his new diocese was the foundation of a school for boys, which gave employment to a number of candidates for orders, and poor clergymen; but the buildings necessary for the accommodation of the school entailed upon him a debt from which he was not able to free himself for many years. He subsequently busied himself in building up the 'Vermont Episcopal Institute,' and was occupied besides with controversial and other works. Among these was 'A Refutation of Milner's End of Controversy, in a Series of Letters,' two volumes, published in 1854. His first work was published in 1833, and his last in the last year of his life. In the early part of the Rebellion he published a work in defense of Slavery, which was much spoken of at the time because of the source from which it emanated. One of his latest works was a 'Church History in Verse,' published last year, but this effort did not reach the dignity of poetry. Bishop Hopkins was present at the Pan-Anglican Synod at Lambeth, in which he took a prominent part. While abroad, the degree of D.C.L. was conferred upon him by the University of Oxford. He had but recently returned to this country and his diocese, and, notwithstanding his age, his death will be a surprise to many. In the dissension dividing the Episcopal Church, Bishop Hopkins was a decided champion of the High Church party, and refused to sign the famous protest of the Bishops last year against High Church practices."

Domestic happiness, thou only bliss
Of paradise that has survived the fall!
Thou art the nurse of virtue. In thine arms
She smiles, appearing as in truth she is,
Heaven-born, and destined to the skies again.—Cooper.

LITERARY WOMEN.

BECAUSE the good Father has bestowed upon a woman the gift of "expressing beautiful thoughts in graceful words," is it proof that He has kept from her the power of being and doing all things else? It would seem so, from the oft-repeated remarks we hear of literary women, as wives, mothers, and housekeepers.

Because out of the depths of her soul there gush words that lovers, husbands, and wives quote as the fondest, deepest expression of their own affection, she is voted incapable of loving very much. Because of the tenderness of her heart, she can fold in words of music that mothers all over the land sing to their little children for a lullaby, she is deemed unfitted for maternity. Because her hand can wield the pen, it is thought to be useless with the needle. In fact, because she has genius enough to write a song, an essay, or a book, it is sufficient proof with many, that she can not know enough to keep a room in order, cook a dinner, or even give directions to a servant; and for this reason, "she ought not to marry."

If this were true, if God, when He places this one gift in the hands of woman, makes her a dunce in everything else, then she ought not to bring upon herself duties which she has no power to meet. But let us know first if it be true. One says, "My own observation has confirmed this judgment. A literary woman once invited me to visit her. The invitation

was accepted, and upon entering her house the most disagreeable confusion met my astonished gaze." The question was then settled. But my dear friend, I beg you to think if you never saw a house in confusion, whose keeper was not literary? I doubt not that if this woman had never written a line in her life, her house would have looked just as badly. You said, "It is because she is literary," and not as you should have said, "It is because she is an untidy woman," just as people are always ready to remark, when a step-mother commits an outrage in the training of a child, "It is because she is a step-mother," and not as it should be, "It is because she is an unkind woman." Facts have shown that an own child will be treated cruelly when the mother is a bad woman, and genius and untidiness are not necessarily found together, any more than step-mothers and cruelty.

If my pastor should appear in his desk on Sunday mornings with hair uncombed and face unwashed, I should never think of attributing his singular appearance to his profession; neither should I affirm that all ministers went to church in the same condition.

Another instance is quoted: "I once called upon a friend, and found her sick, suffering through need of care, while her daughter was busily engaged in writing." And so the cruel selfishness and heartless neglect of this girl form the standard by which you judge all literary women. Whatever she wrote, God knows that it had no blessing in it for any one, because she lacked the very goodness which is the key to all pure and noble thoughts. Be assured that the women who have written truest and best have been those who have lived truest lives, who have been most loyal to every duty, and though the pen at times has had to wait, have found it to be the very discipline needed to mature and purify thought, and have found, too, in the cares and duties love has laid upon them, the springs of holiest inspiration.

If it be true that the greater love for beauty and harmony a woman has in her soul, the more disorderly her house will be, and the more shabbily she will dress; and the greater power she has to write words that will rouse all the tender feelings of others, the more heartless she will be, it is high time that poetry were crushed out of the hearts of women, that every one who has felt its divine presence should stifle the cry of her soul, "Woe is me if I preach not the word God is speaking to me," lay down her pen and live a life of mockery.

Many persons have the idea that when a woman writes at all, her whole time is devoted to it, and that everything else must be neglected. What has been only incidental is often taken as the measure of a woman's life-work.

Said Fanny Forrester, "People talk about my writing as though that were the only thing I ever did. Why don't they say something about my teaching, and all the other work I do."

Many who read with delight the early stories of Mrs. Stowe, know but little of their history.

"Having married a man with more brains than money, poverty sometimes knocked hard at her door. When necessity demanded, she would get a colored woman, who lived near her, to take care of the children for a day, and shutting herself up in a room, would write a story. With the money received for one of these she bought her first feather-bed."

The hand that now writes out the products of her wonderful genius toiled faithfully for years in household work, and even then gained credit for only what she wrote.

And Mrs. Hemans, through years of toil and poverty, forgetting none of her duties, neglecting nothing for the comfort of her little boys, herself their teacher, was singing the sweet songs that have lifted the burden from many a sick heart oppressed like her own.

The composition of the beautiful song, that has brought to so many sweet thoughts of the dear ones gone, "Over the River," was no interruption to a day's labor. It is said to have been written hastily, during an intermission of work, at the Lowell Factory.

Many a young girl, prompted by duty and unselfish love for father, mother, brother, sister, or friend, toiling in onerous work from day to day, and in an occasional spare hour coining in words the pure thoughts, aspirations, and yearnings of her heart, has had come back to her, with praises of her genius, the assurance that a literary woman can know nothing of the duties which she has so well performed, that although she might in time be able, by a half-day's or an evening's writing, to earn money enough to pay a kitchen girl a month's wages, she could not possibly have the inclination or the brains to tell that kitchen girl what to do, that should she so far forget herself as to marry, her husband would die of starvation, and her children cease to know that they had a mother. In short, that she is destined to stand apart from the most sacred offices to which a woman can be called.

It is doubtless true, that there are literary women who neglect duties which they have voluntarily taken upon themselves, who make bad wives, bad mothers, and bad housekeepers; who had better never have married; but it is equally true, that there is just as great a proportion of those who are not literary, who come under the same head, and I do protest against every fault in a literary woman's life being laid to the fact that she is a writer, leaving the inference clear that all other women are embodiments of perfection, because they are not writers.

A woman to be an efficient housekeeper is not obliged to wash, scrub, bake, and do all the drudgery with her own hands, and if she has the power to furnish the money for which others will do it, instead of drawing it from the slender purse of a husband, and at the same time bless humanity with good and noble thoughts, I can not see why it is not a fortunate thing. And because she has this power, I deny that she can not have the ability to superintend the affairs of a household, and will not find the time to exercise it—that because

she can write well, she can not love well, and loving well, she will do the best thing she can for those whom she loves.

I can not think that Mrs. Browning's "Fair Young Florentine" ever felt less tenderness in the caress of his poet-mother's hand, less sweetness in her kiss, or ever received from her less care and instruction than would have been his, had she not been gifted to "move two nations with one song."

Be careful, then, my friend, and not judge a whole class by two bad specimens, or you may retard the progress of woman more than one speech and one vote for female suffrage can make good.

HOPE ARLINGTON.

A WOMAN'S MANNER.

BY MRS. GEORGE WASHINGTON WYLLYS.

If ever there was an age when women were made much of—idolized, brought forward, developed in every possible capacity, almost deified, in fact, this is the age! No woman gets a chance to hide her talent in a napkin, nowadays. It is brought out, scoured up, polished, graven, set on the exhibition tables, for every one to look at and admire! If she does not reach perfection now, physically and mentally, she never will!

And yet there were women—women, too, whose names and memories make our blood stir with a thrill of instinctive pride, even through the silence of dumb centuries—before the days of Calisthenics and Gymnasiums, ere "Female Colleges" existed, and when any science, beyond the "daily page" of reading immortalized by the Vicar of Wakefield, was as a sealed book to them. We could hardly improve on some of those old-fashioned models, with all our "modern improvements."

Still we are not altogether satisfied. We have gathered the fruit, mellowed, ripened, and perfected, but the bloom is somehow rubbed off. We are like poor Frankenstein, not by any means exactly suited with the result of our labors!

Now, here is the trouble. Our women are educated, refined, charming, no doubt, but they are not *womanly* women. We miss the nameless grace, the indescribable charm that should characterize a woman as entirely and inseparably as fragrance characterizes a rose! Somehow, in the great crucibles of education and development, this strange, sweet essence has vanished and is gone—nobody knows how, when, or where!

If we were a man—one of those curious compounds of strength and weakness, energy and helplessness, stupidity and intellect—that so sorely need a second self by way of balance-wheel—where should we look for a true wife? For something that would be more than a mere ornament, better than a compendium of sciences, nobler than a trained parrot? We are afraid we should be worse off than Diogenes with his lantern!

We should not want a wife too much like ourselves. We should learn to dread the woman

who defies us with our own logic, who out-talked us on our own ground, who pitched her voice a semitone above ours, and who, in short, carried the doctrine of equality right into the domestic hearthstone. Imagine such a woman by our sick-bed; fancy coming home to such a woman after a day of discouraging failure or depressing business. If there was a "club house" within ten miles, we should flee to it as a city of refuge. There is much harsh judgment pronounced in the world. A man is "a brute" who spends his evenings away from home; what, then, is the woman who has failed to make that home attractive, and whose voice and temper make it hideous instead?

Too little attention is paid to the *manner* of women in the nineteenth century. We never stop to think that this manner is the letter of introduction they carry with them into the world; that by the touchstone of manner they will most assuredly be judged. And it is so difficult to watch this most impalpable of all feminine charms, to prune away redundancies and cultivate deficiencies! There is but a step between confiding frankness and unpleasant boldness—between vivacity and pertness—between simplicity and silliness! We have no sympathy with the prudish damsel who confines her conversation to "Yes" and "No," and looks upon all men as destroying demons, to be kept at arm's length, or looked at through a grating; yet is not the other extreme still worse? The tendency of the age is toward too great freedom in social intercourse between the two sexes. Men should be men, and women women; and when a young lady slaps her brother's friend on the back and calls him "old fellow," the result is a most unpleasant confusion of ideas! It is not at all unusual, nowadays, for a girl to "take a cigar" in the evening "with the rest of the fellows!" Not a cigarette, that compromise between Spanish vice and American folly, but a regular, full-fledged cigar!

Now perhaps we are hypercritical upon the subject; but from the moment we saw a cigar between the lips of a lady we were disposed to like and admire—always supposing us to be a gentleman on the *qui vive* for a matrimonial companion—all respect and esteem would die out of our nature toward that lady. She would have unsexed herself as completely as if she had been an Amazon. We could neither recognize her as a man or respect her as a woman.

Freedom of manner in public is another national fault. School girls of sixteen enter public conveyances with the confidence of young men. They look you boldly in the eye, press forward to a seat with the greatest sang-froid, and converse across the aisle in loud, self-assured voices about "Lib" and "Tom," and "the party last night," and "the surprise to-morrow night," as if everybody was as vitally interested in their concerns as they themselves are. They eat pea-nuts and throw the shells past you out of the window with an accuracy of aim that makes you nervous; they

clean and trim their nails, or perhaps pick their little white teeth with pins as they talk. Yet were you to call them "unladylike," how shocked and surprised they would be!

You see they *don't think!* Carelessness is the trouble—utter, reckless lack of thought! Girls, *do think!*

As they verge from sixteen toward the twenties, new perils beset their way. Their tendency is to become abrupt, quick-motioned, hard-voiced, and *fast*. They pride themselves on an independence which is but another name for coarseness. With the pure "well of English undefiled," from which Milton sang and Goldsmith wrote, as a heritage to their tongues, they express themselves in language befitting a stable-yard or a billiard saloon. They glory in the newest slang, the choicest repertoire of what Victor Hugo calls "Argot." They have no respect for the "sweet low voice" that Shakspeare loved, but hail you across the drawing-room as if you were somewhere out at sea, and speak from between their eyebrows, metallically and sharp.

And when the sweet old story of love and courtship weaves itself into the chapter of their lives, how do they comport themselves? They treat it as a joke. They "get engaged" for the fun of the thing, not because they ever intend to ratify the solemn compact before the altar. It is no new thing to hear of a young lady, "Oh! *she* has been engaged five or six times!" We hardly blame gentlemen for amusing themselves at the expense of such women as these.

And lately we have been surprised and shocked to observe the total lack of delicacy with which young ladies parade their " conquests" before the world! If a man asks a woman to marry him, and is mortified by a refusal, has he not a right to take it for granted that she will keep his secret as honorably as if it were guarded by the most solemn vows of silence? What, then, can we think of women who boast of their rejected lovers, as Indian chieftains carry scalps at their belt, and bring the most solemn episodes of life into the idle chatter of every day! It is as dishonorable as if they had stolen money or forged bills! You can demand some sort of satisfaction from a man; but when a woman's tongue is the criminal, what redress have you?

Shall we allow the manner of American women to degenerate into mere mannerism? Is there to be no dividing line between the language used on a race-course and that of our young ladies in boudoirs and ball-rooms? Are girls to be distinguished from their brothers only by the accident of dress? It is all very well for women to know how to take care of themselves, but there is a stage where independence becomes repulsive; it is right that women should develop all their powers and faculties, both of mind and body, but they have no business with those of a man.

We are weary in hearing impertinence called frankness, coarseness defined as independence, masculine boldness dignified into

the place of "a proper spirit!" When once a woman ceases to be truly feminine, she loses all claim to the chivalrous courtesies which are universally awarded to her sex, without gaining the respect due to a man!

Mothers, it is in your hands to make the manner of American women the most charming in the world. Daughters, it is for you to discountenance the bold flippancy of the day and study a manner that shall clearly and fully represent the white soul and sunny nature within. If, standing on the threshold of life and the world, you pray for aught, let it not be for beauty, or brilliant intellect, or fascinating tongue, but for a woman's womanly nature, and a manner that shall be its interpreter. Cleopatra herself could not wage successful rivalry against such a gift!

To be Queen of Hearts, a woman need only be sympathetic, tender, soft-voiced, with faith, hope, and charity templated in her soul. Men see enough of the dark and tempestuous side of life in their daily existence; their homes should be shrines wherein to gather new strength and recognize holier types; their wives should be "in the world, not of it!" It is not necessary for a woman to stand alone, defying the world. There are sufficient strong arms to fight the battle for her. Her strength lies in the very weakness of her slighter nature and more delicate frame, and the charm, subtle and sure, of a feminine manner is a more potent spell than ever enchanter wove!

Let us not fall into apathy on a subject of such importance. The evil is rapidly advancing—the remedy can not be too soon applied.

THE PHRENOLOGICAL JOURNAL.

BY MISS L. S. SADLER.

I HEARD one day a young lady say,

"When you go down town, don't forget it, I pray,
Dear father, to bring me a book.

I'm tired of music, I'm weary, you see—

To sit all day idle I feel so *ennui*,

So, father, dear father, now look."

"Ah, yes! *ma chère*, I will look, my child;

Your request, indeed, I think very mild.

What kind of a book shall I get?

There's Harper's, and Godey's, and Demorest's too,
And a great many others that would interest you—

Will any of these please Laurette?"

"Nay, father, don't get me any of these—

I want something new, to-day, if you please,
Something I never have seen;

I'm tired of novels, I'm tired of trash,

And silly love stories made up like a hash,

Or made out of nothing, I ween."

"You're a strange little girl; but if I can find

A book that will suit your fastidious mind,

I'll get it for my little darling;

So put on your hat and take a short walk,

And when I come back we'll have a good talk

About the *new* book I shall bring."

"Father thinks I'm a child—he calls me his pet,

He brings me to read the last novelette;

I'll be eighteen this next December;

I want something to read that will do my heart good,

And give to my mind some nourishing food—

Something I'll always remember."

"Ah! there is dear father at the gate now I see,

With a book in his hand he has purchased for me;

Oh! I'll give him a kiss so sweet."

"There, little pet, I took a good look,

Up street and down, to get the *best* book,

And it surely is hard to beat."

So he threw in her lap the book he had brought,

And he looked in her eyes to see what she thought;

She said, "For a joke you've got a diurnal."

But she tore off the wrapper—and O what applause

Did fall from her lips when she found that it was

"THE PHRENOLOGICAL JOURNAL."

DR. ELIZABETH BLACKWELL.

[TRANSLATED FROM THE LEIPZIG DAHEIM.]

ABOUT twenty-six years ago there died in America an English merchant named Blackwell. He left nine children without the means of support. Elizabeth, the eldest, in connection with her sister, opened a school in order to maintain the family. Through economy and untiring perseverance they accomplished this, but the thought often came to them: How much more easily we could make our way if we were men, or if so many lucrative employments were not closed to women! Sickness in their own and neighboring families drew their attention especially to the calling of medicine. From that time on Elizabeth, with that energy peculiar to her, occupied every spare moment in the study of medical and anatomical works. This she continued until 1844, when, after the closing of her first school, she undertook a larger one, which secured her greater returns, of which she was able to reserve a portion for the furtherance of her object. She was not satisfied to commence the practice of medicine as many of her sex had done, without either diploma or suitable preparation; she desired a thorough medical education, and a regular physician's diploma. One of the most prominent physicians of Charleston, Dr. Dickson, received her, conducted her studies, and assisted her in them as much as possible. After she had for three years studied with unabated diligence, she went to Philadelphia, where she sought vainly for admission in a medical college. She did not, however, allow this rebuff to discourage her, but having obtained a list of the medical colleges of the United States, she went to them in turn in order to ask admission. Notwithstanding the brilliant testimonials of her Charleston teacher, Dr. Dickson, she received a refusal from twelve institutions. But she did not relax her efforts, and finally the way was opened to her.

The medical faculty of the University of Geneva, New York, did not positively refuse, but resolved to lay it before the students for decision. These were unitedly in favor of receiving her, and even promised in an address which was sent to her, that they as individuals, and as a body, would so conduct themselves, that if she should accept their invitation, they would never, either by word or deed, give her cause to repent having taken the step.

In November, 1847, Elizabeth Blackwell went, according to this decision, to Geneva, and was enrolled as No. 417, and devoted herself to the study of the different branches of medical science with a zeal corresponding to the difficulties to be overcome.

In the year 1849 she was, after examination, passed for graduation. The church in which the commencement exercises were held was crowded. After the introductory ceremonies and speeches, the young lady, with several of her fellow-students, ascended the platform, and received from the hand of Dr. Lee, the worthy President of the University, the diploma which (officially sealed and tied with a blue ribbon,

the word *dominus* changed into *domina*) admitted her into the circle of the medical fraternity, which, up to this time, had been closed against her sex. Every student upon receiving his diploma returned his thanks. Upon receiving hers, Dr. Elizabeth said in a low voice, while a breathless silence reigned in the audience, "I thank you, honored sir, that the institute, at the head of which you stand, has sanctioned my studies. With the help of God, it shall be the aim of my life to honor the diploma which you have to-day bestowed upon me."

In his closing speech, the President remarked that a young lady had, during the last session, attended the University, "an innovation fortunate in every respect," and added that the "zeal and energy which she had displayed in her studies had served as a brilliant example to the whole class," and that "her presence had in every respect exerted a beneficial influence on her fellow-students; and that the heartiest good wishes of her teachers would attend her in her future career." Her thesis was highly commended by the assembled professors, and printed by order of the faculty.

Shortly after, Dr. Elizabeth went to Europe, and after several vain efforts, finally obtained admission in a few hospitals in Paris; then visited the celebrated water-cure at Grafenbourg, under Priessnitz, and went from thence to London, where she practiced in several hospitals and thoroughly acquainted herself with the details of the movement-cure, which Geordi had introduced into England. Provided with many recommendations from eminent physicians of Paris and London, she returned in 1851 to New York, where she established herself as "physician for women and children." But here, also, much zeal and perseverance were requisite to success, the opposition of physicians, the prejudices of the public, and the entirely isolated position which she was compelled to assume, must be overcome step by step, and day by day. Her path became gradually smoother; her practice increased; she became able to purchase a house; a circle of friends gathered around her, and her reputation slowly and surely increased.

In winter she lectured before women on popular medical subjects. Later, she published a book treating of the laws of life, with especial reference to the physical training of girls, and particularly insisting that gymnastics should be introduced into all schools as a regular subject of instruction.

In the year 1853 she laid the foundation of a hospital for women and children, in which she not only offered medical advice and prescriptions to indigent women, but especially to instruct them in the care of their health and the physical training of their children, and to insist upon the introduction of rational habits of life. The peculiar aim of this establishment was the preparation of skillful nurses. The undertaking succeeded admirably, and four years later her sister Emily, who had after great difficulties just received her medical diploma, joined her. These two courageous women hav-

ing by their great perseverance succeeded in winning the confidence of the most respectable men of New York, and having been supported in their philanthropic endeavors by the municipal authority of the city, decided, later, to connect with their hospital a school for lady physicians.

They confined themselves entirely to the treatment of women and children, and now stand in the most friendly relations to the principal physicians of the city, by whom they are often invited to consultation. They have succeeded in fully demonstrating the fact, that the practice of this profession, which had hitherto been considered as belonging exclusively to men, is entirely compatible with womanly simplicity and modesty.

POSSIBILITIES.

"WHATEVER man has done, man may do," and acting on that proverb, how many difficulties are overcome and practical results obtained from apparently impracticable theories!

Possibilities are the rounds to ambition's ladder; the tangible things which we grasp so readily, and thus elevate ourselves to heights we desire to attain. That is not a true life that attempts impossibilities; that spends the moments of time in attempting to penetrate the arcana of hidden mysteries, and dies unsatisfied and unrecognized. The foundation must be firm, or the building will be insecure. Prove your position, and then maintain it. The old adage, "Let well enough alone," has given way to the new system of improvement that carries everything before it. "Improve! improve!" is the cry of to-day; and yesterday's failures are subjected to the necessary test, and made to conform to present exigencies and nineteenth century principles. This is the very spirit of reform. This adds new features to science, mechanics, and mercantile and literary pursuits. One man proves that steam can be made useful, and applies it to his own peculiar idea. Another sees where still greater power can be imparted by it, and his suggestion touches the spring in another brain; and so the idea goes on developing, improving, and bringing out its highest capabilities.

God, in making man a superior being, has given him such vast control, and the power of subordinating to his will, that it is impossible for a finite mind to put a limit to finite capacity. Nothing but divine power working through man could enable him to accomplish successfully one half that he undertakes. The wild beasts of the forest are brought into subjection; the untamable forces of Nature are harnessed to the chariot of Improvement; the winds and the waves perform their part with due alacrity.

We are but cultivating the seeds that others have sown, and we, in our turn, must plant for posterity. "Whatsoever a man soweth, that shall he also reap." We make our own harvests, and if the reaping-time comes not in this life, we shall obtain our increase here-

after. But there are more reapers than seed-sowers—that is, sowers of good seed, men who are living on the product of others' toil and care, and doing nothing themselves toward the advantage of those who are to succeed them.

I often wonder what some people think of; or if they ever think at all. They deny their own ability, and confess a helplessness that is a reproach to themselves and to their Maker. How true it is that "we never know what we can do until we have tried;" and many a one has found himself *divested of himself*—launched upon a sea of troubles, and obliged to use efforts that were only lying dormant within him. Man is full of dormant energies, many of which do not need to be aroused until the time of emergency, while others are in constant demand, and every day some new capacity is aroused by the cry, "Awake, thou sleeper!"

Could you ask for a wider field than the whole world?

However *well* you do, it may be possible for you to do *better*. This is not to encourage discontent; far otherwise, for I hold that that man is only truly contented who is satisfied that he has done the very best that he could. The frog that aimed to be as large as an ox attempted an impossibility, and perished miserably. The rose may say, "I can not be a lily; but I will do my best to be a perfect flower, the sweetest of my kind;" and the effort is appreciated.

Man, made in the image of God, is capable of attaining to wonderful heights of moral, mental, and physical excellence, with *positive good* to start upon. There must be a positive element before there can be any improvement. There is no advance in quicksand.

Try yourself, and find out of what you are capable. "As thy day, so shall thy strength be," and the veil that falls before you and hides each successive step of your progress will stand like a wall of adamant when you trespass on God's domain, and are checked by the warning words, "thus far shalt thou go, and no farther."

Man's own heart realizes what are its possibilities, and knows how much the wisdom of this generation is indebted to the past, and responsible to the future. VIRGINIA VARLEY.

A LITTLE BRIEF AUTHORITY.—It is not only an amusing, but a ludicrous sight to observe with what an assumption of dignity a young sprig of royalty puts forth his commands. It reminds one of a beardless midshipman ordering about an old gray-haired sire. It is said that the hardest task-masters are they who themselves are only subjects or slaves. Put one of these to oversee others, and he is most likely to be much less merciful than the rightfully constituted superintendent or overseer. We see this in schools; a sub or assistant teacher, makes a far greater display of authority than the principal. Modesty is a decided virtue in one whose duty it may become to manage.

THE BROAD WAY.

• BY RUTHELLA SCHULTZ.

"MANY there be that go in thereat," and poor Percy Howell was one of the many.

He was a frank, good-natured, impulsive boy; the latest born and only surviving child of his aged parents. One by one the others, whose brief lives were full of blessings, had been buried in the village churchyard; and, without a shadow of doubting, the old couple hoped to see their boy's promising youth ripen into the fragrance and fruitage of a perfect manhood.

Alas! they never sat under the shadow of that tree, nor inhaled its perfume, nor gazed on its beauty, nor partook of its bounty, for the ax was early laid at the roots!

Percy was just twenty when he left his native village for the distant city—his father's house, with its simple cheer, for a homeless abode among strangers; his fond parents, and the tried friends of his youth, and the sweet girl of his choice, for the mixed multitude of the metropolis.

Had you been there when the stage-coach stopped at the lane gate; had you seen the serious faces of the neighbors gathered around the aged mother, wiping her streaming eyes; the feeble father, uttering his blessing; Annie Collins, Percy's sweetheart, rushing distractedly into the house, you would have thought that the same thing had happened before. They, at least, thought so. The neighbors, as they walked homeward, said one to another that there were not many boys nowadays like Percy Howell. The old couple, returning to their fireside, wept to see his vacant chair, his lonely dog, his empty place at table, and his unpressed pillow. Surely no other son so dear had ever left a home so sorrowful!

As for Annie Collins, she went back to her father's cottage, and quietly discharged her daily duties. But whatever occupied her hand or heart, there flowed a constant undercurrent of thought, and Percy was its burden. "My Percy!" she whispered to herself a thousand times a day, as if to assure her sad heart of its blessed ownership.

During the journey, Percy, with eyes on the lookout and ears on the alert, and with a heart full of bright hopes and untried expectations, went joyfully on, and thought but little of the dear ones at home.

Yet, when at nightfall he found himself in a little hall-room, containing a bed very suggestive of a bier in its six-by-three dimensions and white covering; a washstand of iron, with ordinary accompaniments, minus soap; one chair; and a diminutive looking-glass, he began to wish himself at home.

"Wh-e-w!" said he, giving vent to a deep-drawn breath. "Wonder how Annie is! S'pose she's thinking about me, this very minute. 'Fraid father won't get along with the out-door work! Wish I hadn't ha' come! Don't believe there's a fellow in New York

that's got a mother like mine! W-h-e-w! guess I'll look at the news!"

He had already seen everything of interest in the daily paper, but he caught it up and glanced over it to keep the moisture from gathering in his eyes. Running down the columns, he chanced upon the "amusements," and the following attracted his attention:

"Clerks, young men from the country seeking employment, clergymen, the judges of the various courts, policemen, and all officers of the law, should visit the Widegate Theatre, to see 'The Old Man of the Moor.'"

"Wasn't brought up to go to the theater," thought Percy, reading it again. "Don't believe in it; but—"

A knock at the door. Instead of calling "Come in," as a man does when he has been six weeks in a boarding-house, Percy cautiously opened the door and peered out. A fine-looking fellow, beside whom he had sat at the six o'clock dinner, said:

"Beg pardon! As you're a stranger, I thought you might be lonely. Wouldn't you like to go out for a short stroll?"

Percy was very grateful, and said as much; then took his hat, and followed his new friend down the stairs, and out into the lighted street.

They went directly to Broadway. Walking along that brilliant thoroughfare, Percy tried to appear as if he noticed nothing; but he saw much, and thought more. Among other things, he observed that the majority of young men carried a slender walking-stick, which seemed to add grace and dignity to the bearers. An air of elegance surrounded these men, which, to Percy's mind, came directly from the fanciful reeds which they waved coquettishly with daintily-gloved fingers. Moreover, they afforded employment for otherwise unoccupied hands; and Percy wished for a cane. Kingsley—that was the name of his new friend—carried "a beauty," the top representing an exquisite leg and foot, the knee-joint forming the bend of the handle. Percy resolved to have one just like it. In fact, he greatly admired Kingsley. He took on no airs; was neither supercilious nor patronizing; and Percy, grateful for his attentions, pronounced him a "first-rate fellow."

"Do you drink, Howell?" said Kingsley, pausing hesitatingly before a brilliantly-lighted saloon.

"No," said Percy, as if ashamed; "I—"

"Neither do I," said the other, moving on. "I take a glass of champagne, occasionally; but champagne is light, you know."

Percy didn't know, but he said:

"Yes, certainly."

"I am a Temperance man," continued Kingsley, with an emphatic gesture; "I don't mean to say that I believe in total abstinence. That is simply intemperate abstemiousness. The Bible says, 'Let your moderation be seen of all men.' Now, total abstinence is just as immoderate as total drunkenness. We should shun both extremes. In my opinion, the pledge

has made more drunkards, and consequently more liars, than any other one thing on the face of the globe! Do you play billiards?"

"Not much," replied Percy, unwilling to admit that he had never seen a billiard-table.

"Come in and try a hand," said his companion.

Percy would gladly have excused himself, but with a show of alacrity followed Kingsley up a flight of broad steps into a brilliant room where a number of men were engaged at play.

"Believe I won't play to-night—I'm rather tired," said he, as they entered.

"I suppose so," replied Kingsley, throwing himself on a luxurious lounge. "Make yourself comfortable for awhile."

Following his example, Percy took a sofa, and in the course of an hour gathered some knowledge of the game. True, he heard some things said that sent the blood tingling to his brow; true, he observed that the players invariably supplemented their game with a visit to the bar below; and he thought of his mother and of his Annie. Nevertheless, he determined that he would learn to play billiards.

"Come in and have a drink," said Kingsley, as they ran down the stairs. "Only a glass of lager; it will make you sleep."

So Percy, yielding, found himself standing at the marble bar and drinking from a glass held in a richly-wrought receiver of silver a beverage which, to his untaught palate, was exceedingly offensive.

"It is better, certainly, if one has one's own house and can afford to keep a billiard-room," said Kingsley, wiping his mustache, as they left the saloon. "Then a fellow can choose his company. But, since we can't have our private billiard-rooms, are we to be deprived of this manly and elegant pastime? Of course, the society at these public places isn't just the thing, but what can a man do?"

Percy thought of poor Tray, who was cruelly beaten for no other reason than being found in bad company, but said nothing.

When he reached his room it was nearly midnight. Though very tired, he took up the paper, and looked again at the singular advertisement that had interested him before going out. It seemed to apply to him. He was a "young man from the country, seeking employment," and he might get some very useful hints from the "Old Man of the Moor." If clergymen went, as the advertisement implied, he might, surely. And he believed he would go.

Next morning he rose late, and took breakfast in company with a very pretty young lady, who declared, with a bewitching smile, that since they sympathized in the matters of rising and breakfasting, they must be firm friends. Her hands were so small and white, her complexion so delicate, her waist so slender, and her hair so beautifully arranged in rolls and crimps and curls, that Percy regarded her with intense admiration, and mentally contrasted her with Annie Collins. It hardly need be said that his conclusions were very unfavorable to the sweet girl whose devoted heart was ever magnifying

his graces and accomplishments. Meantime, the young lady, whose name was Sybil Pearson, entertained him with her pretty chit-chat, and he lingered long over his coffee. At last, with some constraint, he said:

"Do you ever go to the theater?"

"I? Oh, yes! I never lose an opportunity," said she, with a look which meant, "try me, and see."

"Have you seen the 'Old Man of the Moor?'"

"No; but I want—oh! ever so much, to see it!"

"I would like—I mean, I intend to go. Would you—"

"Go with you? Of course I would!"

"When shall we go?" said he, animatedly.

"I am engaged for to-night, and to-morrow evening and the next. I can go on Thursday."

Percy thanked her most gallantly, and as it was now half-past nine, excused himself, and went after the morning papers. Sitting in his little room, he ran over the columns of "Help wanted," and found two or three dozen advertisements which he decided to answer. Not having the slightest doubt that among them all he should find a situation, he concluded which places he would like the best, and started. But, everywhere he went, the answer was invariably to the effect that they were suited.

And this morning, in late rising, prolonged breakfast, and tardy applications for work, was but a sample of many that followed. He was ever "too late" to obtain a position. Some "lucky fellow" was always "ahead" of him. He forgot his good old father's maxim: "The early bird catches the worm." Indeed, he seemed altogether to have forgotten home and friends. He neglected writing, because he had no "good news." He intended to write as soon as he procured a place; and so three weeks passed, and the lonely, anxious hearts of the aged parents were uncheered by tidings of the absent boy.

Meantime, he went with Miss Sybil to see "The Old Man of the Moor." He was dazzled, bewildered, delighted, and proposed going again. But the young lady reminded him that there were many other theaters as fine as the Widegate, and many other plays as good as this, and that he had not yet seen them. So they went the round of the theaters together; and at the end of a fortnight Percy found himself without money and without work. He stood at nightfall in his little room, considering what had best be done. To ask his father for assistance was out of the question. He knew that only by the most frugal and self-denying care the old man had provided him the fifty dollars with which he left home. He drew his watch from his pocket and looked at it. It was his father's gift.

"If I could sell or pawn it," said he. "What do I want with an old silver watch?"

An hour later he stood at a pawnbroker's counter.

"What do you want?" asked the Jew.

"Ten tollar! I say no! I give you tree tollar—no more. What you say?"

"I say no!" cried Percy, angrily. Then, on second thought, "Well, give me three!"

But this was not enough, even for his immediate need. Under a desperate impulse he stepped into a drinking saloon, and midnight found him at the gambling-table. Pretty Sybil Pearson had shuffled cards for him with her delicate, beautiful fingers, and had taught him to play. Under the tutelage of his temperance friend, the elegant Kingsley, he had learned to drink more than lager; but how and when to stop drinking had not been a part of his instructions.

What need to tell more? You find his history repeated in that of thousands who throng our great cities, and end a short career of crime upon the gallows.

The gray hairs of his aged parents were brought down in sorrow to the grave, and Annie Collins' golden curls were covered with the fresh turf of spring-time.

TIMOTHY O. HOWE, M.C.

THERE is much fineness of organization evinced in this face. His temperament is of a superior mental type, with an understratum of toughness and tenacity which enables him to entertain vigorous and prolonged intellectual efforts. He is an apt man, *i. e.*, he quickly perceives the bearing and relation of any subject proposed for his consideration. He is active in thought and sudden in conviction, a good judge of character and motive, but not so ready in speech as in reflective suggestion. He is an accurate and direct speaker rather than a copious coiner of words. He is not inclined to ring many changes on trite and commonplace expressions, but to speak with an unction, to the purpose. He is strongly impressed by appeals to his feelings, and has a deep sympathy for the oppressed or the suffering. He is an ambitious man, but not ardent in his aspirations, not disposed to avail himself of any anomalous or exceptionable aids to greatness. Being strongly impressed with the phases of life in its practical currents, contemplating his relations with others from an intellectual point of view, and being not over-hopeful, he is not impelled to inconsiderate attempts to secure popularity and power, but awaits his time and the development of the subject which engages his attention. He is a nervous man, withal, and has much need to bring about, by a careful diet and a composed mode of life, an improved

PORTRAIT OF TIMOTHY O. HOWE, M.C.

physical condition—a better tone of health, if he would live long and enjoy the little span which we call life.

United States Senator Howe is one of the ablest men of Wisconsin, and one of the most influential men in the highest branch of our American parliament. His integrity, firmness, and foresight have given him great weight with the people. As Michael Angelo carved his own character into beautiful symmetry while he was making images for the Pope of Rome, so Senator Howe has sculptured himself into shape by his uncompromising courage and his unyielding honesty. Hence he will stand fairer in the future than some who have been temporarily raised into power by favoritism, to be hurled to the dust again by that iconoclast the people.

Mr. Howe is about fifty-two years of age, and more than half of his life has been spent in Wisconsin. He was born in Livermore, Oxford Co., Maine, Feb. 7th, 1816, and graduated from Bowdoin College. After studying law, he commenced the practice of his profession at Readfield. In 1845 he removed to Green Bay, Wisconsin, where he practiced law in the leading courts. He was elected Circuit Judge in 1850, and resigned the office in 1855. In 1861 the Wisconsin Legislature elected him to the U. S. Senate. Six years of service in the Senate Chamber has proved his devotion to the best interests of his constituents, and added vastly to his reputation as a statesman of the highest order. He has many of the peculiar traits of character so marked in the lamented Lincoln. Like him, he is deliberate in forming his judgment, and firm in his convictions; and, like him, he is noted for his power of argumentation and clearness of vision. He seems to stand on a political Pisgah, which commands a view of

the promised land. He is rather slow of speech and unimpulsive, save at times when his earnestness kindles into enthusiasm, when he "pours out all as plain as downright Shippen or as old Montaigne." With a Western audience he has more power than some orators of greater pretension, because he speaks to the heart as well as to the ear and brain. His political life is a lesson of political virtue. He does not say one thing and do another. He does not make promises to the public which he does not redeem in the council chamber of the state. He has a political conscience, hence his opponents honor him, and his friends never fail to trust him. He is to the State of Wisconsin what Mr. Lincoln was to the State of Illinois, and is known as the honest politician. While some would-be statesmen—like Penelope in her task with her lovers—unwind at night the web they wove during the day, he is always trust-

worthy, and one knows where to find him, and how he will deport himself. There is not power enough in Congress to change his purpose when his judgment and his conscience have decided in favor of or against a great national issue; and there certainly is not money enough in the treasury to purchase his vote. It is not overpraise to say that he is truly an honest, faithful, discreet representative of the vast constituency which delights to do him honor. Although he is wise rather than witty, profound rather than brilliant, reflective rather than impulsive, he does not permit his head to gain the mastery of his heart; hence he retains his hold on public favor. There are scores of men who have brains and culture, but they lack power over the masses, simply for the want of heart and a love of justice. They spill their spleen in paragraphs, and in private scandal, and in public speech, and are never so well pleased as when they can make some shining mark the target of their pointless wit. Narrow minds are too often the victims of jealousy and suspicion, and their eyes are microscopes with which they magnify a mistake into an affront. With such persons you are an accepted acquaintance so long as you burn incense under their nostrils; but the moment you cease to worship the idol, like the cruel god of the heathen, it clasps you in a grasp that is intended to kill. Conceit is forever over-estimating its possessor and under-estimating every body else, and praise bestowed on a rival brings the venom to the tongue or the nib of the pen. Now it is refreshing to find a fair man, who faces every issue squarely, whose love of justice will not cause him to withhold what is due to an enemy even—whose mind is broad enough to grasp the great issues of the day, while he looks beyond the narrow neighborhood of

self-interest and farther than the boundary lines that embrace his constituency.

About ten years ago Mr. Howe opposed the doctrine of State Rights, then ably advocated by Judge Smith, a native of South Carolina, but a resident of Milwaukee. The arguments *pro* and *con.* of these debaters were like the blows given by pugilists in a square, stand-up fight. They were hard hitters; and at the close of the contest not a few men of sound judgment concluded that it was a drawn battle.

The following extracts from a spirited speech made in the U. S. Senate on the 10th of January, 1866, will give the reader a taste of his style—and pay him well for his time.

"Mr. President, when Paul stood there 'in the midst of Mars' hill,' a needy, perhaps a rugged, missionary, and told the indolent, idolatrous, and luxurious Athenians that God had 'made of one blood all nations of men to dwell on all the face of the earth,' do you believe he was playing the demagogue or not? When the Congress of 1776 assembled in Independence Hall, representing a constituency few in numbers, poor in resources, strong only in their conviction of right, and announced to the world 'that all men are created equal, that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights governments are instituted among men;' and when the members of that Congress pledged their 'lives, their fortunes, and their sacred honor' to maintain those assertions against the whole power of the British empire, do you really suppose they were talking for bunkum or not? And when the American people declared in their organic law that—

'This Constitution and the laws of the United States, which shall be made in pursuance thereof, and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land; and the Judges in every State shall be bound thereby, anything in the constitution or laws of any State to the contrary notwithstanding'—

do you think they actually meant that, or did they mean that the constitution and laws of each State should be the supreme law of the land, anything in the Constitution or laws of the United States to the contrary notwithstanding? I have put these questions, because however generally we may assent to these propositions in our speech, there are scarcely three theses in the whole field of discussion more flatly denied practically than these three. We do very generally admit Paul to have been a minister of the true religion, and yet if he had proclaimed in the Smithsonian Institute six years ago what he did in the Areopagus at Athens, he would have been driven out of the city. We do with our lips very generally assent to the doctrines of the Declaration of Independence, and yet when the American *auto-da-fe* kindles its hottest fires, it is to roast some reckless Radical who dares to assert the political equality of men. We can not well deny that the Constitution is the supreme law of the land, because the Constitution says so, and we have sworn to support it; but practically we do seem to

treat it much as if every law was supreme but that. I can not now afford the time to defend the teachings of the Apostle, or the doctrines of the Declaration. But if it will not annoy the Senate, I would like to make a few remarks in vindication of the Constitution of the United States. In my judgment, Mr. President, it is time the American people adopted the Constitution. We have, indeed, been taking the tincture for nearly a century. I am sure it has done us great good. I believe now we should try the sublimate, and I am confident it would cure the nation. Hitherto we have taken the Constitution in a solution of the spirit of States' Rights. Let us now take it as it is sublimed and crystallized in the flames of the most gigantic war in history. The war, as we know, was designed to demonstrate that the will of each State was supreme, and that the United States must defer to it. Before the Constitution was adopted, such was the case precisely. The several States were sovereign, and for that very reason the Union formed between them was worthless. The Congress of the Confederation could enact laws, but as their laws were addressed to the States, and the States were sovereign, they would obey or not, as they pleased.

"Said Mr. Sherman:

'The complaints at present are not that the views of Congress are unwise or unfaithful, but that their powers are insufficient for the execution of their views.'

"Said Mr. Randolph, of Virginia:

'The true question is, whether we will adhere to the Federal plan or introduce the national plan. The insufficiency of the former has been fully displayed by the trial already made.'

"The national plan was adopted. Thirteen weak and thriftless sovereignties were welded into one great and prosperous Republic. It was not the purpose of the Convention to destroy the State governments, but to change their character, to strip them of sovereignty and leave them no manner of authority to impede the execution of the national will. Hence it provides a national Legislature, to enact laws, not for the direction of States, but for the government of the people, whether within or without any of the States; a national Executive, sworn to see those laws executed if they are constitutional, whether a State dislike them or not, and a national Judiciary, to determine whether they are constitutional or not. The President therefore aptly says in his late message that 'the sovereignty of the State is the language of the Confederacy, and not the Constitution.' But in the Convention which framed the Constitution there was a party opposed to depriving the States of their sovereign authority. And since the adoption of the Constitution, there has been a party in the country which has stoutly maintained that the States have not been deprived of their sovereignty. They insist that unless each State can defy the authority of the Government the rights of the States are in imminent peril. They forget that it was the existence of this very power of defiance which imperiled all the States under the Confederation. And, sir, there can be but little danger that the several

States will be despoiled of their rights by a Government constituted like that of the United States. The President rightly says that 'the subjects that come unquestionably within its jurisdiction are so numerous that it must ever naturally refuse to be embarrassed by questions that lie beyond it.' Mr. Madison urged this same consideration in support of the national plan in the constitutional Convention. To my mind, the States have another security against the encroachments of the national Government even more reliable than this. It lies in the fact that the people who compose the several States *make* the Government of the United States. It is not much to be apprehended that the creature will devour the Creator. But the State Rights party resemble a congregation of dervishes dancing before an idol their own hands have created, and frantically imploring it not to destroy them. And the Government often seems almost as nervous as that party. Like the elephant with its owner under its belly, the Government often seems so conscious of its own weight as to be afraid to move for fear it will crush its proprietor. Let the Government move. It will not destroy the States unless it betrays them. When true to its office it is but the voice of the States. Is there danger that the voice will slay the speaker?

"Mr. Madison declared in the Constitutional Convention—

'That in the first place there was less danger of encroachment from the General Government than from the State governments; and, in the second place, that the mischiefs from encroachments would be less fatal if made by the former than if made by the latter.'

"Who that has lived during the last fifteen years will deny the correctness of that estimate? Yet, in spite of the terrible admonitions we have received against the liability to State encroachments, and of the disastrous consequences resulting therefrom, there are those among us still who talk rapturously of the priceless value of the States to the nation, who persist in estimating its grandeur by the number of States subject to its sway, and who dwell upon the idea of their 'indestructibility' with something of that fond and reverent air with which we speak of the immortality of the soul.

* * * * *

"But the flag! We are pointed to the flag of the Union; we are impressively told that it bears thirty-six stars, and that it 'declares, in more than words of living light, there are thirty-six States still in the Union;' and my colleague asked the other day, with much emphasis and fervor, if that was a truth, or a 'hypocritical, flaunting lie.' Nay, Mr. President, the stars do not lie; only my colleague, I think, fails to read them aright. If they asserted what my colleague seems to think they do, they would not tell the truth. But, in fact, they make no such assertion. Sir, it was a law of my father's household that the name of every child born to him should be inscribed upon a certain page in the family Bible. It was not provided that when death removed one from the circle the name should be erased from the record. And so it happened that the

Book, which is still extant, bears to-day the names of eight brothers and sisters. But I know, sir, I know full well, that only four of us are now living. So Congress enacted in April, 1818, that upon the national flag there should be 'twenty stars, white in a blue field,' and 'that on the admission of every new State into the Union, one star be added to the union of the flag.'

"I am not clamoring for scaffolds or prisons, or penalties, or forfeitures for the authors of these crimes. Fling them pardons if you choose. If repentance will not come in quest of pardon, send pardon in search of repentance. Give to the rebels life, and civil rights, and political privileges; give them offices and honors if you must; build altars to them, if you will, but, for God's sake, do not sacrifice men on those altars any longer."

Senator Howe is upward of six feet high, not of stout build, and his shoulders have the literary stoop. He has light-brown hair, light-blue eyes, and a fair complexion. His head and face bear the stamp of thought and culture. The forehead is high and broad, and the smoothly-shaved face shows features indicating refinement and earnestness of purpose.

SPIRITUALITY IN HUMAN PROGRESS.

THE sacred historian tells us "God created man in his own image." He doubtless intends to inform us that his Creator supplied him with powers and capacities approaching the divine; endowed him with a portion of his own intelligence, and gave him dominion over the earth, which he had fitted for his abode. The narrator closes the story of the creation with these words: "And God saw everything that he had made, and, behold, it was very good." We understand from this account that man left the hands of his Creator a perfect being, in the same sense as we say a perfect child, possessing all the faculties of man at maturity, but as yet untried, with those capacities capable of great development which would expand and enlarge in proportion as they were called into action. That man had an imperfect knowledge of God at that time is fully proved by the story of the fall. That neither the omniscience nor omnipresence of the Deity were fully recognized by Adam or Eve, is shown in their attempt to hide themselves from the all-seeing eye of God, and in their endeavors to excuse themselves for their disobedience. It is evident in the account of the death of Abel, that Cain was ignorant, whether willfully or not we will not now discuss, of his own nature, as well as ignorant of the character of that God he assumed to worship in his own way.

The powers of man which first seem to have been acted upon were his lower or animal passions; these operating alone without the guidance of the higher faculties. Hence evil gained the ascendancy, and so vile and wicked did man become, that the sacred historian uses these remarkable words: "It repented the

Lord that he had made man on the earth, and it grieved Him at His heart." One character stands out in bold relief at this period, one who had cultivated his spiritual nature, held communion with his Maker, and kept himself free from the vices and enormities of those around him. This man, one step higher in the progress of mankind than Adam, God chose to perpetuate the human race, and swept off the earth with a flood all the other descendants of our first parents, and with them all the evil that had accumulated since their creation.

The next character worthy of note in the history of man was Abraham, whose faith in God was remarkably exercised, and this faith God honored by distinguishing him from all mankind, and constituting him the head of a people who are yet a distinct race in the earth.

In looking over the history of Egypt, with whose records the descendants of Abraham were for a time identified, we see evidences of a high state of civilization, a rapid progress in the development of mind. We believe Egypt reached the highest civilization at which man can arrive without the development and cultivation of his spiritual nature. Ancient Greece and Rome, in their boasted superiority of civilization, can claim no precedence over Egypt in the days of her greatest prosperity. But this civilization extended no farther than the higher or wealthier classes; the masses of the people were ignorant and degraded, and governed by brute force. We are told by one historian, "The lower classes found their superiors severe task-masters, who punished them, when found delinquent, with a stick;" and we are all familiar with the degradation of the Israelites when reduced to a state of bondage by the Egyptians, the cruel laws imposed upon them, and the sufferings they endured. Yet amid all these persecutions, enslaved by an idolatrous people, they preserved the knowledge of their great Creator.

The faith of the mother of Moses, we have often thought, reached almost to sublimity when she so skillfully evaded one of their inhuman decrees, by placing her beloved child on the river's brink, and setting his sister to watch what should become of him. Did her strong faith afford her a glimpse into futurity and reveal to her the strange events in which her son should figure? This faith transmitted to her child developed with his growth, and assisted by the learning of the Egyptians, marks him a wonderful character in that early age. Commissioned by God, Moses established a government, of which God himself was the head. The worship of the one great Creator was the basis of the national freedom and prosperity of this peculiar people. In proportion as they acknowledged God, depended upon Him, and worshiped Him, would happiness and prosperity attend them. Idolatry would bring down the divine displeasure upon them, and severe punishment was ever the result of their departure from God. Moses enacted laws so wise and judicious that they are now the basis of the laws of all civilized countries. While

all other nations upon the earth fell into idolatry, this singular people alone preserved the knowledge of God. Their spirituality was kept alive and cultivated; consequently we find among them marked characters whose strong faith pierced the veil of futurity and foretold the most remarkable events in the world's history.

In tracing the progress of mankind from the time of Moses down to the advent of Christ, we find that instead of progression there has been a retrograde movement. The Jews had corrupted the law of God and made it of none effect by their traditions; and were now reduced to the condition of a Roman province. That Saviour, whose coming their teachers had prophesied, and of whom their forms and ceremonies were but types and shadows, they rejected and put to death; thus filling up the measure of their iniquities and calling down upon them the fulfillment of those prophecies contained in the 28th chapter of Deuteronomy. We think if we were inclined to doubt the authenticity of the Bible, that chapter alone, with its literal fulfillment, would set our doubts forever at rest. The civilization of the pagan world did not equal that of Egypt in the days of her greatest prosperity, and we must come to the inevitable conclusion that mankind can not of themselves make much advancement; they must be influenced by a Power above and beyond themselves, to arrive at anything like perfection. The historian says of the age of Augustus, in whose reign Christ was born: "The modes of artificial luxury prevalent in this age of the world were destructive to general happiness. No resources, no incomes were adequate to the demands made by the indulgence of such tastes and propensities. The sufferings of the mass of the people must have been excessive, in order to supply the more elevated classes with the means of their enormous luxury. So far as the Roman modes of living were introduced into Judea, and the people were infected by them, the evils above adverted to were felt in their full force. Plenty and want, power and oppression, violence and unresisting submission, side by side, present but a sad picture to the eye of benevolence. Such was the condition of Judea, and, more or less, of the Roman world, when our Saviour appeared among men. His doctrines and his religion were needed, at such a period, to save the world from the most frightful miseries."

In Luke iv. 16-21, we read: "And He came to Nazareth, where He had been brought up; and, as His custom was, He went into the synagogue on the Sabbath-day, and stood up for to read. And there was delivered unto Him the book of the prophet Esaias. And when He had opened the book, He found the place where it was written: The spirit of the Lord is upon me, because he hath anointed me to preach the Gospel to the poor; He hath sent me to heal the broken-hearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised, to preach the acceptable year of the Lord. And He closed the book, and He

gave it again to the minister, and sat down. And the eyes of all them that were in the synagogue were fastened on him. And He began to say unto them, This day is this scripture fulfilled in your ears."

We, of this age, can have but a faint idea of the effect of such an announcement. That this man coming from the common ranks, the son of a poor mechanic, should presume to teach, was incredible. That the poor, whose sole object in life seems to have been to minister to the demands of the rich, should have rights and privileges, and that His mission, if he had one, was especially to that oppressed, down-trodden class, was unheard of, and past all belief. That a doctrine whose tendency would be to subvert the prevailing order of things should be vehemently opposed by those who enjoyed their enormous luxuries at the expense of the suffering poor, can not surprise us. It might naturally be expected that the common people would hear Him gladly, hang on His words, and follow Him in great crowds, and we are informed that such was the case. But He not only gave them words of consolation, He also ministered to their necessities and removed their physical ills. He chose his disciples from among the poor and ignorant, and sent them to promulgate His doctrines through the world. These unlettered men, men from the degraded mass of the people, spoke with irresistible power and eloquence the teachings of their Master. The higher classes listened with astonishment to the weighty arguments which these ignorant men brought forward in support of their principles. The masses listened with joy and gladness to new truths which were proclaimed by men of their own station in life, and which were calculated to ameliorate their sufferings and relieve them of the wants and oppression under which they labored.

We learn from the words of Jesus that He could not complete His mission, while on earth, because mankind were not sufficiently advanced to appreciate His teachings. Light has been gradually opening up to us the fact, that the religion of Jesus was not only designed to teach us how to die, and to look forward to immortal happiness, but while this is true, it was also designed to teach us how to live, and how to secure the greatest amount of happiness while on earth.

We of this age are only just beginning to appreciate the sublime truths of the Gospel; we are only just beginning to perceive that the joys of earth were not intended alone for one class, and the sorrows of earth for another; that Jesus did not take upon himself the burden of poverty to show His sympathy for the suffering of earth, and for that alone, but He identified himself with that class, to show to the world when His doctrines should be fully understood, that no man or class of men should take the precedence over another, but that all should share alike in the blessings of earth, in the rights and privileges, the pleasures and joys, of a common humanity.

In looking over the history of all nations

since nations were first formed, we find that just as soon as luxury crept in, the seeds of decay were sown; they generated, and grew, and produced their legitimate fruits—the overthrow of those nations; but this result was not, as we have been taught to believe, in consequence of the effeminate, enervating, moral-destroying effects of luxury, but because these blessings were confined to the few, and were wrung out of the flesh, blood, and nerves of the masses, and because the more riches, the more means of happiness, the more of the blessings of this life the few enjoyed, the more degraded, debased, and impoverished, did the masses become. Our own country has been no exception. Slavery was the sin of this nation, and its baneful effects were felt by all. The idea was gaining ground every year, that capital—wealth—alone was honorable, and labor degrading and dishonorable. The poor whites of the South had imbibed the sentiment, until they imagined that to live in ignorance and poverty was far better than to improve their condition by the labor of their hands. This idea and its effects were felt at the North. Men both in the political and financial spheres resorted to every possible means, honorable and dishonorable, to gain riches in order to place themselves above the necessity of labor, until the foundations of our government began to totter, and the overthrow of the nation seemed inevitable; but there was yet enough saving power in the people to keep it from destruction. It is yet fresh in our minds how eagerly the men of the North rushed to the rescue of the nation, when its overthrow was threatened by the South. They fought well and bravely to crush the rebellion. As the struggle went on, a ray of light dawned upon their minds, and showed them that they were fighting for a principle, and the contest became more earnest and deadly. On those battle-fields, in deadly array against each other, stood not only slavery and freedom, but a wider, broader, deeper antagonism—an antagonism, now that the rebellion is fought out to the bitter end, which is felt and acknowledged not only by our own people, but also by all civilized nations. The principle involved was: Shall capital or labor rule? and the final issue of this question was decided on the battle-fields of the South. We may not all be willing to admit this, but it is nevertheless true. Americans may well pride themselves on their public schools, for it is to the educated, intelligent, working classes they owe the safety of the nation.

The eyes of the whole world are upon us, they are looking to us for the last great reform necessary to the perfection of the human race, a reform which shall preclude any man, or class of men, from living in idleness and sin upon the ill-paid labor of another—a reform in which each man shall furnish his quota of hands or brains for the benefit of the whole—a reform which shall give to all classes the means of enjoying perfect happiness, physical, intellectual, social, moral, spiritual. We believe this country

has been chosen as the theater of this great work, because she has taken the initiatory in all reforms calculated to advance mankind, since she became a nation; and because she has not to suffer punishment at the hands of the Almighty for the persecution of the "chosen people," the Jews. She has not, in common with other nations, been guilty of the base ingratitude of harassing and torturing a people who, amid the gross idolatry of all other nations, alone preserved to the world the knowledge of God.

We have fallen upon a time when men, aye, and women too, are permitted to think their own thoughts, speak their own opinions, and act in accordance with their own sentiments, without endangering their social relations, their lives, or their liberties. We have fallen upon a time when Truth will assert herself—when she will no longer consent to remain inactive, and lie buried under the dust and cobwebs with which ignorance, prejudice and precedent had covered her. She utters her stern mandates, and calls us to aid her in battling with error. Hear her, as she proclaims: "I am now on the eve of another irrepressible conflict, not a sanguinary one of swords, and musketry and cannon-balls, but a conflict of mind, a war of ideas. The next great issue in which I am about to engage is the conflict of Labor and Capital. Already my signs are abroad in the earth. These upheavings of the working classes, these trades-unions, laboring-men's associations, strikes, the agitation of the eight-hour system, portend the coming struggle, and I call upon all my followers to repair to my standard."

We believe we are approaching the time of which it is written, "Wisdom and knowledge shall be the stability of thy times, and strength of thy salvation. And the inhabitants shall not say, I am sick. They shall obtain joy and gladness, and sorrow and sighing shall flee away."

Look over the last century, and note the increase of knowledge. We have made fire and water do our bidding, and cause them to transport us and our merchandise from one end of the earth to another. We have brought the lightning from the skies, bound it in chains, made it our slave, and sent it over the mountain and under the ocean, to carry messages of hope, and love, and life to some, of fear, and hate, and death to others. We have become more acquainted with our own natures. We have progressed in phrenology, physiology, and hygiene. We understand better the cause and cure of disease; though we have much to learn in that respect yet. We believe it was noticed during the late war, that heavy rains followed large battles. Did not some of our scientific men make a note of it? And who will venture to say that we shall not yet be able to control the clouds and the state of the atmosphere? and pestilence and famine become memories of the past? We seem to be fast approaching the time, with our anesthetics, when there shall be no more pain. Another sign of the times is the effort the laboring classes are making to obtain their share of the blessings of this life, the rights and privileges of human beings, of which they have always and in all countries been deprived, and to secure which seems to have been part of the mission of Jesus.

HOPE.

MRS. J. C. CROLY ("JENNIE JUNE").

THE name of Jennie June has been familiar with the public for the past ten years, and it is our pleasure to present the JOURNAL readers with a brief sketch of her character which purports to be her likeness.* Of her temperament, it may be stated that her complexion is fair, the hair a light auburn, the eyes blue, the skin soft and fine, with a peachy hue, and the whole expression lively and animated. In the new nomenclature it would be called the Mental-Vital Temperament; in the old, Nervous-Sanguine, but there is enough of the Motive to ally her spirited action with much endurance.

The mind of such an organization works without friction; it is supple, racy, flexible, and available; indeed, the spiritual predominates, and she is most susceptible to impression. There is nothing dull or opaque in her composition; all is clear and transparent.

Phrenologically, she is blest with large Hope, large Conscientiousness, Ideality, and Sublimity. Intellectually, there is nothing wanting. She is a great observer, a good thinker, quick to perceive, clear and correct in her inferences, and of good taste. She has both originality and imitation; conforms readily to circumstances, adapts herself to all conditions, and retains her own individual identity. She acquires knowledge rapidly and communicates it freely. Her sympathies and her affections are strong. Her moral character centers in Conscientiousness, Hope, Benevolence, and Spirituality; there is less meekness than truth, sincerity, and sympathy.

Socially, all the organs are fully developed. She is a devoted friend, with strong attachments to home, children, pets, etc.; and has all the qualities to make a good wife and mother.

She accepts thankfully whatever the fates or circumstances bestow, and in prosperity or adversity would make the most of her joys and least of her sorrows. With her moral or religious nature, she would accept Christianity, conform to its

* We very much regret the imperfection of our portrait. It is true in general outline, but far from representing the genial, joyous, sunny face of the original. In this there is something more angular and severe than is true in nature. The fault is partly in the drawing and partly in the engraving. We beg the lady's pardon for presenting her in a garb so unsatisfactory to ourselves, but time would not permit us to re-engrave before going to press.

MRS. J. C. CROLY ("JENNIE JUNE").

requirements; but she could not fold her hands and sit passively, but must take an active part in the world's progress, doing with her might whatever she finds to do. Such a spirit could never be held in bonds, but would assert her rights in useful acts.

We append the following brief statement as an evidence of the industry of this wide-awake and spirited lady.

MRS. J. C. CROLY, the subject of this sketch, was born in Leicestershire, England, but came to this country when quite a child. Her family name was Cunningham, and her father, who was strongly interested and prominently connected with the Unitarian, Temperance, and Free School movements, all equally unpopular with the rich and powerful, suffered so much from persecution as to induce him to come to America, and subsequently remove his family here.

Mrs. Croly, the youngest of four children, had her educational opportunities much curtailed by the later struggles and vicissitudes of her father's family, and she may claim to be almost wholly self-taught. Worthily seeking to maintain herself, she taught school during the day, and not unfrequently had to study closely after school hours the lessons of her older and advanced scholars, in order to be prepared to answer their questions and explain away their difficulties.

Her early literary experience was in correspondence, for which she showed unusual aptitude. She became locally famous for remarkable powers of description and characterization, but did not appear publicly as a writer until after her marriage, when she com-

menced an engagement on the New York *Dispatch*, which was shortly transferred to the *Sunday Times*, and extended to other papers and periodicals, including the old *Democratic Review*, *Leslie's* and *Graham's Magazines*, the New Orleans *Delta*, and the Richmond *Enquirer*. To the last two she was the regular New York correspondent. Editorials, reviews, nothing came amiss from her pen; but she soon developed a specialty for domestic matters and fashions, and in a short time became the fashion correspondent of the leading papers in nearly all the large cities of the Union.

In the beginning of 1859 she accompanied her husband to the West, and acted as assistant editor in the conduct of a daily paper. Here she displayed her usual versatility, writing editorials, reports, or domestic articles on dress, social topics, and fashions, with equal facility; and becoming well and favorably known all through the West for her varied accomplish-

ments, and graceful, yet vigorous style of composition. Her reputation led her to receive frequent invitations to lecture, but she has always declined appearing in public.

On her return to New York, she resumed her position on the *Sunday Times* and *Leslie's Magazine*, fulfilling for the former paper the office of musical and dramatic critic, writing editorials, besides conducting her own special department, which made her *nom de plume* a household word throughout the entire country.

At this time she published a book, "Talks on Woman's Topics," which has had a very extensive sale; and subsequently "The Young Housekeeper," the title of which, however, was changed by the publishers to "Jennie June's American Cookery Cook;" and which has achieved great popularity. She was for a long time a regular contributor to the *Round Table*, to the *Home Weekly*, of Philadelphia, and has occupied an editorial position on *Demorest's Illustrated Monthly* since its commencement.

She is the regular fashion contributor to the New York *Daily Times*, the New York *World*, and the fashion correspondent of influential journals all over the United States. As her articles are very generally copied, it is estimated that her fashion gossip alone must have over a million of readers every month.

Mrs. Croly is the unacknowledged author of thousands of paragraphs which are floating through the press of the country. She is noted for grace of style, surprising industry, and inexhaustible variety. She moreover faithfully performs all the duties of a wife, mother, and head of a household, and at the same time accomplishes an amount of literary work of which very few men are capable. She has two children living, one between seven and eight years old, the other a baby—both girls. The grief of her life was losing her boy, a beautiful child, at the close of his first year.

SEEING, NOT BELIEVING.

"SEEING is believing," says the old adage. "Seeing is *deceiving*," say we, and we will prove it. Let us put our eyes in the witness-box and ascertain if they always tell us the truth, and the whole truth, and nothing but the truth.

Is the moon nearly full to-night? If it is, look out early toward the east, and see it rising, ruddy and round, and as large as a dinner platter. Take particular note of its size, and impress it upon your mind, so that you can carry it in your "mind's eye" for a few hours. Look out again when these few hours have passed. Toward the south there shines the moon bright and silvery, but how much smaller than it was before! No longer as big as a dinner platter, its size has dwindled down to that of a cheese plate. Surely, says a knowing one, "the moon must be nearer to us when on the horizon than when high up in the sky, or else it is somehow magnified by the thick atmosphere through which, when it is low down, we look at it." No such thing. Astronomers, with their delicate instruments, have repeatedly measured the diameter of the moon when it has appeared so large at rising, and again when it has seemingly got smaller, but they have never found any difference in the actual dimensions; and so it has been concluded that the enlargement is only apparent, that it exists only in our eyes and our senses, and is therefore nothing more or less than an optical illusion.

FIG. 1.

Here (fig. 1) are two parts or segments of a ring placed one above the other. Which is the larger of the two? Unanimously voted that it is the bottom one. Measure them, and you shall find that, if there be any difference at all, the bottom one is the smaller. Here the eye has again deceived you, having been itself deceived by the direction of the boundary lines of the segments.

FIG. 2.

In the above diagram (fig. 2) we have drawn a number of zigzag lines with four straight lines running across them. We want you,

curious reader, to decide by your eyes alone whether the horizontal lines are parallel to one another. From the evidence of your eyes alone you can have no hesitation in saying that they are not so. But just take a parallel ruler, or measure the distances between the lines at each end, and you will find that they are perfectly equidistant in all parts of their length, and are therefore strictly parallel. The fact is, your eye has been a bad witness, biased by the zigzag lines.

FIG. 3.

In fig. 3 we have two horizontal lines, that you may call the section of a board if you like, and an inclined line, that you may similarly call a wire, coming out from the top. Now, suppose you thrust that wire through the board in the direction in which it now lies, where will it come out?—where we have drawn the continuous line, or where we have drawn the dotted line? We hear you say, "Upon the continuous line, to be sure." No it won't; it will run in the direction of the dotted line, as you may see if you will lay the straight edge of a sheet of paper along it.

Can you divide a straight line into two equal parts, or judge which is the middle of a straight line? Try. Draw a number of lines of various lengths, and running in various directions, on a sheet of paper. Mark on each the point which you consider to be the center of it, of course estimating by the eye alone. Then measure your work, and you will find that while you have seldom hit the true middle, you will have nearly always gone on the same side of it. Some eyes invariably err by making the right side of the line too long, and others invariably make it too short. We have just tried our own case, and find that we always do the latter; in every one of a number of lines, without a single exception, we have put the middle point, or what we thought to be such, too much to the right. If you mark a number of points or divisions along one part of a

FIG. 4.

straight line, as we have done in fig. 4, and then try and judge the center of the whole line, you will always make the divided portion too short. You will naturally say that the point A, in our figure, is the middle of the line, B C; but measure the two portions of the line, and you will find A B considerably longer than A C. From this you will learn that every

space divided or cut up by crossing lines looks larger than it really is. Here is a striking example of this. In fig. 5 are two sets of

FIG. 5.

parallel lines, one set, marked A, horizontal, the other, marked B, perpendicular. A looks higher than B, and B looks broader than A; yet the heights and breadths are perfectly equal, both sets being inscribed in perfect squares of exactly the same size.

Is it not evident, then, from these few cross-questions put to our eyes, that those organs do not always tell us the truth? And if they do tell the truth, obviously they can not tell the "whole truth;" and from the foregoing illustrations, it is quite clear that they sometimes tell us "*something* but the truth;" and are therefore witnesses not entirely to be relied on.

Do you know that there is a worse fault than this delusive power in your eyes? that you are partially blind in each eye? You don't? Then we will show you that you are. We will prove to you that there is a small region of the retina of your eye, each eye, that is absolutely blind. Happily it is a *very* small region, and hence never causes us any inconvenience; but it exists in every eye, nevertheless, and this is how you may know it. Place two small but conspicuous objects—say two wafers or coins—upon a table in front of you, and about three inches apart. Close the left eye, and place the right eye about twelve inches straight over the left-hand wafer, keeping the direction in which the wafers lie parallel to the line of the eyes. Look steadfastly at the left-hand wafer, and the right-hand one will disappear completely; if it does not, it will be because the eye is not exactly in the right position, but this position will be found, and the wafer will vanish by moving the head a very little up or down.

The reason of the disappearance is, that the image of the vanishing wafer falls upon a point in the retina where all the minute nerves of that organ converge and pass out of the eyeball to go to the brain. The left eye may be tried in a similar manner, by bringing it over the right-hand wafer and closing the right eye.

If you will take two small circular disks of paper, one black and the other white, of exactly equal size, and lay the white one on a black ground, and the black one on a white ground, and place them in a strong light, you will see the white disk larger than its black partner. This is because a bright image falling upon the retina spreads its light, or excites the nerves of the eye, to a short distance around the natural boundary of the image, somewhat as a spot of ink let fall upon a piece of blotting-paper spreads itself upon the absorbing surface. Philosophers have given the high-sounding name *irradiation* to this ocular phenomenon. For our present little purpose it is sufficient for

us to know it by its effects, and to bear in mind that our eyes sometimes deceive us by making very bright objects look larger than they really are.

Then there are several illusions, out of which no small amusement may be got, depending upon the power the eye possesses of retaining for an instant the image of anything it sees. If the eye sees objects pass before it at a greater rate than eight a second, it runs one thing into another, and thus produces a continuous string of objects. You know, when you light a stick, and wave it in the air, you see not the spark at the end, but a line of light—a succession of sparks joined together, in fact. Amusing toys may be, and are, based on this phenomenon. Take a disk of card, and so fasten pieces of string to two opposite edges of it that you can make the card spin round by twisting the strings between your fingers and thumbs. Now draw on one side of the card a bird-cage, and on the other side a bird. Set the card spinning, and you will see the bird *in the cage*. You may make an infinite variety of such toys when once you have recognized the principle upon which they depend.—*Once a Week*.

On Physiology.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—*Cæcilia*.

My people are destroyed for lack of knowledge.—*Hosea iv. 6*.

FASHIONABLE INVALIDISM.

[It pleases us to see copied in so sensible and popular a religious paper as the *Christian Advocate* of this city, such a stirring and cutting appeal, by a well-known writer, on the subject of health, and the means to acquire it. We have been saying similar things for thirty years, and rejoice to see religious papers doing so good a service for the bodies of men as a means of the more effectually reaching their souls.—*Ed. A. P. J.*]

I hope to live to see the time when it will be considered a *disgrace* to be sick; when people with flat chests and stooping shoulders will creep round the back way, like other violators of known laws. Those who *inherit* sickly constitutions have my sincerest pity. I only request one favor of them, that they cease perpetuating themselves till they are physically on a sound basis. But a woman who laces so tightly that she breathes only by a rare accident; who vibrates constantly between the confectioner's shop and the dentist's office; who has ball robes and jewels in plenty, but who owns neither an umbrella, nor a water-proof cloak, nor a pair of thick boots; who lies in bed till noon, never exercises, and complains of "total want of appetite," save for pastry and pickles; she is simply a disgusting nuisance. Sentiment is all very nice; but, were I a man, I would beware of a woman who "couldn't eat." Why don't she take care of herself? Why don't she take a nice little bit of beefsteak for her breakfast, and a nice *walk*—not

ride after it? Why don't she stop munching sweet stuffs between meals? Why don't she go to bed at a decent time, and lead a *clean, healthy* life? The doctors and confectioners have ridden in their carriages long enough; let the butchers and shoemakers take a turn at it. A man or woman who "can't eat" is never sound on any question. It is wasting breath to converse with them. They take hold of everything by the wrong handle. Of course it makes them very mad to whisper, pityingly, "*dyspepsia*" when they advance some distorted opinion; but I always do it. They are not going to muddle my brain with their theories, because their internal works are in a state of physical disorganization. Let them go into a lunatic asylum and be properly treated till they can learn how they are put together, and how to manage themselves sensibly.

How I *rejoice* in a man or woman with a chest; who can look the sun in the eye, and step off as if they had not wooden legs. It is a rare sight. If a woman now has an errand round the corner she must have a carriage to go there; and the men, more dead than alive, so lethargic are they with constant smoking, creep into cars and omnibuses, and curl up in a corner, dreading nothing so much as a little wholesome exertion. The more "tired" they are, the more diligently they smoke; like the women who drink *tea* perpetually, "to keep them up."

Keep them up! Heavens! I am fifty-five, and I feel half the time as if I were just made. To be sure, I was born in Maine, where the timber and the human race *last*; but I *don't* eat pastry, nor candy, nor ice-cream. I don't drink tea—bah! I *walk*, not ride. I own stout boots, and pretty ones, too! I have a water-proof cloak, and no diamonds. I like a nice bit of beefsteak, and anybody else who wants it may eat pap. I go to bed at ten and get up at six. I dash out in the rain, because it feels good on my face. I don't care for my clothes, but I *will* be well; and after I am buried, I warn you, don't let any fresh air or sunlight down on my coffin, if you don't want me to get up.—*Funny Fern in Ledger*.

FREEZING THE BRAIN.—The great discovery that the brain of a living animal could be frozen, and afterward could recover, was made by Dr. James Arnott, who solidified the brain of a pigeon by exposing it to a freezing mixture. Here research stopped, because with an ordinary freezing mixture it was not possible to act on individual parts of the organ; but the importance of the discovery is not the less on that account. It was a marvelous revealing. Think what it was! Here was a living organ of mind, a center of power, of all guiding power, of all volition. It took in every motion of the universe to which it was exposed. It took in light, and form, and color by the eye; it took in sound by the ear; sensation and substance by the touch; odor by the nostril; and taste by the mouth; it gave out in return or re-

sponse animal motion, expression—all else that demonstrates a living animal. With it the animal was an animal; without it the animal was turned into a mere vegetable. And this organ, the very center and soul of the organism, was, by mere physical experiment, for a time made dead—all its powers ice-bound. And this organ again set free, received its functions back again, and, as we know now by further observation, its functions unimpaired. Surely this was the discovery of a new world.—*Dr. Richardson, F.R.S., in Popular Science Review*.

[We know men who *heat* their brains boiling hot by the use of alcoholic liquors, spices, etc., but we prefer a *compromise* between the extremes of freezing and boiling. It may be possible to freeze the brain of a warm-blooded animal like a pigeon—though it seems improbable. A friend of ours relates that when a boy he went one cold Sunday and caught fish, through a hole cut in the ice, and that when the fish were thrown upon the ice they soon were frozen as stiff as sticks. He carried his fish home as he would an armful of wood, and put them in a tub of cold water to be thawed; and when he went in the morning to get his fish, behold they were alive and swimming, and as happy as if they had not been caught and frozen. He felt alarmed, and thought it a supernatural warning against breaking the Sabbath.]

A BUSINESS FACE.

Most business men have an expression of countenance peculiar to their hours of toil. As the knights and men-at-arms in the days of chivalry wore their mail with the beaver and visor of their helmet closed as they went to the field, but laid aside their plate for silken garments when the fray was over, so these champions, in a struggle not less trying, often wear an impenetrable mask in business hours, and lay it aside only in their moments of relaxation from their daily pursuits.

The other day, one who had known a brother merchant only in his counting-house, met him by chance as he was frolicking with his children in the play-ground, and failed at first to recognize him in what seemed a strange disguise. The hard lines of the face, the stern, questioning look, the imperious gesture, the bold, almost defiant, attitude, were gone, and in their place there was a benevolent smile, a dimpled cheek, and a caressing fondness of manner that seemed to belong to another being.

Part of this business armor is assumed for effect, but much of it is the unconscious preparation for the daily struggle made by those who have had some experience of losses in bygone conflicts. Suspicion, born of repeated betrayals; doubt, almost justified by the prevalence of deceit; a wary, restless, watchful eye, trained to such activity by unprovoked attacks; an un pitying curve of the lip, proof alike against the solicitations of chronic beggary and the appeals of simulated distress; a rigid veil of unconcern to hide the eagerness

which would defeat itself in a bargain; the tension of muscle and nerve ready, like the bent bow, for sudden action; all these signs and many more which are familiar to everyday observation, often mark the man of business prepared for his daily task.

This arming for the counting-house as for a battle-field has many advantages. We discussed, the other day, the best method of relaxation, showing the importance of a total change in the bent of the mind to secure any refreshment from the wearied body. But this habit of wearing an unnatural face and manner during business hours renders such repose doubly difficult. The warrior becomes accustomed to the mail, and wears it unconsciously when there is no impending strife. The rigid features fix themselves in a habit of stern inflexibility, and the hard, unloving face frowns with its business aspect upon the tender gayeties of the family circle, chilling the atmosphere of home, and blighting all social joy. The wife can hardly recognize in this somber countenance the face that beamed upon her bridal hour; the children shrink from the cold caress, and fear to meet the forbidding glance, which has in it no touch of parental softness. We do not say that those who dwell amid the defended precincts of the family circle can do nothing to help the husband and father, upon whom such habits are creeping, ere these become indelibly fastened. As delicate hands of old aided to remove morion and breastplate, and even to unbind the armed sandals, that the warrior might rest at ease, so there are tender ministries now, which will easily charm the rugged lines of the sternest frown into a smile of peace and sweet content. They who only suffer, making no attempt to furnish the cheer for which their hearts are longing, must share the blame for their cup of misery.

[The above is *one side* of the question, given by the *Journal of Commerce*. Now we venture to inquire, what is the object of "business," which causes all this wear and tear—this wearing and iron-cladding the human face and heart? Is it money? But what if a man gain the whole world, and lose his soul? If gaining money be the object of any man's life, we pity him. His motives are low, selfish, miserly; or if he is ambitious to shine in external plumes, to him all will be found to be vanity. But if a merchant pursues his calling for the purpose of doing good to his race, to obtain the wherewith to feed, clothe, educate, and *elevate* mankind, his efforts will be blessed even in the doing. Nor will it be a warfare, but a pleasure, a happiness to work in a good cause, for a good object. Our merchants are too apt to lose sight of the true objects of business, and of life itself. A BUSINESS FACE is not attractive, inviting, genial; nor has it a godly expression, being framed under the influence of the lower, rather than the higher, faculties. Let business men beware that they do not serve his satanic majesty rather than the true God. If they pursue their business in the love and fear of Him, they will wear an expression, not repulsive, but attractive and acceptable to Him, and to all.]

TEACHERS AND SCHOLARS.

BY A TEACHER.

AN old and worn-out theme, I think I hear you say. So is every subject in its turn, as it is discussed by different minds. It seems to me that notwithstanding all that has been said, there is yet more influence required to work a change in the manner of training the minds of the young. Many years' experience has taught me that the teacher is generally deficient in the first qualification for her vocation, namely, a knowledge of human nature. I have seen those who possessed a store of knowledge, who were well versed in the arts and sciences, yet they did not advance their pupils, did not create a love of the study undertaken.

No teacher should enter the school-room without a feeling of intense interest in her pupils, as well as in the study pursued.

On entering the room, then, I would first attend to the purity of the atmosphere. This is absolutely necessary to progress. I have been in classes where the pupils were dull and heavy, wearing a listless and inattentive countenance. All may be changed in fifteen minutes. That class may be enlivened, spurred on to thought and action, by simply lowering the window, say an inch or two. You need not fear cold, provided there is no draft. Keep the room comfortably warm, but let the fresh air enter. You will soon see its good effects.

Next, study your pupils, and learn to read them, as you would the open page before you. I can assure you that you will reap your reward.

Again, a teacher of a class is very apt to take one set method, and strive to adapt it to all the minds before her; she thinks to use one explanation, one illustration, for the whole class. Now this is a false system. Each individual mind is cast in a different mold, and it is just as impossible to cause the same methods to appeal to the understanding of each pupil as it is to adapt the same food to all constitutions. The parent finds great diversity in the temperament and dispositions of her children, and is obliged to adapt her government to them, and where a look will answer as a reproof for one, some other means must be tried for the brother or sister. This study of the child's nature is just as necessary in the teacher as in the parent. The subject taught must often be presented in a new light and be illustrated in some familiar manner. And let me add here, that if the teacher would instruct by comparison she would find great benefit. What is learned in one study should assist in another, and every branch be brought to bear its influence on another.

A teacher is apt to attend only to the bright ones, and to neglect those denominated dull or stupid. This is a sad delinquency—"They that are whole need not a physician," will apply here. The greatest patience and unwearied effort should be employed by the teacher to make up the deficiencies, and all possible en-

couragement be given to such—they should be dealt with gently and kindly. Strive above all things to interest the child and make it happy.

Before closing my remarks, I would refer to one other point; it is the too constant use of books. The teacher must have resources within herself. Especially may the branches of mathematics and grammar be taught with very little aid of the book. One who understands the principles thoroughly can handle them in a variety of interesting ways. Of course, every teacher must be thoroughly conversant with her subject. I might extend my theme, but enough has been said to give a few hints to those who perhaps have not looked at the matter in this light.

[We hope to hear again from this distinguished teacher, giving our readers the further benefit of her extensive experience.—
ED. A. P. J.]

CHILDISH ELOQUENCE.

"OH, what a lovely play I've had this afternoon!" exclaimed a sweet little girl, skipping in to take her place at the cheerful tea-table. And truly it seemed that the bright sunshine of that summer afternoon still lingered over the little golden head and looked out of the speaking blue eye; and its cheering influence nestled lovingly in her glad little heart. The mother looked very tenderly down at the little one, and was no doubt thinking of the brighter sunshine, the bounding footsteps, and the dear little face brought to the home circle. But her faithful eye could not fail to see a long scratch on the little round cheek, so beautiful in its flush of glowing health.

"What have you been playing at?" she asked.

"Oh, climbing on the fence," said the little one carelessly.

"But didn't you get hurt?" said the mother.

"Oh, yes, I did fall over once and hurt myself a little, but I just cried in a *whisper*."

Could words express a more beautiful sentiment? Beautiful in its very simplicity, beautiful as the rose-bud lips that gave it utterance, and pure as the mind that gave it birth.

From whence comes this unstudied eloquence, these little "gems of thought" falling from the lips of children? Are they the gift of some higher, holier Power, to teach us the lesson that "a little child shall lead" us? Or does the intellectual growth outstrip the physical, and with its invisible tendrils reach out to grasp ideas for above the capacity even of mature years?

What a sacred responsibility, what a precious trust is the molding of a character, the cultivation of a mind that must live through eternity! EMMA.

How delightful the task of pouring fresh instruction into the young mind, and awakening generous purposes in the glowing breast!

NEW YORK, MARCH, 1868.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous preciptes of telling unbiased truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*De Poe.*

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED is published monthly at \$3 a year in advance; single numbers, 30 cents. Please address, SAMUEL R. WELLS, 389 Broadway, New York.

PAUPERISM—ITS CAUSE AND CURE.

IN a well-organized and properly conducted community there can be no paupers. Even a well-established religious society so manages as to provide not only for all its members, but also for the children of its members, who may be left destitute orphans. There are no paupers among Quakers or Shakers, and the same is true of many other religious denominations; each individual in prosperity contributes whatever may be necessary for any one overtaken by adversity, as in the case of epidemics, fires, floods, volcanic eruptions, or earthquakes. The Roman Catholics, in many places, take good care of all their own; but neither they nor other religionists feel in duty bound to provide for apostates. Thus Roman Catholicism is a sort of mutual benefit society; and it is well for every Romanist and every Protestant to have a part in some such organization. Take the Father Mathew Societies of our own and other cities; here each member, by paying his small monthly stipend, entitles himself to a share in the funds, which soon become sufficient for any emergency.

But what is the *cause* of pauperism? Why is one individual poor, and another rich? why one in prosperity, and another always in adversity? Foolish persons will answer it is "all luck and chance." They will say of a prosperous one, "He was born under a lucky star, or early in the moon, and is therefore always in the ascendant." While of an unfortunate we hear it said, "He was born under an unlucky planet," etc. But we reply: It is because of good habits, good government, and good management on the part of the one person, and bad habits and bad judgment on the part of the other; these conditions generally go together. Let

us examine our newly imported pauper. Look at him,—question him,—smell him; he is, in a measure, the victim of European monarchism and aristocracy; of course his habits are bad; he is ignorant, his only education consisting in holding out the hand for a penny, in bending the supple knee to "yer honor," "yer lordship," "yer majesty," or "my landlord," and in playing sycophant to his lordship and her ladyship. He is simply human fungus, indigenous to monarchical institutions, and thrives in his way nowhere else. He is a comparative stranger in a republic, and here he becomes at once self-supporting, or rapidly descends to the condition of a miserable outcast, having no part or share among a free people.

Our American-born citizens are not beggars, paupers, or vagabonds; though we grant that by intimate association with these imported creatures, weak ones take on similar habits, similar grossness and low life. How often do we hear the remark: "I would rather starve than beg!" and this is the spirit of all native-born, high-minded Americans. In contrast with this, see how generally—we may say how naturally—a foreign-born creature in human shape, who lands upon our shores, take to begging for a living; indeed, he was born a beggar, of pauper parents; a beggar he will remain; he was a child of want—it may be of sin—it certainly was of sorrow.

Where a few monopolize the land, and where many simply exist, living for generations "from hand to mouth," with no prospect or hope of a better condition, it is indeed hard; but how can it be otherwise? Talk of justice to men in a man-made monarchy? Justice does not, can not exist where there is a wicked monopoly,—not only a monopoly of the land, but also of lake, river, and sea; and a monopoly of labor itself.

How is it here in America? In our Republic, we propose to give all men an equal chance in the pursuit of life, liberty, and happiness. He is unjust—he is not a true democratic republican who would deny these rights and privileges to any man, not criminal or imbecile. These are conditions inherent in our institutions, and we have no pauper, slave, or dependent classes; we provide prisons for the criminal, asylums for the infirm, and "SCHOOLS FOR ALL." Paupers have no

business here; those we have, we repeat, are imported from the old corrupt European king and priest ridden monarchies. So much for one cause of pauperism; and that it is which crushes out all feeling of self-respect and true manliness, leaving the victim—politely called a subject—without dignity, decision, pride of character, or the manly spirit of resistance and self-defense.

Look again at the imported pauper; notice particularly his organization and temperament. He is low and coarse in fiber; he is flabby and flat; his walk is a shuffling mope, without spring or elasticity; his voice is dull and guttural, with a growl and a grunt—all pewter, no silver. He is saturated through and through with vile whisky and nasty tobacco, and he literally stinks. He is clothed in coarse garments, such as were long since "cast off" and out of fashion. He is unwashed, unshaved, uncombed, and unregenerated. Of course he is ignorant, superstitious, and stupid; his skull thick, and his brain poor and small. He breeds disease and pestilence; he brings yellow fever, cholera, and small-pox in his wake, and his very atmosphere is as foul morally as it is repulsive physically. And here let us put in a side remark, viz: a thing which strikes a native American as the most foolish and absurd habit and practice, now creeping upon us. It is that of a clean young man, say from eighteen to twenty-five years of age, imitating the disgusting old codger in the use of the nasty old tobacco pipe! How, with his senses alive and awake, his eyes open, and his reason not obscured by idiocy or insanity, a man can fall into and run in such a miserable rut, is past accounting for even on phrenological grounds. It seems more like the imitation of a monkey, without the sense of a man. Can they not see where they are going—where they must inevitably fetch up? Then how in the world, with the earth under them, and God over them, can they, how *dare* they, thus mar, pervert, degrade, and pollute His image in themselves? Such a young man is in the direct course to become a pauper such as we have described, "an old codger," a dissipated vagabond. All these creatures ultimately come to want; they readily adopt the European habit of begging and borrowing. They are always complaining of their misfortunes; they

quarrel with their best friends; get turned out of doors by their employers; disgraced in the social circle to which they have been admitted, and are on the rapidly descending inclined plane which leads to destruction and death. He who ignores the Christian principle of self-denial is without hope of Heaven, and he lives, merely subsists, to gratify a perverted appetite. If he wants or feels inclined to drink, drink he *must*. If he desires to smoke, to chew or to snuff tobacco, he *must* do it; and why should he not? Is not liquor a good creature of God? Is not God the Creator of tobacco? Then why not use them? The silly "soft" does not see that it would be as proper to use, in the same way, any other poison found in the pharmacopœia.

THE CURE.

The remedy for pauperism in America is very simple and very easily understood. It consists in self-denial and in Christianity. If the person will submit the question of abstinence or indulgence in stimulants or narcotics to our Saviour, and do what He would advise or approve, we will venture the assertion that he would at once forsake his bad habits, and have strength to resist further temptation. Let him, in all sincerity, say and feel those blessed words, "*Thy will be done.*"

Reader, where do you stand on this question? Are you on the downward path, or are you tending upward? Are you a slave to "habit," or are you free? What is your duty in the matter? Would you have the approval of God and of good men? Would you stand well with your mother, your father, your brothers and your sisters? Would you have the approval of uncles, aunts, and cousins? Would you have the confidence of all your friends and neighbors? Then be a free, temperate, clean, healthy man. Ay, more than all this, would you stand well with YOURSELF? Then be master of your appetite, of your temper, of all your inclinations. Learn to say "No" to every temptation, and hold to it. Be a man—be a gentleman, and you will escape pauperism, slavery, crime, and secure to yourself, your family, and your Nation, all in life that is worth living for.

Men generally know more of almost anything else than of themselves. To have "a sound mind in a sound body," one must know and obey the laws of physiology, and live in obedience to the laws of the mind.

HELP! HELP! HELP!

LAMENTATIONS FROM THE SOUTH.

WHEN it is considered that the South was not only conquered by the army of the Union, but was also stripped of its available stores and public property; its railways and its bridges destroyed; factories, churches, State capitals, school-houses, colleges, and universities burned—by one or the other of the belligerents—and the entire property, in *four millions of slaves*—valued at upward of two HUNDRED MILLIONS OF DOLLARS—SET FREE! and that all the vast army of Southern soldiers were paid in worthless Confederate money, a hateful of which—after the surrender—would not buy a loaf of bread, because it was utterly worthless; and that half a million of lives were sacrificed in the Southern cause; and when *all was lost*, starvation stared—still stares—the survivors in the face; their clothes being worn out in a four years' war; their cotton burned; agricultural implements rusted and rotten; their horses, cattle, and mules scarce, and poorly fed—what, say you, can the Southerners do in their emergency?

It has been and will be iterated and reiterated that "they fired the first gun;" "they brought on the war;" "they are to blame." Is this magnanimous? Is it even manly to twit a fallen foe? Let us look at this matter from a Christian point of view. Is it not probable that our Southern fellow-countrymen, at least the great majority of them, supposed themselves in the right? Had they not been educated in the schools and doctrines of "State sovereignty?" and were they not sincere—however mistaken in judgment—in the defense of their "peculiar institution?" Did they not peril everything—comforts, homes, and life itself? Aye, and they fought bravely. More plucky, more self-sacrificing men are not to be found. Had they not been opposed to *us*, we should have been *proud* of their achievements. They *were* our enemies. They are, and are evermore—let us hope—our friends. Political differences, as everywhere else, will and must arise. But there will be no more war between North and South. Our interests are in the future "one and inseparable." We shall most subserve our best interests by doing all we can to lift up our fallen friend, heal his wounds, and assist him to help himself. We repeat, while the North lost largely by the war, the South lost nearly all.* Our soldiers were liberally paid in greenbacks; our widows and orphans pensioned and provided for. The Southern soldiers, the widows and orphans got nothing, except rations, through the Freedman's Bureau, and such contributions as benevolent persons here and there contributed. Is it surprising that there should be "hard times" in the devastated South? Let each of us consider what is our duty in this emergency.

* Seeing their impending fate, during the war, the rich men of the South converted all their available property into gold and set sail for Europe, where they still reside. But the great mass of the people were either too patriotic or too poor to leave their country in its perils.

Let us leave party politics out of the question, when listening to appeals for help. "Let us do as we would be done by."

Every day we receive applications similar to the following:

GRENADE, MISSISSIPPI.

EDITOR PHRENOLOGICAL JOURNAL: In this most destitute region I am doing missionary work, having left for that purpose a flourishing school in Nashville, Tenn. The only hope of these people is so educating their children as to enable them courageously to bear and intelligently to conquer the hardships of their lot. But they are poor, abjectly poor! Twenty thousand churches, academies, and colleges were burned in the South during the war, and this is one of the few that were spared (The Baptist Female Institute of Grenada)—spared, but stripped of everything—furniture, library, apparatus, musical instruments, all, all! How can we educate our young people properly without books and literature! Money we have none with which to buy. Will you aid us to the extent of sending us your PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED? The charity would be hardly felt by you, and yet would be greatly appreciated by us. A very little current and choice literature would go far to supply the want of a library, and afford culture and information.

Trusting that your generosity may prompt you to respond to a case in behalf of a worthy cause and a destitute people, I am, Yours respectfully,

[Signed by the Principal.]

[This, and hundreds, we may say thousands, of similar appeals have reached us since the close of the war, and the burden has become too great for us to carry. What shall be done? Must we say No? How can we say Yes, and not be ourselves impoverished? If any of our present subscribers do not care to preserve their JOURNALS, they can make them useful, after reading, by sending them to a teacher or acquaintance in the South who may not be able to subscribe for it. Or, if there are any who may wish to intrust their charitable offerings to us, for the specific object of placing the PHRENOLOGICAL JOURNAL in the hands of those who desire it, but who are too poor to pay for it, we will join them in the work, and give the worth of \$15 in JOURNALS for every \$10 thus contributed. Parties contributing may specify in every instance to whom the JOURNAL shall be sent, or they may leave it open for us to decide. It must be made to appear, however, that parties receiving the favor are worthy and needy. This proposition shall remain open up to the 1st of July, 1868. Others will help the South to food and raiment; be it ours to help them to what they equally need—food for the mind.]

GOOD SPEAKERS.

EVERY American should be educated to speak in public. In a free country it is right and proper that the voice of every man be heard; and that he be so educated that he may speak *impromptu*, or without previous preparation. He is liable to be called on to give evidence before a court of justice, to speak in a religious meeting, or to address a society. He may wish to take part in a debate, to defend an absent friend, or a principle. But if he has not been taught to speak, he will be as awkward in this as a green-horn would be at a piano. We want good speaking every-

where; we want it in the pulpit, on the platform, before the legal tribunal, on the stage, and on the stump. If a man can talk in private he can learn to speak in public without embarrassment. And what a comfort this would be to thousands whose thoughts well up in their soul and clamor for utterance! The way to learn to speak is, when alone, to *think aloud*, or to put one's thoughts into words. Go into your study, and after reading upon a subject, becoming thoroughly master of it, draw up a plan according to which it should be presented. Have a beginning, a middle, and an end; make an outline sketch—a skeleton—of the address, and then talk it off. If you can go alone to a mountain, or to the sea-shore, with trees, rocks, or waves for your auditors, you may speak with the fullest freedom, expanding lungs and voice at the same time.

Were the same attention given to training for public speaking that is given to dancing or music in America, we should be able to electrify the world with the highest oratory and the sublimest eloquence. How is it now? Many of our ablest thinkers and ablest writers are bungling, ineffective platform speakers; and there are those in the pulpit whose mannerisms, affectation, and eccentricities completely drive away all real devotion. There is no necessity for this. It is only an evidence of neglect in this particular part of the preacher's education, which he has no moral right to inflict on God or man. If true eloquence is demanded anywhere, it is when appealing to the throne of grace, beseeching a Divine blessing. There are no other themes so impressive, no other occasions so touching to one's highest emotions; and the very spirit of the man of God should be so expressed as to bring all into reverential rapport or unison with the Divine will. Then, if he would touch and move the hearts of his hearers, he must himself *have* a heart, and use it. The way to beget love is to love; and it must be the genuine thing, sincerely expressed. Bogus is bogus, no less here than elsewhere. But the reader inquires, How can I become a good speaker? We repeat, by practice and training. Read the best authors, employ the best teachers, and then to make perfect, practice! practice!! practice!!! If you are animated by the love of God, and a desire to be useful among men, your efforts will finally be crowned with success, and your works and prayers answered with a blessing.

NO BUSINESS.

[A gentleman in Georgia sends us the following for the A. P. J. There are comparatively few of our readers who need this excellent advice; but there are millions who do need it, and nowhere else more than in the South. We are glad to give it wings, that it may inspire the aimless, everywhere, to form useful resolutions, and then perseveringly follow them. This article, "No Business," should be copied into all the magazines and newspapers.—Ed. A. P. J.]

FIRST of all, a choice of business should be made, and made early, with a wise reference to capacity and taste. Then the youth should

be educated for it, and as much as possible in it, and when this is done it should be pursued with an industry, energy, and enthusiasm which will warrant success. A man or woman with no business, nothing to do, is an absolute pest to society. They are thieves, stealing that which is not theirs; beggars, eating that which they have not earned; drones, wasting the fruits of others' industry; leeches, sucking the blood of others; evil doers, setting an example of idleness and dishonest living; hypocrites, shining in stolen and false colors; vampires, eating out the life of the community. Frown upon them, O youth! Learn in your heart to despise their course of life.

Many of our most interesting youth waste a great portion of their early life in fruitless endeavors at nothing. They have no trade, no profession, no object before them, nothing to do; and yet have a great desire to do something worthy of themselves. They try this and that and the other; offer themselves to do anything and everything, and yet know how to do nothing. Educate themselves they can not, for they know not what they should do it for. They waste their time, energies, and little earnings in endless changes and wanderings. They have not the stimulus of a fixed object to fasten their attention and awaken their energies, not a known prize to win. They wish for good things, but have no way to attain them; desire to be useful, but little means for being so. They lay plans, invent schemes, form theories, build castles, but never stop to execute and realize them. Poor creatures! All that ails them is the want of an object—a *single object*.

They look at a hundred, and see nothing. If they should look steadily at one, they would see it distinctly. They grasp at random for a hundred things, and catch nothing. It is like shooting among a scattered flock of pigeons; the chances are doubtful. This will never do—no, never. Success, respectability, and happiness are found in a permanent business. An early choice of some business, devotion to it, and preparation for it should be made by every youth.

REV. G. S. WEAVER.

DEATH OF PROF. AMOS DEAN.

We regret that we are called on to announce the recent and unexpected death of Professor Amos Dean, at his home in Albany, N. Y. Having enjoyed his personal friendship for many years, and from time to time received his cordial sympathy and encouragement in the prosecution of our labors, we can not but deplore the sudden separation which death has wrought.

Professor Dean was one of those noble-spirited men who, many years ago, when Phrenology was yet in its infancy in this country, did not fear to assert his convictions of its truth, and being at the head of the first School of Law in America, and moving in a highly refined and cultured social sphere, his influence has been ever most favorable for the dissemination of its philanthropic principles.

In our next number we will publish a more extended account of this eminent and worthy gentleman.

OUR CLASS OF 1868.

OUR class in practical phrenology commenced, according to announcement, on Monday, Jan. 6th, and after a pleasant yet laborious session was brought to a satisfactory termination. A portion of the time, four lectures were given during the day and evening; one on scientific phrenology, one on anatomy or physiology, one lesson in elocution, and one on practical phrenology, or exercises in lecturing and examining by the students. All the members appeared to be healthy, and well organized mentally. The different pursuits in life were well represented. There were in the class, teachers, artists, farmers, and others. They were distinguished for good common-sense, possessed of much varied information, and we believe that they are capable of carrying into the world more than an average amount of influence. We anticipate, for several of them at least, decided success, and are satisfied that each one, having given undivided attention to the wide realm of instruction afforded, will be able to acquit himself with credit. They come—as will be seen by referring to their names and residences—from a wide-spread field reaching from Canada to Alabama, and from Maine to Iowa.

The instruction in anatomy and physiology has been imparted by one of the ablest professors in the country; while the instruction in elocution was given by one of the most accomplished teachers in New York; while in the phrenological department they have had the results of our ripest experience, with the ample illustrations afforded by our extensive cabinet. We do not expect each student to start out an able and eloquent teacher; but this we know, that their instruction has been as thorough as we could make it; and it now remains for them by practice, and by familiarizing themselves with their own powers, to communicate to others that which their teachers have labored faithfully to communicate to them. We bespeak for each of them the respect and confidence of the public, and anticipate for them success and usefulness in their chosen field of labor.

We, the members of the Professional Class in Practical Phrenology of 1868, at No. 389 Broadway, New York, under the able supervision of Messrs. S. R. Wells and Nelson Sizer, deem it but a just tribute to the Science and its worthy exponents to offer the following.

Resolved, That we believe Physiology and Phrenology are among the most useful in the entire circle of the Natural Sciences, and therefore worthy of profound investigation, and that they should be more thoroughly and universally understood and practiced by mankind.

Resolved, That we recommend all who may wish to acquire a thorough practical knowledge of these Sciences to avail themselves of the facilities afforded by this institution.

A PASTOR'S TRIBUTE.

THE PHRENOLOGICAL JOURNAL, although the organ of a science once sharply decried by religionists, who thought they discerned in its teachings features strongly tinctured with materialism or infidelity, has been growing in favor more and more with the most orthodox for several years past, and numbers among its subscribers very many ministers of the various religious denominations.

A minister of some eminence, in a letter to us, uses the following language:

"May the JOURNAL ever be a growing power for the enlightening and uplifting of all, till all shall come to the knowledge of the truth as expounded upon the principles of Phrenology, which are the true and only basis of a true Theology. Again I say, God bless you and yours, and all who seek the truth."

It is very evident that this gentleman heartily sympathizes with us in our work, and is an enthusiastic advocate of Phrenology. We doubt not but that his experience in the practical adaptation of it warrants his emphatic expression of favor. And we most cordially accept his sincere co-operation. Glancing back five hundred years at the theology of many eminent fathers of the Church, we find strong leanings toward the doctrines enunciated by our friendly correspondent. The revered Thomas à Kempis, in his reflections on the "Doctrine of Truth," uses this language: "In the study of ourselves [This is the grand theory of Phrenology—to know ourselves.—Ed. A. P. J.] we are best capable of avoiding mistakes; therefore a true sense of what we are, and that humility which can not but proceed from such a sense, is a surer way of bringing us to God than the most laborious and profound inquiries after knowledge."

We presume that it was in this sense that our ministerial correspondent used the words quoted from his letter.

THOMAS ALLEN REED.

PORTRAIT, CHARACTER, AND BIOGRAPHY.

THIS gentleman possesses a dense brain and a vigorous tone of mind. He is capable of enduring much mental labor, and sustaining severe trials of mind without excessive depression or exhaustion. He has superior reflective ability with much originality in design and purpose. He is a thinker more than an observer, better qualified to originate or design than to apply principles. Morally considered, we find the indications of a strict adherence to his sense of right. He is

PORTRAIT OF THOMAS ALLEN REED.

well calculated to reason upon the moral bearings of questions and to perceive and know how and why things are as they are. He is self-relying, manly, and independent; prepared to take all the responsibility which may arise out of his business or social relations, and but little inclined to accept dictation, much less dogmatism, from any one. He would be independent, and control his own affairs without reference to others. He is friendly and accommodating, rather warm-hearted, and attached to children. General society does not possess very potent charms for him unless it has strong intellectual features. He is not sociable or companionable for the mere gratification of the social nature, but rather for the gratification of the intellectual. When he can exercise the latter, and impart or receive knowledge, company is acceptable to him.

His head is not a wide one, hence those qualities which impart severity, harshness, and cunning are not very influential in molding his disposition. He avoids giving pain to or doing anything calculated to injure others. His force, energy, and executiveness are displayed through his intellect rather than in feeling, emotion, or action. He is somewhat reserved in disposition; inclined to keep his own

affairs to himself; one of those few men who are averse to drawing the attention of others to themselves, or making themselves objects of remark and discussion.

His appreciation of the ideal and beautiful is well marked. The artistic and poetic readily enlist his sympathy; in fact, enter largely into the warp and woof of his every-day life. He is also fond of the witty and facetious, but rather delicate in his notions of joke-making. Coarseness and bluntness in merriment do not meet with his approval. There is much spirit and earnestness evinced by him in the prosecution of those undertakings which enlist his hearty sympathy; but his feelings rarely rise to the height of enthusiasm. Order, clearness of expression, and precision are strong elements in his organization. His language is not so largely developed as

to render him a free, fluent speaker, but sufficient to give him readiness in the lucid expression of his thoughts. He has more talent for the written than for the verbal expression of thought. But such an intellect, properly cultured, would exhibit taste, delicacy, clearness, care, and precision in statements, whether written or extemporaneous.

Temperamentally, he is organized on a superior plan. Delicacy, fineness of nerve, symmetry, and acute susceptibility characterize his general structure. He is constituted in every respect for any position in life which requires keen mental discernment and acute off-hand judgment.

BIOGRAPHY.

Thomas Allen Reed, one of the most accomplished of English reporters, was born at Watchet, Somersetshire, April 6th, 1825. He received while at school about the ordinary amount of a schoolboy's education; and appears to have imbibed while there a decided ambition to learn the art of that profession in which he has since become so distinguished. He read occasionally the reports of the speeches of popular men, and he learned that they were taken down in strange cabalistic characters by a race of men called "Reporters," as they fell from the eloquent lips of the speakers. The thought inspired him with ambition to become a reporter too, and he made all inquiries about the matter that he could. The schoolmaster had a smattering of knowledge on the subject;

had probably learned some shorthand alphabet and forgotten it. But he could not satisfy his anxious pupil.

One day the walls of the town in which he resided were placarded with the startling announcement, to him, that a certain learned professor had arrived, and would devote himself to the general entertainment of the public, and especially to their improvement in the arts of writing, arithmetic, and shorthand. Such an opportunity was not to be lost by the young enthusiast. He made his way to the place announced by the eminent professor, and after gazing admiringly upon the "crow-track" characters that were temptingly hung as a bait outside, and feeling assured by the gratifying statement that met his eye, that he could learn "the art of shorthand in six lessons—price ten shillings and sixpence," he immediately obtained paternal permission to enter upon the study after school hours. The next day had yet to be passed over before entering upon his new duties; and school requisitions for that day had no attractions; and when evening came he eagerly made his way to the rooms of the august professor. He had expected to see a man of important appearance, but was sadly disappointed to find him an ordinary man, who eagerly grasped the money he had brought him and rang it upon the desk to try its genuineness. He was then sent to a table, and a shorthand alphabet set before him with a sheet of ruled paper, on which he was desired to write his copy. It was Lewis' system (as he afterward discovered), with some slight modifications introduced by his instructor, who on this account had designated it as his own. He copied the alphabet several times, and soon had the letters firmly fixed in his memory; and having practiced them about half an hour he was dismissed, and desired to come another evening. The second lesson was devoted to the practice of joinings, on a large sheet of paper on which the letters of the alphabet were displayed along the top and also down the left-hand side, the joinings being arranged after the fashion of a multiplication-table. These presented little or no difference, and the young pupil was surprised how easy everything appeared. The third lesson was duly imbibed, and a number of arbitrary characters committed to memory. These were simply letters of the alphabet which were made to do the duty of many words; and the young pupil was sadly puzzled how to distinguish between the different significations when he met the characters in a sentence. For instance, the letter *t* (then written thus —) was made to do duty for *it*, *at*, *to the*; and most of the other letters had corresponding words provided for them. With this difficulty in his mind, he modestly questioned the professor on the subject, and was informed that the infallible remedy for all such difficulties would be found in the context. However, he persevered, and the six lessons were completed. He had written out the Lord's Prayer, the Ten Commandments, and one or two chapters from the Bible;

which performances elicited the approbation of the professor, who said that he only needed practice to make him a real reporter. He practiced resolutely for some weeks, writing down his exercises and then puzzling his brain to find out the meaning of his signs by appeal to the context, when that was equally unintelligible. At last he thought he felt equal to the task of reporting a Sunday sermon. He was up very early on the Sunday morning sharpening his maiden pencil, and folded several sheets of paper together for the purpose of recording the words of the preacher. With a feeling of immense importance he took his seat and waited for the commencement of the sermon. At last it began. The sermon was founded upon the twelfth chapter of Isaiah and the third verse. He managed the first four words; but Isaiah had to be satisfied with only *Is.*; and as for the words of the text, three words only would suffice. Then the sermon proper. "The remarkable words, my brethren, of this important prophecy." He never got that prophecy straight. Whether it should be written *prof* or *proph*, floundered him; while the speaker got away ahead, and at the close of the sermon he had obtained about one entire sentence, of which achievement he felt duly proud. The afternoon of the same day was spent in puzzling over the fragments; the result was a transcript of his notes, which he presented to his mother, and which she carefully locked up as a precious treasure.

Such was Mr. Reed's first attempt at reporting, and its issue, which was certainly not very encouraging. But he still persevered; and though he was yet but about thirteen years of age, was able to take the *substance* of sermons by the old complicated method of stenography; and while at school was once complimented by a lecturer for a transcript of his notes of one lecture. But with all his practice he found no practical benefit from his laborious studies; and when he entered a mercantile office in Bristol, on leaving school, his shorthand remained practically in abeyance; and it was not until he had arrived at the age of sixteen that he became acquainted with the system he now practices. Then he happened to make the acquaintance of a gentleman who was a practical phonographer, who offered to teach him the new system if he would abandon his old stenography. He did so, though he found great difficulty in the clashing of the two, and in two months was able to write faster than he ever could before, besides being able to read his notes with facility—a very valuable addition.

But what contributed to Mr. Reed's ultimate success was the habit he then had of devoting a few hours of every day to the study; and not only did he practice in English, but made use of the characters in his studies in French and German. This habit he zealously followed for many years; and at the present time he is one of the very few reporters who can make an accurate English report of a French or German speech. He had a friend

who used to read to him, at first a few chapters of the Psalms; but the reader got tired of them, and then a three-volume Cooper novel was procured, the plot of which was located in the back-woods of America; the reader would get interested in his story, and go on without regard to speed. But it was excellent practice nevertheless, and Mr. Reed never fails to recommend this method to others. "There is nothing," he says, "so conducive to satisfactory progress as the undertaking a definite task which is likely to extend over some considerable time, and resolutely going through with it. Effort put forth in a fragmentary way will always be more or less wasted; the methodical persistent pursuit of a well-marked-out course will never fail of success. I highly recommend every beginner to choose some book likely to be interesting to himself and the reader, and firmly resolve to write every syllable of it from dictation. It may be slow and wearisome work at first, but every day, or at any rate, every week, will make a sensible difference, and a considerable increase of speed will ultimately be the reward. * * I had been stimulated in my efforts by reading in the phonetic publications that some diligent students and practitioners had been able to accomplish the marvelous feat of writing one hundred and twenty words in a minute. I hardly dared to hope that I should attain this facility in execution, but I determined to do my best to approach it. The truth is, I attained that speed long before I was conscious of the effect. I had not tested my rate of writing from dictation, but took it for granted that I had not reached the object of my ambition, and when I was daily writing from dictation at least 180 or 140 words a minute, I was laboring hard to accomplish 120." So he discovered that he had really achieved success in his exertions, and a field gradually opened itself for the application of his naturally acquired power.

When he was about seventeen years of age he joined Joseph Pitman, a brother of Isaac Pitman, with whom he traveled for three years, both lecturing and spreading phonetic reform. At that time phonography was only in its infancy, and but a few had really tested its merits and capabilities. There were probably not half a dozen phonographers who could follow a rapid speaker with success; and Mr. Reed was about the first who ever made practical use of it. Mr. Pitman, in these travels, usually gave the lectures, and Mr. Reed practically demonstrated the system. He had a good ear for sounds, and was remarkably successful in accurately representing them in phonography, and afterward reading them correctly; and this had the effect of drawing the attention of a great number to the subject.

Mr. Reed's first connection with the press dates from his twentieth year, when he was engaged as reporter upon the *Norfolk News*, in Norwich, and subsequently upon the *Manchester Guardian*, one of the ablest journals in England. In 1849, he went to London. There

he settled down as an independent shorthand writer, occasionally giving lessons in the art. He established about that time, with his associates, what is now called the Metropolitan Reporting Agency, for the supply of all news relating to matters of legal interest transpiring in London, etc., and which are not generally reported in the London journals, to provincial papers. The firm is now styled Reed & Woodward, and they have five or six first-class reporters constantly employed, generally in the taking down minutes of law cases, speeches, sermons, etc., etc. Mr. Reed's well-known ability, of course, commands a great influence among those who wish for correct reporting.

Mr. Reed's first effort in the way of public reporting occurred during his itinerancy with Mr. Pitman. He was at Bolton, in Lancashire, and Mr. Bowring, now Sir John Bowring, was about to deliver an important address to his constituents; and Mr. Reed was engaged by the editor of the paper there to take down the first turn of a quarter of an hour, as he had other reporters to follow him, and the paper would be going to press in a few hours. He complied with the request of the editor, and sent in his transcript of the first part of the speech. Dr. Bowring himself, on reading over the proof, was so pleased with its correctness that he asked if the same reporter could not give the whole. Mr. Reed was applied to, and fortunately was able to supply it, and received the warm commendations of the Doctor.

As a correct reporter, Mr. Reed has no superior probably, and his speed is a marvel even to accomplished phonographers. But this has been variously and greatly exaggerated by the press, both in England and America, one paper stating that Mr. Reed had accomplished the feat of writing two hundred and seventy words per minute! Of course this is preposterous and impossible. The utmost speed Mr. Reed attained—we have it from his own lips—was one hundred and twenty and a half words in half a minute! or two hundred and forty-one words per minute! This is a lightning rate of speed; but could not be kept up for any length of time. Said Mr. Reed: "Many people, on the strength of that, say that I can write two hundred and forty words a minute. I don't remember to have taken continuously, say for an hour together, anything more rapid than 180 or 185 words per minute, on an average."

The most rapid speaker in London is a preacher named Molyneux, and Mr. Reed is in all cases called upon to report him when occasion requires, and he has found as the result of his reporting that his average is but 185. There are a great number of reporters who say they can take down 200 words per minute on the stretch, and there are others whose system will take down two hundred and thirty words in a minute; they can perform prodigious feats among words by turns and twists, and "abbreviations and contractions" and "contexts," that no one but the writers can understand; and which they themselves

sometimes can not unpuzzle. But Mr. Reed knows nothing of arbitrary rules or formations of characters, and the consequence is his reports can as easily be read by his assistants twenty years after date as on the day they were written.

One of the finest written compliments ever paid to a shorthand writer has been dedicated to Mr. Reed. It was in 1852. The noted infidelistic speaker, Holyoake, and the Rev. Mr. Grant, both of England, had a lengthy discussion on controverted religious points. Mr. Grant is a "tremendous speaker;" and Mr. Reed was engaged to report the debates between them, which lasted some six or seven days. The notice was from the pen of the celebrated Dr. Campbell, the editor of the *British Banner*. After referring to the object of the discussion, he writes: "Mr. Grant closed the discussion less by adding to the argument on the atonement than by a summary of the entire subject which he had thoroughly elaborated beforehand, which he uttered with a rapidity scarcely conceivable. This is one of the most remarkable features of this very exciting scene. Even the late Mr. Jeffrey (a notably quick speaker) was a very deliberate speaker compared with Mr. Grant, whose words came forth with the rapidity of lightning. The wonder of the performance is not diminished by the fact that every articulation is perfectly distinct, that not a word is lost in the remotest corner of the vast edifice. The lingual, the labial, and the intellectual apparatus seem so perfectly adapted to each other, that they assume the appearance of a special creation for the purpose. Without break or breath or pause, and, strange to say, sometimes without the slightest motion or gesticulation beyond a gentle extension of one or other hand, he tears along with the swiftness to which nothing in nature supplies a parallel, except, perhaps a partridge or a plover, as alarmed by the report of a fowling-piece, when the motion of the wing is from its rapidity scarcely perceptible. That even he can be reported *verbatim*, is perhaps the highest achievement of modern stenography. Such, however, is the fact. One of the writers, for there are several engaged, devotes to Mr. Grant his special attention, and defies him. Never was there a more extraordinary illustration of the power of that wonderful art to which mankind owes so much. In the case of this gentleman there is no oppressive dragging with a half dozen or more words in the memory. The pen is quite a match for the tongue, so that when the speaker ceases the writer ceases! One scarcely knows which most to admire, the man of the tongue or the man of the pen."

Prof. Huxley, in his scientific lectures, is always reported by Mr. Reed; and a few months ago he was the recipient of an editorial notice in the *Lancet*, for the correctness of his transcript. Charles Dickens, who is the most competent judge of the correctness of his reporters, also sent him a complimentary testimonial.

Mr. Reed, in spite of his arduous reportorial duties and superintendence, finds time to contribute largely to the press, mostly to the phonetic publications. He is the editor of the *Phonographic Reporter*, a monthly magazine, and a contributor to the *Shorthand Magazine*, where excellent articles from his pen appear every month. We can not close this sketch more profitably to our readers, especially to the young, than in giving a brief selection from one of his articles, entitled

REPORTING AS A MENTAL EXERCISE.

If we trace the operations of the mind which are carried on during the act of taking down the words of a speaker as they are uttered by him, we shall not be surprised that a considerable amount of practice is needed before the art of *verbatim* reporting can be acquired; the cause of our astonishment will rather be that still greater labor and skill are not necessary to the carrying on of a process so rapid and yet so complicated.

Let us suppose a speaker commencing his address. He utters two or three words, perhaps, in a deliberate manner; they fall on the reporter's ear, and are thence communicated to the brain as the organ of the mind; the writer must then recall to his memory the sign for each word he has heard; the proper sign having suggested itself to his mind, a communication is made from the brain to the fingers, which, obedient to the will, and trained perhaps to the nicest accuracy of form, rapidly trace the mystic lines on the paper. Some portion of time is of course required for each of these operations to be performed after the words have been spoken; yet see! the writer appears to stop precisely at the same time with the speaker. The orator still continues in his deliberate style, and the reporter is able to write each word he hears before the next is uttered. Now, however, the speaker warms with his subject, and changes his measured pace to one more rapid; the writer increases his speed accordingly, and, notwithstanding the many operations at work in his mind, scarcely is the last word of a sentence uttered before he lifts his pen from the paper, as if for an instant's pause, not a syllable having escaped his ear or pen. This surely is a laborious task; much more so that which follows. The speaker has finished his exordium, is in the midst of his topics of discourse, and has begun his flights of oratory. Listen to his next sentence. He begins in a low, measured tone; after a few words makes a sudden pause; then, as if startled with the brilliancy of his ideas, and fearful lest they should escape before he can give them utterance, he dashes along at an impetuous rate which he never slackens till he is out of breath with exertion. In this rapid delivery he has gained ground to the extent of five or six or more words on the writer, whom probably he has taken by surprise. The latter, nevertheless, has had to listen to the words which were, so to speak, in advance of him, recall the proper sign for each, send it from the brain to the fingers, and trace

it on his note-book; while, *at the same time*, he has had to attend to the words which follow, so as to be able to dispose of them in the same way when their turn arrives; and in this manner are his mental and bodily powers occupied for an hour, or, it may be, several hours together.

It would naturally be supposed that, with all this to attend to, it would be impossible for the writer to think at all of the sense conveyed by the words which he is at such pains to record; but, to perform his work efficiently, he must bring his mind to bear on this also, and not only endeavor to understand the general drift of what he is reporting, but to catch the meaning of every expression; for where this is neglected, literal accuracy can not be attained. The probability is that we do not distinctly hear—hear, that is, so as to be able separately to identify them—half the sounds that compose the words to which we listen; and it is only therefore by our close attention to the context that we are enabled to supply imperceptibly—for few people are conscious of this mental act—the sounds that the ear has failed to convey definitely to us. Hence the necessity for listening to the sense, as well as to the sounds of words, as they flow from a speaker's lips. A minister once told us that in a report of a sermon delivered by him, the phrase "the siege of Abimelech" was written and actually printed the siege of Limerick!" This could not have arisen from a mistake in the written characters, for the forms of Abimelech and Limerick would, in any system of shorthand, be palpably distinct: the ear must, in such a case, have been in error, and the sense should have been sufficient to correct it. Every experienced reporter must occasionally have discovered errors of this description while transcribing his notes; his inattention to the sense, while following the speaker, not having led him to correct the false impression which has been made on the ear.

As a mental exercise, then, reporting may be regarded as of the greatest utility. It is true that after a long course of practice the art becomes *apparently* a mechanical one, as far as the taking down is concerned: yet at first all the powers of the mind must be brought to bear on its attainment, and they can hardly fail to be materially strengthened by the training they must undergo. A word, however, as to reporting being a mechanical operation, as some have termed it. No effort put forth by us can be purely mechanical, since the mind is necessary to it. Walking and reading (reading aloud without attending to the sense) seem mechanical acts, but the mind is indispensable to them. After long practice, indeed, a comparatively external region of the mind is concerned in them, for we are enabled to think and plan—operations of more interior faculties—while these outward acts are being attended to; but at first both walking and reading require, in order to their attainment, a strong exercise, in one case, of all the powers of the body, and, in the other, of all the pow-

PORTRAIT OF RICHARD BAXTER.

ers of the mind; both having been, of necessity, improved and strengthened by the training. It is the same with reporting, but in this case the exercise is more severe; and if even the act of writing should, by practice, become little more than a mechanical performance, the constant employment of the mind in catching the meaning of different speakers, and the bringing before the writer all the varied styles of diction in use among them, together with the exercise in composition afforded by the transcribing of what has been written, can not fail to commend the art to all who are interested in education, and in the development of the powers of the human mind. Even where the student of shorthand has been unable to acquire sufficient manual dexterity to follow a speaker *verbatim*, the practice of reporting will still be beneficial; since increased attention to the sense will be required, in order that, when abridging a report, nothing material may be omitted. A habit is thus cultivated of separating mere verbiage from the solid material, winnowing the chaff from the wheat; and though this is not the particular benefit on account of which the cultivation of shorthand is recommended in this article, it is one whose importance ought not to be overlooked in regarding reporting as a mental exercise.

RICHARD BAXTER.

RICHARD BAXTER was born at Rowton, Shropshire, England, November 12, 1615, and was the son of poor but respectable parents. His education was but scanty; he was obliged to content himself with a course of private study, in the midst of which he was induced to try his fortune at court. This was remarkable, as he was by nature habitually serious. A month at court sufficed to convince him that he was out of his element; and a protracted illness served to deepen the earnestness of his religious convictions. At the age of twenty-three he was ordained, and shortly af-

terward became an assistant to a clergyman at Bridgenorth, where he resided two years. In 1640 he became parish clergyman of Kidderminster, where he established his reputation as one of the most remarkable preachers of the time, and succeeded in improving the social manners of the townspeople. On the breaking out of the civil war in England, his position was somewhat peculiar. Sincerely attached to monarchy, his religious sympathies were almost wholly with the Puritans, and though a Presbyterian in principle, he was far from admitting the unlawfulness of Episcopacy. These views, which, some time before the Restoration, became extremely popular, were now too liberal for the general taste, and the open respect shown by Baxter to some leading Puritans exposed him to some danger from the mob. He accordingly retired to Coventry, but returned to Kidderminster after a few years. During this period he published his "Saints' Rest," and "Call to the Unconverted," which greatly extended his fame. Baxter would never acknowledge the protectorate of Cromwell, but denounced him as a usurper. On the return of Charles to the throne of England he was appointed one of his chaplains, and he attempted to reconcile, but unsuccessfully, the contending church factions. In 1663, Baxter was driven out of the established church, and retired to Acton, in Middlesex, where he occupied himself for nearly nine years in the composition of some of his numerous works. In 1672 he was permitted to return to London, where he again preached and wrote. In 1685 he was condemned by Judge Jeffries to pay a fine of 500 marks, for alleged sedition in his "Paraphrase of the New Testament." Being unable to pay it he was imprisoned. After a confinement of eighteen months he was released and pardoned. He lived after this to see better times, and died on the 8th of December, 1692, in the seventy-fifth year of his age.

Baxter is said to have preached more sermons, engaged in more controversies, and written more books than any other Nonconformist of his age. The total number of his publications exceeded 160; of these, the most popular and celebrated are his "Saints' Rest," "Call to the Unconverted," and "Dying Thoughts"—20,000 copies of which were sold in a twelvemonth, and were translated into all European languages.

Baxter's peculiar doctrines were: 1st, That though Christ died in a special sense for the elect, yet he died in a general sense for all; 2d, The rejection of the dogma of reprobation; 3d, That it is possible even for saints to fall away from saving grace.

Baxter's life was a remarkable one, and his biography is historically valuable.

Our portrait is taken from an authentic source, but is not so satisfactory in all respects as we would have it. There is an expression of meekness and resignation combined with firmness in the face. The positive Roman nose, prominent cheek-bones, and large chin indicate the man of courage, action, and physical

power. The uncomely hood or cap is anything but a pleasing addition to the face, and tends rather to deepen the shade of melancholy that lingers in the expression.

The large eyes, which appear full of emotion and tenderness, indicate the word-power which so distinguished his sermons, and which is still so eloquent in his writings. The face is full of earnestness, and of that precise character which stamped the Nonconformist of the seventeenth century.

FRIEND DAVID'S NEW SIGN.

FRIEND DAVID—now five years in his grave—was a man well known to fame, and yet he did not belong to what is called a high position. He did not own a foot of ground in the world, excepting a small lot in the village graveyard, and he lived in a small house, and in a small way, spending little or nothing—for he had little to spend—on the luxuries of life. Plain clothes and plain fare were all that the calling of a blacksmith gave him, but he was not conscious of wanting anything more.

"If I were rich," he often said, "it would trouble me sorely to take care of my riches, and I am sure I should, like all men, learn to love them so well, that it would trouble me sorely to lose them. And it is quite probable I would lose them, for they, as well as the angels, have wings, and have often been known to fly away. I am a blacksmith, and am willing to remain a blacksmith until the Lord calls me hence and sets me up in other business."

David Hall, or "Friend David," as every one called him, was remarkable for his contentment and humility—particularly for his humility—and yet he prayed for help to conquer what he called "his besetting sin, *pride*," for he belonged to the bland, peaceful, loving sect called Quakers, or Friends, and it pained him to know that it was to him a cause for pride, although it took no form that men could call pride.

Good "Friend David" was noted not only for his contentment and humility, but for another virtue, which was both a virtue and a talent. With a heart full of love, and a mind well skilled in selecting and using appropriate means for every good end, he became known as a man able to settle all quarrels. Often, while at work at his calling, he devised ways to turn enemies into friends. If he had been any other man than bland, sweet-tongued "Friend David," he might have been thought meddlesome or officious, and been told to mind his own business; but no one had the heart to think evil of him, or speak rudely to him, and so he was allowed to go undisturbed on his way, not only as a blacksmith, but a peacemaker.

Now it happened one time that "Friend David" had a heavy burden on his heart, for Robert Gordon and Richard Newman—old settlers in the village—would neither go to the same church, nor speak to each other, and their enmity touched his heart. After long thought

on the subject, he concluded to follow the promptings of his heart and the simple dictates of his conscience, and do what he could to turn their hearts. So he sent, one day, to Robert Gordon, a request that he would "come round and see him in the evening, as he had something very important to tell him," and at the same time he sent a similar message to Richard Newman.

During the day, he said to his wife, "Mary, I want thee to make a pan of thy very best doughnuts to-day, and I want thee to be sure to put raisins in them. And I want thee to have our Tommy crack up a large dish full of walnuts; there is no one can do it like him, for he brings out the meats whole, and never once pounds his finger."

"Why, what does thee mean to do with all the doughnuts and walnuts?" asked Mary.

"I want them to make merry over to-night, and there are no three things that go so well together as doughnuts, and walnuts, and cider, and I must have them all."

Mary rose at once to go and do as her David had requested, for the "stove was hot," but he said, "Wait a minute, Mary, I have not told thee all my request yet. Now thee must not be offended when I ask thee to take our Tommy and Susy to-night, and go and spend the evening with grandfather and grandmother. The children will like it well, and I will like it well to have you all gone, for Robert Gordon and Richard Newman are to be here."

"Robert Gordon and Richard Newman!" exclaimed Mary. "Why, David, thee can not be in thy right mind. I am more than glad to give thee the doughnuts, and walnuts, and cider, but thee must not have Richard Gordon and Robert Newman here together, or thee will have to witness a sad quarrel."

"No, Mary, I will be a peacemaker, and when I have told them what is on my heart, we will eat doughnuts and walnuts and drink sweet cider together, and the strife of ten years will all be forgotten."

"Very well; I am willing thee should make a trial, but I should not like to be in the shoes," replied Mary, with an incredulous smile, as she once more started for the kitchen.

The doughnuts that were made that day, by the hand of Mary, were rich and sweet, but the heart of "Friend David" was richer and sweeter.

After tea, good Mary "cleared away thy dishes," and prepared herself and Tommy and Susy to "go round to grandmother's."

Susy danced and clapped her hands, for it was the first time she had ever been out at night, and mother Mary found it difficult to make herself heard as she said, "Good success to thee, David. No one but thee would think of doing such business, and thee must not be disappointed if nothing comes of it."

"It will not come to naught, for God smiles on every good thing," replied David, as Mary closed the door and walked away with Tommy and Susy.

It was bright starlight when Robert Gordon

"came round" to see what important communication "Friend David" had for him, and he had hardly taken his seat before Richard Newman made his appearance. The two enemies, although they hated each other as cordially as ever, were ashamed not to exchange bows and a "good-evening." But the greeting was very cold, and it was evident that they were much annoyed by their accidental (for accidental they thought it) meeting.

"Friend David," however, possessed his soul in serenity, and was in no wise abashed.

"You must not be displeased with me, friend Gordon and friend Newman," he said, "if I let you know that I sent for you that I might tell you what a heavy burden I have on my heart because you have no love for each other, and because I know there is nothing but love that will serve us any good purpose in the other world. I have been reading the good book to-day, and it tells me that 'we spend our years as a tale that is told;' and as the time is so short below, and so long above, and as those who hate here can never love there, I want you both to forget the past, and be reconciled. It was a little thing made you enemies, and now, good friends, let a little thing, even this effort of a plain, humble man like me, make you friends."

"Well, Friend David," replied Richard Newman, "you needn't use any more breath on us, and we'll use what you've already spent, and shake hands. It isn't worth while for men, who are on their way to the same eternity, not to be on speaking terms, or to walk on opposite sides of the street when they can just as well as not walk on the same side."

"That's a fact," groaned out Robert Gordon, in a deep bass tone, "and we had better 'kiss and be friends,' as children say. And the next thing we had better do is to let all the villagers know that our feud is ended."

"I say Amen to that," responded Richard Newman.

"And I say Amen to what you've both said!" exclaimed Friend David; "and now let by-gones be by-gones, for the less said about disagreeable things the better. Mary has gone out with Tommy and Susy, to spend the evening, but she's left a pan of most remarkable doughnuts—a raisin in the middle of every one—for us to dispose of, and I think that, with the help of some walnuts and sweet cider, we can worry them down."

No one could have witnessed the scene that gladdened the heart of Friend David that night without being convinced of the power of a peace-loving man; and when Mary returned and heard that all was well between Robert Gordon and Richard Newman, she looked at David with astonished eyes, and said:

"Ah! David, when I was making the doughnuts, I thought what a strange notion thee had got into thy head, but I'll always believe in thee after this."

Not long afterward Friend David happened to open his front door very early in the morn-

ing, before the village people were astir, and discovered, to his surprise, that he had a new sign. On a shingle that had been fastened to the door, these words, in large letters, had been printed:

"Peace made here, to order, by Friend David."

Suspicion was at once fastened upon a noted wag in the village, but he refused to throw any light on the subject, affirming that no one had any right to suspect him of doing what any one else in the village might have done as well as he, for it was known from one end of the town to the other that Friend David had turned two sworn enemies into sworn friends.

"Indeed," added the wag, while the corners of his mouth twitched, "who knows that Robert Gordon and Richard Newman didn't do it themselves!"

"I believe thee did it, for I read the truth in thy face," said David, "but thee need fear nothing from me. I ask for no greater honor than to be numbered with peacemakers."

"I'm sure you've never had a sign that could compare with this new sign," remarked Richard Newman, who happened to be standing by, "and it's a pity to take it down, for 'blessed are the peacemakers.'"

[This little history illustrates how easily evil may be overcome with good. "Holding a grudge" against another is little else than self-punishment. True Christianity requires us to forgive our enemies. If we would be happy, we must be at peace.]

CHARLES KEAN.

THE portrait of this eminent English actor is a copy of a photograph from life, and though it appears younger than he did when last on the stage, it is regarded as a fair likeness. The head appears to be pretty well balanced. He was not so eccentric as Edmund Kean, his father. He had not so sharp and angular a nature, but was more genial

PORTRAIT OF CHARLES KEAN, THE ENGLISH ACTOR.

and symmetrical in organization. The portrait indicates a man of vigor, executiveness, breadth of imagination, force of character, ambition, talent for education, and capacity for business. His Ideality and Sublimity were amply developed, giving a sense of beauty and grandeur, while his Constructiveness being also large, gave him powers of combination and arrangement, and ability to comprehend complications and the interplay of subject and character. Human Nature, indicated by that elevation and prominence in the center of the forehead just where the hair joins it, gave him excellent insight of character, and the ability to appreciate motive and disposition, and to personate, a trait required by an actor as well as by successful public speakers and business men. He has all the signs

of social affection. His top-head is not deficient, though he would be known more for talent and force, for skill and genius, than for spirituality and religious characteristics. On the whole, he was organized on a more elevated plane than most play-actors; but he was simply an actor. The question with earnest men will be, How much better is the world in *any* respect for his having lived in it?

He was born at Waterford, Ireland, Jan. 18, 1811. Two years after, his father removed to London, and then set out on his career as an actor. Charles was sent to Eton, and was there a schoolmate of Gladstone. His father's means, however, were insufficient to maintain him long at school; and his parents having separated, Charles left Eton and went upon the stage, for the purpose of supporting his mother and himself.

In the outset of his dramatic career he did not exhibit much abil-

ity, and we may say that the position which he attained subsequently was owing to assiduous study and persevering effort.

In 1830 he came to this country and remained here about two years, during which time he reaped the results of a very successful stage career. In 1839 he made a second visit to America, and in 1842, after his return to England, he married Miss Ellen Tree, an actress of some reputation in comedy. A third visit to this country was made by Mr. Kean in company with his wife in 1842. This visit was lengthy, being nearly five years in duration. In 1850, he became the lessee of the Princess's Theater, in London, when he inaugurated a series of Shaksperian representations, with the view to elevate the standard of the English stage. Eleven years after, Mr. Kean retired from the management of that theater under the happiest auspices for a gentleman of the buskin. A banquet was given him by some of the most eminent persons in England, and a quantity of silver plate, valued at upward of ten thousand dollars, was presented to him. This ex-

pression of the public sentiment is indicative of the moral rank which he had attained in a position surrounded by so many demoralizing influences.

In 1863, Mr. and Mrs. Kean left England for a professional tour around the world. In the course of their travels they visited Australia, California, Cuba, the Atlantic seaboard in the United States, and Canada. His last appearance in this country was made at the Academy of Music, April 16, 1866. On this occasion he confirmed all the previous impressions which he had made on the public mind, by the superb character of his impersonation. His death occurred on the 23d of January, and was occasioned by that fatal derangement of the vital organism known as aneurism of the heart. He leaves a widow and one daughter.

SPRING FASHIONS.

BY MME. DEMOREST.

[A REGARD for the wishes of our lady readers induces us to "post them up" on the latest styles. We get our information from the American headquarters. We leave it for others to give the pictures, contenting ourselves with a plain and racy description. We still have the plan of a prize essay in view, and hope ere long to submit something more sensible in the way of ladies' dresses than has hitherto appeared. But here we give the present styles, written for the A. P. J.]

There is little room now for the tirades against fashion that used to be so frequent. Styles for indoor and outdoor wear have become so sensible, and, withal, so picturesque and graceful, that, for a wonder, nearly everybody is satisfied. Even professional snarlers can find little of which to disapprove.

The short dress for out-door wear belongs especially to this age, and is worthy of its practical spirit of improvement. We are glad to say that it is still in vogue, and it rests with American women to render it perpetual. It is so useful, relieves women from such a burden of skirts, and makes the exercise necessary to health so easy in all sorts of weather, that its long life is exceedingly desirable.

There are innumerable varieties of the short dress; but there are two special styles, of which all others are but modifications. These are technically called "suits" and "costumes." Suits are made in one color and material; costumes in two colors, and often of two materials.

Costumes are more dressy than suits, and are best adapted to young girls or stylish young married ladies.

The most distinguished suits are made in black, blue, or in Bismarck. The most elegant costumes in black and violet, black and green, or black and Bismarck.

Very handsome costumes are made this season of the long paletot, tied in at the back with a wide sash, and a short skirt, finished round the bottom with three narrow frills. An old black silk dress can be remodeled in this way; the frills taken from the skirt, which is cut short and gored, and only the paletot made of new silk. An old colored silk dress may be utilized in the same way, and worn with the black silk cloak, thus making, at trifling expense, both suit and costume.

Neat gray suits are made with a pelerine cape, the long rounded ends passed under the belt in front, or carried round to the back and knotted, so as to form sash ends. This style will be suitable as spring advances, and is particularly adapted to thin summer tissues.

Indoor dresses are still cut gored, though not as much so as during the past seasons. The trains of toilets of ceremony are enormous, in many instances two yards long, and the trimming is therefore principally confined to the front of the skirt. A recent novelty is a square train arranged as a *manteau de la cour*. It need hardly be said that these long trains require peculiar tact to render them graceful or becoming. A moderate length

is better suited to the generality of ladies, and especially to ordinary occasions.

Bonnets are small, but no longer flat to the head—they are raised in a sort of diadem in front, or form a succession of raised puffs, with a trimming or ornamental veil at the back.

Pique, one of the most useful and durable of materials, will be very much worn for morning and children's dresses. It goes so nicely, and trims so effectively with *soutache*, or any of the flat washing braids in vogue, that it retains a perennial freshness and popularity.

The new designs are particularly in sleeves, the "Lamballe" and *Marie Antoniette* reaching to the elbow in capes, of which the *Marie Antoniette* is the most fashionable, and in *paletots*, of which the *Polonaise*, or "Redingote," is the newest and most admired. There are many others, but these are prominent among the spring styles.

INTEMPERANCE IN THE SOUTH.

KENANSVILLE, N. C.

DEAR JOURNAL: In an article on page 17, of your January number, indorsing a very erroneous statement of the Sandusky *Register*, you declare yourself on the side of "God and humanity."

Now as the inscription on the banner of those who are "in for the fight" for God and humanity must be TRUTH, from the very nature of the warfare, will you permit a constant reader of the AMERICAN PHRENOLOGICAL JOURNAL to suggest a reconsideration of the sweeping and, as he thinks, unfair charge against the South. Your correspondent has lived nearly half a century in New Hampshire, Vermont, Canada, Virginia, and North and South Carolina, and he sincerely believes the people of the South to be far less addicted to intemperance than the inhabitants of the Northern States and British America.

Undoubtedly "whisky and tobacco" are "twin curses," blasting and blighting the fairest prospects of individuals and communities, and every lover of his race must bid all suitable efforts to disenthrall his fellow-man from their deadly influence, "God speed," yet the good work will be hindered by misrepresentation, however unintentional.

The Sandusky editor must have been peculiarly unfortunate in his field of observation. Certainly he did not gather the information on which to speak so positively and unreservedly, from acquaintance with the Atlantic Southern States. During a recent visit to Wilmington, N. C., although at the festive season of Christmas, the writer saw nothing of the treating or drinking with which the entire South is so unjustly charged. It may be thought that the stringent military orders of the commanding generals will account for this freedom from "the constant and all-pervading use of the infernal fire-water," but liquor, like love, laughs at locksmen. The truth is, the people of the South, taken as a whole, are at least as temperate as those of the North. Owing to their excitable temperament, the actions of Southerners under the influence of liquor may be more rash and violent, and in their hospitality they may more freely offer such beverages as they think their guests will relish, but that they are, as a people, so degraded by drunkenness and so depraved morally, as the *Register* and *JOURNAL* represent them, is simply a grave mistake.

TRUTH AND CANDOR.

[Our statements were strong, it must be admitted; but as they were founded on the quotation taken from the *Register*, we deemed them fully warranted. We believed that the Sandusky editor was honest in his convictions, and that his remarks were the result of personal observation. If we have been misled as regards the facts, we regret our repetition of them; but as regards our appeal to the southern portion of our country, for the sake of temperance and true morality we would make such an appeal to any community North or South, if we hoped that some good results would flow from it. Our North Carolina friend does not seem to be familiar with the whole South—he resides in one of the fairer sections. We are willing to take his word for the social condition of the Atlantic Southern States, and if the state of society elsewhere is better than the dark picture drawn by our Sandusky cotemporary, we would rejoice to know it.

In our February number we published an article on the "Poor Whites of the South," from the pen of a gentleman of extended acquaintance with, and careful observation of, Southern society. Surely his description was dark enough. He treated of one class—the lowest—but a large class, and thoroughly diffused through the Southern States. As regards the higher grades of society in the South, we are ready to believe that they are on an even footing with the Northern upper classes. We would have no objection to the former being more temperate and high-toned than the latter, were it so.]

LADIES, ATTENTION!

IN the October number of the AMERICAN PHRENOLOGICAL JOURNAL we made some allusion to American inventive enterprise in almost every department of art excepting that of fashioning ladies' costumes. We spoke of the expediency of offering a prize for some useful and proper method by which garments might be made to combine the essentials of grace and healthfulness. Unexpectedly, we have received a letter from a lady residing in Syracuse, who presents for our consideration a new plan for cutting and fitting dresses, basques, riding-habits, and other garments. It is called "Madame Thomson's Parisian Mode." Why not "American Mode?" If it was invented and perfected here, as is claimed. It is said to be easily learned from the printed instructions which accompany the diagrams, and is perfectly practical, simple, and reliable. As a device for fitting waists, it is claimed to form a graceful and easy fit, and that in only three pieces.

If all that is claimed for it is warranted by facts (and we certainly have no reason to think otherwise), the Method is indeed "every family's friend," and need only be made public to be sought and applied by all who would dress economically, sensibly, and tastefully. The price of one copy of the Method is \$2.

NEW PREMIUMS.

WE offer the following to all who may feel an interest in the PHRENOLOGICAL JOURNAL:

For 350 new subscribers, at \$3 each, we will give a Steinway or Weber Rosewood Piano, worth \$650.

For 100 subscribers, at \$3 each, we will give a Horace Waters five Octave Parlor Organ, worth \$170.

For 60 subscribers, at \$3 each, a Horace Waters five Octave Melodeon, worth \$100.

For 40 subscribers, at \$3 each, a Florence Sewing Machine, worth \$65.

For 30 subscribers, at \$3 each, a Weed Sewing Machine, new style, worth \$60.

For 25 subscribers, at \$3 each, a Wheeler & Wilson's Family Sewing Machine, worth \$55.

For 15 subscribers, at \$3 each, the Riverside Edition of Irving's "Belles Lettres Works," comprising "Knickerbocker," "Tales of a Traveler," "Wolfert's Roost," "Crayon Miscellany," "Bracebridge Hall," "Alhambra," "Oliver Goldsmith," "Sketch Book," elegantly bound, worth \$16.

For 12 subscribers, at \$3 each, a handsome Rosewood Writing Case furnished with materials, worth \$12.

For 10 subscribers, at \$3 each, a Clothes Wringer, the Universal, worth \$10.

For 7 subscribers, at \$3 each, a handsomely finished Stereoscope, a beautiful and useful article for home amusement, with 12 views, worth \$6.

Those persons desiring our own publications instead of the premiums offered, can select from our catalogue books amounting to the value of the premium for which they would have such books substituted.

Or for premiums of or under the value of \$12 we will send such book or books as may be selected from any New York publisher's catalogue, the regular price of which is that of the premium rate.

All subscriptions which have reference to premiums must commence with the January number.

UGLY MUG AND HER MAGICAL GLASS.

I.

GRANDMOTHER Grigg was a jolly old dame,
As merry as ever a grig of her name;
Her little eyes sparkled from under her cap,
And she bit off the ends of her words with a snap.
Her nose was on intimate terms with her chin,
And the things she loved most were to chatter and spin.
When she gathered her grandchildren close by her knees,
Her wheel and her tongue both were busy as bees;
The flax she used up was a sight to behold,
But more wonderful still were the stories she told.

II.

One night—'twas the night before Christmas—there came
A clamorous crowd to this jolly old dame,
Who begged her—before they were packed off to bed—
To tell them a story "all out of her head;"
Not one of the tales from her regular store,
But a story, they said, they had ne'er heard before.
"Ho! ho! something new, eh?" quoth Grandmother Grigg.
"Very well, chits! sit down, till my spindle I rig,
And I'll tell you the queer things that once came to pass
Between Miss Ugly Mug and her wonderful glass."

III.

"Ugly Mug! What a name!" all the little ones cried.
"Twas a nickname, my dears!" the old grandam replied.
"This miss, when asleep, was quite pretty to see,
But awake, she was ugly as ugly could be;
And this just because miss was subject to fits
Of the sullen, and pouts, and wry faces, my chits.
These so altered her pleasant expression, that folk
Called her Miss Ugly Mug, just by way of a joke;
And, I think, had you seen her in one of her 'queers,'
You'd have found it a very apt nickname, my dears."

IV.

"Now it happened one day—'twas the last of the year—
A strange-looking peddler the window drew near,
And saw through the pane such a face that, good lack!
He jumped, and came very near dropping his pack;
But the very next moment, he tapped at the door,
And asked madam's leave to exhibit his store.
He spread out his wares on the floor of the hall,
And said he was sure he could pleasure them all.
He could fit both the maids and the mistress, he knew,
And something would suit little Pretty Face, too."

V.

"Ugly Mug, at this flattery, smirked with delight,
And her eyes grew as large as pin-crowns in the night.
The peddler, with more provokingly slow,
Took forth a small glass, worth a sixpence or so,
And holding it up: 'Now, my sweet little friend,
If you mind my directions, you'll find in the end

'Tis a magical mirror, and dog-cheap, if sold—'
Quoth this queer-looking chap—'for its weight in pure gold.'
And when, in a twelvemonth from this, I come back,
You won't trade your mirror for all in my pack."

VI.

"You'll not think me rude now, my sweet little miss,
When I tell you your image, reflected in this,
Will grow, day by day, still more charming and clear,
If you gaze on it faithfully all the new year
In the way I direct, thus: Whene'er it appears
You have cause to inflame those soft eyelids with tears;
Whene'er by a frown you shall wrinkle that brow,
Or pout those red lips, as you're doing just now;
Whene'er to be sullen or sad you incline,
Just take a long look in this mirror of mine,
And I'll forfeit my pack, at the end of the year,
If your image don't prove you a beauty, my dear!"

VII.

Then the peddler, he shouldered his pack and went out,
And Ugly Mug looked in the glass, with a pout,
Till the image she saw seemed so funny and strange
That she laughed—and behold! what a magical change!
The cross-looking face in an instant was gone,
And a gay little visage smiled into her own—
The visage of such a bright-eyed little elf,
That Ugly Mug felt quite ashamed of herself.
So she vowed she would do as the peddler had said,
And she carried the glass, quite delighted, to bed.

VIII.

"Well," said Grandmother Grigg, "when the twelve-
month was at hand for the old year to die,

The odd-looking peddler came trudging again
By Ugly Mug's window, and glanced at the pane;
But no Ugly Mug did the peddler behold,
But a very sweet face set in ringlets of gold;
And up flew the sash, and a silvery voice
Cried, 'Come in, sir peddler, and show me the choice
Of all in your pack, for the glass that you sold
Is cheap at its weight in the purest of gold.'

IX.

"So the peddler came in, and 'I knew it!' cried he,
'You're as pretty, my dear, now, as pretty can be!
And the face that I saw, when I called here before,
Will never be seen in this glass any more!
Then he sold her a doll with magnificent curls,
And a dress of rich silk, and a necklace of pearls,
And he said he had hoped she this doll would prefer,
And so he had kept it on purpose for her.
But the glass, as no longer of use, he took back,
'It was handy,' he said, 'for to have in his pack.'

FINAL.

"Now," said Grandmother Grigg, "it is bed-time, you
know,
And I've only one word more to say ere you go.
There's a magical glass that can always be had,
To show little folks how they look when they're bad;

And when any of you, dears, feel willing to try,
Of Grandmother Grigg such a glass you may buy;
All the payment she asks, is a kiss and a hug,
And the promise to use it like Miss Ugly Mug!"

C. D. GARDETTE.

[The above amusing, but at the same time instructive,
poem for our young readers is taken from *Our Schoolday
Visitor*, a magazine for young people, published by
Messrs. J. W. Daughaday & Co., of Philadelphia.]

This periodical deserves a prominent place in the juvenile literature of America. In the quantity and quality of its monthly installment of *bonbons* it is not surpassed by any other periodical of the same nature and similar subscription terms. On its roll of contributors we find many names which have been long familiar to the youth of our land, and whose attractive stories and sketches have found appreciative readers of all ages. Among these contributors are George S. Burleigh, Jacob Abbott, Rev. Alexander Clark, and Alice Carey, of whom we need only make mention. The design of the publishers of this magazine evidently is the production of a monthly perfectly adapted to juvenile tastes and desires. The language is simple, the illustrations vivid, and the subjects generally are those which come within the notice of children and excite their interest. The cat, the dog, school scenes, vacation sports, dolls, babies, etc., are variously and humorously illustrated, while at the same time points of morality are brought out strongly and urged home. We find much pleasure ourselves in a rapid glance through the magazine whenever it comes under our eyes. Subscription, \$1 25 per annum.]

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office at prices annexed.]

THE SOUTHERN JOURNAL OF EDUCATION. Devoted to the Educational and Literary Interests of the South and West. A monthly quarto of sixteen pages, published at \$1 a year, by John T. Hearn, Shelbyville, Ky.

Why "Southern" education? Why not National or American? Or, if it must have a local designation, call it The Kentucky Journal of Education. Considering the sectional feeling hitherto so rampant, we would do nothing to perpetuate it, but all things to allay it or abolish it. We want no arbitrary lines drawn to separate one section from the other. In future, our manners, customs, and interests are to be one and the same. State rights and sectional interests are to be merged into the Union. It is not a kingdom nor an empire. It is a NATION. And our education, literature, commerce are to be AMERICAN.

The editor says: "Appreciating the necessity that has long existed for a periodical devoted to educational matters in the section where all our interests are, we, fully conscious of the responsibility assumed, enter hopefully upon our self-imposed task. The distinctive features of the Journal are set forth in the prospectus published elsewhere. To its statements we have only to add that without prejudice, without sectarian or partisan bias, we hope to so discharge our duty as to meet the approbation of every earnest worker in the great cause of education throughout the South and West. [Why not say throughout the Union?] We know that failure has been the common lot of those who have essayed the enterprise which we now propose, but we have the temerity to presume upon gaining wisdom from the experience of our predecessors."

Whatever may be the political proclivities of this new candidate, it must concentrate upon itself the best minds of educators in the regions where it circulates, and will inevitably do a most useful and necessary work. We therefore wish it the best success.

OLIVER TWIST. By Charles Dickens. With twelve original illustrations, from designs by George Cruikshank. Price, \$1.50 in cloth.

This edition of "Oliver Twist" is the tenth volume of an entire new edition of Charles Dickens' Works, now in course of publication by T. B. Peterson & Brothers, Philadelphia, which is called "The People's Edition, Illustrated." Each volume is printed on the finest white paper, from large, clear type that all can read. It is one of the best and cheapest editions of Charles Dickens' Works published in the world.

THE LIVING PULPIT OF THE CHRISTIAN CHURCH. A Series of Discourses, doctrinal and practical, from representative men among the disciples of Christ; with a brief biographical sketch and steel portrait of each contributor. Arranged and edited by W. T. Moore. One large octavo volume of 590 pages, with twenty-eight portraits. Published by R. W. Carroll and Co., Cincinnati. Price, \$5. Sold only by subscription.

The publishers express a just pride in the artistic excellence of this splendid production. The type is of the old style, new and clear; the paper fine and of rich tone; the printing and binding every way creditable. Some acquaintance with the editor, and a cursory perusal of the book,

warrant us in pronouncing it every way worthy of the most liberal patronage, which it is sure to receive. It is proposed to continue the series until it shall include all the leading preachers of the Christian Church now living, and thus will furnish in itself, when completed, a library of choice religious literature, including specimen sermons on all the various subjects generally discussed. Among the topics in the present volume are the following: The Good Confession; Jesus of Nazareth is the Theanthropos; Atonement; Jesus, the First and the Last; Reconciliation; Christ's Precious Invitation; What Must I Do to be Saved? The Conditions of the Gospel Reasonable; Regeneration; Christ's Conversation with Nicodemus; Baptism Essential to Salvation; The Ministry of the Holy Spirit; The Witness of the Spirit; The Church, its Identity; Building on the One Foundation; The Safety and Security of the Christian; The Priesthood of Christ; The History of the Redemption Reproduced in the Redeemed; Death and Life; The Love of God; Glorifying in the Cross only; The Law of Progressive Development; Conscience and Christianity; The Mission of the Church of Christ; Faith and Sight; Retribution; The Judgment to Come.

ORATORY—SACRED AND SECULAR: or, The Extemporaneous Speaker. With Sketches of the most Eminent Speakers of all Ages. By William Pittenger, author of "Daring and Suffering." Introduction by Hon. John A. Bingham, and Appendix, containing a Chairman's Guide for Conducting Public Meetings According to the best Parliamentary Models. 1 vol., large 12mo, pp. 320. Tinted paper, beveled boards. Price, \$1.50. New York: Samuel R. Wells, publisher.

Instead of an elaborate description of this new work, we give in brief the table of contents. Objects of the Work stated. Introduction, by Hon. John A. Bingham, Member of Congress.

PART I.—The Written and Extempore Discourse Compared—Illustrative Examples. Prerequisites—Intellectual Competency; Strength of Body; Command of Language; Courage; Firmness; Self-Reliance. Basis of Speech—Thought and Emotion; Heart Cultivation; Earnestness. Acquirements—General Knowledge; of Bible; of Theology; of Men; Method by which such Knowledge may be obtained. Cultivation—Imagination; Language; Voice; Gesture, how acquired; Distinguished Orators and Writers.

PART II.—A Sermon. The Foundation for a Preacher—Subject; Object; Text; Hints to Young Preachers. The Plan—Gathering Thought; Arranging; Committing; Practical Suggestions; Use of Notes. Preliminaries for Preaching—Fear; Vigor; Opening Exercises; Requisites for a Successful Discourse. The Divisions—Introduction, Difficulties in Opening; Discussion, Simplicity, and Directness. After-Considerations—Success; Rest; Improvement; Practical Suggestions.

PART III.—Secular Oratory. Instructive Address—Fields of Oratory; Oral Teaching; Lecturing. Miscellaneous Address—Deliberative; Legal; Popular; Controversial; the Statesman; the Lawyer; the Lecturer; the Orator.

PART IV.—Eminent Speakers Described—St. Augustine; Luther; Lord Chatham; William Pitt; Edmund Burke; Mirabeau; Patrick Henry; Whitefield; Wesley; Sidney Smith; F. W. Robertson; Clay; Bascom; Sumner; Spurgeon; Beecher; Anna E. Dickinson; John A. Bingham; W. E. Gladstone; Matthew Simpson; Wendell Phillips; John P. Durbin; Newman Hall, and others.

APPENDIX.—The Chairman's Guide. How to Organize and Conduct Public Meetings and Debating Clubs, in a parliamentary manner. Sent by return post.

SEXOLOGY AS THE PHILOSOPHY OF LIFE; Implying Social Organization and Government. By Mrs. Elizabeth Osgood Goodrich Willard. Chicago: G. R. Walsh. 8vo, pp. 483. Price \$2.25.

The dissatisfaction which is felt by most intelligent thinkers at the present day with the traditional theories of life and the universe, is strikingly manifested in this remarkable volume, without the slightest tendency to the skepticism which is content to remain in barren negations. After a critical sifting of prevailing speculative systems, the author appears as the champion of a positive faith, which she is persuaded will add new triumphs to thought, and lay the foundation for a higher order of society. In the prosecution of her argument she takes no counsel of the past, pays no deference to the authority of great names, is never blinded by the prestige of popular opinion, but follows out the clue which she professes to have obtained to the mysteries of the universe, with singular consistency and courage. At the same time, she exhibits no love of audacious innovation; none of the vehemence of party spirit; her tone is uniformly reverent and gentle; but she writes with undoubting strength of conviction, and the confidence of a feminine nature, that she is authorized to announce a new development of truth.

The philosophy of which Mrs. Willard assumes to be the discoverer, is founded on universal laws. Its peculiar feature is the prevalence of the masculine and feminine elements throughout the domain of nature. The principle of sex controls both the solar and the human systems, which correspond with each other, and with the laws of social organization and government. The harmony of society depends on the elevation of woman to her natural rank and influence, as illustrated in the motions of the heavenly bodies and the general order of the universe.

The laws of our nature are identical with the laws of the spheres. The ultimate causality in each of these orders of phenomena is the all-prevailing soul, which exists by its own eternal necessity, and is revealed in the manifold forms of life. Soul must be governed by the same laws that control matter, or it could not become organized in connection with matter. We can accordingly judge of the nature of soul by its analogy with the material elements. Still, we are not to regard soul as the product of any refinement of matter. It was never made or produced at all. It is forever the same unchangeable, incorruptible element, while matter proceeds from the laws of motion in the organization of the universe. Matter is the result of action—is subject to perpetual changes; its present state is not its primitive state, and hence it can not be eternal. Its elements are eternal, but not its changeable material forms.

But as all the elements of nature move by inherent mathematical law, every law of motion is universal and unchangeable. The conditions of sex are as deep as existence itself. In the development of life, soul is the mother, and law the father of nature. Nature is a birth as well as humanity. Birth implies parentage. Soul and law are thus the bride and bridegroom of the universe? The essential attribute of the soul is power, the essential attribute of law is principle. Matter has no sex. It is neuter in all forms of organized life, since it is the passive servant of the law of motion in the soul. In the primal condition of the elements matter does not exist, but is made or produced in the processes of motion. Matter is to the soul and law what clay is to the potter. Everywhere in

nature is the masculine, feminine, and neuter.

The theory, of which we have thus given little more than the merest hints, is elaborated by the author with great fullness of detail, and skillfully applied to the explanation of the origin of the material universe and of humanity. A large portion of her work, and one which will interest a majority of readers more than her ingenious speculations, is devoted to the practical application of her views to the improvement of the political and social institutions of the world. The masculine law of physical and mental labor gives to man the right of supremacy and control in this orbit of life. His right is derived from his strength and ability in the field of labor. The central power of woman in the maternal office gives her the power of control over herself and her offspring, and also the right of control over man in the sexual relation. As a consequence, she has the right of control in the central relations of society and government. In the solar and human systems the feminine law is the controlling power. The same law must be recognized in all the relations of life before we can possess a guarantee of order and harmony. In the present condition of society there is no balance of power between man and woman. By his power of control with the sword and in the field of labor, man has usurped all the natural rights of the mother. He has taken possession of her person, her children, her property, and earnings, as well as of the earth beneath her feet. He maintains his usurpations by the power of the purse. The remedy for these evils is to be found in the readjustment of the social relations, giving a feminine as well as masculine head to the government of the state in all its branches. The feminine head should be central, directing, and controlling; the masculine, external, distributive, and executive. In the governmental orders of society woman has the power of control, because she holds the heart of the people, as the left side holds the heart of the human organism. Woman is just as necessary to the head of the governmental orders as the feminine law of reason is to the head of the human system or rotation to the solar. In the public councils she would be to man intuition, judgment, wisdom, conscience, and self-reliance, in accordance with her mental constitution.

From the brief outline which we have given of a portion of the leading ideas that are developed and illustrated in this volume, our readers will be able to form some estimate of its import and purposes. It is not probable that the views of the writer will meet with general acceptance. They are too much at war with the current systems not to challenge controversy, although they are presented in a suggestive rather than a dogmatic form. Still, they possess a curious interest as illustrative of the fermentation of thought in these days, and the original products which are often found in the foam.

THE AMERICAN ARTISAN is a first-class weekly, devoted to the interests of inventors, mechanics, manufacturers, and others. It is a high-toned journal, conducted on business principles, and aims to do good. Like its elder brother, the SCIENTIFIC AMERICAN, it grows larger and stronger as it grows older. It deserves the success it is sure to receive. There is a spirited but an honorable rivalry between these two weeklies; the public will support them both and be the gainer for their enterprise. We read both.

THE STRANGER IN THE TROPICS.

Being a Hand-Book for Havana and Guide-Book for Travelers in Cuba, Porto Rico, and St. Thomas; with descriptions of the principal Objects of Interest, Suggestions to Invalids, Hints for Tours, and general directions for Travelers. Illustrated. 12mo. 200 pp. Price, \$1 50. New York: American News Co.

Just the thing needed. Why has it not been done before? Every person visiting these islands needs the precise instruction given in this book, and even the islanders themselves need it. Nor are its hygienic suggestions without value to the inhabitants of the continent—Tropic, Temperate, or Arctic regions. The very capable author—well known to us—modestly withholds his name from the title. Why?

ROUTLEDGE'S ILLUSTRATED

NATURAL HISTORY OF MAN, in all Countries of the World. By the Rev. J. G. Wood, M.A., F.L.S., etc., etc. Part VIII., December. Price, 50 cents.

This elaborate and exceedingly interesting work would require a very extended notice at our hands to furnish our readers with a definite idea of its character and contents. The Kafir tribes, the Hottentots, the Bushman, the Namaquas, the Bechuana, the Damaras, the Ovambos, the Makololos, the Makobas, the Batokas, the Banyals, the Balondos, Angolese, and Wanyamuezi, all African tribes, are considered at length as to their habits, customs, costumes, intellectual capacities, and geographical position. The number of illustrations introduced into the text is very large, and of course adds much to the value of the work.

To the ethnologist, the anthropologist, the lover of natural history, the work need only be named to excite their interest. To the general public the work may be earnestly commended as affording information of a useful character, written in a very entertaining style. No gentleman's library which pretends to comprehensiveness is complete without this publication. We purpose to give some extracts from it in the course of future issues of our JOURNAL.

THE PERSONAL HISTORY OF

DAVID COPPERFIELD. By Charles Dickens. With eight illustrations. Boston: Ticknor & Fields. Price, \$1 50.

Another volume of the neat *Charles Dickens* Edition, and the one which has enlisted the special interest of the author's admirers, as it is generally supposed to contain passages from his own early life and his struggles in the outset of his literary career. We count David Copperfield one of the best productions of the fertile author.

GOOD STORIES. Part III.

Boston: Ticknor & Fields. Price, 50 cents.

The stories in this interesting number are not confined to English literature, but embrace translations and stories from other languages. It includes Christmas with the Baron, Stephen Yarrow, A Family Christmas in Germany, the Christmas Banquet, Three of a Trade; or, Red Little Kris Kringle, Adventures of a New Year's Eve, and several illustrations.

BRAITHWAITE'S RETROSPECT OF

Practical Medicine and Surgery. Part LVI. January. Uniform American Edition. New York: W. A. Townsend & Adams. Half yearly, per number, \$1 50; per annum, in advance, \$3 50.

This exceedingly valuable compendium of medicine and surgery is without a rival in this country. As a reporter of important cases which have received the attention of the physician or of the surgeon, it especially commands the interest of all practitioners who would keep pace with the march of scientific improvement.

WOMAN'S WRONGS; a Counter-

Irritant. By Gail Hamilton. Boston: Ticknor & Fields. Cloth.

This racy, cogent, and sometimes caustic New England writer directs the shafts of her satirical logic at the recent publications of a noted clergyman. She takes occasion to dissent in strong terms from his positions with reference to the social, moral, and intellectual relations of woman, and claims that he ignores some of the most important influences which tend to impair their physical and mental forces. Some pages of the book are given to a vigorous advocacy of woman's right to vote, and the pressing need of her asserting her womanhood in matters more strictly within her sphere. Miss "Gail" always writes for a purpose, and the readers of her book will deduce from it some good impressions.

THE EDUCATION OF THE HEART;

or, The Necessity of Proper Moral Culture for Human Happiness. By Hon. Schuyler Colfax. New York: Samuel R. Wells. Price, 10 cents.

This is re-printed from the *PHRENOLOGICAL JOURNAL*, in response to the request of some friends who deemed the essay of sufficient value to be published separately for general circulation. It will repay the reader well.

THE GOOD MAN'S LEGACY. A

Sermon by Samuel Osgood, D.D., after hearing of the death of Dr. Richard Rothe, of Heidelberg. Price 25 cents. New York: Samuel R. Wells.

This interesting discourse will commend itself to any reader if he has not heard of the cultured minister who produced it. If he is acquainted with the reputation of the author, he needs no special advice of ours to determine his purchase of the book. The title is a sufficient review of the pamphlet.

PETERSON'S CHEAP EDITION OF CHARLES DICKENS' WORKS. Of these we have lately received from the publishers, T. B. Peterson & Brothers, Philadelphia, the following:

"David Copperfield," price 25 cents. "Hard Times," price 25 cents. "Great Expectations," price 25 cents. "No Thoroughfare." By Charles Dickens and Wilkie Collins, price 10 cents.

BLEAK HOUSE.

By Charles Dickens. With twelve original illustrations, from designs by Phiz and Cruikshank. Price, \$1 50 in cloth.

LITTLE DORRIT. By Charles Dickens. With twelve original illustrations, from designs by Phiz and Cruikshank. Price, \$1 50 in cloth.

LIFE AND ADVENTURES OF NICHOLAS NICKLEBY. By Charles Dickens. With illustrations by Phiz and Cruikshank. Price \$1 50 in cloth.

Three more volumes of that exceedingly cheap edition called *The People's Illustrated*, from those pushing publishers, T. B. Peterson & Brothers, Philadelphia. How they can make it pay we can scarcely see, unless Mr. Dickens' recent visit at Philadelphia has greatly stimulated the demands for his books.

GEMMA.

By T. A. Trollope. Price, \$2 in cloth; or, \$1 50 in paper. Philadelphia: T. B. Peterson & Brothers.

This new novel relates many passages in the more private walks of Italian life. The descriptions of localized scenery, especially those of the city of Siena, Savona, and Maremma, are excellent. There is much complication, plotting, and counterplotting introduced into the narrative—a mode of treatment permitted in all novels—but in the main the book is written well, and possesses a style well adapted to please.

THE TRIBUNE ALMANAC and

Political Register for 1868. Price, 20cts. New York: The Tribune Association, Publishers.

Of all political registers, this annual is the best of its size and price. Exclude the patent medicine advertisements—of which there are several pages—and there would be nothing to disapprove; as it is, excepting this one drawback, it is the best thing of the kind.

THE GOSPEL IN THE TREES,

is the somewhat peculiar title of a new volume, by Rev. Alexander Clark, editor of "Our School-day Visitor," Philadelphia, and pastor of the First Methodist Church, Pittsburgh, now in the press of J. W. Daughaday & Co. It will contain over 300 pages, 12mo, and be very handsomely made. As soon as ready, we shall describe it more at length.

THE PRAIRIE FARMER COM-

PANY of Chicago have published a capital Annual of Agriculture and Horticulture. It contains—including useful advertisements—140 pages, and sells for 30 cents. A complete directory, arranged in alphabetical order, of all the nurserymen and fruit-growers in the United States is given; also, agricultural implement dealers, seedsmen, and stock-breeders, which must be most desirable for those interested in these subjects. Altogether, we think this a capital beginning, and commend it as worthy of a place on the table of every Western farmer.

MUSIC. Mr. C. M. Tremaine,

481 Broadway, New York, has lately published the following pieces of new music. We have examined them with much enjoyment. The Soldier's Prayer, a bass song, by John Dunbar, price 30 cents; The Smile Whose Sweetness Won Me, a ballad, 30 cents; Day by Day, words by the author of John Halifax, music by W. R. Dempster, 40 cents.

MAGAZINES.—LE PETIT

MESSAGE for February contains an assortment of finely illustrated *modes de Paris*, with paper patterns. Price, 50 cts.

DIE MODENWALT for March

is replete with matters of interest to ladies in the line of new designs and patterns for dresses, sacques, etc. Price, 30 cents.

THE CATHOLIC WORLD. A

monthly magazine of General Literature and Science, by its February number, shows itself to be in the front rank with other American periodical literature of a critical nature. It writers are eminent for culture and taste.

LITTELL'S LIVING AGE, of

which we have just received Number 1234, continues to furnish its readers, semi-monthly, with choice selections from the prominent foreign and domestic monthlies and weeklies.

THE REVOLUTION, is the

title of a new weekly, devoted to the new movements favoring Woman Suffrage. Eight Hours Labor, the Overthrow of Political Domogism, General Education, etc. Subscription, \$2 a year. Susan B. Anthony, proprietor and manager, New York.

THE February number of

Demorest's Monthly Magazine abounds in matters of current importance to ladies. The fashion-plates are large, numerous, and elaborate.

GODEY'S LADY'S BOOK,

though now in its 76th volume, is fresh and vigorous. The February number contains a variety of information acceptable to the social circle.

To our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter. If questions be brief, and distinctly stated, we will try to respond in the "next number." Your "BEST THOUGHTS" solicited.

POLARIZING THE BRAIN.—

Does it make any difference in what direction the head is while one sleeps?

Ans. It is claimed by some that the head should be at the north during sleep, because there is supposed to be a magnetic current running from south to north, which, in a few years, will charge or polarize a bar of iron if placed in a north and south position. Dull heads might well sleep with heads to the north, and perhaps those who are too wide-awake and excitable should turn the other way to lower the tone of their brain. This doctrine is speculative only.

SUCCESSION OF THE YEARS.

—It is evident to our mind that but sixty-seven years of the present century have elapsed. Common parlance hath it, and correctly so, when speaking of occurrences of the past year, "in the year 1867," the signification of which is, "in the course or progress of 1867," a period of time incompleting. We speak of living in the nineteenth century, because the eighteenth is past, and it is now eighteen hundred and —, a number of years past eighteen hundred. The present century commenced January 1st, 1801.

A PERPLEXED CONSCIENCE.

—I was present when A paid B some bank notes. I saw the notes thrown on the table, and was, at the time, of the opinion that there were two of them, and so stated soon after the transaction. Two days later I had occasion to think the matter over more carefully, and, by placing other bank notes in the same position to refresh my memory, I am convinced that there were four or more of the notes. Should my having expressed the opinion that there were only two of the notes invalidate my present statement that there were four or more?

Ans. We think not. In judicial matters, the right of a witness to testify a second time with reference to the same matter unquestioned. The following illustration is in point: A witness is called to state the substance of an interview which had taken place in connection with the subject in litigation. He recites the circumstances and the character of the conversation to the best of his recollection then; a day or two afterward, it occurs to him that he omitted certain points which have a most important bearing on the case, and which he did not recall, or could not recall, in the course of his examination. His impressions are now strengthened by associated circumstances which present themselves to his mind and enable him to reason clearly on the subject; and it may be the further knowledge of which he has become thus possessed will tend to contradict or weaken the strength of his first testimony. He presents himself for a second examination, announcing that he wishes to make further statements; that, since his last deposition, he has become possessed of further information bearing on the subject of the suit. He is usually admitted to testify. Aside from this legal view, the equitable right, not to say duty, of a man to correct any statements made while entertaining, unintentionally, false views of a matter, is undisputed. We think that man who is willing to correct any erroneous statement thus made, entitled to the respect of all honest men.

ELECTRO-GALVANIC BATTERY.

—What is its use?

Ans. The medical uses of electricity, as recorded by many of the faculty, in cases of neuralgic, dyspeptic, rheumatic, and paralytic affections, are manifestly a very imperfect exhibit of what can be accomplished by the tonic effects of electrization. The *Boston Medical and Surgical Journal* publishes the following, relating to the effects of the galvanic battery:

"It strengthens the organs of assimilation and very markedly affects the secretion and excretion. The appetite increases in keenness and vigor; the bowels, if constipated, become more regular, and the sleep more refreshing; as a consequence, also, there is oftentimes an increase of the muscular development. As a result of all this increased activity of the vital functions, the patient improves in capacity for endurance, and is able to use more violent and protracted exercises than before.

"It causes a temporary feeling of exhilaration, very much like that which is experienced after surf or shower bathing. Patients say that they feel at once refreshed, as though they had taken a brisk walk in the open air. This enlivenment of the sensation often lasts for hours. Sometimes, especially with nervous patients, a very agreeable drowsiness is experienced, that makes a couch or lounge very inviting. If sleep is at once indulged in on account of this, it is usually very quiet and refreshing.

TRIBES WITH NO RELIGION.

—Are any tribes of men destitute of any of the mental faculties? The Kaffirs of Africa and the Patagonians of South America are said to have no disposition to worship, or any religious feeling.

Ans. So far as we are informed, no tribe or nation of men has yet been found who did not recognize a superior intelligence, or God. Those who have made the most extended acquaintance with African tribes have, we believe, uniformly found them pagans, worshipping all sorts of idols and entertaining the most wild and extravagant superstitions. Explorers, seamen, and traders, who are not in the line of such investigations, land upon shores among savages, and without learning their language, their customs, or their institutions, may infer that they have no religion, because they do not see them congregate and go through with that which civilized men would regard as religious ceremonies. Most of these barbarous and savage tribes, unfortunately, believe in evil spirits, and they have a hundred malign spirits to one good one. But all this indicates a religious element, a blind hungering for moral truth. All men have the rudiments of all the faculties, and there is as much difference between the best and worst specimens in civilized nations as there is between a civilized and a savage nation or tribe, in respect to intellectual scope and moral appreciation.

PHOTOGRAPHY.—Some people regard the practice of the photographic art as a very unhealthy occupation. Is this so?

Ans. In the early history of photography, when daguerreotypes only were taken, and the plate must be coated with the fumes of iodine and the picture brought out by the vapor of mercury, it was a very unhealthy pursuit, because the iodine and mercury must be more or less inhaled. With the recent improvements in photography, many unhealthy processes have been obviated. The confinement and the nervous excitement generally makes photographers nervous and thin, because they have to "make hay while the sun shines." Queen

Caroline once ordered her artist to paint a likeness of herself in the open garden, where the whole sky was reflecting light upon her from every quarter. An artist would appreciate the impossibility of painting a true picture of a person under such circumstances. Sometimes sitters complain because there is a dark shadow on one side of the nose, or under the point of the nose, or under the chin. They say "they are not negroes, they have not a black neck, or a black cloud on one side of the face;" and there are ten thousand other whimsical and ignorant criticisms which sitters make, that would wear out nerves of India-rubber. If artists could have artists to sit, it would be comparatively easy, because they would appreciate merit, and be satisfied with good work.

COLLEGIAN.—The student who is given to fits of melancholy will please call at our office, and we will suggest some resolution of his difficulties.

Publisher's Department.

DOUBLE SUBSCRIPTION.—We have made arrangements with other publishers by which we can associate several magazines respectively with the *PHRENOLOGICAL JOURNAL*, and offer both at a reduction from the aggregate price.

We can send the *JOURNAL* and *PUTNAM'S MAGAZINE* (the subscription price of which is \$4) to new subscribers for one year for \$6. The *JOURNAL* and *HOURS* at HOME for \$5. The *JOURNAL* and *LIPPINCOTT'S MAGAZINE* for \$6. The *JOURNAL* and *THE WEEK* for \$5. The *JOURNAL* and the *ROUND TABLE* for \$7. The *JOURNAL* and the *RIVERSIDE MAGAZINE* for \$4 50. The *JOURNAL* and *DEMOREST'S MAGAZINE* for \$5. The *JOURNAL* and the *ATLANTIC MONTHLY* for \$6.

"SHORT STORIES IN BUSINESS HOURS." is an old and sensible motto. The amount of valuable time wasted, killed, forever lost to one through inconsiderate persons who "just drop in" to say "how do you do," in business hours, is painful to contemplate. We ought all to remember that however little value we place on our own time, we have no right to consume or squander the time of others. Read what Dr. Hall says on this head in his *Journal of Health* to a correspondent. We doubt whether the experience which produced his outburst equals ours:

To C. O. H.—Can't afford to read a three-page letter from any correspondent, but gather the main drift, perhaps, from a first few lines; we can not tell all about any one thing in one article; it would be too long; nobody would read it; if you write again and want to be read, say all you want on one piece of common note-paper; enough can be said in that space to last a year. Ye long-winded folk: your blows are not worth a button; come to your subject at once; if two words express your meaning, select the one having the fewest syllables; if two monosyllables will equally convey your idea, write the one which has the fewest letters. Just imagine that every letter you want printed cost half a dime, and what wordy fellow has many! and act accordingly.

Persons often send a dollar or two for the *Journal* or for a book, and then write a letter a mile long, detailing their signs and symptoms, with insufferable diffuseness, and seem to think that an opinion or a prescription will be thrown in. When the editor opens a letter longer than a few words and in a strange hand, and has no money in it—it is turned over to another to glean the one main idea and report it. Time is money in a large city. A whole bundle of compliments would not buy a sprig of parsley for a bowl of soup. If you make a purchase at a store you do not expect to

have some other thing of equal or greater cost thrown in because you have patronized the "House." It would take us a year to answer all the letters we receive in a week from persons who seem to think that their subscribing for the *Journal*, or purchasing a book, or speaking praises entitles them to a prescription. Whoever wants a letter from us on any subject must send with it Five Dollars.

Personal.

DR. RICE, when at the head of the Theological Seminary in Prince Edwards, Va., was requested by the people of one of the out parishes to send them a minister. They wanted one who could visit a good deal, for their former minister neglected that, and they wanted to bring that up. They wanted a man of very gentlemanly deportment, for some thought a deal of that. And so they went on describing a perfect minister. The last thing they mentioned was—they gave their last minister \$350; but if the Doctor would send them such a man as they had described, they would raise another \$50, making it \$400. Dr. Rice immediately replied, advising them to send for Dr. Dwight in heaven, as he did not know any one on earth that would suit them.

THEODORE, king of Abyssinia, is a man of wit and sense if he is a tyrant. The following is told of him: He had subdued an insurrection, and issued an edict whereby he commanded that all those who had fought in the rebellion to lay down their arms and return to the employment of their fathers. Shortly after the publication of the edict he was waited on by a band of robbers, who claimed the right, in accordance with his command, to return to the calling of their fathers. "And what, then, were your fathers?" asked the king, unsuspectingly. "Robbers," was the reply. The king assured them that they would do better to raise herds and till the ground, as most of their countrymen, and offered to give them plows and oxen. But they insisted on the privilege of the edict. "Be it so," said the king, and dismissed them. But as they went their way rejoicing, a band of cavalymen overtook them, with the words: "Your fathers were robbers, and ours were engaged in hunting them; we have a right to follow their calling, and thus cut you to pieces in the name of our master the king."

PHRENOLOGY IN OHIO.

MR. D. M. KING, one of our former pupils, is laboring in the phrenological field in the State to which he belongs, Ohio. His appointments during January are in Trumbull County, Ohio; in East Cleveland, Ohio, the first half of February, and the last half in Wellsville, Ohio. March he intends to spend in Portage Co., Ohio, unless invited elsewhere. Mr. King is an earnest and honest man, fully impressed with the truth and importance of Phrenology, and anxious to promulgate it for the benefit of mankind. We wish him much success, and bespeak for him a hearing and a cordial reception by the public.

COMMODORE VANDERBILT

has been elected President of the New York Central Rail Road. He holds the same position on the Hudson River and Harlem Roads, and it is said he is negotiating for the control of the Erie Road. His enterprise raised the Harlem to profitable figures, and it is said the Hudson River was never before so prosperous as since the Commodore became its ruler. Brains tell if they are seventy-five years old.

General Items.

PRIZE TICKET SWINDLES.

The frequent warnings published in this *JOURNAL* in regard to mock auctions, lotteries, grand gift concerts, jewelry enterprises, and so forth, have saved many of our readers more than the subscription price of the *JOURNAL*. Every day we receive letters from subscribers, inclosing tickets, entitling the holder to a watch "marked" \$100, to be delivered on payment of \$5 and cost for packing. It is needless to say that none are ever sent worth more than the \$5, and none at all in any instance where the rogue can safely avoid it. We repeat, there is no such thing as getting something for nothing except by stealing. The safest way is to buy and pay for what is wanted.

MUSIC.—MR. FREDERICK

BLUME of 125 Broadway, New York, supplies everything in his line—books, instruments, sheet music, etc., at wholesale and retail. Citizens and strangers would do well to visit his establishment and examine his wares and prices before purchasing elsewhere. Persons residing at a distance should send stamp for circulars, giving full particulars.

THE YOUNG MEN'S HOME

IN NEW YORK.—We call the attention of our readers to this institution, but lately established at No. 220 East Thirteenth Street, near Third Avenue, as supplying to a limited extent a want long felt in this city, in which so many of our young men are compelled to reside without the protecting influences of home and friends. As its name implies, it offers the comforts of "a home" to all worthy young men, at cost. It is under the superintendence of a most excellent lady—Mrs. Middleton—experienced in the management of institutions of the kind, and is visited and controlled by some of our prominent ministers and citizens. The building, lately a private residence, is well heated and lighted, and the rooms and beds exceedingly comfortable and cleanly, with the conveniences of a warm and cold bath, and a well-furnished reading-room. The members of the household are trammelled by no regulated restraints, common to most benevolent and charitable institutions, but are free to come and go as they please, and being left to their good judgment to conduct themselves properly. In fact, the Young Men's Home does not wish to be looked on as a charity, as it is intended to be self-sustaining, requiring its weekly rate of board in advance; it is enabled to offer superior inducements in the way of home comforts, at a very low charge. We have gone to this length in speaking of the Young Men's Home, feeling it our duty, as it is our pleasure, to bring its advantages before our readers.

SEWING MACHINES.—Every

purchaser first inquires which is best? Having bought a good one—no matter whose make—a testimonial goes forth as to its excellence. We have seen diplomas, gold and silver medals, and numerous other evidences of approval, awarded to all the leading manufacturers. Among the rest, *THE WHEEL MACHINE*, advertised on our first page, is classed among the best. The enterprising manufacturers are bound to hold the leading position they have fairly earned, and will not allow themselves to be surpassed.

TEA AND COFFEE.—We never yet advised any one to drink these beverages; we believe the world would be the better for their total disuse. There would

be less headache; less palpitation of the heart; less sleeplessness; less nervousness; less scolding; less fault-finding; less ill temper; less mental irritability. It is quite possible that these foreign substances—stimulants—may, when taken in moderation, serve, or seem to serve, a useful purpose. But that they are generally used in excess, we do believe; we have ourselves used them, more or less, and—like toppers and smokers—can not say that they have injured us. The American Tea Company, who import all their stock direct, are said to furnish the best, and they seem to regard this JOURNAL a good advertising medium, though we can not recommend their wares to our readers. That they will deal *honorably* with all, we do believe, and hence permit them to speak for themselves in the advertising pages of the A. P. J.

THE WEBER PIANO has an excellent city reputation, though not so much advertised and puffed as some others. We commend it, not only on the testimony of experts, who pronounce it one of the very best, but also, on our own knowledge. A descriptive circular will be sent to any address by MR. WEBER, of 429 Broome Street, New York, on receipt of a postage stamp.

PLANT TREES.—All winter Nurserymen have been "busy as bees," root-grafting, trimming, and getting their stock ready for spring planting. Visit nurseries and select an assortment, and then lay out orchards, and stock them with standard apple, pear, peach, plum, and cherry trees—blackberries, raspberries, strawberries, etc. Young farmers and gardeners, and all citizens who own even a rod of ground, should at least plant a grapevine. Supposing every dwelling-house in all our cities had each one or two fine large grapevines in full bearing, think of the tons of beautiful fruit they would annually produce. It would be worth millions of dollars to health and enjoyment, and cost a mere trifle.

THE MUSICAL BOXES OF MESSRS. M. J. PILLARD AND Co., of 21 Maiden Lane, New York, are among the most interesting household ornaments and means of entertainment. Their use begets a musical taste in one and all. We believe children who listen to their sweet tunes will be better tempered and better behaved. Husbands and wives also. Try one of them.

GRAPES.—Eastern and Northern readers will be glad to know the kinds of grapes to be had and approved, and where they may be procured. Besides many well-known varieties, we take pleasure in calling attention to the following, grown by the Shakers, in South Groton, Mass., for which Elijah Myrick is agent, and who thus describes them:

THE SAGE GRAPE has a very large, handsome, deep amber-colored berry; very early, from the 10th to the 15th of September; sweet, juicy, rich, and very productive.

THE HARTFORD PROLIFIC.—Large, dark purple, ripens early, never mildews; a most excellent hardy variety and great bearer; ripens 20th of September.

THE BLACK CLUSTER.—A beautiful black grape, very compact and large clusters, sweet and delicious, vine hardy, ripens 20th of September, and is very productive. Keeps well after taken from the vine.

Farther South, other varieties, which ripen later, may be preferred.

This Society of Shakers also have the Early Amber (or the Early Northern Muscadine), equally as hardy, productive, and valuable.

They also propagate the Mountain Seedling Gooseberry, which the *New England Farmer* pronounces the very best variety within our knowledge. Dwarf pear-trees, currant and gooseberry bushes of the choicest varieties are supplied.

The following motto, adopted by this Society, indicates the rule by which the Society profess to be governed:

"This above all—to thine own self be true, And it will follow, sure as day the night, Thou canst not then be false to any man."

Gardeners will grow what they can to sell, but never enough. Now that fruits may be canned, kept, and transported any distance, by sea and land, there is no danger of a glutted market; then multiply those healthful luxuries. Do not go to extremes and plant a thousand trees when you can only care for a hundred, but let each plant a few, get an assortment, get the best; get them early in the season, get them now! Try the new varieties, prove them, and your eyes and palate shall be gladdened by these good gifts of God to man.

[COMMUNICATED.]

THE VILLAGE SEWING-CIRCLE.

BY CHRISTINE H. CARPENTER.

A DROWSY summer afternoon hung over the dainty little village of Maysville, nestling among the green Connecticut hills. The leaves of the clustering vines framing the pretty white cottages just stirred in the sunshine, while even the bees and butterflies crept to shelter in the hearts of the great red and white roses, faintly nodding to some occasional zephyr as it languished by. From the open windows of Widow May's "best room" a hum of voices stole out upon the scented air, and within, more than a score of busy hands fashioned divers fabrics into fair shapeliness. It was the weekly sewing-circle of the Maysville church, for which a fair was in prospect for autumn, a fact that formed the secret of this feminine conclave. Who ever saw a sewing-circle without its little tit-bits of gossip? This was no exception to the rule. Presently a cheery face looked up from its owner's glancing needle:

"Do you know," said she to her neighbor, "that I've quite altered my opinion of Mrs. Wells lately? Pray don't start—she has not arrived yet—there's no one here one need care for."

"How is that?" asked the re-assured little matron thus addressed; "you used to think her the most extravagant woman in the village, and I'm not sure but you were quite right. To my certain knowledge she wears the most new dresses, the most new bonnets, and so costly, to say nothing of the style in which those children of hers are primped up! You don't pretend to imagine her husband can stand it so much better than others I might mention?"

"Oh! no; Mr. Wells is not rich—only comfortable."

"Well, I should say it must tax him awfully, poor fellow! Now I've more consideration than that, although I could impose upon Ned, he's so easy and good-natured. He does sometimes say, 'How nice Mrs. Wells always looks, and how pretty she fixes up those children!' but when I tell him what a power of money it would cost him for me and my children to dress up like that, I guess he don't mind being a little tired of seeing the same old things on us. I have all I can make off the place, the garden-truck and fruit—quite a round sum, too; but I can't make much of a show of it, for all that. I can't afford four new bonnets a year, and I can't afford two new dresses to my neighbor's one;

and when I get one, it's got to be plain, because dressmakers charge so much to trim it."

"Maybe you don't know how to economize."

"Economize! Well, you do astonish me! I shouldn't say it, perhaps, but I'd like you to point out another woman in Maysville who has the principle of economy more at heart, or one that can stretch out a dollar further'n I can!"

"Yes, I can do it."

"Just tell me, and I'll take a lesson right off."

"You might profit by it, too, as I have."

"Do tell."

"It's Mrs. Wells."

"Mrs. Wells! That does beat my time—to set her up as my model! Now I dare say, if one really knew, she spends just three times as much."

"No, she doesn't, nor in fact any more than you do."

"Oh, nonsense! How do you get over the four bonnets and the dresses and fancy furbelows one always sees about her?" The little matron shook her head sagaciously. "No, no, Mrs. Brown, you can't tell me! I calculate the whole matter in plain straightforward figures. Now, for instance: There were my two bonnets last year. Ned thought as how I should have something better than the hideous things Miss Smith gets up in the village, so I went to New York. Well, there were two days lost just going and coming at the very time I was most wanted, besides the cost, which I reckoned up would have bought a new dress for the baby. When I got there, such a chase as I had! Of course I was in a hurry. Everything a body liked was dreadful dear; and then I wasn't sure but some old thing'd be palmed off on me, just like Lucy Stuart, who thought she'd a perfect bargain, and was something ahead of everybody, when it turned out it wasn't a bit like the real fashionable shape. The last time I went I tired myself almost to death looking for something reasonable, and at last had to take the nearest to my means. I thought it would do well enough till I got home, and Mrs. Wells called on me next day with the very loveliest bonnet on her head I ever saw. It never cost less than twenty-five dollars in the city. I mean that gray velvet she had last fall."

"I know all about it, and it didn't cost but six dollars, and it didn't come from the city."

"Six dollars? You must be dreaming! And where, in the name of creation, could any one get such a bonnet in Maysville? Then, again, when I was in the city, I saw a dress something like that blue merino of Susie Wells's everybody liked so much. I thought I'd enough left to buy it for Ada. I knew the stuff wasn't more than fourteen shillings a yard, and it takes just four yards—that was seven dollars; but besides, there was the making and trimming. I went in and priced it. It was eighteen dollars."

"And Susie Wells's cost her mother only about nine."

"That beats me out and out. Where does she go to get such bargains?"

"Not very often out of Maysville."

"Why, I never see them. When I go to Miss Smith for anything new, most likely it's some notion she's borrowed from the Wells's. I do believe they set the fashions of this village for dressmakers and all."

"Well, Mrs. Wells can do it if she likes, for the truth is, she has a sure guide. This is the secret."

"Do tell!" suspending her work to listen.

"Yes, and what's more, Mrs. Wells

doesn't buy half those new things ready-made; she makes them herself."

"Oh! it's all in gumption, then. I never had any."

"No, not that alone. I went down to the house yesterday to take tea, and we got chatting, and somehow we came to talk about economy, and I said I didn't see how some folks managed to make such a show when others doing quite as well in the world couldn't. 'Now, you don't mean me?' said Mrs. Wells, laughing like. 'Why, yes,' said I, bluntly; 'I do. I can tell you, Mrs. Wells, I went on, 'Maysville people do think you are awful extravagant.' 'Why?' said she. 'Because you have so many new things, and made so costly, and the children are always furbelowed enough to cost a small fortune.' 'Now, I'll warrant,' said she, 'that all mine and the children's new things together don't cost me any more than yours, or any other family in the village as large as mine.' 'Why, how is that?' said I. 'Because I know how to manage,' said she. 'I make every penny tell, and just because I've got an invaluable aid to give me the very best advice, and keep me acquainted with the newest and best fashions for every month. It furnishes patterns and ideas, and tells what to get, and how to make up, so explicitly, that a body can't help understanding. There's my bonnets.' 'You have four a year,' I remarked; 'one for every season, while I am obliged to make one serve for spring and summer, and another for fall and winter both.' 'True. Now I save all the cost and time and trouble of going to the city, for all I have to do is to consult my Mentor for shape, style, and material. Past experience has proved to me that I can rely upon it without a fear, and it is always full a month in advance, so that I have plenty of time for consideration. Send for the necessary articles, and there are the directions to make up. My gray velvet you admired only cost me six dollars, when I'd have had to pay twice as much otherwise. So you see four don't cost any more than your two, and besides, I have the pleasure of always feeling fresh and presentable. Just the same with cloaks and dresses. The rule applies all round. Then again, Miss Smith, our village oracle, never can deceive me with anything ancient. I have an incontrovertible authority from headquarters, too, that keeps me continually supplied with pretty fancies for Susie's and Maggie's clothing. I can always dress my children well and tastefully, because I spare myself one great expense, that of giving them out to be made, as I have within my reach such valuable and practically useful instructions, that it is a delight to contrive and fashion for myself. Then I'm never at a loss for the boys either. My never-failing friend has always some valuable and serviceable suggestion. If my means are limited, there is sure to occur an idea that helps to make a cheap suit come out quite jaunty and becoming. There are a hundred-and-one other notions to add effect to a toilet; how to cut and ornament dresses, aprons, sacks, jackets, or any of the indispensables in a well-regulated wardrobe, even to under-clothing. It puts to use all the odd ends of materials one may have. Nothing can go to waste when you are reminded so often of innumerable uses to turn it to.' 'I wish you would take pity on me,' said I, 'and put me on the right track, for I've got tired of pinching and screwing to no purpose.' 'With all my heart. I'm afraid you have always been, like many others, a penny wise and pound foolish. Take the cost of a journey to the city and back—to which you are forced by Miss Smith's im-

positions or the fear of them—three dollars, and purchase a year's subscription to *Demorest's Monthly Magazine*. That is the aid, counselor, and helpmate I've been telling you of."

At this juncture Mrs. Brown chanced to glance out of the window; "I have just finished my story in time," said she, her voice subsiding. "There is Mrs. Wells coming up the garden path; you shall have her own testimony."

Bonnet and mantle disposed of, and work in hand, the new comer was prepared for the consultation by an active rehearsal from Mrs. Brown of a portion of her own and her neighbor's recent discourse. Mrs. Wells's entrance had been the signal for the resolving of the several little groups of talkers into a general conversation. Not a few listened anxiously for her sentence upon Mrs. Brown's narrative.

"I am quite prepared to indorse all that I said yesterday," returned she at its conclusion, smilingly surveying her auditors, "and I can even say more. Mrs. Brown kindly complimented me yesterday upon the arrangement of my table, and more than one of you praised the trifles in the way of pastry and other refreshments I contributed to the refreshment table of our last year's fair. The household department of the Magazine was my guide in numberless instances; it is especially devoted to the discussion scientifically of edibles and items of interest to housekeepers. You have seen such practical illustrations of the value of its various receipts, that I need scarcely dwell upon it. It utterly dispenses with the extra expense of cook-books, that are but too often humbings, composed of mixtures neither wholesome nor palatable. The recipes of my reference will bear testing."

"Where did you learn of the existence of your oracle?" questioned Mrs. Hart.

"I read of it in the village paper."

"Oh we don't take that."

"Not take the Maysville Times? I'm surprised! Why, it's to every one's interest to take the local papers. You get your money's worth over and over. I should as lief be out of the world as to be without the news. My husband says he sets as much store by them as I do by my *Demorest's Monthly*. That must have been the reason Mr. Wells did so much better by his grain and hay than Mr. Hart. You see, he had the advantage of knowing how to sell, and when and where to find a good customer, and all this through the paper, while neighbor Hart, even though he's quite as shrewd at bargaining, had to trust to luck after all. Mr. Wells says he finds so many items of use to him about gardening, and then there are the quotations from the city markets. It won't do to trust to hearsay. You want a reliable source for such information, so as to know how to shape your own arrangements. We always do well off our fruit, because we don't, of necessity, need to take much risk by hurrying to get it out for sale in time when it is really too early or too late, and it must be sold at a sacrifice or be let to spoil. We watch the paper, and are generally just about right for a very good sale. Just make a trial of it, and if you don't confess that you wonder how you ever did without it, I'll pay the cost of your subscription."

Before any one could reply, there was a slight stir at the doorway, and the next moment a chorus of voices welcomed the good shepherd of the Maysville flock among his people.

"What have you there?" said Jennie Kip, the pet and belle par excellence of the village as, after the greetings were over,

the reverend gentleman sat down before the table and began divesting of its cover a small packet he had carried.

"Something that I fancied might be of use and interest to you ladies in the pursuit of your good work: *Demorest's Monthly Magazine*." There was a rapid interchange of glances among the needleworkers.

"I thought you disapproved of light reading," ventured Miss Kip, mischievously.

"So I do, except when, like the literary department of this Magazine, it is instructive, entertaining, and calculated to exert a strong moral influence over our minds. This Monthly is a great favorite at the parsonage. I am a regular subscriber, for I scarcely think we could do without it. My wife says it has taught her to love poetry, because of the little gems of verse she finds therein. Besides, there is a new piece of valuable music each month. As a work of art, it is superior to any other published. Look at its beautiful illustrations, its exquisite steel-plates; at the fineness of the paper and the clearness of type, which at once fasten the attention. Every page is smooth and fair to look at. Even in looking through its advertising columns I find nothing to offend the most fastidious. No patent medicines or other quackery. Upon several occasions my wife and I have been in want of articles, and we should have been at quite a loss whither to turn but for the notices in *Demorest's Monthly* directing us to some first-class establishment, and which, in every single instance, we found to be just as represented, reliable and trustworthy. What I presumed might be of special service now, was this department of fashions, about which I know but little, but which my wife affirms always contains the most valuable suggestions respecting wearing apparel."

"I have just been testifying to that before you came in," remarked Mrs. Wells. "And I remember a recommendation from a friend of mine in Greenfield. Her husband is a builder, and she writes me he is forever lauding the Architectural Department of the Magazine. He considers this feature alone renders it invaluable, because its plans and diagrams are all so good and adaptable. My children hail its appearance quite as gladly as I do. I read aloud to them from its literary portion, because I find its general tone so pure and elevating. I think it a desirable addition to every household in Maysville."

"And I," chimed in the minister. "My boys and girls take special delight in its engravings. It has inculcated a taste for art among them. I think its refining influence, the variety it combines, and its neat dress, render it an ornament for every parlor-table in the village."

"Any one of its peculiarities—its full-size patterns, its braid and embroidery sheets for the year, or the compilation of twelve excellent pieces of music—is worth far more than the cost of a year's subscription," suggested Mrs. Wells. "And despite all this, each subscriber receives a valuable premium."

"I shall subscribe," exclaimed Mrs. Brown.

"And I," said her neighbor.

The words were echoed from all parts of the room.

"Why not make up a club," suggested the pastor, "and give your orders to Mrs. Wells?"

"I should like that very much," resumed the latter. "I will tell you why, frankly. There are great inducements offered for this purpose. For fifteen subscriptions at three dollars each, while every individual

receives a premium, I should come into possession of a Family Sewing Machine. Such a treasure!"

"You are quite deserving of such a prize, as the first to establish the merits of the Magazine here," said several. In a few short weeks Mrs. Wells's sitting-room boasted a sewing-machine, and each member of the club a copy of the Magazine.

"How do you like it—how do you like it?" asked the various Maysvilleites, as they met after this important event. "It has all the virtues claimed for it. The fashion gossip offers really new and acceptable ideas, because they emanate from the actual depot of the metropolitan modes, and are not a revised and garbled-over rehash of old styles. It is in truth an actual 'mirror of fashions.' I have discarded the other wishy-washy counterfeits I have heretofore been taking, and find this one Magazine will do me more actual service than half a dozen others put together."

Soon so said all Maysville, except Miss Smith, who had hitherto been quite successful in palming-off her antiquated styles upon the villagers, and who now found her "occupation gone."

"What shall I do?" said she, wringing her hands in despair, to a sympathizing gentle soul who chanced to be a member of Mrs. Wells's club.

"I can not say, unless you take *Demorest's Monthly Magazine*, when you will be likely to find suggestions to help you out of your difficulty, as I almost always do in my own case. Miss Smith, you had better think of it."

The result of this counsel was that Miss Smith sent in her subscription.

Early one bright Monday morning the good people of Maysville remarked that a marked change had come over the little millinery and dressmaking establishment they had of late almost utterly ignored.

"How beautifully you have fitted up, Miss Smith," said her friend, who had been invited to take a look within.

"I've started anew as a branch of *Mme. Demorest's Emporium of Fashions*, the headquarters of *Demorest's Monthly*. I'm very thankful to you for mentioning the Magazine to me, for you see it has helped me out of my trouble."

"How do you prosper?" asked the same friend, some time later in the month. "dropping in" to see if Miss Smith's hopes had been realized.

"Oh, I never did so well! Why, I can work with so much satisfaction to myself and every one of my customers, and I have such a variety of beautiful styles, that even the ladies from the city, boarding hereabouts, find all they require."

Time flitted swiftly by, and again the sewing circle had met at Widow May's.

"What a vast improvement there has been in our village since we have taken *Demorest's Monthly*!" exclaimed Mrs. Brown, during a pause in the conversation. "Mrs. Hart, did you take Mrs. Wells's advice and subscribe for the village paper?"

"Yes, and I must say, it was just as she said—Mr. Hart and I have resolved never to do without it again. He thinks it saves him a great deal more than his false notions of economy ever did."

"That is my opinion of the Magazine. Besides, we are certainly all brighter, and better, and happier, and wiser, through its influence. It is the general remark. There is now one thing for which I have a great ambition. That is, to make up a club large enough to get, as a premium, an organ for the church. I have already set about it by applying to some of my friends. I find I have only to show a copy of the Monthly to convince them of its merits. It speaks for itself, and they have been so enthusiastic in their appreciation as to set their names down upon my list immediately. Will any of you aid me?"

Every voice chimed in assent. As women always do when they have a pet project at heart, they went to work with will and energy, and found their task so easy, that in a few days the entire subscription was upon its journey to W. Jennings Demorest, Publisher of *Demorest's Monthly*, No. 473 Broadway, New York.

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED, and charged according to the space occupied, at the rate of \$1 a line.]

THE HYGIEAN HOME.—At this establishment all the Water-Cure appliances are given, with the Swedish Movements and Electricity. Send for our circular. Address A. SMITH, M.D., Wernersville, Berks County, Pa.

Address, J. W. DAUGHADAY & CO., Publishers, 434 Walnut Street, Philadelphia, Pa.

JUST OUT.—Should be read by every one with Weak Lungs or Disordered Nervous System.

THE STRANGER IN THE TROPICS: A Guide-Book for Travelers in Cuba, Porto Rico, and St. Thomas. With Descriptions of the Principal Objects of Interest, Suggestions to Invalids (by a Physician), Hints for Tours, and General Directions for Travelers. 1 vol. 8vo. Illustrated. Price, in cloth, handsomely bound, \$1 50. Will be sent free by mail on receipt of price.

This work is designed especially for those who contemplate seeking a more Southern Climate for Health or Pleasure, and should be read not only by those who contemplate going to the West Indies, but also by all who desire information as to the effect of a sea-voyage and a warm climate on persons with weak lungs, or disordered nervous system.

The Suggestions to Invalids (written by a Physician who was himself a sufferer from consumption, and who for several years experienced the benefits of a Tropical Climate), are worth many times the price of the book to every one who suffers by that insidious disease.

To all who have visited Havana, its perusal will open afresh the fountains of memory, and bring back vividly to the mind, many scenes and incidents of pleasant and curious sojournings. "Except for some special and overruling reason," says Willis, "no traveler comes away willingly from Havana."

With "The Stranger in the Tropics" in hand, the reader may plan a delightful winter or spring excursion of thirty days to Havana and back, which shall cost him but \$300; or he may arrange to do Cuba, Hayti, St. Domingo, Porto Rico, and St. Thomas in sixty days, for \$500; and, if so inclined, he can extend his tour to five months, and for \$1,000 make the entire round of the West Indies, returning by way of New Orleans, the Southern States, and the Mississippi River.

By the casual reader it will be found to be one of the most entertaining and instructive books of the season, and containing a more concise and exact account than can elsewhere be found of the interesting manners, customs, scenes, and climate of our (present and future) New Possessions.

FRANK LESLIE,

Illustracion Americana,
No. 537 Pearl Street, New York.

CHANGE OF ADDRESS.—Our business connection with "Austin Hurd & Co.," and "F. Wilson Hurd & Co.," having been dissolved, our friends will hereafter please address us—Box 322, Danville, Livingston Co., N. Y., and not "Our Home," as formerly.

THE PHRENOLOGICAL JOURNAL, as an Advertising Medium. While we rigidly exclude all swindling schemes, including lotteries, gift enterprises, and cheap jewelry concerns, we are open to useful and legitimate business announcements. Our very large circulation, among a thinking and active class of readers, renders it a very desirable medium. The JOURNAL is less ephemeral than common papers, every number being carefully read and preserved. Some of our advertisers have informed us that their announcements in this JOURNAL have done them more good than those in any other. Our editions being very large, printed very handsomely, the same as book work, we are compelled to go to press a month in advance of date. Therefore those who would avail themselves of our circulation must hand in their advertisements accordingly. Books, stationery, papers, trees, plants, seeds, lands, schools, machinery, inventions, and the like, would get patronage if advertised in these pages.

AMERICAN ARTISAN AND PATENT RECORD.—New Series.

The *American Artisan*, now in the fourth year of its publication, is a Weekly Journal, devoted to fostering the interests of Artisans and Manufacturers, encouraging the genius of Inventors, and protecting the rights of Patentees.

Each number contains numerous original engravings and descriptions of new machinery, etc., both American and Foreign; reliable receipts for use in the field, the workshop, and the household; practical rules for mechanics and advice to farmers; "Mechanical Movements," and other useful lessons for young artisans; the official list of claims of all patents issued weekly from the United States Patent Office; reports of law cases relating to patents, etc.

Each number of the *American Artisan* contains sixteen pages of instructive and interesting reading matter, in which the progress of the arts and sciences is recorded in familiar language. Twenty-six numbers form a handsome half-yearly volume. The columns of the *American Artisan* are rendered attractive by articles from the pens of many talented American writers upon scientific and mechanical subjects.

Terms of subscription: Single copies, by mail, per year, \$2 50 in advance. Single copies, by mail, six months, \$1 25 in advance.

The publishers of the *American Artisan* are also extensively engaged as Solicitors of American and Foreign Patents, and will promptly forward to all who desire it, per mail, gratis, a pamphlet, entitled "Important Information for Inventors and Patentees." Address

BROWN, COOMBS & CO.,
Proprietors of the *American Artisan*,

MADAME DEMOREST'S MAM-

NOTE SEMI-ANNUAL BULLETIN OF LADIES' AND CHILDREN'S FASHIONS FOR THE SPRING AND SUMMER, 1868. This elegant Plate of Fashions is printed on very large, heavy plate paper, 24 by 38 inches, and elegantly colored, being the largest and most elaborate, as well as the most reliable, Plate of Fashions ever issued. The Plate is also accompanied with Ten Full-size Cut Patterns of the Principal Figures and a Pamphlet of Full Descriptions, and other valuable information on Dress-making. Price \$2 50, or, yearly, \$4, mailed free, securely done up on roller. This Plate is invaluable to Dress-makers.

JUST PUBLISHED—Third Thousand Edition—An extraordinary New Book by Andrew Jackson Davis, entitled A STELLAR KEY TO THE SUMMER-LAND. Part I. Illustrated with Diagrams and Engravings of Celestial Scenery.

Men of Science! Thinking Men! Independent Men! Minds skeptical about the Future! Here is a Book for You.

This is the twentieth volume from the pen of the inspired Seer and Teacher, Andrew Jackson Davis. He has heretofore explained the wonders of creation, the mysteries of science and philosophy, the order, progress, and harmony of nature in thousands of ages of living inspiration; he has solved the mystery of Death, and revealed the connection between the world of matter and the world of spirits.

Mr. Davis opens wide the door of future human life, and shows us where we are to dwell when we put aside the garments of mortality for the vestments of angels. He says: "The volume is designed to furnish scientific and philosophical evidences of the existence of an inhabitable sphere or zone among the suns and planets of space. These evidences are indispensable, being adapted to all who seek a solid, rational, philosophical foundation on which to rest their hopes of a substantial existence after Death."

The contents of this book are entirely original, and direct the mind and thoughts into channels hitherto wholly unexplored.

The account of the spiritual universe; the immortal mind looking into the heavens; the existence of a spiritual zone; its possibility and probability; its formation and scientific certainty; the harmonies of the universe; the physical scenery and constitution of the Summer-Land; its location; and domestic life in the spheres—are new and wonderfully interesting.

This book is selling rapidly, and will be read by hundreds and thousands of persons. Price, \$1; postage, 16 cents. Liberal discount to the trade. For sale by the Publishers, WILLIAM WHITE & CO., No. 153 Washington Street, Boston; and by W. ARNOLD CHASE, at our Branch Book Store, No. 544 Broadway, New York. It

ic MAGAZINE. Terms: \$3 a year, or 20 cents a number. This is the only periodical printed in Phonography published in America. Address JAMES E. MUNSON, 41 Park Row, New York.

A GREAT ANNOUNCEMENT!!

Now Ready, in No. 16 of

THE NEW YORK WEEKLY,
the Best Story and Sketch Paper of the
Age, a thrilling Tale, entitled,

THE WITCH-FINDER:

OR,

THE HUNTED MAID OF SALEM.

By Leon Lewis,

Author of "The Silver Ship," "The
Water Wolf," "Syria, the Jewess," etc.

A thoroughly authentic history of Salem Witchcraft has yet to be written. In the books treating of this subject the atrocities that were perpetrated by the Witch-Testers were classed as almost pardonable offenses, because committed under the delusion that the victims were gifted with supernatural powers, and could at will afflict any person with the most direful physical and mental ailments—such as blindness, deformity, or insanity. In those days, every person who suddenly became ill, at once proclaimed that he was bewitched, and began recalling to mind the female on whom he had last looked, and who, it was thought, had prostrated him by the power of Witchcraft. The suspected party, as was natural, generally proved to be some unfortunate woman against whom the invalid had long harbored a spirit of unfriendliness. The relatives of the sick person were at once summoned; after listening to the story of the individual supposed to be Bewitched, they would proceed in a body to the dwelling of the unsuspecting victim, drag her forth, publicly accuse her of witchcraft, in having afflicted their suffering relative, and make her submit to

THE WITCH-FINDER'S TEST.

Tears and entreaties were of no avail; the expostulations of friends only made matters worse, by leaving them open to suspicion; and it often happened that in endeavoring to shield the unfortunate victim from the fury of the superstitious multitude, even the friends of the supposed witch were compelled to undergo the tortures of

THE WITCH-FINDER'S TEST.

These tests were as numerous as they were atrocious and diabolical, and frequently resulted in the death of the victim. When proved guilty of Witchcraft, death by the most cruel means was of course the sentence; but it was not a rare occurrence for

THE WITCH-FINDER'S TEST

to put an end to the victim's sufferings by death, just as she was about to be declared innocent.

At this distant day, and in this age of enlightenment, there will be found many who will discredit the following brief description of one of the many tests resorted to by

THE HEARTLESS WITCH-FINDER.

The Salemites believed that it was impossible to drown a witch—that if thrown into a river, she would certainly be able to make her way to the shore. Acting upon this belief, when a woman was suspected of Witchcraft, she would be compelled to undergo

THE WITCH-FINDER'S DROWNING TEST.

She would be dragged to the nearest river, and plunged in at a considerable distance from the shore. In case the woman succeeded for a time in keeping her head

above the surface of the water, that was considered positive evidence that she was a Witch, and she would be stoned to death as she struggled with the remorseless waves. In this test the only proof of the woman's innocence of Witchcraft was when she could not swim, and therefore sank to rise no more! Innocent or guilty, it was death in either case! By drowning, she proved herself innocent; but if it appeared probable that she could save her life by swimming, she was stoned like a cat until she drowned!

Even cruelty more atrocious than this was put in practice by

THE WITCH-FINDER.

Private quarrels and ancient grudges were avenged by accusing innocent people of Witchcraft. Young wives were ruthlessly torn from loving husbands, accused before the gaping, ignorant, and superstitious populace,

BRANDED AS WITCHES,
and after being marched through the town, that everybody might look their last upon the

FEMALE DEMONS,
the terrified women were given over to the villainous wretches who had achieved notoriety as

WITCH-FINDERS.

The remarkable story which is soon to appear in the

NEW YORK WEEKLY,
is a reliable expose of the atrocities enacted in the

DAYS OF SALEM WITCHCRAFT.

The tale is founded on authentic records and data, and is entitled

THE WITCH-FINDER;

OR,

THE HUNTED MAID OF SALEM.

The plot of the story is original, although it has for its basis an accurate account of the cruelties that were perpetrated during the period of

SALEM WITCHCRAFT.

Among the principal characters portrayed in this exciting story is

THE WITCH-HUNTER.

The most disreputable person in Salem, at the time of the Witchcraft excitement, was a man named BOARDMAN, who had achieved a devilish notoriety as a Volunteer Accuser, a Witch-Tester, or Witch-Discoverer. This heartless miscreant practiced various juggleries, under pretense of distinguishing a witch from an innocent person, such as drawing blood, saying the Lord's Prayer backward, etc.

THE HUNTED MAIDEN.

Another interesting personage of those times was HESTER WAYBROOK, the daughter of a colonial merchant—a beautiful and noble-hearted girl, whom the villain BOARDMAN persecuted with his attentions, and afterward hunted as a Witch.

THE WHITE ANGEL OF SALEM.

A third and most remarkable personage of those dark days was a mysterious being who appeared in Salem when the delusion was deepest. She possessed the aspect of a young lady; but a strange peculiarity was noticed in her appearance—she was strangely white, and her skin shone so brilliantly that many supposed her to be an angel. She went about doing good, opposing the Witch-Hunters, releasing prisoners, helping widows and orphans, etc.

Whoever would have full particulars concerning these and a score of other inhabitants of Salem in the days of Witchcraft, must read the thrilling and beautiful narration just drawn from the historical collections of Massachusetts, and entitled

THE WITCH-FINDER;

OR,

THE HUNTED MAID OF SALEM.

By Leon Lewis.

Which will be commenced in No. 16 of
THE NEW YORK WEEKLY.

The great success of the NEW YORK WEEKLY is in a measure due to the scrutiny exercised in compiling the contents, so that the slightest offensive word or passage may be avoided. Heads of families, fully aware that we expunge from our manuscripts every expression that might contaminate the young, present

THE NEW YORK WEEKLY

to their wives and children, fully confident that its teachings will have a beneficial effect, and that its Stories, while they inculcate good morals, also exhibit the punishment that must attend vice.

The contents of

THE NEW YORK WEEKLY

are varied, to suit the popular taste; they are instructive, entertaining, and amusing. The thoughtful will find in

THE NEW YORK WEEKLY

subjects that will induce reflection, the knowledge-seeker will be edified and learn the social habits peculiar to various parts of the world, while the humorously inclined can always find in the quaint writings of JOSH BILLINGS, PHILANDER DOSTICKS, MARK TWAIN, JOHN QUILL, and other humorists, something that will provoke merriment and laughter. As we have not space to particularize at great length the numerous features of THE NEW YORK WEEKLY, we will just mention some of the standing attractions. ANSWERS TO CORRESPONDENTS.—A department in which the editor indulges in familiar chat with his correspondents, replies to various queries put to him, and disseminates information that is of the greatest popular interest.

THE KNOWLEDGE BOX.—In this column will be found Domestic Receipts, Scientific Notes, Hints to Farmers and Gardeners—in fact, suggestions that will prove useful to all classes of society.

ITEMS OF INTEREST.—The important events of the world are epitomized in this column, and their essence given in pithy sentences.

PLEASANT PARAGRAPHS.—This department is entirely devoted to articles of a humorous nature, and it forms an excellent dessert to the mental feast which the columns of THE NEW YORK WEEKLY contains every week.

The above are the regular departments of

THE NEW YORK WEEKLY.

Besides which we have

SKETCHES OF EVERY DESCRIPTION.

LOVE SKETCHES,

SKETCHES OF ADVENTURE,

SKETCHES OF BORDER LIFE,

SEA SKETCHES.

With such attractions, who can wonder that

THE NEW YORK WEEKLY

is considered

THE BEST LITERARY PAPER
PUBLISHED.

It should be borne in mind that in No. 16 of THE NEW YORK WEEKLY will be commenced "THE WITCH-FINDER; OR, THE HUNTED MAID OF SALEM."

The New York Weekly is for sale by every News Agent. Price Six Cents per copy. Specimen copies sent free.

IMPORTANT TO OWNERS OF
STOCK.—THE AMERICAN STOCK JOURNAL
AND FARMERS' AND STOCK BREEDERS'
ADVERTISER.

A first-class Monthly Journal devoted to
Farming and Stock Breeding. Each
number contains thirty-six large-double-column
pages, illustrated with numerous engrav-
ings. Only one dollar a year. Specimen
copies free, for stamp.

HORSE AND CATTLE DOCTOR FREE.

The publishers of the AMERICAN STOCK
JOURNAL have established a Veterinary
Department in the columns of the Journal,
which is placed under the charge of a dis-
tinguished Veterinary Professor, whose
duty it is to receive questions as to the
ailments or injuries of all kinds of stock,
and to answer in print in connection with
the question, how they should be treated
for a cure. These prescriptions are given
gratis, and thus every subscriber to the
Journal has always at his command a
Veterinary Surgeon free of charge. Every
Farmer and Stock Breeder should sub-
scribe for it. We will send from June
until the 1st of January for 50 cents.

above Twenty-fifth Street.

ESTABLISHED 1861—THE GREAT AMERICAN TEA COMPANY

I HAVE JUST RECEIVED TWO FULL
CARGOES OF THE

FINEST NEW CROP TEAS.

22,000 Half Chests by ship Golden State.

12,000 Half Chests by ship George Shotten.

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyane districts of China, which are unrivaled for fineness and sweetness of flavor.

To give our readers an idea of the profits which have been made in the Tea Trade (previous to the establishment of the GREAT AMERICAN TEA COMPANY), we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors.

First. The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in this country have made their immense fortunes through their Houses in China.

Second. The Banker makes large profits upon the foreign exchange used in the purchase of Teas.

Third. The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth. On its arrival here it is sold by the cargo, and the purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth. The Speculator sells it to the Wholesale Tea Dealer in the lines, at a profit of 10 to 15 per cent.

Sixth. The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh. The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth. The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so much lower than small dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages, and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same price, with the small additional expense of transportation, as though they bought them at our Warehouse in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this: Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price-List, as published in the paper, or in our circulars. Write the names, kinds, and amounts plainly on the list, as seen in the club-order published below, and when the club is complete send it to us by mail, and

we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members can divide equitably among themselves.

Parties sending club or other orders for less than thirty dollars, had better send Post-office draft or money with their orders, to save the expense of collections by express; but larger orders we will forward by express, to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for clubs of less than \$30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom-House stores to our Warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within thirty days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of clubs. They are sold at cargo prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

OOLONG (Black), 70c., 80c., 90c., best, \$1 per lb.
MIXED (Green and Black), 70c., 80c., 90c., best, \$1 per lb.
ENGLISH BREAKFAST (Black), 80c., 90c., \$1, \$1 10, best, \$1 20 per lb.
IMPERIAL (Green), 80c., 90c., \$1, \$1 10, best, \$1 25 per lb.
YOUNG HYSON (Green), 80c., 90c., \$1, \$1 10, best \$1 25 per lb.
UNCOLORED JAPAN, 90c., \$1, \$1 10, best, \$1 25 per lb.
GUNPOWDER (Green), \$1 25, best, \$1 50 per lb.

COFFEES ROASTED AND GROUND DAILY.

GROUND COFFEE, 20c., 25c., 30c., 35c., best, 40c., per lb. Hotels, Saloons, Boarding-house keepers, and Families who use large quantities of Coffee, can economize in that article by using our *French Breakfast* and *Dinner Coffee*, which we sell at the low price of 30 c. per lb., and warranted to give perfect satisfaction.

Consumers can save from 50c. to \$1 per lb. by purchasing their Teas of the

GREAT AMERICAN TEA COMPANY,
81 and 33 Vesey Street.

Post-Office Box 5,643, New York City.

THE GREAT AMERICAN TEA COMPANY (established 1861) is recommended by the leading newspapers, religious and secular, in this and other cities, viz.:

American Agriculturist, Orange Judd, Editor.

Independent, New York City, Henry C. Bowen, Publisher.

The Methodist, Geo. R. Crooks, D.D., Editor.

Moore's Rural New Yorker, Rochester, N. Y., D. D. T. Moore, Editor and Proprietor.

Tribune, New York City, Horace Greeley, Editor.

We call attention to the above list as a positive guarantee of our manner of doing business; as well as the hundreds of thousands of persons in our published Club Lists.

COMPLIMENTARY LETTERS FROM CLUBS.

MANHATTAN, KANSAS, July 25, 1867.

GREAT AMERICAN TEA COMPANY,
81 and 33 Vesey Street, New York.

Your "Advocate" is received and circulated. Please accept my thanks. You are extending a blessing to us old tea drinkers in the West.

My profession keeps me in my office, but the limited opportunities I have shall be devoted to the extension of your trade. The orders I have sent have been purely from private families. I have recommended your house to our merchants, with what success you know, not I. They might not like to have their customers see the profits they make.

I remain, very respectfully yours,
LORENZO WESTOVER.

DEARBORNVILLE, MICH., July 6, 1867.

GREAT AMERICAN TEA COMPANY,
81 and 33 Vesey Street, New York.

Gents: This day I forward you, by M. U. Express Company, \$107 50, being amount due you on one box of tea.

It may be proper here to state that the tea received gives entire satisfaction. This makes two orders from this place. Your patrons are so well pleased with the tea that you may expect to furnish us our tea and coffee. I have sent your papers to Linden, Genesee County, in this State, and other places, from whence you may expect to receive orders.

Please accept our thanks for the promptness with which you responded to our order.

Respectfully yours, AMOS GAGE.

BUNSWICK, Mo., March 26, 1867.

TO THE GREAT AMERICAN TEA COMPANY,
81 and 33 Vesey Street, New York.

The order we sent you last month reached us in due time, and with which we are well pleased. We think there is, at least, 50 to 75 cents difference in your favor, compared with the prices of St. Louis, where we have been buying our teas for several years past. You may expect to receive our future orders.

Yours truly, MERCHANT BEAZLEY.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the GREAT AMERICAN TEA COMPANY.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name, either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

TAKE NOTICE.—Clubs and quantity buyers are only furnished from our Wholesale and Club Department.

Post-Office orders and drafts made payable to the order of the GREAT AMERICAN TEA COMPANY. Direct letters and orders to the

GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey Street, New York.
Post-Office Box, 5,643, New York City.

DERVISHES IN THEIR RELIGIOUS DANCE.

DERVISHES OF THE ORIENT.

IF the *fakirs* of India and Arabia have received considerable attention from magazinists and students of racial types and peculiarities, so have the *derwishes* of the Orient. The latter, however, occupy a much higher position in the scale of intelligence than the former, and are free from the uncouth gestures and *diablerie* which generally mark the fakir order. Some writers use the terms *derwish* and *fakir* as if they were synonymous; but it would be well to observe the distinction which plainly exists. Fakirism is of very ancient origin; an attempt to trace it would be lost in the darkness of mythical ages. It has been allied chiefly with Hindu paganism, and its followers have ever been characterized by the most extravagant follies. Dervishism is more particularly allied with Mohammedanism. Formed, doubtless, on, or an outgrowth of, fakirism, it is nevertheless much superior to the latter, and resembles in some respects the monachism of Christianity. Tradition refers the origin of the order to the earliest times of Islam, and attributes the foundation of several of the brotherhoods into which dervishes are divided, to the califs *Abubekr*, *Ali*, and others.

The word *derwish* or *derwise* is Persian, and signifies poor; and poverty is one of the rules of life chiefly observed by the order. The various brotherhoods have each a convent, where in they are maintained by liberal endowments. Many Turkish sultans and Mohammedan princes have made rich gifts to these orders, and held the dervishes generally in high esteem. The people among whom they live still regard them with the utmost respect and veneration, and

contribute largely to their support. The most prominent dervish establishments, or *changah* in the Turkish, are—Bestames, founded in 874; Kadris, 1165; Rufagi, 1182; Mevelevis, 1273; Nakshibondis, 1319; Bektashis, 1357; Rushehis, 1538; Shemsiss, 1601; and Jemalis, 1750. The names of the brotherhoods or societies are those of their founders. Over each is a superior, with the title *sheik*.

By the rules of the order, dervishes are commanded to live a life of austerity, chastity, humility, charity, and general asceticism. They are not forbidden to marry, but can not bring a wife into the convent, or absent themselves more than five days in a week from their associates. Mendicity is prohibited, except in the one society of Bektashis, so that they to a great extent maintain themselves by manual labor.

Their religious exercises are frequent. On Tuesdays and Fridays ceremonies of the most striking nature are performed, when they engage in sacred dances to the sound of flutes, and whirl around and leap about with great swiftness, stopping all together at once whenever the music ceases. Our engraving represents a company of dancing dervishes very much as they actually appear.

There are many dervishes, not well reputed among the Orientals, who live a vagrant life and affect the most singular eccentricities. They dress meanly, and walk barelegged from place to place, at all times manifesting extreme indigence. Many of them, like the fakirs, perform feats of jugglery and sorcery. One class, called *Rufais*, are given to extraordinary self-torture and mortification. At their assemblies they appear to emulate each other in degrees of human endurance. Some are seen holding

red-hot iron between their teeth, and others lacerating their flesh, with an air of the most stoical indifference. Another class, called *Calenders*, are noteworthy on account of their singular dress. These wear a tiger's- or a sheep's skin; dress up their hair with feathers in a grotesque style, and go about half naked. Many weird and improbable stories are related of them, as of the fakirs, by travelers whose organ of Wonder possesses a strong degree of susceptibility, and is allied in the same brain with a good degree of imagination.

The true dervishes impute their existence to divine inspiration, and quote passages of the Koran which commend the influences of a life of retirement, contemplation, and poverty on the character and disposition of man. It is well authenticated that from the earliest times it has been held meritorious, by pious persons of the East, to separate one's self from the trammels of society and domestic life and to enter upon a course of austere meditation and seclusion. The prevalence of this theory or notion doubtless gave rise to the monastic orders of Christendom, which at times have been marked by painful self mortifications and rigorous asceticism, scarcely exceeded by the fanatical devotees of Islam.

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED.

Is devoted to *The Science of Man*, in all its branches, including PHRENOLOGY, PHYSIOLOGY, PHYSIOGNOMY, PSYCHOLOGY, ETHNOLOGY, SOCIOLOGY, &c. It furnishes a guide in *Choosing a Pursuit*, and in judging of the dispositions of those around us, by all the known external "Signs of Character."

Published monthly, \$3 a year in advance. Sample numbers, 30 cents. Clubs of ten or more, \$2 each. Supplied by Booksellers and Newsmen everywhere.

Address, SAMUEL R. WELLS, EDITOR,

The Journal.

Man, know thyself. All wisdom centers there;
To none man seems ignoble, but to man.—Young.

ADELINA PATTI, THE PRIMA DONNA.

WE have here a large brain on a comparatively small body. The whole is fine, compact, and strong. There is something like whalebone in her composition, and her powers of endurance are great. The temperament, in the old nomenclature, is the nervous-bilious, with less of the lymphatic and sanguine. In the new nomenclature, the mental and motive predominating, with enough of the vital to give ease and elasticity of motion and expression. There is a good degree of the recuperative functions. The head is long, high, and tolerably broad, especially through Ideality, Sublimity, Constructiveness, and Tune. Imitation is also

PORTRAIT OF ADELINA PATTI, THE PRIMA DONNA.

large. The reflective faculties are especially prominent, hence the perceptive appear less conspicuous than they really are. The whole intellect, as may be seen by the distance from the ear to the upper forehead, is decidedly large. Benevo-

lence is one of the more prominent organs of the moral group, while Veneration, Spirituality, Conscientiousness, and Hope are large. So also are Approbativeness and Cautiousness. Self-Esteem is less prominent, though not small.

The affections are fully indicated. Indeed, nearly all the phrenological organs of the brain anteriorly may be said to be considerably above the average in development, and this view is confirmed by the biographical sketch annexed.

The complexion of Patti is dark; so is that of her family and race. The eyes and the hair are nearly jet black, while the skin is soft and white, making a striking contrast. The hair is abundant, and the heavy eyebrows really meet or come together, giving her a somewhat singular appearance. The chin is full, the mouth and lips marked, and the nose prominent; and notwithstanding her *petite* figure, there is not a little of the masculine in both feature and character.

We shall, no doubt, hear more of this natural born singer, for she inherits to a large extent her remarkable gift.

BIOGRAPHY.

Miss Adelina Patti was born at Madrid, Spain, April 9, 1843. Her mother, Madame Barilli Patti, was the prima donna of the Grand Theater at Madrid; and on the evening preceding the birth of Adelina, the youngest of a large family, Madame had sung Norma, in which *role* she had a high reputation. Curiously enough, after the birth of Adelina, Madame Patti lost her voice almost entirely, and has always believed that it was given to the child.

Madame Patti left Madrid as soon as possible after Adelina's birth, and returned to Milan, the permanent residence of her family. Here the impresario Strakosch made the acquaintance of the prima donna, then only four months old.

The Patti family emigrated to this country in 1844, when Mr. Patti joined Sanquirico, the buffo, in the management of the Italian Opera, Chambers Street. There were four daughters of Madame Patti, all artists. The eldest, Clotilda Barilli, married the son of Colonel Thorne. Amalia, the next, is the wife of Mr. Strakosch. Carlotta resides in this city, and is an accomplished teacher of music; and the latest edition of this fair musical libretto is Adelina, the subject of this sketch.

Adelina was what is called a precocious child. She could sing almost before she could speak. She caught up, at the age of four, all the gems of the operas, and sang them correctly. Her first public appearance was made at the age of nine years, when Mr. Strakosch, Ole

Bull, and the infantile prima donna made a tour in the provinces, where Adelina sang all the great pieces made familiar by Jenny Lind, Sontag, Bosio, and others. The little lady created great enthusiasm, and her share of the profits amounted to twenty thousand dollars, which her father invested in a country seat, and the summer residence of the family.

Although so far advanced in Art, Adelina had not forgotten to be a child. She always took her doll to the theater or concert-room, and once refused to sing unless "Maurice" (Strakosch) would allow her to carry it on the stage. Once she had sung a very difficult cavatina in such a way as to "bring down the house" with tremendous applause. When the calm came after the storm, Adelina, having recognized on one of the front benches a child of her own age, said, in a clear, smooth voice, "Nelly, come to my room right away; I've got such a beautiful doll to show you, and we'll have such fun!" The effect of this naiveté upon the audience may be imagined.

At this time our prima donna received the highest compliments from Sontag, who told her that she would be one of the greatest singers in the world; and from Alboni, who said if she went to Paris she would make such a furor as is seldom seen there.

After the concert tour with Strakosch, Miss Patti went to the West Indies with Gottschalk, the pianist. In Havana she sang in costume the duet in the "Barber of Seville," with her brother Barilli. The enthusiastic Havaneese made such a row in recalling her that she ran away frightened, and could not be persuaded to go upon the stage again. Throughout the Indies she divided the honors with Gottschalk, and at Porto Rico had an offer of marriage (she was then fourteen) from the richest proprietor in the place. But that diamond wedding did not come off. Adelina is still unmarried, and is devoted only to Art. Afterward she visited Europe, and for some years has been the leading prima donna at all the principal cities and royal courts of Europe, amassing honors and wealth by her musical genius.

In some of the continental cities, her personal share of the receipts is said to have attained the astonishing amount of 5,000 francs—about \$1,000 gold—for a night's performance. From this we can easily infer that her income must be large, and her fortune already acquired princely. How strikingly does her success illustrate the well-known saying, that "the most beautiful music is that produced by the human voice!" Miss Patti has almost literally coined her bewitching notes into money.

She is not at all selfish; does not aim at the emolument of herself and family, but bestows liberally from her earnings for charitable purposes.

We may regard Miss Patti as American by adoption. The country seat which has been purchased by her father is located in one of the pleasantest environs of New York city, and is said to fully meet the wishes of the family in its comfort and attractiveness as a home.

CONSCIOUSNESS AND MENTAL ACTION.

[CONTINUED FROM MARCH NUMBER.]

WHENEVER the quota of any of the faculties engaged at the time of any given event, or in the acquisition of any specific knowledge, shall become visible from consciousness, then all the other faculties at that time engaged must immediately, spontaneously, and harmoniously furnish quotas; for instance, suppose a particular event is witnessed at a given locality; afterward any one of the faculties engaged in taking cognizance of what was going on, will be able to bring all them back by virtue of this linking law; the sight of one of the actors, or even his coat or his hat, may recall the event; at another time, the sight of the locality, or a single sentence uttered, or even a single word, may be sufficient to bring the whole into conscious memory.

Exactly *why* the thought was suggested again, the individual will oftentimes not be able to perceive, there being no link of association between the thought first dominant in consciousness, and the metaphysical theories have never given us any clue to the *modus operandi* of the "spontaneous suggestion." The same law comes into play not merely in reminiscence, but also in the development of new thoughts; the spirit of man, while working over the stores of its acquired knowledge into new forms of thought, may pitch upon some one particular, say, for example, from the organ of Form, then other quotas from the organs of Size, Color, etc., will spontaneously arrange themselves and appear simultaneously, so as to present a complete picture; but as the management of these particulars is allotted to the automatic department, and not to consciousness, it will not be in the power of the individual to trace the exact origin of the "spontaneous suggestion." This reworking of all the stores of acquired knowledge goes on unceasingly, the spirit of man never wearying like the flesh; and these "spontaneous suggestions" may arise whether the individual be designedly endeavoring to develop some new thought, or may accidentally be not specially engaged on any subject.

Association of Ideas in Reminiscence.—This automatic law will also unfold to us the intricacies of the "association of ideas" in reminiscence, a problem which the metaphysicians have essayed in vain, for many centuries, to solve. In fact, their speculations have served only to complicate and render mysterious the whole phenomena of memory.

It will perhaps be advisable, first, to examine the exposition of the association of ideas given by Sir William Hamilton, one of the ablest metaphysicians of the nineteenth century. In the first part of his *Metaphysics* he enunciated certain propositions concerning consciousness which he regarded as true; but as metaphysical expositions can not be made to harmonize with phenomena actually occurring, he was forced, when considering certain other phenomena, to contradict himself, and abandon his former position; nothing uncommon, however, for metaphysicians to do.

On page 123 he says: "Consciousness constitutes the mental form of *every act of knowledge*."

In the course of his elucidations he touched upon certain phenomena which could not be explained clearly in accordance with his previous enunciations, and he was "constrained" to contradict himself.

On page 244 he says: We have not yet spoken of what is called the association of ideas; and it is enough for our present purpose that you should be aware that one thought suggests another, in conformity with *certain determinate laws*—laws to which the succession of our whole mortal states are subjected. Now it sometimes happens that we find one thought rising immediately after another in consciousness, but whose consecution we can reduce to no law of association. Now, in these cases, we can generally discover, by an attentive observation, that these two thoughts, though not in themselves associated, are each associated with certain other thoughts; so the whole consecution would have been regular had those intermediate thoughts come into consciousness between the two which are not immediately associated. Suppose, for instance, that A, B, and C are three thoughts, that A and C can not immediately suggest each other, but that each is associated with B, so that A will naturally suggest B, and B naturally suggest C. Now, it may happen that we are conscious of A, and immediately thereafter of C. How is the anomaly to be explained? It can only be explained on the principle of latest modifications. A suggests C, not immediately, but through B; but as B, like half of the *minimum visible* or the *minimum audible*, does not rise into consciousness, we are apt to consider it non-existent. You are aware of the following facts in mechanics: if a number of billiard balls are placed in a straight line, and touching each other, and if a ball be made to strike in the line of the row the ball at one end of the series, what will happen? The motion of the impinging ball is not divided among the whole row; this, which we might *a priori* have expected, does not happen, but the impetus is transmitted through the intermediate balls which remain, each in its place, to the ball at the opposite end of the series, and this ball alone is impelled on. Something like this seems to occur in the train of thought. One idea immediately suggests another into consciousness, the suggestion passing through one or more ideas which do not themselves rise into consciousness. The awaking and the awakened ideas here correspond to the ball striking, and the ball struck off; while the intermediate ideas of which we are unconscious, but which carry on the suggestion, resemble the intermediate balls which remain moveless, but communicate the impulse. An instance of this occurs to me with which I was struck. Thinking of Ben Lomond, this thought was immediately followed by the Prussian system of education. Now conceivable connection between these two ideas in themselves, there was none. A little reflection, however, explained the anomaly. On my last visit to the

mountain, I had met upon the summit a German gentleman, and though I had no consciousness of the intermediate and unawakened links between Ben Lomond and the Prussian schools, they were undoubtedly these: the German, Germany, Prussia, and these media being admitted, the connection between the extremes was manifest."

But who played this wondrous game of billiards, and by what laws the game was played, Sir William Hamilton failed altogether to inform us, even though he had affirmed that one thought suggested another in conformity to certain "determinate laws."

On page 507 he says: "Thus man is made up of two substantial parts, a mind and a body." Now it is very clear if Sir William Hamilton would not admit that the brain was the material organ of the mind, he certainly would not affirm that the material body could be the player, neither could he affirm that the other substantial part, the mind, was the player, for that would be confounding the locality where the game was played with the player himself, and this would be inexcusable in such a logician as he was. And yet that some such thought may have existed in his mind, may be logically inferred from page 260, on which he says: "The mind datum under consideration is the identity of mind or person;" thus confounding mind and person.

What share consciousness took in this game of mental billiards can not be ascertained, for he contradicts himself too often.

On page 110 we read as follows: "Consciousness comprises within its sphere the whole phenomena of mind."

"Consciousness is the condition of knowledge."—P. 242.

"Consciousness constitutes the fundamental form of every act of knowledge."—P. 183.

"Let consciousness, therefore, remain one and indivisible, comprehending all the modifications, all the phenomena of the thinking subject."—P. 127.

On page 342 we read as follows: "We are thus constrained to admit as modifications of mind, what are not in themselves phenomena of mind."

"There are acts of mind so rapid and minute as to elude the ken of consciousness."—P. 250.

"On the ground of perception, it is thus demonstrably proved that latent agencies—modifications of which we are unconscious—must be admitted as the ground-work of the Phrenology of mind."—P. 255.

We might suppose from an affirmation on page 268 that he considered the soul the player. "It is the whole soul that remembers, understands, wills, or imagines." But then we are warned from that conclusion, for the context shows he considers the soul synonymous with the mind, as he is defending philosophers in general against a reproach that they regarded the faculties into which they analyzed the mind as so many distinct and independent existences, and that every page concerning the work of the soul is quoted to show that philosophers do not deserve the reproach of Dr. Brown concerning the faculties of the mind. This point is settled beyond dispute by reference to page 91. "The term Psychology is of Greek compound, its elements $\psi\chi\eta$, signifying soul and mind, and $\lambda\omicron\gamma\omicron\varsigma$, signifying discourse or doctrine. Psychology, therefore, is the discourse or doctrine treating of the human mind; and as the mind is the place where the game of mental billiards is supposed to be played, the term soul being considered synony-

mous with mind, can not be considered the place without confounding the player with the locality where the game is to be played. We can not suppose he considers the spirit the player, for he almost entirely ignores the spirit, and says "man is composed of two substantial parts, mind and body." The part that the spirit of man plays on the world's stage through life can never be ascertained by Sir William Hamilton's metaphysics. But, in truth, his hypothesis containing his latest modifications and mental billiards stands condemned by his own rules concerning a good and bad hypothesis. On page 119 he says: "The comparative excellence of an hypothesis requires in the first place that it involves nothing contrary, either internally or externally; that is either between the parts of which it is composed, or between these and any established truth." He considered it an established truth, and so enunciated it: "It is the whole soul that remembers, understands, wills, or imagines." On page 132 he says: "Is there any knowledge of which we are not conscious? There is not. There can not be."

Now if his hypothesis concerning the latest modifications be received, we have the contradictory positions assumed that the whole soul remembers, understands, wills, or imagines in consciousness, while a part is engaged in carrying on these latent modifications of mind and of consciousness. This is too unreasonable to be admitted.

We will suppose, however, that the whole soul is actually engaged in consciousness, then there must be another power in man, carrying on latent mental operations out of consciousness, different from the soul or mind, then we would have two independent souls or mental powers, carrying on operations simultaneously, which certainly can not be admitted by any one, whether metaphysician or phrenologist.

If he does not support the existence of an independent power to carry on the latent modifications out of consciousness, or, in other words, to play that game of mental billiards, then he must maintain that the ideas lie loosely in the mind, liable to be jostled by some caused motion, and thus give rise to those new modifications, just as the pieces in a child's rattle will give rise to a new sound when rattled together.

Upon the whole, we can very readily and justly conclude that Sir William Hamilton signally failed in developing "determinate laws" of our mental operations, when treating of the associations of ideas.

But the phrenological hypothesis will give us a clue to the intricacies of associative memory, and will enable us to unravel many of the perplexities which have been so puzzling to the metaphysicians.

As above-mentioned, all parts of the pictures developed in consciousness, and appropriatively secured by the faculties engaged at any time in the acquisition of any specific knowledge, are irrevocably linked together by the automatic law of control, and whenever any one of those parts is brought into consciousness, the others must necessarily follow so as to form a perfect

picture. If, however, a wrong part is presented in consciousness as belonging to a particular group, when in fact it does not, then there is at once a consciousness of the want of harmony, and the truth of the picture recalled in consciousness is at once denied. Suppose, for example, we have witnessed the performance of a certain act, and this is subsequently recalled in memory, and all the various faculties furnish their appropriate quotas of the picture then secured except one; we will suppose that the actor and the act are correctly delineated, but the faculty of locality furnishes the image of the wrong locality; consciousness immediately feels the discord and refuses to recognize the image as the proper one, and a voluntary effort is made until the proper image of the locality is obtained, and then a pleasant feeling of satisfaction from the harmonious working of this automatic linking law assures us that the right locality has been furnished. Or the proper locality with all particulars may have been furnished, except that the organ of Form furnishes the wrong face for an actor in the scene; forthwith a repulsive feeling of discord assures us it is wrong, and a voluntary effort is made to recall the right one, and when obtained, we are perfectly convinced from the accordant feelings resulting, and so on through all the endless variations of mental manifestations.

[TO BE CONTINUED.]

PHANTASMAGORIA.

BY JOHN NEAL.

"Come like shadows—so depart."

EARL RUSSELL—GEORGE CRUKSHANK—MRS. SARAH AUSTIN—SIR FRANCIS BURDETT—MRS. WHEELER—FRANK PLACE, THE TAILOR—LEIGH HUNT—DR. BOWRING, NOW SIR JOHN BOWRING—AND OTHERS.

FOR many years, people have been urging me to amuse them with a few outline sketches of the men and women I have met with in the course of my wanderings, "who had a name to live." At last, therefore, I consent, hoping that, although hurried and brief, like those which appeared in "Randolph," so many years ago, they may be found both sprightly and truthful; individualities that may be remembered without labor.

EARL RUSSELL:

I had the pleasure of hearing this great statesman make his maiden speech at the hustings, when he was only Sir John. It was, indeed, a very common-place affair, and given with the intonations and gesture of a school-boy, though I do not suppose it had been committed to memory, or otherwise prepared, than by diligent study. He was then a pleasant-faced, flaxen-headed young man, with nothing whatever, so far as I could see, to distinguish him from thousands of the feebler growth around him. But the phrenological developments were all in his favor, and his lineage opened the way which he has since traveled, with the step of a giant, set to music. On the whole, he did not promise much, as a speaker, and up to this hour has, I dare say, disappointed nobody, and astonished nobody. But as a minister, and

as a statesman, the very qualities which were a hindrance to him as an orator, were helps to him in the business he followed—his Caution, for example, and his Conscientiousness.

GEORGE CRUKSHANK.

This wonderful man, who, to the last, had no just idea of his own worth as an artist, used to sit hour after hour at a table, in the club of which he was a member, with newspapers rustling about him, and conversation going on, both "fast and furious," in every part of the room, without interchanging a word, or letting fall an observation for ten minutes together, although, when he did, it was oftentimes both strange and startling. He was a thin, dark man, about the average height of studious men, with clear eyes, and a lurking smile about the mouth, which not unfrequently shaded off into downright sarcasm, if he were "much enforced." After the sitting was over, the table, and sometimes the floor, would be found littered with scraps of paper, on which he had let fly some of his extravagant or whimsical thoughts.

I have now before me one of these little scraps, about four inches square, on which he has hit off, with a few scratches, a fat sleepy magistrate, leaning back in a chair, with a nightcap on, and two unmistakable Irishmen, though utterly unlike, up for a row before him. Among the crowd are two or three Greenwich pensioners and a night watchman—all indicated by a few touches, or a peculiar flourish, that would pass for penmanship—while the long shovel-hat of the former, seen both in front and rear, together with the nose and chin, are enough to make any man laugh outright, who has ever happened to see any of these monstrosities elongated. So far as I now recollect, he was a man to be overlooked in a crowd—but never in the club-room. Others have come up since, to dispute the prize with him for the grotesque and the exaggerated, but nobody that could hold a candle to him, for heartiness and humor. Hogarth himself was the only caricaturist that ever said so much, and so effectually, with a few scratches of the pen.

MRS. SARAH AUSTIN.

This magnificent woman, with her stately bearing, her queenly presence, and large lustrous eyes, though known to most of the leading Carbonari and political outcasts of Europe, seems to have been almost unheard of in this country, though her book on Germany is among the very best we have, and her accomplishments and her talents have made for her a continental reputation worth having.

She was a daughter of Mr. Taylor, of Norwich, the Platonist, and wife of the celebrated John Austin—celebrated, I mean, among those who knew him best, as a writer on jurisprudence, and not as a jurist, for he had no practice, and being a Benthamite, like Sir Samuel Romilly and half a score of other dangerous men, who had the courage to think for themselves, was rather obnoxious to the slow coaches of that day.

When I knew her, she was in her glory—the glory of established womanhood, and the ripe fullness of something tropical, that needed translation. She had a long upward reach, and being both adventurous and ambitious—without any definite object, for a long while, was in constant danger of discouragement, or shipwreck. She had but one child—now Lady Duff Gordon—whose translation of the "Amber Witch," and the "French in Algiers," have made her quite famous in that way. When I first saw her with her mother, she was not more than twelve or thirteen, lithe, spirited, and graceful, though exceedingly shy and sensitive, with large, laming eyes, like her mother's, and a step which even at that early age had a rhythm in it.

My acquaintance with her mother began in this way. We had met somewhere—I can not now remember how, nor where—and soon after she wrote me a note, in consequence of something that had happened, to say that she wanted to consult with me for a few minutes; I supposed about Mr. Bentham's doings, for I was then with him in Queen Square Place, Westminster. When I saw her, it was in the garden, where, after some hesitation, she told me that she had been writing a little book, and knowing that I was in that way myself, wanted my advice. It was the poor thing's first essay of the kind—and what do you think it was? Nothing but a phrase-book in Spanish, or Italian, I forget which. After running my eye over it, I advised her to publish it, by all means; but—and here I could not help being serious and emphatic—why not try her hand upon something worthier of her talent and education? She was afraid; she only desired to eke out the small yearly allowance they had from her father and from her husband's father, and believed a school-book would pay better than anything else in her power to get up. The little book was published, and produced something—not much—I believe hardly enough to encourage her. At my suggestion, after I had dropped a line to Mr. Jeffrey in her behalf, she wrote for the *Edinburgh Quarterly*, translating some of the admirable papers of Ugo Foscolo for that journal, and then, after a while, by little and little, doing herself more justice with original matter, until she brought forth her "Germany"—one book only—"one; but a lion."

Her familiarity with French, Italian, and German was quite remarkable. She wrote all these languages with great fluency and correctness, and talked them almost as if they were each her native tongue. Her familiarity with the best literature of the past and present, and her personal acquaintance with the eleemosynary ex-patriots of all Europe, whether soldiers or civilians, authors or conspirators, made her little reunions exceedingly attractive, and her conversation delightful.

Wanting exercise, and being rather adventurous by nature, she took lessons in small-sword of me, and really might have been somewhat dangerous had she continued; but

another friend, an Italian, by the name of Prandi, who was far from being a capital swordsman, and who had never amused himself with teaching, as I had, interfered with my arrangements, and I gave it up. After this, another pleasant freak seized her. I was heartily engaged with gymnastics at the time, having Volker, the German giant, for a teacher, whom I afterward sent to New York. Mrs. Austin was deeply interested in the subject, having understood the purpose to be revolutionary on the Continent, and being assured by our friend Dr. Franz Lieber, who had just escaped from Germany, and was on his way to this country, with letters from me to Mr. Jefferson, who was then hard at work upon the foundations of his great university, and was on the look-out for eminent professors in every branch of science, that there was a new system at work in Italy, called calisthenics, which women might venture to grapple with, she jumped at the conclusion at once, and soon after, having engaged a professor for her, we both took lessons of him upon the triangle, and she at least became quite a proficient in *flying*, and balancing on the floor, while I managed to break my arm in demonstrating some queer problem he had suggested, upon the composition of forces, with whipcord and a movable balance. Most of the exercises were both graceful and strengthening, especially those with what I called a yard-stick, though others called it a wand.

These two anecdotes may be quite enough to show the character of the woman—full of energy at first, and at last, of self-reliance, though, when I first knew her, she was more like a startled fawn, if I suggested a new enterprise to her, than like what she soon after became—a wonder among the boldest of those who knew her best. One word of her phrenological developments, as I now recollect them. She had a large head of the masculine type, though womanly in all the domestic and social affections, with large Approbativeness and large Self-Esteem, though deficient in Caution, with a bilious, nervous temperament, and great capability of endurance; in short, she was altogether fitted for a commanding station; and if circumstances had been favorable, would have been celebrated as a reformer, and as a writer and thinker, not only at home, but abroad, and especially here.

Among those whom I met with at different times at her house, or bearing a note from her, by way of a passport, were Rey, the juriconsult, author of "Institutions Judiciaires d'Angleterre;" the Canon Riego, brother of General Riego, and his daughter, Teresa; Prati; and Dr. Lieber, whom we are now so well acquainted with here, as an adopted citizen and cosmopolite. Two or three brief extracts from one of her letters may help to show how she received the hints I gave her, from time to time, of the dangers that beset her path among these illuminati.

"My dear Friend (for I think you have earned that title of me), your letter was very

kind and encouraging and very direct—*droit*—just as was to be expected from the writer."

* * * "I do not, and never did, mean to give more to this German, even had he been an angel, than just sufficient to acquit myself of the duties of hospitality and civility." * * * "You must not wonder at poor Prandi. All men who are cast from their sphere are *susceptible*, in the French sense; they are eternally seeing slights and unkindnesses, and scorns and insults, where prosperous men, at home in their station, would not; and this increases in proportion as they like the person from whom the offense is supposed to come." * * * After inviting me down to Leith Hill, in Dorking, Surrey, where she and her husband were resting and *recruiting*, she adds: "Thank you more than all for your frankness. By that I judge of the worth you have found in me, and am proportionally your obliged friend. S. A."

SIR FRANCIS BURDETT.

Not long before I knew this great leader of the day, he was held up as the finest sample of an English gentleman to be found alive—not excepting the Prince Regent himself, with his magnificent bow, and the celebrated flourish to his signature; nor even Sir Stratford Canning, now Lord de Redcliffe, the most courtly gentleman I ever met with, and fullest of what we acknowledge for high-breeding. He stood six feet or six feet two in the clear, well proportioned, with a noble presence and bearing, and was beyond all question the finest parliamentary orator of his day, before Canning appeared; but in conversation, he seldom had fair play among his worshippers. The moment he opened his mouth, he would be assailed with questions, and badgered, till it seemed to me that he must spring out of his chair and sweep the tables. There they would sit, open-mouthed, and full of deferential awe, asking his opinion of this, that, and the other subject, upon which the authorities were divided, as if they might all be disposed of in syllogisms or apothegms. It was "Sir Francis" this and "Sir Francis" that, until I began to look toward the door for escape. Still, he was entertaining, liberal, and statesmanlike, when allowed to finish a sentence or explain his views. Among other pleasant things, he said to me, Aristotle to the contrary, notwithstanding, that England was a republic, and not a monarchy. And here, undoubtedly, he was more than half right, though something would depend upon the definition.

MRS. WHEELER,

The Mary Wolstoncroft of her day, "fat, fair, and forty," who stood almost alone for a long time in battling for "Woman's Rights;" exceedingly pleasant in conversation, good-humored and sprightly, no common observer would have suspected her strength, but for the influence she had over strong men. Her phrenological developments corresponded with her character, of course.

FRANK PLACE, THE TAILOR.

Since the apotheosis of Tom Paine, the stay-maker, no mere tradesman ever had so much

influence with the leaders of Parliament as this extraordinary man. A small, compact figure, about the size of Aaron Burr, and bearing no little resemblance to that dangerous, unprincipled man—in his personal appearance, I mean—there were those who saw him in conversation with orators and statesmen, who could not believe that he was "only a tailor." He had the look of a born gentleman; dressed in black, with coat buttoned up to the chin, and *tights*, instead of small-clothes, he was everywhere—even at Carlton House—received as a gentleman, and oftentimes found his most unpalatable suggestions adopted, as a *necessity*, by the leaders of Parliament.

LEIGH HUNT.

A small, slender, swarthy man, with an eye full of slumbering fire, that looked through you at a glance, abounding in quaint pleasantry and cheerful, unpretending speculation, rich and satisfying, though rather epigrammatic, upon whatever subject he touched. It had something in it of the "bottled velvet" and "golden ferment" he speaks of, in his "Feast of the Poets," when the eyes of the god were like his own,

"And a sprinkle of gold through the duskiness came,
Like the sun through the trees when he's setting in flame,"

and the talk was "loosened silver" and "twangling pearls." He was a West Indian by birth, and no man ever lived with such a delicate appreciation of epithets and adjectives, not even Spenser, nay, not even Shakspeare himself. "He played his weapon like a tongue of flame" whenever he felt touched by a kindred spirit, and wore a chaplet, like Southey, "a wreath of wild mountain-ash plucked in the wind." He rather liked the Yankees, I saw; but the blaze of the tropics had persuaded him, as it had Byron, that "the cold of clime are cold of blood," a terrible mistake for a poet;—since the fiercest flames are found in the north, and most of the volcanoes worth mentioning are always capped with snow.

"The deepest ice that ever froze
Can only o'er the surface close;
The living stream runs quick below,
And flows—and ne'er can cease to flow."

There was no pretension about the man—no stage trick—no parade. He chatted freely and naturally, and almost always anticipated your cleverest observations, with his eyes and lips, though never by speech, never by interruption.

DR. BOWRING—NOW SIR JOHN BOWRING.

The most poetical face I ever saw in my life; rather slight of build, and not over five feet seven; with large Caution, large Ideality, prodigious Approbativeness, and Self-Esteem enough, I should guess, for a great reformer, though wanting in steadfastness and comprehensiveness. Before he undertook the *Westminster Review*—and he did not overtake it—for years, he was a wine merchant, failed, and got rid of his creditors—he never knew how, himself; took to poetry, gave a series of capital translations from the great northern storehouse, and, at the last, became a power in the

state—or, rather, in that portion of the state where Benthamism prevailed. But he was a man to be misunderstood, and on the whole, would bear watching.

I remember a transaction which occurred while he was editor of the *Westminster*, and which is so characteristic of the man, that, if I knew nothing more of him, that would be enough. He was at the time Secretary of the Greek Committee, and was moving heaven and earth to raise funds for their help, just about the time when poor Byron made such a fool of himself with his pasteboard helmets, and other trumpery, and Colonel Stanhope (Leicester) and Trelawney were running riot over the land, establishing newspapers instead of *magazines*, and printing-presses instead of store-houses, full of war material, heavy ordnance, gunpowder, and provisions. At last, the Greek Committee began to murmur, and then to growl, and the question was taken up in Parliament, and Mr. Hume, the great Scotch financier—the penny wise and pound foolish statesman of the day—and Dr. Bowring, were both hauled over the coals. The substance of the charge was that both had taken advantage of the poor Greek representatives, and bought stock of them at prices far below the market value, thinking they were soon to be made rich by it, in consequence of what parliament, and the bankers, and the newspapers were doing: that after a time the stock fell, so far as to be well-nigh worthless; and then these two Hellenists obliged the Greek Committee to take it all off their hands, alleging that they had bought as decoys, only to help the sale. Being afraid to refuse, they did so, for what could be hoped in England without the co-operation of Mr. Joseph Hume, M.P., and Dr. John Bowring, if they should go to loggerheads, and the truth should come out?

I read these charges, with all the specifications, day after day, in a morning paper—the *Times* perhaps, but never gave myself a moment's uneasiness, having so much confidence in one at least of the two gentlemen. Meanwhile, Mr. Hume owned up, and offered to "leave it out;" in other words, to submit the whole question to a committee of the House, and abide the issue. And there—after he had offered to let other people say whether the watch he carried had been honorably come by or not, saying he would give it up if they said so—the matter dropped, so far as he was concerned.

Not so with our friend the Doctor. He insisted on replying through the newspapers; and he did so with phrases like these: "One story is good till another is told;" "the last triumph may be the best triumph;" "let him that putteth off his arm or rejoice;" etc., etc.—but never a word of denial or of refutation.

One day he came to see me, while the controversy was raging. He seemed wretched enough, to be sure, and after sitting awhile in silence, while I finished a paragraph I was writing, he looked up, and said, "They have been taking away my character, you see."

"Nonsense, my friend," I replied, "that they

can not do. A man's character is always in his own keeping. He is only to be patient and hopeful, and he is sure to triumph at last."

He shook his head so despondingly, that I pitied him. "You have read the papers, I suppose?" "Yes—but—" and here I came to a full stop. "Allow me to say, that I think you have not done yourself justice in replying as you have. Axioms, and proverbs, and old saws are not syllogisms—still less, are they bombshells. Either—excuse me—either you should have taken the bull by the horns, or paid no attention whatever to the story."

"And what did you think of these charges?" "Think! I thought nothing of them. But now that you are here, and have brought the question up, allow me to ask if there is *any* truth in them; and if so, how much?"

"Not a word, my dear sir, not a word, from beginning to end."

"That's enough! I am satisfied. It is just as I supposed; and I shall not take the trouble to investigate them, after this assurance."

And here we parted, never to meet again on the same terms; for all these charges turned out to be true—substantially true, that is—and after I had taken up the cudgels on his behalf, I was obliged to forego the championship, and leave the Secretary of the Greek Committee to shift for himself, or as they say a little further down east, to "skin his own skunks."

Nevertheless, the Doctor—Sir John, I should say—is a man of great cleverness and remarkable adroitness, very amiable—beyond all question, but weak, frivolous, and meddlesome, chattering where he ought to be listening, and professing statesmanship and a profound appreciation of the mysteries of political economy, and the balance of power, when, as a matter of fact, he might change places with the tailor, of whom I have just given a sketch—Frank Place—and pass the rest of his life cross-legged on the shopboard, with advantage both to himself and others, while Frank towers into the Halls of Legislation, or goes forth, lance in rest, like the barons of Runnymede,

"Who carved at their meal, with gloves of steel,
And drank the red wine through helmets barred."

But enough; Dr. J. Bowring will be remembered for his translations, and for his writings in the *Westminster*, feeble though they are, when Sir John Bowring will be forgotten beyond hope—for which he ought to be thankful, after his doings in China.

THE GROTESQUE.—Some men, phrenologist among others, are of this stamp. What they lack in common sense they try to make up in oddities. They wear long hair, oddly cut coats with singular colors, parade themselves for public view, and thus attract attention. If they secure this, their point is gained. A strutting tom turkey spreads himself to produce an effect, and so it is with these grotesque swells in human form. To all such we may apply the words, "vanity of vanities." In general, we would say to our friends, beware of eccentricity!

Our Social Relations.

*Domestic happiness, thou only bliss
Of paradise that has survived the fall!
Thou art the nurse of virtue. In thine arms
She smiles, appearing as in truth she is,
Heav'n-born, and destined to the skies again.—Cowper.*

"RUTH."

BY HOPE ARLINGTON.

THE light of a summer day most rare
Stole into a lowly hovel, where
Two children played at their mother's knee,
Happy as little children could be.
Blessed by her love, her care, no more
They asked or wished, to enrich their store.
For that day a new strange tenderness
Had seemed to dwell in her fond caress,
And they saw a holier light arise
From the tender depths of their mother's eyes.
But they were too young to guess the truth,
The laughing Maurice, the loving Ruth.
They had not known how her heart had bled
When she gently blessed each fair young head.
They had not heard her sad soul's deep cry,
That the cup she dreaded might pass by!

That evening the children knelt by her side,
To hear the words she would speak, ere she died.
"Ruth, you are older than Maurice, and you
Must be to your brother a sister true!
Your mother must leave you soon, for a while,"
And a shadow chased from her lips the smile
She had struggled to keep there, lest the chill
Of death the hearts of the children should fill.
"Your mother must leave you, and you, dear one,
Must care for your brother, as she has done;
And God will care for you both; little Ruth
Will always guide you, and bless you, in truth.
To His love I confide my precious trust,
And leave you with Him; He is good and just!"
A pause—a whisper; the dying mother
Said once again, "Be kind to your brother!"
And then when "God keep you!" was feebly said,
The children were sobbing—the mother dead!

The story of Ruth's sweet life will tell
That she heeded her mother's counsel well;
For oft in the crowded and busy street,
The people have gazed, when they chanced to meet
The two little forms, the one with an arm
Clasping the other, to shield him from harm,
Saying the while, though her lips never stirred,
And any one passing could hear not a word,
Saying the while in her heart, "Oh, mother,
I try to be kind to my little brother!"
And then with a gentler and closer fold,
She made him warmer, while she was so cold.
And when the crust for their supper was small,
She never would taste it, but gave him all.
And so, through the years of childhood and youth,
Such a dear, good friend was his sister Ruth,
That he did not dream at how great a price
Of toil and of pain and of sacrifice,
The treasures he so much prized had been bought,
And the bright goal reached which he long had sought;
(For he had grown great, and had seen his name
Written high up on the roll of Fame.)
But he learned it all one day, and then
He thought "how patient and kind she has been!"
And he found that a love, than his more sweet,
Long years before, had been laid at her feet.
But she, remembering the words of her mother,
Said, "Take it away—I must love my brother."
So her cheek grew pale, and her eye grew dim,
And her heart was heavy through love of him.

He wept as he said to himself that day,
 "I owe her a debt I can never pay."
 And then after musing with dreamy look,
 He cried, "I have it—I'll write a book,
 And my heroine shall be, in truth,
 No other than my dear noble Ruth."
 He wrote the book, and his love had wrought
 So many bright visions in his thought,
 That the story was clothed with such a grace,
 The world stood ready to give it a place.
 His "Ruth" was crowned with a halo of light,
 Till the writer was almost lost to sight;
 And the old true love came back to her feet,
 And the bitter of life was changed to sweet.

MRS. E. O. SMITH ON "THE FAMILY."

BY SAMUEL BARROWS.

ELIZABETH OAKES SMITH is a woman whose right to claim a place among the prominent lady writers of this country will not be disputed. She has shown herself deeply interested in every philanthropic movement, and has judiciously used her talents in urging many reforms of the day. In a late number of a New York monthly,* she has an article upon "The Family," which deserves some special consideration.

Mrs. Smith opens as follows: "When we consider how carelessly the foundations for the family superstructure are laid, the wonder is, not that ruin sometimes ensues, but that it is not more general than it is now found to be. Two persons from two already established families separate themselves to establish a third, whose taste, habits, and disposition are little known to each other, and may prove totally dissimilar and at variance." After referring to the "foundations of a thousand insidious diseases," which are laid in the family, which baffle the skill of the "most skillful physicians," Mrs. Smith gives from "Webster" this definition of the family: "The collective body of persons who live in one house, *subject to one head or manager*; a household, including parents and children, servants, boarders, etc." Accepting this definition, Mrs. Smith adds her own opinion, that "in every well-regulated household there must be a supreme head or umpire—one to whom all may appeal, and whose decision must be final; from whom there is no appeal; a wise, loving, judicious center, who is to be looked up to as counselor, friend, judge." Then comes the question, who shall be this head or umpire? To answer this question, Mrs. Smith consults the Apostle Paul, who, she says, "decided that question, nearly two thousand years ago, by asserting that the woman should be subject to her husband." "I know," she continues, "the masculine arrogance of the Jew denied the equality of woman, and accepted her in the aspect of sex mostly, as Paganism did entirely. The Jew excluded woman then, as now, from the main body of the tabernacle in worship, and yet in the earlier and better ages she had been recognized in the nation both as judge and prophetess."

Upon this basis of philological and ecclesi-

* *Herald of Health* for January.

astical authority, Mrs. Smith proceeds to build her argument, the corner-stone of which is, "that the man is the rightful, proper head of the family; that wife, children, and servants must, and ought to yield, not only respect, but obedience to him, as the head and ruler of the household; in his place there he should be *king and priest*, he should rule and worship in the altar-place of home."

Without disputing Dr. Webster, who is supposed to define words according to their received signification, and not as they *ought* to mean, it may be very proper to doubt whether St. Paul meant, two thousand years ago, to decide that question for all time, as against every attempt to improve the social and political status of women; whether what he said was not specially directed to the people to whom he wrote, and intended merely for the time in which he lived. Such a position is strengthened by Mrs. Smith's argument, and is well fortified by the answer of Christ to the Jews on a subject akin to this. They said unto him, "Why did Moses, then, command to give a writing of divorcement?" He answered, "Moses permitted it because of the hardness of their hearts." According to Mrs. Smith, the hard-hearted age was a *better* one than that in which St. Paul lived, when women were excluded from the worship of the tabernacle, and from priestly and judicial functions, and therefore it is not unreasonable to suppose that, in addressing the unsanctified Greeks, Paul, like Moses, wrote some things which there would have been no occasion to write if their hearts had been subdued by the gospel of love. At any rate, is it fair to presume that Paul intended by this letter to check the aspirations and bar the progress of woman in the nineteenth century? Does religion thrive on the subjection of woman? Is Christianity insulted by her elevation to equal rights with man? The whole tenor of Christ's teaching is against such an inference. In Christ Jesus there is neither male nor female; that is, the distinction of sex is made entirely subordinate to that higher nature which man and woman possess in common, and to which Christianity appeals. "The letter killeth," says Christ, "but the spirit maketh alive." We should be careful how we construe the teachings of a past age, without knowing the spirit and condition under which they were uttered. There are not wanting literalists who quote the Bible with great parade of reverence in support of human slavery, polygamy, and every stain on our social system. Such a mistaken, soul-blind reverence is a dead weight on the progress of truth.

But we must return from St. Paul to Mrs. Smith's opinion. This, written in our own language, by a capable woman of the nineteenth century, is scarcely susceptible of mistake. The most unfortunate aspect of her argument is, that a woman who accepts it must sacrifice her freedom of will, and yield her personality to the authority of a man; though this sacrifice is not required by the felicity, the sanctity, or the permanency of the marriage relation. Mrs.

Smith is confident that in every well-regulated household there must be one supreme head or umpire, discarding altogether the old maxim, that two heads are better than one. It is not to be questioned that in a well-regulated family of children, servants, and dependents there should be *at least* one "wise, loving, judicious center who should be looked up to as counselor, friend, judge;" but in Solomon's wisdom, two such counselors would be better than one. Why one only? and why that one the husband? The husband has not always the longest head, though often the longest ears; and in such cases, what is the wife to do under Mrs. Smith's philosophy—subject her wisdom to his folly, or follow her own counsel? If the former, she offends the literal Solomon; if the latter, she offends the literal Paul. Certainly, if there must be but one head and counselor, it should be the one who has the best counsel to give, and is this more usually the husband than the wife?

Neither the husband nor the wife loses in dignity or self-respect by delegating to the other, for household administration, some of the authority which inheres in each; but, according to Mrs. Smith, all the authority inheres in the husband. He is not only wise counselor, friend, and judge, but he is supreme ruler, "*priest, and king!*" True, Mrs. Smith thinks the "wife not without authority in the family," that the children and servants must obey her; but then she writes: "The woman's part is generally a subordinate one; her marriage contract involves the condition of obedience as well as chastity," so that virtually whatever authority she has in her position, must be by derivation from the "priest and king."

If our lady friend had been content to make her model husband a wise counselor, a judicious friend, certainly no one could object, for wisdom and prudence are not too common in the family circle; but why is the wife by her marriage vows condemned to be the subject of a household "priest and king" who may be totally unfit either to rule or worship? Is the husband naturally any more religious than the wife? Does it detract anything from his dignity that she wears in her turn the sacerdotal robes, and as often as he leads the family in prayer and praise? With all due respect for Mrs. Smith's opinion, it is submitted that the right of a husband to a *kingship* in the family is founded neither in the nature nor the welfare of that institution. The husband and wife should hold equal power, exercise equal authority, and command equal respect. There may be a conceded division of labor and authority for the good of both, but in all matters in which the happiness of each is directly concerned, there should be a common judgment and a common consent. Desirable peace and harmony are not secured by the subjection of the wife to any absolute husbandly authority. Her place is by his side, not at his back, or under his feet.

Mrs. Smith maintains that the first law in the household is obedience to the head and

center. That may be the case in Turkey, but it should not be the case in the United States. The first law of the household should be *love*. Each member of the family should be bound to the other by its silken chord. No unselfish husband, who truly loves his wife, as every husband ought, will ever wish to treat her as his inferior; and no woman not born in savagery ought to consent, in these days, to take a marriage vow which makes her subordinate to a co-ordinate in privilege and power. Our family system, though needing much reform, is perhaps superior to any in the world. Our best regulated families among the rich and poor are those where love is the first law, and filial obedience an adjunct; where neither husband nor wife affects supremacy, but each lovingly concedes that which belongs to the other, and the personal rights of each are sacredly maintained. Neither scorns to ask counsel of the other. If they differ as to policy, love suggests a compromise; if they can not agree, they consent to differ. The husband does not dogmatize, pervert St. Paul to bully his wife, or quote the marriage vows of the Episcopal service; but treating her with deference, he accords to her all the social right and privileges which he himself possesses.

Mrs. Smith, in speaking of wifely loyalty says: "I know of nothing more base than for a woman to take the name of a man, eat his bread, and mother his children, and then go about to abuse and vilify him." It would be bad enough if such a thing were common, or if it were any more common for a wife to vilify her husband than for a husband to vilify his wife; but look at the pronoun. "To eat *his* bread, mother *his* children!" As though *everything* belonged to the husband and nothing to the wife; as though she were a menial, a dependent, a beneficiary; as though she were obliged to thank him for the very bread she eats, the clothes she wears; whereas, by every rule of right and equity, though not of civil law, to the wife belongs one half of the husband's possessions, at least one half of all that he acquires after marriage, the wife's duties at home being a full equivalent to the husband's abroad. If Mrs. Smith insists upon obedience, she should also insist upon justice.

Commendable efforts are being made to enlarge the political and industrial sphere of women. How can we expect them to be successful so long as women are denied their rights in their own homes. The inevitable tendency of Mrs. Smith's social philosophy is to retard the genuine improvement of woman. This may be contrary to her intentions, but that does not alter the fact. The family is the foundation of society. "Equal rights" for woman should begin there. Husbands should treat their wives with consideration, and encourage them to respect themselves; then they will be more likely to respect their husbands. Subjection is opposed to growth. The loveliness and holiness of the wifely character will not be diminished by enlarging the scope of their exercise.

The real danger to domestic harmony is set

forth by Mrs. Smith in her first paragraph which is quoted above. Incompatibility of tastes, education, and mental endowment is the foundation of family disorder. Phrenology and physiology are usually ignored in marriage engagements, whereas they should be respectfully consulted and obeyed. Then no couple should marry without a mutual agreement as to the precise character of their future relations; this would avert much future difference. If a woman has genius, let her provide by stipulation for its future growth and her own mental and moral expansion; let her marry no selfish, arrogant man who will make her a drudge and a slave. When such subjects become common to courtship, instead of being excluded by affected prudery; when physiology and phrenology are employed to interpret God's law in each case, there will be less need of quoting St. Paul; less household despotism, but better husbands, better wives, better children.

[We are pleased to give our Washington friend, Mr. Barrows, a hearing on this social question. He writes in the interest of those who need encouragement, not as a champion, but as a sympathizing friend.]

REST!

BY CRAYON BLANC.

ANYBODY can work; but it takes a philosopher to rest. Given a certain amount of brain and sinew, bone and muscle, just so much to do, and just such a time to do it in, and if at the day's end the day's labor is not completed, our calculation must be very much out of joint somewhere! But when the sun is down, the banks are shut and the shipping offices closed, and our workman goes home to begin the other half of his existence—resting, in nine cases out of ten he don't know any more *how* to do it than you or I, my friend, know how to get at the secret spring of Perpetual Motion!

And, what is worse, there is no school, nor college, nor conservatory where the science is taught; and that is the reason why our men at forty grow bent and wrinkled, and our women put on spectacles at the same age, and begin to pull out the gray hairs when they brush their coiffures of a morning!

"Work! work!" says the father, and the schoolmaster, and the adviser; but nobody stands by to say, "Rest, rest!" Americans need the latter admonition, as a general thing, much more than the former.

Summer is the season when city people most need rest—the season longed for and looked forward to, for three quarters of the year. A man can endure a far heavier pressure of brain and body when he looks ahead to "drawing a long breath" by and by. But how seldom does the promised hour of relief arrive! "We'll rest for a few weeks," says the Business Man, when he rents a furnished cottage somewhere out on the railroad, or engages summer board under the shadow of patriarchal New England maples. And he rushes hither and yon, buying air-cushions, and mosquito-netting, and camp-

chairs, and patent contrivances that turn into anything from an ironing-table to a bedstead, at thirty seconds' notice, with a diabolical ingenuity which, two hundred years ago, would certainly have strung their inventor up for a wizard; and his wife lays in stores of things that "may be wanted," and "had better be taken along," and that "it wouldn't do to be without," and sews herself into a sort of fever, in order that "the children may look decent." That's the way they get ready to rest, and by the time they and their trunks and bandboxes reach the new destination, the Garden of Eden itself would present no attractions to their jaded bodies and over-wearied minds, much less an ordinary farmhouse, with ordinary green grass edging its doorstep, and ordinary leaves fluttering in the sunshine overhead!

And now the question is, how to rest! Our business man comes up Saturday night, rushed onward by express train which he catches at just the last moment, with both arms full of newspapers. Oh, why does he not leave the great world behind for one brief day, with its cares and trials, and the fall of stocks and the rise of gold? And he walks up and down the piazza with his hands behind his back, thinking—thinking—thinking! of business perils, and the risks of his last venture, and the telegrams from Europe, and all the chances and changes that hang over the "down-town" horizon! And the children don't dare to show him the empty bird's-nest in the woods, nor the misletoe growing on the old dead tree, nor the butterfly's wing they found, nor the nests in the fragrant hay of the old barn. "Papa's busy," says the mother, with warning uplifted finger; so they creep away to their woodland haunts, and feel a sensible relief when "papa" is gone back once more to the city, per express train.

Nor does the wife understand the science of rest much better. She thought she was going to have "so much leisure" in the country, and so her trunks went down, filled with rolls of work, and bundles of unmade shirts, and there they lie, like so many Juggernauts on her conscience, night and day, while the children alone thoroughly enjoy the summer sunshine and the birds and the brooks, as God meant they should be enjoyed!

Now, to rest, my good woman, you should have left your work at home, and brought only a few serviceable garments that grass will not stain, nor rain spoil, nor little clinging hands rumple! You should have gone out into the woods with the children, day after day, or with a friendly gossiping book, and dreamed away the long summer hours with that *abandon* which is to the mind what tonics are to the body. You should have shut the door of your minds resolutely on past and future, and admitted only the great, genial Present. That would have been the true meaning of the word rest!

As for your husband, he should have turned boy with his little ones, lain on the mossy banks, breathed in the spicy hay scents, brought home a hatful of wild berries, and forgotten Wall Street altogether for the twenty-four hours of reprieve he had given himself. Twenty-four hours! It should have been twenty-four *days*! But when, alas! will people leave off trying to work and play at the same time? Not in our time, we fear, nor in that of our children!

On Physiology.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—*Cicero*.

My people are destroyed for lack of knowledge.—*Exod. iv. 6*.

TO LUCINIUS.

HORACE, ODE X., BOOK 2.

To live, Lucinius, safe and free,
Thou wilt not keep far out at sea,
Nor, fearful of the gales that sweep,
Too close along the margin creep.
The man who'd have a soul serene,
Must cultivate the golden mean,
Escaping thus the squalid cot,
And jealousies by wealth begot.
The mighty pine is ever most
By wild winds sway'd about and toss'd;
The highest towers disastrous crash
When, from the mountains, lightnings flash.
When fortune frowns, then hope for change,
And when she smiles, fear she may range;
Though haggard winters rule the land,
They disappear at Jove's command.
Though now they may be sure of this,
Things will not ever go amiss;
Not always bends Apollo's bow,
But from his lyre sweet strains bestow.
Though sorrows strike, yet still be true;
Though comrades fall, your ends pursue,
And wisely, when your speed's too great,
Take reefings ere it be too late.

DIETETICS—WHEAT BREAD.

A WRITER in the *American Farmer* writes as one learned in the chemistry of food. He says: "Our whole process of converting wheat into bread has, at almost every step, violated the laws of nature and disregarded her suggestions, and the reform must be a fundamental one. Wheat is, beyond all dispute, the most perfect article of human food, it being the only vegetable production yet discovered that contains all the elements necessary for the nourishment of the muscle, bones, fatty tissue, and brains, in just the right proportions. Beans, peas, Indian corn, and the other grains afford perfect nourishment for all the organs but the brain, by which term is included the spinal marrow and the nerves, which branch from the brain, and are identical in composition with it, the whole forming one system or set of organs. Now the pabulum of the brain is phosphorus, whose life-giving fire thrills along the nerves, and whose light illumines the chambers of the mind—for could we rightly understand the correspondence between the material and the spiritual, we might see that light in the intellectual sense was something more than a mere figure of speech. The wear of the brain by study or any mental effort throws off the phosphorus which is found with other waste matter in the urine or other secretions. To keep the brain healthy and in working order, the waste must be restored by the use of food containing phosphorus, and that food is wheat.

"It would seem as if wheat was made for brain food, and man, the only animal that works with his brain, is the only consumer of

PORTRAIT OF ISAAC JENNINGS, M.D.

it. But by a strange caprice, the promptings of his intuitions are overruled by his tastes, and in this particular instance, to his great detriment, nearly every particle of this brain-nourishing phosphorus is found in the hull or bran of the wheat, which, when separated from the flour, for the sake of merely gratifying the eye with the sight of white bread, carries with it all the superiority which wheat possesses over a dozen other kinds of cheaper vegetables. In addition to this, the mechanical action of the bran on the internal organs keeps them in a healthy state, and supersedes the necessity of pills and other cathartics, which many people are obliged to use habitually. This matter of making flour of the whole wheat is well understood, and approved by every school of physicians, and through their recommendation to their patients, and the teachings of health journals, its use is becoming somewhat common, and *wheat meal*, as it is called, is a staple article in the markets."

[We are not sure about the shucks, or skins, of wheat, any more than about the goodness of the shucks of nuts or the skins of potatoes. But we do believe in wheat meal, rather than in superfine wheat flour for bread. Nor would we object to having our bread, for at least one meal a day, made of Indian corn. If in the shape of samp, hominy, or johnny cake, it would be acceptable, as it certainly would be healthful.]

ISAAC JENNINGS, M.D., THE INDEPENDENT MEDICIST.

In figure Dr. Jennings is tall, spare, lithe, and wiry. He appears to have remarkable physical endurance, as well as great activity of body and mind, and remarkable tenacity of thought, feeling, purpose, and constitution. His head is high and long, but not very broad.

His intellect has enough of the reflective to make him theoretical; but having a superior development of the perceptive and practical organs, he has remarkable talent for acquiring knowledge in detail, and of gathering up information and reducing theoretical knowledge to practical uses. He has a remarkable memory of things, places, qualities, conditions, historical facts, and a good memory of words. The central line of the head, beginning at the root of the nose and running backward over the head to the base of the brain, is sharp and high. These qualities thus brought out give a tendency to individualism,

enabling a man to centralize himself on his own foundation. They give independence of judgment, decision of character, self-reliance, independence, persistency, and constancy. His head rises high at the crown, showing steadfastness, determination, and independence of feeling.

His Conscientiousness indicates integrity, truthfulness and justice. He is frank, has but little Secretiveness, is not inclined to hide his thoughts or to conceal his light. He has courage as well as fortitude, force as well as steadfastness. His social nature is amply developed; he is strong in his friendship, is patriotic in his attachment to home and country, is a good friend and faithful to his convictions. His distinguishing characteristic is a wiry, enduring constitution, which gives to his mind clearness, force, and persistency, and a strength to his character that is not often equaled. He has a clear mind, an excellent memory, great powers of analysis, high moral feeling, strong affection, frankness, prudence, dignity, and determination.

Dr. Jennings was born at Fairfield, Connecticut, in 1789, and is consequently now an octogenarian. His busy life commenced on his father's farm, where he remained an active co-operator, enjoying at intervals the moderate educational privileges of a district school, until his twentieth year. Then, having determined to engage in the study of medicine, he entered the office of Dr. David Hull, a practitioner in his native place. Young Jennings, in the outset of his pupillage under Dr. Hull, displayed such an aptitude for study that he took a special interest in procuring for him, through

Rev. Mr. Humphreys, afterward Dr. Humphreys, president of Amherst College, the requisite facilities for a collegiate education. In speaking of the manner in which he was induced to entertain the idea (before scarcely thought of, because of his father's moderate circumstances) of studying the ancient languages, the Doctor writes: "Mr. Humphreys gave as a reason for his advice to me that Dr. Hull had represented to him that I could master books with much greater facility and speed than any other man that he was acquainted with. I felt my need of a better foundation for my medical studies than I then had, especially for some knowledge of the Latin and Greek, and told Mr. Humphreys that if he would loan me a Latin grammar—he had previously offered to superintend my preparation for college and aid me to some extent with books—I would immediately commence a study of the languages. Andrews and Stoddard's Latin Grammar was put into my hands, and I started for home." While pursuing his professional studies, he from time to time aided his father on the farm, and at the time he thus commenced his studies in ancient literature, he had considerable to do with getting in the hay crop. Of this his clerical friend was aware, and did not expect him to make much of a figure at the first recitation. As it was, however, the indefatigable farmer-boy and student was resolved to surprise his instructor, and therefore applied himself with the greatest earnestness to his classics whenever an opportunity of retirement from the labors of the hay-field occurred, although he by no means stinted the latter. At the recitation, he gratified his friend by the perfect rendering of a certain number of pages, which Mr. Humphreys considered ample for a commencement; but when young Jennings remarked that he was prepared to recite more, the minister asked: "Have you gone further?" to which the student answered, "Yes, sir; I have seen the end of the book, and made a finish of it." Of course Mr. Humphreys was greatly surprised by this announcement and put him to a test on account of it, and found that his precocious pupil had indeed swallowed the book, nay, mastered it, verbs, nouns, pronouns, declensions, conjugations and all. This sort of rapid acquisition characterized to a great extent his extended studies in Latin and Greek, until he had proceeded as far as he thought it necessary for the purposes of his medical training. "Mr. Humphreys," he says, "urged me strongly to go forward in my preparation for college, assuring me that in a few months I could pass over the first two classes in Yale and enter the junior, and at its close reap its rewards or secure the Valedictory. But, as Hudibras says:

"Want of cash is
The obstacle to cutting dashes."

His mind being set on medicine, he was anxious to make as rapid advances as possible in the acquirement of the knowledge necessary to fit him for securing a license to practice.

He entered the office of Eli Jones, M.D., of New Haven, in 1821, and remained there until he had fitted himself to sustain the examination prescribed by the laws of Connecticut for all applicants for a license to practice medicine. At that time there was no State medical college, and candidates for admission to practice were examined by a board appointed for that purpose. Young Jennings had not studied during the entire period required by the statute before a medical student could present himself for examination. He lacked more than six months of it; but feeling abundantly able to acquit himself with credit before the examining board, of which Dr. Jones was one, he was desirous of saving the time. His case was presented to the board by Dr. Jones in so favorable a manner that the examiners consented to try him, and the result was entirely satisfactory to the examiners and the student. He soon entered upon active practice, and with much success for a young man. His previous close application to books, however, began to manifest itself in a lack of general vital vigor and a defective pulmonary condition, strongly disposing him to consumption. His powerful brain, by its unceasing exercise, too severely tested his naturally compact and vigorous constitution, and had so reduced his physical forces that for some time he was obliged to take every precaution against further mental excesses. He continued to practice medicine according to the old-school theories until about 1822, when he was induced, by many careful observations and experiments, to modify his system of practice—to relinquish ultimately the use of drug specifics in the treatment of disease and place his reliance on a conformity with the laws of nature. In the Introduction to his "Philosophy of Human Life," he has presented, at considerable length, his reasons for abandoning the old theories of medication. When it is understood that his practice was large and his reputation for success enviable at the time of his adoption of his new theory, it can be fairly inferred that his reasons for the change were weighty. In the Introduction already referred to he says: "At the time when I launched forth into the 'do-nothing' mode of treating disease, vigorous practical medicine was the vogue of the day. Popular teachers and leading medical men discarded the doctrine of 'cure by expectation,' which had been brought considerably into notice and practice in the preceding century by Van Helmont, Stahl, and others, as based upon a fanciful and visionary theory, and tending only to the use of inert and frivolous remedies, and, on the contrary, recommended bold and energetic practice; and in this common sentiment I had participated largely while a student of medicine, and in the first years of my medical life. It was no light affair, therefore, to face square about on a subject which involved human lives, and attempt to stem the long-established, broad, deep, and powerful professional current, aware, too, as I was, that such a course would

be likely to alienate from me the warm affection and sympathy of those with whom I had taken sweet counsel, and whose favor was as dear to me as the apple of my eye.

"My lancet was sheathed and active medicine proscribed, with few exceptions, which will be noticed hereafter; and for all ordinary occasions my stock of remedial agents consisted of bread, flour, and water. . . . The general results of the 'let-alone' principles, in comparison with those of the perturbing one in common use, in any and all of its multitudinous forms, were such as to convince any sober-minded and common-sense man of the superiority of their claim to soundness over that of the latter. Diseases were more uniform and regular in their progress, and shorter in duration; recoveries were proportionally greater in number, and more perfect and enduring in the end. Sudden and remarkable cures were a matter of notoriety, and the wonder was often expressed how such astonishing results could be compassed by such apparently trivial means. It came to be well known that the weapons which I used were few in number and of small dimensions; but it was conjectured that they made up in power what they lacked in number and size, and especially that their peculiar efficacy consisted in the skillful direction of them to the very seat and center of disease. On the full tide of successful experiment in 'bread-pill' practice, my patronage, large at first, continued to increase and extend, until my ride embraced a wide range of territory and a large population, besides frequent excursions into other districts as consulting physician." In 1839 he removed with his family to Oberlin, Ohio, where a Christian colony had been established, the organization of which, in most respects, elicited his approval. There he still resides. Although at an advanced age, the vigor of his intellect is evinced in the pages of his "Tree of Life, or Human Degeneracy," a work of a religious and moral character, though including some chapters on Orthopathic Medicine, published in 1867. In this work he enunciates the doctrine, that the perfect man is he who unites perfect physical health with correct moral and religious principles, based on the Christian model. The books which Dr. Jennings has written are distinguished for their vigorous and clear style, and for the extent of scientific investigation and reading indicated in the department of his profession. That he has been eminently successful as a physician is beyond question, and that he is earnest and sincere in his declarations is sufficiently attested by his well-known, consistent Christian walk and conversation.

"Be a whole man to everything," wrote J. J. Gurney to his son at school. "At Latin, be a whole man to Latin. At geometry or history, be a whole man to geometry or history. At play, be a whole man to play. At washing and dressing, be a whole man to washing and dressing. Above all, be a whole man to worship."

THE PIPE AND ITS STORY.

—o—
 "That noisome weed, Tobacco."

THE two engravings which embellish this page present no fancy sketch, no chimera of the imagination, but dread, startling reality. When the curtain has been withdrawn from

a chemically-prepared weed. How many sons of genius, who rose in the horizon of intellect, and dazzled the world with their brilliancy, have stained their otherwise glorious monuments by a profligate death! How many a noble intellect has been steeped in eternal darkness ere it had time scarcely to challenge

FIG. 1.—INFATUATION.

behind those bare and dry items of disease and death which we term "statistics of mortality," and instead of mere figures and technical terms we contemplate the fatal cause of the great aggregate, how shocking, how revolting the picture! Can it be realized that a being endowed with splendid capabilities and privileges, with that mental vision and power of judgment which constitute him the chief, the dominant energy in the universe, will subordinate, nay, prostitute, all these capabilities and privileges to an ephemeral indulgence of an animal appetite; will entirely lose sight of himself in the pursuit of objects in themselves unsightly, and ministering naught but mental or bodily disease to their infatuated votaries? Yes. The possibility is attested by the numerous asylums, hospitals, prisons, reformatories, etc., which are at once the pride and shame of civilization, by the ten thousand freshly-made graves which dot the sod of this country, and by the leering, bloated, diseased debris of humanity which we meet every day in the social round. How strange, how wonderfully strange the influence wielded by those twin agents of destruction, Alcohol and Tobacco! A few draughts of the fiery liquid, a few puffs of a cigar or a pipe, and a habit is formed which binds its victim in meshes of steel. Strong men—men whose powerful mental apprehension is equal to the loftiest thoughts or noblest conception of genius, who in their pride of intellect and potency of will scoff at restraint, are helpless as infants in their nurse's arms, the thirsty, craving subjects of a distilled fluid or

the admiration of an expectant nation! And yet, with all the dread facts staring them in the face, and urging them to exercise their judgment, their will for their best interests, how great the concourse of men who do not heed the warnings, but obedient only to appetite and propensity, clamor for the things which prove their destruction!

There is no lack of energy on the side of reformers. Societies having in view the redemp-

other be willing. A poor drunkard, or an inveterate user of tobacco, will resist the arguments and entreaties of a friend on the sole ground that he, the former, is not to be controlled in his actions by any one. He *will* do as he pleases, and questions any man's right to interfere. Poor fellow! sensitively conscious of his prerogative as a man, he nevertheless meekly surrenders himself and all his cherished rights to the absolute control of that which must ultimately work his ruin. Yet his inconsistency is not extraordinary, but the normal result of subverted organization—a dominancy of the sensual man. But we have digressed from our subject. Probably in no form is tobacco used less publicly than in "smoking the pipe." Cigar smokers and tobacco chewers are to be met with everywhere, but the pipe smoker is more retiring in the enjoyment (?) of his luxury. Perhaps the inconvenience attending the carrying of a pipe with one in his walks or travels has much to do with its comparative unpopularity. If so, we confess our gratitude that it is an inconvenient appendage out-of-doors. Let any one who appreciates refinement of all sorts, and pure air especially, walk behind a biped who may be promenading with a silver-mounted "meerschaum" dangling from his incisors, and now and then inhale the delicious odor of the foamy clouds which said biped suffers with such an air of unspeakable comfort to ooze from his lips, and our hand upon it, no further suggestions will be needed to impress that one with the extreme sweetness and healthful nature of rank tobacco smoke. An old, well-used pipe, reeking with the deadly oil distilled from the pounds of tobacco which have been so extensively burned in it, is enough to nauseate any human stomach! Faugh! it sickens, almost in imagination. *Horresco referens.**

We have heard of youthful aspirants to smoky honors (the young gentleman depicted in the engraving was one of them) who, having

FIG. 2.—THE RESULT.

tion of man from depraved habits are abundant and vigorous. They accomplish much; but when we contemplate the long ranks of the dissolute, which seem to be filling up more and more with fresh recruits, we are obliged to confess that it doth not belong to any man to save another from sin and death unless that

come into possession of a pipe, thought it their duty to employ every available moment in cultivating its acquaintance, burning tobacco far into the night, and planting the seeds of disease and physical decay in their scarcely mature constitution.

* I shudder at the very reference.

Among the diseases engendered by the use of the noisome weed in early youth, and specifically demonstrated by the best physicians in Europe and America, are dyspepsia, organic derangement of the heart, epilepsy, partial paralysis, necrosis of the jaw, rheumatism, salt-rheum, nervous debility, consumption, insanity. One of our American medical monthlies, in a recent issue, has an extended account of the removal of a man's entire jaw, which had become diseased from the contact of tobacco with decayed teeth. Our profession brings us in contact daily with those whose only excess is the use of the poisonous plant, but whose meager frames, cadaverous faces, and abnormal excitability proclaim their suffering. Nine tenths of our youth, who are wasting their vital forces thus, attribute their weakness to everything besides their darling cigar or pipe. Surely that which they love so well can not be undermining their health! But so it is. Let the truth strike home to their intelligence, and save them from the further waste of time, money, and true bodily enjoyment.

The "last scene of all that closes" the smoker's sad, eventful history is seen in our second engraving, and needs no comment of ours to point its moral. He who, to a great extent, lives to narcotize his lungs and his faculties, must ere long succumb to the effects of his dissipation; and what more appropriate memorial of his life could we place upon his coffin than the pipe which immaturely inclosed him therein, and what more apt legend could we uprear over his grave than

"In the smoke of his pipe his life faded away!"

DIETETIC FACTS.—Here is something of which few persons who live chiefly to eat ever permit a thought to enter their hungry minds. Soup, fish, flesh, oil, vinegar, wines, pastry, ices, confectionery, fruits, and numberless minor ingredients of conflicting chemical qualities are among the materials "thrown in." Stir these things together in a vessel, and which of us would not sicken at their appearance and odor? Yet at a dinner party they are all crammed into the stomach, there to ferment and generate pernicious gases. Truly, man is "fearfully and wonderfully made." No other creature could exist on such diet. It would kill a gorilla in a month. It *does* kill, though more slowly, thousands of that high and mighty variety of the human race commonly called gentlemen. Universal temperance in eating and drinking would quadruple the general health, and add years to the average life of the race. But exercise is as essential to health as temperance. In fact, intemperate eaters and drinkers sometimes stave off disease for several years by using their muscles manfully. As a rule, however, gormandizers and guzzlers are indolent. There is a story in the Arabian Nights of a physician who cured a sultan of plethora by introducing certain medicaments into a mallet, with which the patient hammered every day until he fell into a profuse perspiration, when the virtues of the panacea

in the mallet passed through the fibers of the wood into his pores. This is merely an allegorical way of enforcing the great lesson that bodily exertion is beneficial to health—that exercise is excellent physic. Everybody who knows anything about the mechanism of the human frame, sees, of course, that it was made to work, and we may add that if it does not fulfill the conditions of its structure it is sure to corrode and drop to pieces prematurely.

TEACHERS AND SCHOLARS.

No one need think to enter the field as a teacher unless she is willing to yield herself up to her labor, for it is a labor, though a pleasant one, when undertaken in the right spirit; but it should not be a task. Not only should we, as instructors, be prepared to furnish the necessary information, but we should study how to impart it to the best advantage; how to make it available, how to sift out the knowledge, as it were, so as to make dry studies interesting. In fact, there should be no such thing as dry study.

There is a great deal of useless matter dragged into school books, and the pupil is forced to repeat the ideas, and often the exact words of the author, without getting the least glimmer of their light; they leave the class, nay, the school, destitute of the faintest idea of what they have been studying. When the book is not clear, where pages are devoted to what may be condensed into half the space, the book should be set aside, and the teacher give oral instruction. I have seen pupils who have been studying arithmetic up to the age of sixteen or seventeen years, and yet they were not able to perform an example in long division, nor make the simplest arithmetical calculation. You may say, "Oh! this is a solitary instance; she must have been very stupid." I tell you no! It is the case with a great portion of the young ladies who attend what are termed our best city schools. Our public schools are not an exception. I have found many, even there, who have not been taught correct methods of reasoning. Now what is the reason of this? If a child be passably intelligent, she should be able to give up the study of arithmetic at fourteen years of age. It surely should not be necessary for a girl to dwell on writing and grammar from the age of ten to seventeen—seven years—and many more for arithmetic. Yet it is almost without exception the case. Where does the fault lie? I do not say altogether in the teacher, for, of course, if a parent keep her daughter from school every day or two, progress can not be expected. She should then be obliged by the rules of the school to take a lower position in her classes; and thus she would be likely to learn something thoroughly, and not obtain a useless smattering without end or aim. If all teachers were conscientious and true to their high calling, the parents could not decide the matter, and the pupil would be educated in spite of difficulties.

I would have the teacher do less for the scholar than she now does. Set the child to thinking, show her the way; then let her move on, and learn to overcome difficulties.

The child should be encouraged to ask questions. I know that many will disagree with me, and say that it is impossible to make any progress with a class if one stop to answer all the questions which children may put. Many will tell me they will make idle and foolish inquiries. I answer no! If properly trained, they will ask such questions only as will awaken interest and show thinking minds. I have always encouraged the habit. The teacher should strive to prepare herself upon all subjects, and if she be not careful, she will find her pupils will steal a march on her, and make some demands which will at first seem difficult to answer.

I would here notice the sad failing that I have observed in my fellow-workers, which is this, that they think the pupil must be answered at all hazards, as it would never do for the teacher to be found wanting, so they give a wrong answer, a mere form of words or a set speech, without meaning, and let it pass. We ought to have more courage and say frankly, "I do not know. I'll try and find out." Every child should be taught to search the truth for herself, for the reasons which have given rise to a certain rule. Especially where authors differ, the subject should be presented in a new light by the teacher; then let the pupil take that method which seems most reasonable. A teacher should take a subject in hand, and spend even weeks in gathering all the information she can upon it by inquiry, by observation, and by study. This close application and research upon one subject will make a new one much easier. The English grammar should, in my opinion, be well understood; then the scholar will be fitted to study the grammar of other languages with more facility. History, mythology, and literature are closely blended, and no studies have a more elevated and refining influence than these.

Every teacher should possess a magnetic influence over her pupils; he should imbue the class with life and spirit, and should bear them along with that subtle influence which can be seen and felt, rather than described. She should aim to create an enthusiasm, so that her class may feel lifted up, and the time spent together seem all too short. School days certainly should be happy. A teacher who is one in a true sense, will not fail to make them so.

That course of study should be pursued with girls which will be most conducive to their best interests and future welfare; that they as women may be able to make their knowledge available in the cause of humanity; that they may be useful wherever they may be placed. Self-reliance should be cultivated. There is a great deficiency in this respect, and there is no better place than the school-room for the culture of this important quality. Now, if my remarks prove useful to those just commencing the education of the young, I shall be glad. The great secret is—*How to teach.* F. A. W.

ALLEN A. GRIFFITH,
THE WESTERN ELOCUTIONIST.

WE present the readers of this number of the JOURNAL with the portrait of this rising teacher and lecturer on Elocution. So far as health is concerned, we could say nothing at all deprecatory of the gentleman. Every vital function which he possesses is manifestly in excellent working order, supplying those juices in rich abundance which lubricate the machinery of the mind, and enable it to operate with facility and effect. Such an organization, ministered to as it is by a strong motive temperament, can manifest itself in its fullest capacity, and maintain a good degree of activity without irregularity and without exhaustion. It is gratifying to find occasionally opportunities like this when we can assert that

the indications of the *sanum corpus* are all that could be desired. Good lungs, excellent digestion, and a thorough circulation are the property of Mr. Griffith, and for them he is no less responsible than for other gifts which vigorous health, when properly applied, serves to develop and fortify.

He has a full eye—the expression of talking ability; a broad forehead—an indication of vivacity and sprightliness; a good degree of reflective ability, and a sufficient appreciation of method and taste to effectively manage his intellectual forces. He is by no means deficient in imagination; nor is there any lack of fervor when circumstances conspire to arouse emotion. He is ambitious—would excel in whatever he attempts, and having secured success and reputation, would be likely to stand upon them with earnestness and steadiness. In his line of activity he would be foremost, the condition precedent. He is inclined to be somewhat more theoretical than practical—more original than a follower of other men's recipes.

The social qualities are evidently influ-

ALLEN A. GRIFFITH, THE WESTERN ELOCUTIONIST.

ential with him; the comforts and privileges of a home, and the associations and sympathies of friends, are cordially responded to by such a nature. He possesses in a high degree that elasticity of temperament which conduces to buoyancy and exhilaration of spirit. He enters upon the prosecution of an acceptable enterprise with that cheerful energy which indicates enthusiasm, and which is so generally conducive to success. He is occupied, as will appear from the following biography, in a profession which requires the exercise, more or less, of all the faculties, and which especially evokes the influence of the emotive qualities of man. Taken altogether, his organization certainly appears to be in correspondence with his profession, and able to fully respond to its requisitions.

BIOGRAPHY.

Mr. Griffith is the second son of Luther Newcomb Griffith, and was born at Pike, Wyoming County, N. Y. While very young his parents removed to Elyria, Lorain County, Ohio, and here the first sixteen years of his life were passed. At Mills Academy, in Elyria, he received the first impulse in the special department of education to which he has devoted his

life. In childhood he never enjoyed good health; and at fifteen was supposed to be past help, in quick consumption; was unable to do any kind of manual labor, and was sent to school to be "out of the way." About this time he became very much interested in some exercises before the scholars of the Academy, conducted by the eminent Irish elocutionist whose brilliant and brief career in the United States will be remembered by literary men. The exercises consisted in "breathing," "utterance of the vowels with inflections and circumflex," and "readings." These exercises afforded so much pleasure, and were of so much real benefit to the health, that Mr. Griffith afterward joined a class under Prof. Kennedy's instructions, and also took private lessons. He was highly commended by his teacher, and assured of good health if he would only persevere. Shortly after this, an interview was had with Mr. James E. Murdoch, at Cleveland. Mr. Murdoch was not giving instructions at this time, but kindly suggested a course of study and practice, which was carefully carried out.

Soon after completing the course at the Academy, Mr. Griffith was thrown upon his own resources, and sought his fortune in the West. He taught successfully as principal of Union schools at Milwaukee, and Waukesha, Wis., six years, occupying his leisure in the study of law. He was admitted to the bar in Milwaukee in 1855. In 1857, by invitation of the teachers' associations of Wisconsin and Iowa, he visited institutes, and presented his methods of teaching reading and elocution, and created much interest among the people by his public recitations. In 1858 he was invited to join the distinguished teacher and elocutionist C. P. Bronson, in a series of entertainments. And this may be said to have been his introduction to the people as an elocutionist and reader. For more than ten years Mr. Griffith has been almost constantly occupied instructing classes in the different colleges and seminaries of the North and West, and in public lecturing. He has been a devoted student, and the whole range of classic literature has been explored for models in the different styles of expression and delivery. His memory is superior, enabling him to recall the principal popular selections, and to recite many of Shakespeare's plays entire. His manner upon the platform is exceedingly natural and graceful. The great benefit which he has derived from the practice of elocutionary exercises makes him an enthusiastic advocate of the study of elocution.

Our institutions give prominence to public

speaking. The people are instructed in political assemblies, church congregations, in the halls of justice, and from the lyceum platform. Correct reasoning or simple demonstration is not sufficient to secure the greatest good on these occasions. Sound logic is the basis of oratory; but logic is weak before public assemblies, even in demonstration of the truth, unless the voice is trained to winning cadences, and the charm of manner made to give weight and character to matter. The sacred literature of the Bible and the hymns read from the pulpit, throughout the land from Sabbath to Sabbath, if accompanied with the honest voice of natural feeling and the expressive face of sincerity and Christian love, varying to indicate appeal, rebuke, devotion, or praise, would add to the religious culture of the people and to the wealth of religious ideas and sensibility almost beyond computation. The impression that culture is powerless to produce the results, or that success in elocution and eloquence is only for the gifted few, has too long rested in the mind of the intelligent.

The methods of study in the schools have confined the student to mental processes, without the additional culture or preparation for magnifying ideas by a forcible utterance of them. So many of the learned in the different professions have failed to exhibit a model in elocution, that students under the discipline above referred to, have come to regard oratory as a gift, not an acquirement, and admitting the power of persuasive speech and action, consider them beyond their reach or capacity, and as a consequence the scholars are becoming eloquent as writers, but powerless as speakers. They come to the bar, pulpit, or platform with voices uncultivated, bodies reduced by the unvarying rounds of the class-room, unskilled in gesture without acquired poise and repose, unable to think upon their feet, and experience all the mortification of failure in attempting to do what they have not educated themselves to do.

Mr. Griffith is producing a great change in the minds of the professional men and teachers with whom he comes in contact, in regard to this subject. Claiming that when elocution and rhetoric are taught in harmony, or together, or when the principles pertaining to the management of the voice, and the gesture of the body and limbs which constitute the external facts of oratory, are taught in conjunction with the accepted divisions of rhetoric, invention, disposition, choice of words, and memory, pertaining to the reason and understanding, they are as certain to become a part of the personal talents of the man. This position is the correct one. It is verified by the numerous cases of individuals who have distinguished themselves as orators, who have had the greatest obstacles to overcome, who have acquired all their education independent of rhetorical training, but seeing their great need of this culture have set themselves to work in earnest with competent instructors, and have triumphed over all defects, and returned to nature's pleasant ways in the speaking. Sound and sense must harmonize in speech, and the

tone of voice may be taught to take on the modifications of thought and feeling; or, rather, the indescribable eloquence of children, "who speak as they feel," may mature and develop with their growth and mental acquirements, and we may have harmoniously developed men.

The University of Chicago, at its commencement in 1886, conferred upon Mr. Griffith the degree of A.M. for his services to the cause of learning. Up to the present time Mr. Griffith has refused to connect himself with any institution, believing that he can do more good by passing from one college to another, spending sufficient time in each to awaken a permanent interest, and for this purpose he has reduced the principles of elocution to a brief system.

1st. Physical Culture — Position, Gesture, Breathing, Management of the Vocal Organs.

2d. With Voice Culture, Alphabetical Elements, Groundwork.

3d. Expression, introducing New Combination Exercises, which are invaluable for health as well as oratorical effect.

His "Lessons in Elocution," embodying his system, with many selections analyzed, has reached a sale of ten thousand copies in two years.

By a recent arrangement Mr. Griffith is to visit regularly Georgetown College, D. C.; Columbian Law College, Washington, D. C.; Notre Dame University and Academy, Indiana, etc. He resides at Batavia, Ill., having there a family consisting of his wife, two sons and one daughter. Mr. Griffith is strictly temperate in his habits, using no tobacco or alcoholic stimulants. He enjoys robust health; and having the firmest faith in himself and the importance of his mission, he is doing a work the influence of which can not be estimated.

"VELIS ET REMIS."

Out to the sea we are sailing now,
The great, broad sea, whence none return;
On to the harbor our vessels plow,
Where lights of heaven softly burn.
Happy and gay on the dancing sea,
Forever thus shall our bold song be,
"Vells et remis."

"Vells et remis" we lightly trill,
And as our barks spring swiftly on,
The sea breezes all the white sails fill,
And oars gleam in the golden sun.
While still do our lips breathe forth the song,
As we are borne so lightly along,
"Vells et remis."

But lo! the night comes fearful and cold—
The billows leap in angry foam,
And fierce winds shriek in their language bold,
As weird forms o'er the waters roam.
And now, with our pale lips firmly pressed,
Low ring the words from each throbbing breast,
"Vells et remis."

"With sails and with oars," oh, earthly ones,
Who struggle on a restless sea,
Unfurl thy white sails and ply the oars—
Use every dormant energy,
Until, at last, on heaven's shore,
The weary words will sound no more,
"Vells et remis."

CHARLES THE FIRST OF ENGLAND.

BY EDWARD W. TULLIDGE.

THE innovations of centuries, gradually but surely spreading throughout Christendom, had been working up the times and preparing Europe for great religious and political changes. In England it was not merely a grand religious struggle of the dominant Normo-Saxon race for Church reform and progress—people tearing away the veil of the dark ages and pulling down an old hierarchy which had become intolerable to the robust minds of the zealous Puritans of England and the stern Presbyterians of Scotland. This was the outside form; but there was in it a pregnancy of other issues. A religious spirit and fervor that find expression chiefly in protests and innovative faiths will soon afterward begin to work corresponding changes in the social and political states. Charles the First was born in times and surroundings when this was illustrated, and with him came Oliver Cromwell. Like his beautiful grandmother, he was the very embodiment of the assumption of the superiority of the prince to the nation, and both represented the past, and not their mighty progressive age. The consequence was, they were united in their fate.

Charles Stuart was the second son of James I. of England, by Anne of Denmark. He was born at the royal castle of Dumfermline, in Scotland, Nov. 6, 1600, three years before the death of the great queen who executed his grandmother. Elizabeth, Cromwell, and Charles were living at the same time. If the tradition of the pugilistic episode between the boys Charles and Oliver be not a fiction, then young Cromwell vanquished his elder, for the Prince was born two years before the boy who was destined when a man to meet him on the greatest issue of the world—the right divine of the nation, not of the prince—and he met him in the people's might.

The Prince was endowed with rare obstinacy, which manifested itself in his childhood. "He was noted," says Lilly, "to be very willful and obstinate by Queen Anne his mother and some others about him. * * * The old Scottish lady, his nurse, used to affirm so much that he was of a very evil nature even in his youth, and the lady who afterward took charge of him can not deny but that he was beyond measure willful and unthankful." A most unfitted prince indeed for such times as those he fell upon.

James essayed to bring about a marriage between his son and the Princess of Spain; but the voice of the English Parliament and people loudly protested against the union. This, with the obstinate king and Prince of Wales, would have been but little respected, but Charles, having paid a visit to Spain, with Buckingham, in disguise, to see his bride elect, himself broke off the match, through a quarrel between Buckingham and the Spanish minister. The Prince left Madrid suddenly, under the pretense that his father had recalled him;

and he was soon afterward engaged in marriage to Henrietta Maria of France. This brought about a war with Spain. And the match with the French princess was equally hateful to the nation as that designed between Charles and the Spanish princess.

At this period James died, and his son came to the throne in the twenty-fifth year of his age.

When Marie de Medici sent her daughter Henrietta to England she gave her at parting a letter of instruction, in which she counseled her to be a second Esther to her people, the Roman Catholics. This letter was written in the queen's own hand, bearing her name, but the politic Richelieu was its real author. The import of this counsel was for Henrietta to make herself the head of a powerful faction in her husband's kingdom. She was a zealous Romanist; and England received her with great distrust.

The temper of the times was strongly puritanic, and in the very character and earnestness of the master spirits of the age there was nascent a stern robust republicanism. The Cromwells, Hampdens, and Miltons represent the grandly-earnest men whom Charles was meeting from the opposite side. His chief advisers were the favorite Buckingham and Henrietta. The fate of his grandmother was coming to him from the same causes, and he was running against the nation and the age; and though not himself a representative of Rome, he brought his grandmother to his side in the person of his queen, Henrietta of France. She hated the Puritans as earnestly as the Puritans hated her; and inheriting from her father a love of absolute power, she urged her husband into his fatal course.

At the opening of his first parliament, June 18, 1625, the young king wore the crown on his head, contrary to the custom of the English kings previously to their coronation. This presumptuous innovation was a manifestation of Charles' assumption of right divine, which was first claimed by James his father, and against which Parliament protested vehemently in the late monarch's reign. Notwithstanding this stern protest, Charles Stuart met his first parliament wearing the crown, which the nation had not yet given him. His opening speech was brief and peremptory, demanding supplies to carry on the war with Spain.

But the Commons of England felt its own power; and woe be to that king who braves a nation when the people *feel* their might! The people's representatives were conscious of their strength, and they determined to employ it for the protection of the country against the encroachments of the king's authority on the ancient constitution of the realm. They objected to the taking up of the business of supplies first. Some of the members thought it reasonable that the king should first redress the grievances complained of in the reign of his father; others wished an account rendered of the employment of the last subsidy, granted by the Commons for the recovery of the Palatinate; some were anxious for the enforce-

ment of the laws against Popery, which laws had been suspended by the king's authority; others of the members pressed for the repeal of a duty on wines, imposed by the late king without the consent of Parliament. Charles promised fair, and professed good faith with the Protestant religion, and the Commons, though dissatisfied, granted two subsidies.

Notwithstanding the king's profession of good faith with the Protestant religion, which, from the ascension of Elizabeth to the throne to that time, had been the chief political as well as religious issue of the nation, his marriage with a Roman Catholic princess of Henrietta's character did not assure the people or their representatives. Neither was their assurance increased in view of the large establishment of ecclesiastics, including monks and a bishop, which the queen had been permitted to bring with her. She was looked upon as Charles' chief adviser. The favorite Buckingham was known also to incline toward the Romish Church, of which his mother and wife were members. Besides, there was the king's interference in favor of Popery, interrupting the action of the laws, and slights put upon the reformed Churches abroad, and the bitter hostility which he inherited from his father against the Puritans of his own kingdom. And thus, from the very stepping-place to his throne, he was challenging the issue with the religious and political fervor of his times. The majority of the Commons were Puritans, and the people were of the temper of their representatives.

Enraged with his parliament, the king dissolved it after a three weeks' sitting, and took upon himself the government of the land. He then levied taxes by his own authority, revived the old abuse of benevolences, and quartered his soldiers in private houses.

Charles called a second parliament in 1626; but its members resolving on measures of redress and the impeachment of Buckingham, they were dissolved by the king before they could pass a single act. Then followed the same illegal taxation, and many who resisted were imprisoned.

The king now involved England in a war with France. Buckingham quarreled with Cardinal Richelieu, and that famous minister forbade the duke ever to enter French dominions again. Buckingham led an expedition to the relief of the Huguenots, but lost half of his men, and returned to raise a second expedition.

In the mean time, the king, to obtain supplies to carry on his injudicious schemes, called a third parliament, in 1628. Before granting the desired supplies, the Commons drew up the famous Petition of Rights, exacting that the king should levy no taxes without the consent of Parliament, detain no one in prison without trial, and billet no soldiers in private houses. The Commons also persisted in the resolve of the nation to impeach Buckingham, but this was silenced by the assassination of the favorite while at Portsmouth, preparing to sail with

his second expedition. The king was forced to grant the just demand of his parliament, and "the Commons, rejoicing in the second great charter of English liberty, gave him five subsidies, equal to nearly £400,000."

But Charles had merely deceived the nation, and in three weeks it was conscious of the perjury of its monarch. In vain the Commons murmured; and when they sat to prepare a remonstrance, he came to the House to interfere. The members locked themselves in, but the king got a blacksmith to break open the doors, imprisoned nine of the members—one of whom died in prison, and dissolved the Parliament in great wrath, determined now to reign an absolute monarch, and govern the nation by his own arrogant assumption of right divine.

For eleven years no parliament was called, a case without a parallel in English history; and thus Charles was rushing England backward, and rapidly reducing her power and influence.

During these years of absolutism Sir Thomas Wentworth, who had first led the Commons against the king, but who was now Earl of Strafford, as prime minister governed for the tyrant Stuart; and William Laud Archbishop of Canterbury administered the affairs of the Church. Strafford played the Richelieu, and laid a deep scheme to undermine the Constitution of England, and secure for the monarch absolute power. A standing army was to be raised, and all other power in the state swept away. In 1633 he was appointed Viceroy of Ireland, where for seven years he carried out his policy, and both the native Irish and the English colonists crouched in terror under his iron despotism. On the side of the Church, Archbishop Laud was almost a Papist, and he hated the Puritans with all his heart.

The nation was now groaning under the despotism of three lawless tribunals. The Star Chamber sentenced men to fine, imprisonment, and mutilation for resisting the policy of the king; Laud, through the High Commission Court, launched vengeance upon the heads of heretic Puritans and Calvinists; and over the northern counties a Council with absolute power, directed by Strafford, sat at York.

During this despotic period arose the infamous "ship-money" tax. It was a war tax in the time of peace, and it dated back to the Danish invasion; but it was revived and levied contrary in every respect to its ancient intentions. In olden times it was levied for the equipment of a fleet to defend the shores of England, but now it was forced upon the nation to support a standing army to subjugate itself to the rule of an absolute despotism. The lion was aroused in every noble heart; and Hampden, after three years' non-resistance, boldly threw down the gauntlet against the king, and refused to pay. His mightier cousin, Cromwell, too, was fast coming to his work.

It was in this period of the reign of terror that the great emigration of the Puritans drained

England of her best blood and noblest spirits, for Laud's spies hunted them even to their closets, and the High Commission Court robbed, tortured, and mutilated them. As noted in our life of Cromwell, that hero himself, with Hampden and Pym, was on board of one of the eight ships which the mandate of the tyrant Charles stopped, arresting the flight of the Pilgrims from their native land. But for that evil stroke of the Stuarts' policy, Cromwell would have been among the founders of New England, instead of Lord Protector of the realm and the righteous executioner of a nation's justice.

Not content with the subjugation of England to an iron despotism, the king now hurried on his fate by attempting to carry out his father's darling scheme of converting Scotland to Episcopacy. He visited the land of his birth in 1633, and appointed thirteen bishops; and four years later he commanded a semi-Popish form of prayer to be read in the churches of Edinburgh.

It was a Scotch woman who opened the civil war, and her simple example of physical remonstrance illustrated the temper of the times. When the dean in St. Giles' rose to read the new liturgy, Jenny Geddes hurled a stool at his head. A great riot in the church followed, and the bishop and dean fled. The king attempted to enforce his policy, but Scotland was aroused, and within two months nearly every soul had signed the National Covenant, by which the entire nation bound itself to resist the revival of Popish institutions, and to unite for the defense of its laws and liberty. Soon afterward a General Assembly was held in Glasgow, which excommunicated the bishops and abolished prelacy. Scotland was more than ever Presbyterian.

The king would have sent an army into Scotland, but his policy was reacting upon himself; and he was forced to call his fourth parliament, in 1640. He soon dissolved it, and attempted to carry on the government by a Council of Lords alone. The Peers, however, refused to act apart from the Commons, and Charles was again forced to convene a parliament, for a Scottish army under Leslie had crossed the border and seized New-castle.

No longer was the nation disposed to allow an arrogant prince to play with his right divine, overturn the institutions of a thousand years, and crush out by an iron despotism the freedom of the land. The famous Long Parliament was sitting now, and the man of action—the mighty Cromwell—was in it, ready for his work, and equal to it. In its first session Stafford was impeached and Laud imprisoned. The charge was treason against the liberty of

PORTRAIT OF THE KING OF GREECE.

inspiration and a prophecy in the souls of the earnest men of the nation.

Civil war now began in earnest, and most of the Lords were with the Commons. The Parliament seized Hull; and on August 25, 1642, the royal standard was unfurled amid storm and rain at Nottingham. Ten thousand of the king's Cavaliers soon rallied around it; and Charles made war upon the nation and its Parliament.

Cromwell's day had now come; and he was the first of the Parliamentary leaders in the field. The king's soldiers were gentlemen, high-mettled men, who held loyalty to their king as an heroic faith. The ranks of the Parliament were filled with common men, raw and untrained; but Cromwell brought to the aid of the popular cause his Ironsides; and in time his genius organized that glorious army of God-fearing men who performed such mighty deeds. The principal thread of that great civil war we have already given in our life of Cromwell, published in the late December and January numbers of the PHRENOLOGICAL JOURNAL.

[TO BE CONTINUED.]

THE KING AND QUEEN OF GREECE.

A SUBSTANTIAL-LOOKING young couple, and apparently well mated. The Dane and the Russian make a good cross, and we see nothing incompatible in the two.

The young man will be manly and the woman womanly. As to their office of king and queen, it is only a circumstance growing out of political relations. It is highly probable that there are thousands of others who, if not equally eligible, are equally capable to fill the places. They have no more of our respect because king and queen than if they were simply republicans. The term "handsome," we think, may be applied more appropriately to the man, in the present instance, than to the lady. Those are handsome features; it is a beautiful head, and there are marks of executiveness, decision, and energy in the face. The eyes almost speak, the nose is prominent and well formed, the mouth firm, and the chin will become more prominent with age. Altogether, there is little in this face to criticise, much to admire. But though we apply the term "handsome" to the man, we

the people. Pym led the impeachment. Stafford was executed by the Parliament; and Laud, after a four years' imprisonment, followed him to the block.

The reaction in Ireland, the result of Stafford's despotism, gave birth to a Romish conspiracy, and in that year (1641) forty thousand Protestants were massacred by the Romanists. Fearfully did Oliver Cromwell avenge that dark event.

On Nov. 22, 1641, the king's party and the people's leaders measured strength in Parliament upon the Bill of Remonstrance against the king. Charles for a time was awed by the grand stern spirit of the men now thoroughly aroused against him. He promised fair, but betrayed again; and early in 1642 he ordered the arrest of Pym, Hampden, Hazlerig, Hollis, and Strode for high treason. But the Commons refused to give up their champions. The next day the king went to the House with armed force to seize the five leaders, but they had escaped. The nation was outraged. All that night armed citizens crowded the streets of London. "To your tents, O Israel!" was the feeling and voice of the times. The queen fled to Holland, and Charles to York. Communication was opened between the king and Parliament; but the Stuart found that men had arisen as obstinate as himself. "The sword of the Lord and of Gideon" was ready to leap from its scabbard; and the grand assumption that God was on their side was an

may apply a still better term to the woman, viz., goodness, amiability, integrity, kindness, devotion, prudence—qualities with no lack of intellect.

The strong affections are indicated in the lips and in the chin, Conscientiousness by the breadth across the top-head, and prudence by Cautiousness.

There is also taste manifested through large Ideality, and we do not hesitate to predict that her life will warrant the best predictions which can be made of her; the more she is known, the more she will be admired, respected, and loved.

To the eye of a phrenologist her head presents a beautiful model, while her physiognomy reveals the goodness of her heart. It is a real satisfaction to contemplate characters such as these. And in all sincerity we wish them every reasonable blessing; may they grow in grace as they grow in years, shedding a beneficial influence on all who come within their sphere.

We condense the following brief sketch from a German paper:

George, or, as the Greek orthography has it, Georgios I., the present ruler of Greece, is a young man, having been born December 24th, 1845. He is the third child of King Christian IX., of Denmark. He received a thorough academic education, and entered the marine service of his nation at an early age. On the occasion of the marriage of his sister, Alexandra, to the Prince of Wales, he created a very favorable impression in England, whose ministry saw in him a fit candidate for the vacant throne of Greece. France and Russia consented to such choice, and the national convention of Greece, on the 30th of March, 1863, unanimously elected him king, under the title Georgios I.

His queen was the Imperial Princess Olga Constantirownna, of Russia, who was born September 3d, 1851, and is the daughter of the Grand Duke Constantine. Her education has been by no means neglected, and she has had the improving opportunities of visiting the different countries of Europe and making a personal acquaintance with courts and peoples. She was married to the King of Greece on the

PORTRAIT OF THE QUEEN OF GREECE.

27th of October last, in St. Petersburg, amid all the pomp and festivity usually rife on the occasion of an imperial marriage ceremony. Although but sixteen years of age, Queen Olga is said to command the admiration and respect of her court and people by her amiability and accomplishments.

THE SELFISH FACULTIES.

If Phrenology has done no other good thing, it has taught us to be more tolerant to that class of faculties called "Selfish Sentiments." We have it stated—

"The good die young;
But they whose hearts are dry as summer's dust,
Burn to the sockets."

But why it was so, and especially why it ought to be so, was for a long time a matter of speculation only, in which the "care the devil has for his children," alternated with the aphorism that "the gods loved the good too well to allow them to remain long upon earth." That a philosophy will one day be founded upon the theory, that the excess of selfishness is the summit of unselfishness, is not unlikely, even if we do not consider the utilitarian argument the same in reality; for as men learn that to take care of themselves, morally, mentally, and physically, in the best manner, requires of them the care of the bodily, mental, and moral qualities of their associates, they will, from very excess of selfishness, try to make those

about them better. The man who would benefit his fellows must cultivate and improve his own nature; and to elevate himself, he must benefit his neighbors; and this circle of good works comes very near the command, "Love your neighbor as yourself." The difficulty is to make men see the real value to themselves of this care for others, since selfishness in its lower development always doubts the good of self-abnegation. While a man acts from an impulse or theory of moral excellence in himself, whether the result be for good or evil, he feels, himself, a certain satisfaction, which is not always the case with a man acting knowingly from selfish impulses, however refined. To torture a human being to death might afflict a sensitive nature, but the belief that by this he is serving God, would give him an inward content. For this reason fanatics in every age have, while endeavoring to produce a high state of religious excellence, really opposed the true moral standard of perfect human development. The

man who acts from any strong motive must be constantly on his guard that he allows not low motives to mix with his superior aims.

The selfish faculties, which lead a man to provide for himself, isolate him, to a considerable extent, from his fellows. They lead him to depend upon himself. Persons in whom the social qualities predominate, are often led to allow matters of their own personal need to be performed for them by others; as husbands grow indolent and expect their wives to perform for them many little acts which concern their own personal condition, and which they could best perform themselves; and the same is true of other members of the family circle. We call such persons selfish, but it is a weak selfishness, resulting from the perversion or want of development and right employment of the faculties which are given for each one's care. So many good men absorbed in high moral or intellectual labor are prone to forget, or to neglect, or leave to others, certain tasks as beneath their notice, which duties, it often happens, can be by no one so well performed as by themselves, whom it most intimately concerns.

The perfect action of the selfish qualities produces physical, intellectual, and moral balance, and harmonious health. These faculties stand as a mediator between the higher and the lower, and acting for the good of the world while they lead to the elevation of the individual; thus the whole species is improved, and, conversely, as the race is benefited, the individual is made better.

DAMON.

Religious Department.

Know,
Without or star, or angel, for their guide,
Who worship God shall find him. Humble love,
And not proud reason, keeps the door of heaven;
Love finds admission where proud science fails.
—Young's Night Thoughts.

INORDINATE AFFECTION.

A SERMON PREACHED IN ST. TIMOTHY'S CHURCH,
NEW YORK, BY REV. G. J. GEER, D.D.

TEXT—Mortify, therefore, your members which are upon the earth,—fornication, uncleanness, *inordinate affection*, evil concupiscence and covetousness, which is idolatry.—COL. III. 5.

It is, I imagine, apt to be forgotten that we may love, improperly, things proper to be loved. While there are overt acts of sin, specific and sharply defined, acts in themselves sinful, there are also things toward which we have affection, which affection becomes morally and religiously harmful by reason of its excess, *e. g.*, the exhortation, "Set not your affection on things which are on the earth, but set your affection on things which are above," refers to that excessive worldly affection which interferes with or takes off our affection from heavenly things. We can not live without loving earthly things. The trouble is that it is common to love them unduly, even so much as to take away the love of heavenly things. Precisely at what point earthly love becomes sinful we can not determine. It varies, unquestionably, in different cases. There are those who have set about uprooting every earthly affection. Under the theory which these adopt (that any earthly tie is sinful), bodily inflections have taken place, not to speak of bodily lacerations, from which the mind shrinks, as if there is one God of nature and another of grace, and these hostile, one to the other. We recognize the fact that the kingdom of Christ is a kingdom not of this world; that the Church is a body called out, as its name implies; that the race is fallen and sinful; that Satan has entered into our race; that our blessed Lord became incarnate that He might cast him out; that the whole world lieth in wickedness; that the heart of man is prone to evil continually. For each one of these propositions there is abundant Scriptural proof. They are facts and positions which pervade the sound devotional offices of all the ages of the Christian Church, its collects and its catechisms. They can not be safely ignored. And they must be held not merely as doctrines, but recognized as facts, living and operating, which are constantly to affect and determine the conduct. To walk in the world as if these were *not* facts, is to enact the fancy of the child who, with blindfolded eyes, imagines that he will not run against objects because he does not see them. The true theory, as I believe, of the Church and of the sacred Scriptures is, that we are here to rescue the things of God from perversion—to bring back that which He made, to a pure and holy use [for which it was created],—in short, to use everything proper to be used, as not abusing it.

EFFECT ON THE SPIRITUAL LIFE.

When any earthly affection becomes inordinate—I care not what that affection is—the love of heavenly things and of God is under a paralysis. There is no action of the heart; it is perverted. Hence, we warn against excessive grief. It shows absence of the love of God, that another being or thing has been put in the place of God.

For this cause also we think the condition of the soul, when it shall have lost all upon which it leans, as will be the case when all earthly things are taken away from it, becomes evident. Hence, also, the abundant exhortations in the Scriptures respecting the enduring nature of God and the things of God. So that the fact of the eternity of God, and the fact of the immortality of the soul, being placed by the side of each other, to a thoughtful mind it becomes evident that the happiness of the soul hereafter must depend upon its love of God. Here, that love is a joy which gives back to the soul the richest rewards. There, its absence is, must be, eternal misery. "Without hope, and without God in the world," are descriptive words which have been rightly characterized as "terse and terrific." Without hope and without God *eternally* is a condition of being which it passes the power of language to express and of the human mind to conceive.

This paralysis, which "*inordinate affection*" brings upon our ability to love God, stops the other functions of the organs of the spiritual body. There may, indeed, be action in those organs, where inordinate affections exist, but it is only formal. Such a person does not love spiritual exercises, though it is possible that he goes through them from a pressure of circumstances—from a desire that he shall appear consistent, or from fear, or because his conscience may sometimes be aroused. Love, joy, life, are gone. He does not go to his prayers, his Bible, his church, with a glad heart. All those expressions of the Psalmist, such as, "I was glad when they said unto me, We will go into the house of the Lord," "My soul shall be satisfied even as it were with marrow and fatness, when my mouth praiseth Thee with joyful lips," find no verification in anything of which he has experience.

The effect of inordinate affection is further seen in the fact that it draws away to itself that which belongs to something better. If you have in your garden a plant which you are tending and cultivating (you of course remove from it all noxious weeds as soon as they appear), you keep other plants, however good they may be in themselves and in their place, at a suitable distance. This is the very point: we are called upon to place the tree of heavenly love—the love of God—in the center of the garden of our life, and then everything which can take away nourishment from it, must be kept at a proper distance.

THE PROPRIETIES OF AFFECTION.

We must have other affections. God de-

signed that we should have other affections. God blesses other affections. He disciplines us through them. Indeed, St. Paul draws an illustration from holy connubial love, to set forth more clearly the love of Christ for the Church. He draws a parallel between them: "So ought men to love their wives as their own bodies; he that loveth his wife loveth himself. For no man ever yet hated his own flesh" (the bodily lacerations to which I alluded, belong to a later day; so that St. Paul had never heard of what, in a so-called Christian Church, is familiar to us): "no man ever yet hated his own flesh, but nourisheth and cherisheth it, even as the Lord the Church." But the love of God is to be sacred above every other affection. Without Him, no other objects of love would have been given to us, nor would they be preserved to us a single moment, nor would we have any capability whatsoever of loving. All things in the kingdom of God, in the universe, are beautiful only as proper proportion and due relation are maintained. An inordinate affection is an affection out of place—out of proportion—one which throws its betters in the shade. You may hold a very small object so near to the eye as to shut out the light of the sun; so you may bring a trifling object so very near to your heart—you may make so much of it—you may love it so intensely that the love of God will be impossible.

It is for this reason that it is often difficult to answer satisfactorily a question, not infrequently asked, respecting amusements and indulgences. St. Paul tells St. Timothy to use a little wine for his stomach's sake, and for his often infirmities. The Psalmist speaks of bread as strengthening man's heart; of oil, as giving him a cheerful countenance; and of wine, as making glad the heart of man. But who does not know that the moment the love of wine gets hold of a man, and becomes an inordinate love, he is almost beyond hope of recall—a lost man? Then rise up sternly from the same holy volume another class of texts. The very clouds of heaven seem to gather blackness as these holy texts declare, "Wine is a mocker, strong drink is raging," "They have erred through wine, and through strong drink are out of the way. The priest and the prophet have erred through strong drink, they are swallowed up of wine, they are out of the way through strong drink, they err in vision, they stumble in judgment." And do we not know that we look upon that man in whom this affection has become inordinate with amazement and pity? Not only is the love of God out of the question in such a man's heart, but the love of wife and children, of virtue, of honor—nay, everything which stands in the way of this overtopping, all-absorbing, all-destroying affection, must get out of the way. Hence comes irritability. Beings, who else would cling to him, shrink from him. Children who have clung to him in love shiver and shrink away from his presence. You may talk with him; he will promise, and weep,

and pray, and in five minutes be as much a fool as ever. When we speak of inordinate affection in a definite relation, we take it for granted that there is an affection possible in the same relation which is *not* inordinate. And God forbid that I should condemn as recreant to his Christian vows, for this reason, every one who drinks wine.

TOTAL ABSTINENCE.

The question of total abstinence is one upon which people are not agreed (the preponderance of sentiment being against it rather than in its favor). But when this affection becomes *inordinate*, who doubts that there is no question whatsoever about the matter? Nay, who doubts, from the fact that the victim of the affection, when inordinate, seems to pass beyond his own control, that total abstinence becomes an imperative duty, the moment the tendency in the appetite is detected? Nay, who can doubt, when this vice becomes alarming in the community, that all right-minded people, and above all, *Christian people*, have a grave responsibility to meet, and should set an example of forbearance, though they feel that there would be no personal danger to themselves of inordinate affection therein?

Our Church does not discipline her members for drinking wine, nor for dancing, nor for visiting places of amusement. Why? Because it is not felt that the thing in itself is sinful, though in every instance fraught with danger. Why again? Because of the special power of fascination in every case. The Scriptures tell us that the love of money is the root of all evil. I am not aware, however, that those religious bodies which would discipline their members for indulgence in the other particulars named, prohibit the making and holding of money. We certainly do not. But yet how false should we or any preacher of righteousness be, if we did not lift our voice against the love of wealth—the hoarding of wealth—the squandering of wealth in self-indulgence—the withholding of wealth from doing good in our day and generation—the idolatry of wealth! How untrue to the holy Scriptures should we be if we did not warn all who possess it—all who hope that the true riches will be hereafter committed to them, to be faithful to the trust of what our Lord calls “the mammon of unrighteousness.” And so of wine and all it represents, of dancing and the visiting of places of amusement. How false would that pastor be to his trust who did not lift up the voice of warning respecting them! For whatever may be conceded of a thing as innocent in itself, not one word, with the Bible before us, can be said the moment the affection becomes inordinate. Then it is ruled out at once, and, for prudential reasons, total abstinence becomes the rule in any such relation. Since these which have been named are admitted to present peculiar temptations to excess, and have been so successful in reconverting Christian worshippers to worldly devotees, in whom the love of God and of holy things seems often to be utterly extinguished, so

that the life again becomes vain and foolish, Christian people must be specially watchful in these respects.

But we must not lose sight of a most important fact—that that which sweeps away one by its power of fascination is entirely stupid to another. I presume there are some who hear me who are moderate in all their enjoyments—who wisely watch against excess in all these respects—who yet can testify to the fascinating power of a worldly life in the particulars of which I have named, while there are others to whom these things severally are even without any attractiveness whatsoever. Now, if the principle upon which we are dwelling be a true one, what an idle thing it would be for such a person to infer that religion consists in abstaining from wine-drinking, dancing, and visiting places of amusement! So that abstinence from these is a test, in such a sense, that if a Christian body can effect this abstinence in its members they are therefore good Christians. This certainly has been the mistake of certain systems, and it is wrong in principle. For where such prominence is given to two or three dangers (which are undoubtedly peculiar, calling for the greatest watchfulness and often for instant excision), it is likely to be forgotten that inordinate affection, in any relation whatsoever, shuts God out of sight, and out of mind, and out of heart. Our blessed Lord says, “If thy hand, or thy foot, or thine eye offend thee, cut it off or pluck it out and cast it from thee.” It certainly is not a just view of our duty to God to be content with that state of the Christian life in which we abstain from certain things, toward which others are pointing the finger of condemnation, while we are keeping close to our hearts that which proves just as successful in driving God therefrom, owing to our inordinate affection for it. I care not whether it be household duties or the business of life, or any possible act or object. Any personal habit for which we conceive an inordinate affection must be rooted up. It matters not whether you kill the bird with a stone or a rifle ball, so long as the missile which you send kills it. And so it matters not what it is, whether it be an admitted enemy or your own hand or eye which offends. If the affection be inordinate, it must be plucked up. Hence the great propriety of our petition in the litany against “all inordinate affections,” and for those petitions which we meet with in our best books of devotion for “chaste and temperate habits and desires.”

SUGGESTIONS.

From what has been said, we learn a rule of charity—not to judge others by our own standard until we know that they have identical appetites, desires, and dangers with ourselves.

We also learn that while *sin* does not lose its character as such, yet what is possible for one person is impossible for another. Every one knows “the plague of his own heart.” “The sin which doth so easily beset us” is a

significant setting forth of something more than some one sin common to all in its attractiveness, but of weaknesses peculiar to individuals. We learn also that it is impossible to have success in the Christian life without personal, individual watchfulness; also that it is better to be watching *ourselves* than others. We need to have our eyes upon our own dangers, and our hand upon the helm of our own ship, if we would not run upon the rocks.

“Work out your own salvation with fear and trembling” is a text which has a significance beyond what I think we ordinarily give it. No one else can do it for you, for no one else can be aware of what are *your* peculiar dangers. If a man does not put his own mind and heart to the work, using his spiritual *instincts*, which correspond to natural sagacity, he must destroy the evidences of God’s presence in himself faster than he or those who love him can build. “Watch and pray,” words so solemnly uttered by our blessed Lord, impose a responsibility for individual watchfulness which these considerations make apparent. You can put nothing in the place of individual watchfulness, coupled with personal conscientiousness; it will prove to the spiritual life, by God’s blessing, what a coat of mail is to the body. It is yourself alone who can tell whether you are turning things innocent into things sinful. St. Paul places “inordinate affection” among those “members which are upon earth,” which we are to “mortify;” but that for which we may have inordinate affection is not specified. It is only the fact that the affection is inordinate to which our attention is directed. What the object of this inordinate affection is to each one of us, every one must determine in his own case. No eye but one’s own can discern quickly enough to take the alarm that an enemy is lurking in the heart under the guise of a friend.

If you would not lose your hold upon God, suffer no earthly love to usurp the place of His love. Keep an open space around that love; let it be large and generous. Nay, as you draw nearer to your final departure from earth, see to it that your affections are more and more weaned from earthly things, so that when you shall go away from earth, you will not go from the things which you love, but to those things to which your heart has already been given.

“THAT’S HOW.”—After a great snow-storm, a little fellow began to shovel a path through a large snow-bank before his grandmother’s door. He had nothing but a small shovel to work with.

“How do you expect to get through that drift?” asked a man, passing along.

“By keeping at it,” said the boy, cheerfully; “that’s how!”

That is the secret of mastering almost every difficulty under the sun. If a hard task is before you, stick to it. Do not keep thinking how large or hard it is; but go at it, and little by little it will grow smaller and smaller, until it is done.

EMINENT HEBREW CLERGYMEN.

BIOGRAPHICAL SKETCHES, WITH PORTRAITS.

In many respects, the Israelites are a "peculiar people." On looking over this group, several points arrest attention. The first is constitutional strength. In the twelve faces presented, there is not an indication of impaired health or physical weakness. In general, it will be seen that the base of the brain is large. From ear to ear the heads appear to be broad, and they are all amply developed across the brows. Such developments give to the possessor a very strong hold on life and its enjoyments; a regard to physical things, and their relation with mankind. Persons who have high heads, broad and expanded at the top, and contracted and weak at the base, have feeble constitutions; and live chiefly in the realm of spirituality and idealism, and lightly esteem the realm of reality. Such men are not, in a marked degree, earthly in their tastes and tendencies. The persons before us, however, are strongly developed in those organs which take hold on the present life; which give a tendency to vigorous physical action; which promote the enjoyment of the pleasures of the senses—food, drink, exercise, and sociality.

They are largely developed, also, in the lower part of the forehead; indicating superior powers of observation, practical talent, knowledge of things, adaptation to the acquisition of factitious knowledge. There is hardly a purely theoretical head in the group. One, the Rev. Samuel M. Isaacs, shows a large top-forehead. We judge him to be more of a theorist than any other man in the group.

Another trait is clearly indicated in the Jew, which is that of memory; and in every head before us, the organ of Eventuality, or historical memory, is considerably above the medium. From the beginning of their history, the Jew has been accustomed to recite God's doings with their fathers. It was specially commanded them to teach the wonderful works of God to their children, and children's children, that the generation to come might know them. This they have faithfully done; and it has exerted an influence on the development of the intellects of their posterity. Another marked characteristic is that of Language. The full eye belongs to the Hebrew; and we have never met one of either sex who was not a good talker.

The Jews are, also, good financiers. Their heads are broad at Acquisitiveness. Their large Perceptives give them good judgment of property; while their large Acquisitiveness inclines them to acquire and to save. We have heard it stated that there was not a single Jew receiving a charitable support in our public institutions. Among the marks of excellent health which these portraits evince, is broadness through the cheek-bones. This indicates lung-power; and we fancy that consumption does not afflict this people to any considerable extent. There is also a fullness of the cheek, outward from the mouth, not often witnessed in

clergymen of other denominations, indicating excellent digestion.

There are other striking characteristics evinced in these portraits. One is that of Firmness; which gives steadfastness, persistency, and unbending determination. This may have been developed in this people by contact with opposition and persecution, which they have been obliged to bear for a thousand years; and if there is one trait of character more conspicuous than another in the Jew, it is persistency, endurance, and steadfast hardihood of purpose. One other conspicuous trait is that of Veneration. Reverence for the past; a tendency to honor their venerable fathers; a disposition to recount all the vicissitudes of the children of Israel from the time they went down from Canaan into Egypt, until the present time, has strengthened and matured that feeling. These are the conservatives of the world. The organs which indicate a desire for change, reform, new ideas, invention, improvement, and discovery are not prominently indicated in them by large Causality, Constructiveness, and Imagination. They are, however, more musical and artistic than inventive. In features, they vary according to the country, climate, race, or tribe from which they came. There are dark and there are light complexioned Jews; those from Poland, Spain, and Italy are more generally dark, while those from Germany, Hungary, and Northern Europe are often light haired, and blue or gray eyed; but they are mixed—like the rest of the world—in this respect.

The nose is, perhaps, one of the most conspicuous features in the face of the Hebrew. The chin is also prominent, and the cheek-bone approaches that of the North American Indian. But we need not further particularize. Each reader may observe for himself, and come to his own conclusions in regard to these and other matters.

REV. MORRIS JACOB RAPHAEL, was born at Stockholm, in Sweden, October 3d, 1798. His father, who at that time was banker to the King of Sweden, had two sons, who, in the year 1803, both fell dangerously ill, and the old gentleman vowed that if God would spare the life of one of his sons he would rear him to the service of his Maker. The elder, Raphael, died, and the younger, Morris, survived, and was at once introduced to his profound studies. In the year 1807 he was brought to Copenhagen, where he was present during the whole of the English attack. Entered at the Hebrew Grammar-school, he evinced great mental powers, so that on his *Bar Mitzvah* he was proclaimed *Chober Socius*, or Fellow of learned men. Accompanying his father to England, he devoted himself to the study of languages, traveled in France, Germany, and Belgium, and, when he returned to England, married, and had six children, the eldest and youngest of whom died, the remaining four surviving.

After having tried his powers as a debater against the Society for Promoting Christianity among the Jews, and as a lecturer on Hebrew poetry, he commenced the life of an author by publishing the *Hebrew Review*, or *Magazine of Jewish Literature*, of which one sheet appeared every week. This work attracted universal notice, both of Jews and Christians, and to this day has not been equaled by any subsequent Jewish publication in England. He was, however, at the end of the year 1836, forced to give it up for want of health. He had previously attracted the notice of the late Rev. Dr. Solomon Hirschell, chief rabbi of the Jews of Great Britain, as

whose honorary secretary he conducted affairs, while at the same time he published the translations of Maimonides, Rabbi Joseph Albo, Rabbi Hertz Wessely, and original papers on the Origin and Progress of Literature among the Spanish Jews, the History of the Hebrew Kingdom, the Religious Observances of the Jews, etc. In connection with the Rev. David A. De Sola he published a translation of eighteen treatises of the Mishna, and, subsequently, a translation of the Pentateuch, of which, however, only one volume was published. In the next year he was elected preacher of the synagogue and master of the school in Birmingham, where he continued eight years. At that time, and ever since, he has been considered as the most eloquent orator and the purest writer of English among the Jews. His life in Birmingham was eminently conducive to the best interests of Judaism. Taking a prominent part in the erection of the Hebrew school, he subsequently induced his talented countrywoman, Jenny Lind, to sing at a concert, by which means upward of £1,800 sterling (\$9,000) was realized, and the debt of the school entirely paid off. He also visited several of the leading towns of England, and lectured on Hebrew literature, Jewish history, and many other subjects. In the year 1849, however, he resigned the situation he held in Birmingham, and came over to New York, where he was at once elected rabbi-preacher of the congregation *B'nai Jehurun*.

As a preacher in the synagogue, he proved himself eloquent and impressive, supporting the Jewish religion in its purity and vindicating it whenever attacked. At the same time, he has visited Philadelphia, Boston, Cincinnati, St. Louis, and many other of the principal towns of the Republic, where he was equally admired by the Jews as a profound rabbi and by the Christians as an eminent scholar. In 1861 he was called to Washington, where he opened the House of Representatives with a prayer that was greatly admired. He has also written several works, among which we will name, "Devotional Exercises for the Daughters of Israel," the "Post-Biblical History of the Jews," and several other publications.

Of late, Rev. Dr. Raphael has retired from active service, being too enfeebled to perform regularly the duties attached to the office of rabbi-preacher. The congregation was induced to sympathize with his infirm state of health, and, consequently, while retaining him as rabbi, rendered preaching discretionary with him.

Dr. Raphael is of medium height and very corpulent. His hearing has become very much impaired.

REV. SAMUEL M. ISAACS was born in Leewarden, Holland, January, 1804. His father was a banker in that city, but losing all his property during the French war, he emigrated to England. He there assumed the position of a rabbi, instructing his five young sons to become "teachers in Israel." Four of these adopted the profession, one of whom died over thirty years ago. Another received a call to the congregation of Sydney, Australia; he died about two years since. A third, Rev. Professor D. M. Isaacs, is now minister of a large congregation in Manchester, England, and is widely esteemed for his fine talents and stirring eloquence, being the first pulpit orator—in the English language—among the English Jews.

The subject of this sketch was for a few years principal of an educational and charitable institution in London, known as the *Navy Tiedek*. In 1839 he received a call from the old Elm Street Synagogue of New York, and arrived in this city in the autumn of that year. In 1846, a new congregation having formed out of that, he was elected its minister. This was the Wooster Street Synagogue, which was erected in 1845; but giving way to the up-town movement, was sold in 1864. The congregation, known as *Shaaray Tefila*, or "Gates of Prayer," then removed to the building, corner of 36th Street and Broadway, which they are occupying temporarily until their new synagogue is ready, an edifice now in process of erection in West 44th Street, near 6th Avenue.

Rev. S. M. Isaacs might be styled the "father of the Jewish clergy" in this city, as he has been residing here longer than any other minister. His discourses in the old Elm Street Synagogue used to attract crowds of visitors—Christians in large numbers, as he lectured, of course, in the English tongue; and so little was known of the Jews and Judaism at that time that people were

delighted to be informed on those topics. Formerly reader as well as lecturer, his discourses were given at intervals of four weeks, but since the removal of the congregation he has devoted his energies to his duties as minister exclusively, and he discourses regularly every other Saturday. He is universally respected by people of his persuasion in this country, with whom no rabbi is more widely known. His long residence here, his connection with the press, and his own unblemished character, combine to give him an extensive reputation. He is now sixty-four years of age, and in excellent health, owing to his regular habits and indefatigable industry. He rises early and attends synagogue every morning before seven o'clock. He has a wife and eight children, two of whom are associated with him in the editorial management of *The Jewish Messenger*—a weekly journal of marked literary ability, which he has been editing for the past eleven years. He is connected with all the Jewish charities of this city, some of which he was active in establishing.

Rev. Mr. Isaacs is about medium height, of a very active temperament, has a clear hazel eye, hair sprinkled with gray, and white whiskers. His character denotes amiability, benevolence, piety, firmness, and a keen sense of humor.

REV. ISAAC LEESER is a native of Westphalia, Germany, and is now about sixty-two years of age. He emigrated to this country in early life, becoming very speedily acquainted with the language and customs of the States. On the death of the late Mr. Keys, reader at the Cherry Street Synagogue, Philadelphia, Mr. Leeser was chosen his successor. His talents soon made him popular among his people, and he was retained as their guide for twenty-one years, when a new congregation was formed for him—*Deih El Emeth*, worshipping on Franklin Street, a position which he still holds.

Nearly forty years ago (1828) Mr. Leeser commenced his active life in behalf of Judaism, writing at that time at the city of Richmond, where he then resided, a work entitled "The Jews and the Mosaic law, containing a Defense of the Revelation of the Pentateuch, and of the Jews for their adherence to the same." This work was published at Philadelphia in 1834, together with a series of "Essays on the Relative Importance of Judaism and Christianity."

Mr. Leeser has been eminently a public character. Besides giving his earnest attention to his own congregation, he has, whenever occasion offered, shown his identity with the Jewish cause by his exertions in their behalf—at one time, by journeying hundreds of miles to consecrate a synagogue or to perform a marriage ceremony; at another, by wielding his powerful pen in behalf of his brethren when attacked or slandered in the public press. He deserves the credit of having been the first to introduce pulpit-preaching in the vernacular, and has regularly, unless prevented by sickness, delivered sermons on Sabbaths and holydays.

As a pulpit orator, Mr. Leeser possesses every qualification. Although he has been for so many years engaged in public speaking, his discourses have lost none of their original attractiveness. With few exceptions, his sermons are *ex tempore*, without notes or manuscript. There is one peculiarity about them which we can hardly help noticing—his voice and manner, in beginning a lecture, are hurried and somewhat awkward; but when fully impressed and warmed by the spirit of his theme, his voice grows truly eloquent, his gesture imposing, and he speedily creates in the minds of his hearers a sympathy for the subject, an admiration for the speaker. His discourses are always replete with knowledge, and his general information is singularly extensive.

Mr. Leeser is justly regarded as a man of superior learning. He has written and translated a large number of works, prominent among which is his valuable translation of the Old Testament, which is universally regarded as the best in use. Besides this great work, he has prepared a series of books, embracing the Daily and Festival Prayers, the Pentateuch, and a number of religious works, Catechisms, Hebrew Primers, and the like. He is the pioneer of the Jewish press, having published the *Ocident*, a monthly magazine, twenty-four years ago, which he still edits with ability. He has probably accomplished more to promote intelligence among the

Jews of this country, and to inspire in them an attachment to their religion and ancient faith, than any other person. As to Mr. Leeser's principles, he is uncompromisingly orthodox, a system he has ever defended from innovation; and for his earnestness and consistency he is respected by both friends and opponents.

Rev. Mr. Leeser has never married. He is of medium height and slim; has a clean-shaven face and long gray hair. He is now suffering from a severe illness, which has incapacitated him from active duty for months past. His devoted congregation and his large circle of friends look fondly forward to his recovery.*

REV. ABRAHAM DE SOLA was born in London, England. His father was one of the most eminent Hebrew divines, and well known to theologians and biblical critics by the many valuable works he has produced. After finishing the usual academic course, young De Sola devoted himself almost exclusively to his favorite studies; and before his twentieth year he received several calls to fill honorable and lucrative appointments among his brethren. He accepted the call of the Montreal Hebrew congregation, and arrived in that city in 1847. He soon obtained the confidence and attachment of his flock, and has remained with them on the most cordial terms ever since. During his first year in Montreal he lectured for the Mercantile Library Association of that city on the "History of the Jews of England." He also lectured for this society and the Mechanics' Institute every succeeding winter, as long as they continued to give a course of lectures. He is the present president of the Natural History Society of Montreal. In his connection with this Society he has lectured on the zoology of the Scriptures, the cosmogony, and the botany of the Scriptures.

In 1848 he was appointed professor of Hebrew and Oriental Literature in McGill College, the duties of which office he has continued to discharge to the satisfaction of all concerned. He has contributed articles to various periodicals, one of the most notable is his learned treatise on the "Sanitary Institutions of the Hebrews." Among his other publications are "Notes on the Jews of Persia," "Hanagid's Introduction to the Talmud," "The Jewish Calendar" (conjointly with Rev. J. J. Lyons, of New York), and various educational works.

Besides his literary activity, Mr. De Sola has uniformly identified himself with every movement calculated to promote the intellectual advancement of the community in which he lives. He has been elected honorary member of various literary and scientific societies both in Europe and America, and the good-will of his friends has made him the recipient of several testimonials of a flattering and valuable character.

Rev. Mr. De Sola is a genial gentleman, with a most amiable disposition, and fond of agreeable society. He is tall, inclined to stoutness, has large, kindly features, dark eyes and hair, and is altogether a model of an educated and refined Jewish clergyman.

REV. DR. SAMUEL ADLER is the son of Jacob J. Adler, rabbi of the congregation at Worms, on the Rhine, in which city he was born in the year 1810. At an early age he commenced the study of the Hebrew language, the Bible, and the Talmud, which he diligently pursued under the kind and careful superintendence of his father. At the untimely death of the latter, however, the subject of this sketch, then a lad of fourteen, for the first time left his home and repaired to Frankfort-on-the-Maine, there to pursue his studies at the Talmudical High School. After some time he returned again to his native town to study under the Rabbi Bamberg, and also, by his own exertions, to fit himself for the university. From 1831 to 1836 he frequented the Universities of Bonn and Glessen, and devoted himself with great zeal to the study of philosophy, but more especially to that of Oriental philology. Returning to Worms in the spring of 1836, he was forthwith installed as preacher and religious instructor of the congregation, to which office that of Inspector of all Jewish schools of the district was soon added. In this position he first appeared as a champion of reform, and took the first

* Since writing the above, we have been informed that Mr. Leeser succumbed to his protracted illness, and departed this life on the 1st of February last.

steps toward the purification and improvement of public worship among the Israelites of that entire section of country. In the fall of 1848 Dr. Adler received charge of the rabbinical district of Alzei, an extensive, and as yet uncultivated, field of labor, but one which well repaid his labor, so that in a few years the small community of Alzei had obtained for itself throughout Germany a name which compared favorably with that of the richest and largest congregations. This congregation also permitted its minister to join the convocations of German rabbins of 1844-46, of which he became one of the most active members. In 1854 Dr. Adler accepted an engagement as rabbi and preacher of the Jewish congregation at Limberg, in Galicia, but which was not fulfilled on account of unforeseen and serious family disturbances. In the fall of 1855, after the death of the lamented Dr. Merzbacher, he received a call as rabbi to the Temple Emanuel of New York, to which he gladly responded, and is still discharging the duties of that office in this city, having the gratification of seeing his efforts crowned with entire success.

Dr. Adler's congregation is one of the wealthiest in the country. It belongs to the new reform school of Judaism. The magnificent structure now in process of erection at the corner of 43d Street and 5th Avenue will be occupied the coming fall by this congregation.

In appearance, Dr. Adler is thoroughly clerical, and though generally of an austere look, he has his moments of merriment and *bonhomie*. He is distinguished for his rhetorical abilities, his sermons being extemporaneous, but of a pure, elevated style. He only occasionally lectures in the English language.

REV. DR. BERNHARD ILLOWY was born in Rollin, Bohemia, in the year 1814. From his early youth his parents destined him to be a "teacher in Israel," and educated him accordingly. He completed his theological studies in the famous rabbinical college of Rabbi Moses Sopher, of Presburg, Hungary, and received the diploma of "Doctor of Philosophy" at the University of Pesth. He emigrated early to this country, in consequence of political complications, and became pastor of the synagogue in Syracuse, N. Y. He subsequently removed to New Orleans, and, a short time after the surrender of that city to the Union forces, in the late war, he accepted a call from the congregation *Shearith Israel*, of Cincinnati, O., a position which he still holds.

Rev. Mr. Illowy is noted as a learned Talmudist and a man of strict piety. He is one of the most strenuous supporters of the old orthodox school of Judaism. In person he is tall and of a venerable appearance, with a dark complexion, piercing black eyes, and black hair and beard thickly sprinkled with gray. As a speaker, he is quite eloquent in both the English and German languages, and he is also an accomplished linguist.

REV. JAMES K. GUTHEIM is a native of Westphalia, Prussia. After having completed his collegiate and theological studies, he officiated as preacher and teacher in his native country for three years. He arrived in New York in 1843. At first he acted as book-keeper in the counting-room of a brother, a merchant in this city, and wrote an occasional article for the press. He was called to Cincinnati in 1846, to act as principal in the Hebrew Institute, and there officiated likewise as preacher. In 1850 he followed a call to New Orleans, where he has resided ever since, and is now minister of one of the largest congregations in the United States. His sermons, delivered on his occasional visits to New York, have always attracted attention, being afterward published either in pamphlet form or in the columns of the Jewish and daily press.

As a speaker, Rev. Mr. Gutheim is fluent and graceful. His style is a combination of the philosophical and poetical.

REV. DR. M. JASTROW was born in Posen in the year 1829. He was educated in the *Gymnasium* of Posen, having previously studied the Talmud with the celebrated Rabbi Moses Feilenfeld. In 1853 he attended the Berlin University, and graduated with distinction three years later, owing to a dissertation he had composed on the philosophical system of Aben Ezra. He was for two years teacher in Dr. Sach's school in Berlin. In 1858 Dr. Jastrow was called to

Warsaw. In 1861 the political outbreak occurred in Poland, and Dr. Jastrow naturally took the part of the oppressed Jews and Poles. He was arrested, and obliged to spend thirteen weeks in the citadel of Warsaw, until, being a Prussian citizen, he was expelled, or rather banished, to his fatherland. After a year's stay in Prussia he accepted the situation of rabbi in Manheim, when a decree of Prince Constantine, the Governor of Poland, remitted his sentence of banishment and allowed him to return to Warsaw. The revolution again breaking out early in 1863, compelled him to leave the city a second time, and in the following year he became rabbi of the synagogue at Worms, which position he held until 1866, when he accepted a call from the congregation *Rodef Shalom*, of Philadelphia.

Rev. Dr. Jastrow is one of the most learned Jewish divines in this country, eloquent in his speech and with his pen, and active in his defense of Judaism. He is of medium height, has a mild, pleasant countenance. As soon as his acquaintance with the language of his adopted country will warrant his lecturing in that tongue, we may expect great results from his eloquence and energy.

REV. DR. HENRY VIDAVER was born in 1833 in Poland. He commenced Talmudical studies when five years of age. At thirteen he was considered quite an adept in the science of biblical philology, and was warmly commended by the principal rabbis of Warsaw. Hebrew poetry was his favorite theme, and many of his Hebrew productions in poetry, as also in prose, have been published in different periodicals. In 1859 he arrived in this country, officiating as rabbi-preacher to a congregation in Philadelphia; but, owing to illness, he returned to Europe in 1861. In 1863 he accepted a call from the large Hebrew congregation in St. Louis, Mo., and remained there until January, 1868, when he removed to New York, becoming preacher to the influential congregation *B'nai Jeshurun*, worshipping in 34th Street, succeeding the venerable Rabbi Raphael.

Dr. Vidaver, although not born here, is yet sufficiently versed in the manners and language of the country to be denominated an "American rabbi." He discourses very fluently in the English tongue, is rich in allegory and quotation, and is very earnest and forcible in his denunciation of whatever he considers antagonistic to the spirit of true Judaism. He is of medium height, dark complexioned, has black hair and beard, and small, hazel eyes.

REV. BENJAMIN SZOLD was born in Nemesberg, Hungary, on Nov. 5, 1831. As with so many of the German Jewish youth, he was early put to theological studies, learning the Talmud and kindred branches at Vienna, and graduating from the University of Breslau. In October, 1859, he became minister of the wealthy Hanover Street Synagogue in Baltimore, Md., with which he is still connected. He is well known in his adopted city as a man of learning and activity. He has published several works bearing upon Jewish subjects, among which are a revised edition of the ritual, a catechism for Jewish youth, and an English and German edition of the prayers. Dr. Szold has a noble and commanding presence, an intellectual head, and is outwardly an excellent specimen of the genuine Jewish rabbi.

REV. AARON J. MESSING was born in Posen, Russia, in the year 1839. He is consequently one of the youngest Jewish ministers in this country. His father is rabbi in Czemplin, in the district of Posen, and it is to his teachings that the subject of this sketch owes his zeal for his profession, as well as his knowledge of the duties of his post. He studied divinity at the University of Gratz, with Dr. Elias Goodmacher; became subsequently engaged as preacher in Milledge and Mecklenburg. He has been in this country but a short time, having arrived here early in 1866, on a call from the congregation *Beth Israel Bikur Cholim*, worshipping in Chrystie Street, New York city. He is much beloved by the members of his congregation, and wherever known he soon commands respect, although comparatively a stranger to the American Israelites. He delivers discourses in the German tongue, his sermons being distinguished for their earnestness and clearness. Rev. Mr. Messing is of medium height, well formed, light hair and beard, and dark eyes. By the time he is sufficiently ac-

quainted with the English language to discourse in that tongue, he will be decidedly an acquisition to the American Jewish clergy.

REV. GEORGE JACOBS, now the spiritual head of the oldest synagogue in Richmond, Va., was born in Kingston, Jamaica, Sept. 24, 1834. He emigrated to the United States in August, 1854, commenced turning his attention to the ministry in 1857, and subsequently entered it. He has ever been popular with his flock, being of a very hospitable and genial nature. During the war, he acted for some time as chaplain in the Southern regiments, proving of great service to those of his co-religionists with whom he came in contact in his official capacity. Rev. Mr. Jacobs is an able writer and lecturer. He is publishing a series of catechisms and religious works for the young. He is of a tall and commanding appearance. His complexion is dark, his hair, beard, and eyes deep black.

THE JEWS AND JUDAISM.

The practice of the Jewish religion differs so essentially from that of other denominations, that we may devote a little space to a consideration of its distinctive character.

The Jewish religion had its origin in the Mosaic revelation, which, nevertheless, was in some respects an iteration of enactments previously accepted by the Hebrew people. Noah and Abraham were recipients of laws relating to the shedding of blood, sacrifices, and the Sabbath was an institution universally respected in recognition of the creation.

The history of the origin and progress of Judaism during the successive periods of the theocracy, the judges, the kings, and the captivity, the development of the prophetic office and the priesthood, the grandeur of the temple worship, the union of state and church, culminating in the downfall of the kingdoms of Israel and Judah, the dark chapters of the dispersion relieved by occasional flashes of light and glory, as in the days of the Maccabees, and the superseding of the Jewish Church strictly by successors of limited powers and influence, the Sanhedrim and the Synagogue and the Rabbins, is more or less familiar to our readers.

Judaism in America presents sufficient points of interest to warrant us in restricting this sketch to a cursory survey of its growth and present condition.

There are fully four hundred thousand Hebrews in the United States. The first settlers emigrated from the Dutch West Indies and Guiana, and Holland itself, and established themselves at Newport, R. I., New York, Charleston, and Savannah; the earliest record dates back to 1660, when a charter was granted by the province of New Amsterdam to the Jewish community authorizing the laying out of a burial-ground. There is a synagogue standing at Newport, R. I., erected a hundred and fifty years ago. There were in 1840 three synagogues in New York, there are now thirty, and the Jewish population has increased in that period from five hundred to fifty thousand.

The mode of worship practiced among the Jews differs from that of every other system. The prayers are chanted and read in Hebrew. The ritual consists, for the most part, of the Psalms of David, and the supplications and prayers are mostly of great antiquity.

There are two rituals among the orthodox Jews, or rather three; two being branches of the same origin—the *German* and *Polish*, and the *Portuguese*. These rituals differ in minor points, the doctrines and teachings of the creed being identical. The pronunciation of the Hebrew is the test, the Portuguese being broader and more accurate.

The interior of the Jewish synagogue presents this aspect. The eastern end, opposite the entrance, is called the Mizrah, and is the locality occupied by the Ark. This Ark—the representative of the "Ark of the Covenant"—which was with the Israelites in all their wanderings, and was preserved in their Temple until its destruction—contains a number of parchment scrolls of the Pentateuch. These scrolls are guarded with great zeal, and are handsomely and richly encased, and crowned with bells, and adorned with plates of silver. Every Sabbath, and on Monday and Thursday mornings, a scroll is taken from the Ark and the lesson of the day is read by the offi-

clant. The Pentateuch is divided into fifty-four sections, one of which is read weekly, the cycle being completed every year. Some years containing less than fifty-four Sabbaths (the Jewish year is not always of the same length, varying from 354 to 356 days, according to an established calendar), two of these portions are occasionally read together.

The center of the synagogue is occupied by the reading-desk, or *Aimemor*, as it is termed. Here are seats for those engaged in the ceremonies, and here the reader stands, supported at times by the elders or *Parnassim*. The reader looks toward the east and chants the prayers in a peculiar Oriental monotone. The psalms and hymns are sung by a choir—which is sometimes in front and sometimes behind the desk—in some synagogues, while in others the congregational system is still pursued.

On either side of the desk are ranged the seats for the males, the other sex being placed in the galleries.

The service on a Saturday usually commences at nine. At ten, the scroll of the Law is taken from the Ark, the ceremonies being quite imposing. The ritual is divided into morning and additional services, in commemoration of the daily and additional sacrifices for Sabbath. It concludes usually with a discourse in English or German.

In the Jewish temples of the reform school—of which there are five in New York, and about forty in the United States—the sexes are not seated separately. The choir is accompanied by an organ or melodeon. The male worshippers, in the orthodox synagogue, wear their hats and silk "praying scarfs," or *Talleths*, during service; in the reform temples they do not.

The Israelites have participated in the freedom of religious opinion that had its greatest development in Germany, and accordingly the past decade has witnessed the growth of the "reform movement" in the United States, which departs less from the doctrines than from the ritual of orthodox Judaism, and is not as yet combined in a definite and systematic organization. The idea of independent and heterogeneous congregations is maintained accordingly; and the abandonment of the old ritual has led to the introduction of several new forms of prayer and embodiments of principles which have frequently only local acceptance. Thus there are distinct rituals at Cincinnati, Baltimore, San Francisco, Philadelphia, New York, and other cities. The tendency among the rising generation is toward union and harmony; but the Jewish community is very young and unsettled, and for some years it is unlikely that any other than the independent or congregational system will meet existing requirements and prejudices.

In their charities, the Israelites are proverbially generous and judicious, and all sections are united. The peculiar requirements of Jewish law as respects diet, etc., have rendered indispensable the establishment of hospitals, orphan asylums, and kindred institutions where the inmates may live as in Jewish households, and enjoy the ministrations of Israelite clergymen. Such public institutions exist at New York, Philadelphia, Baltimore, Chicago, Cleveland, Cincinnati, St. Louis, New Orleans and elsewhere; and in New York they are on a grand scale, nearly two hundred children being cared for at the Orphan Asylum—a spacious and elegant edifice on Third Avenue and Seventy-seventh Street.

The Israelites, supporting by tax the institutions of their respective cities, thus maintain the double burden of special charitable societies, while scarcely a single Jew is an inmate of a general almshouse or asylum. They have, also, their own educational system to this extent: that most synagogues have schoolhouses attached; and a college (the *Maimonides*) has recently been established at Philadelphia for instruction in the higher branches of Hebrew studies.

Hebrew citizens are among the foremost in commercial circles, while also enjoying distinction among scientific and professional men. There are many eminent physicians and lawyers of the Jewish race; and not a few have attained prominence in political life. They have filled posts of honor and dignity in civil and military departments, from Major-General to privates, from Governor to councilman; and, socially, no longer exhibit the character of exclusiveness and clannishness which has in times past placed them under a ban.

The peculiar principles of the Jewish faith are expounded in the Old Testament and in the writings of biblical

commentators, rabbinical authorities, and recent Jewish literature, pre-eminently German. The Israelites have national and international committees working for the common benefit; of the former, the Board of Delegates of American Israelites, the Board of Deputies of British Jews, the Central Consistory of France are examples; of the latter, the Universal Israelite Alliance, with its headquarters at Paris, M. Cremieux, the renowned lawyer, being President. Their press has of late years visibly improved in this country; there are six Jewish weeklies and one monthly.

It is not the practice of the Jews to seek converts. They intermarry among themselves, not desiring to effect alliances with Christians. They maintain a religious exclusiveness, while the tendency is toward a breaking-down of social barriers. They are "a peculiar people" still; and it is a marvel that, in view of the persecutions and temptations of centuries, they remain so faithful to their ancestral traditions.

The Jewish creed is thus set forth in the "Confession" prepared by Maimonides, one of the most renowned of the Israelite doctors:

THE THIRTEEN ARTICLES OF THE JEWISH FAITH.

I believe with perfect faith:

1. That God is the creator and governor of all creatures. He alone is the cause of all that is, was, and ever will be.
2. He is a Unity, and there is no Unity like unto His. He alone is our God who was, is, and will be.
3. He is not material, not subject to the accidents of matter, and there is no resemblance to him whatever.
4. He is the first and last being.
5. He is the only one to whom appertains worship.
6. All the words of the Prophets are true.
7. The prophecy of Moses, our teacher, was true; and he is the father of the prophets, both before and after him.
8. The Law which is in our possession is the same which was given to Moses.
9. This Law will never be changed, nor will there exist any other law from the Creator.
10. God knows all the thoughts and actions of man.
11. God rewards those who observe his commandments, and punishes those who transgress them.
12. That the Messiah will come.
13. That there will be a resurrection of the dead, at the time appointed by the Creator.

MUSIC.

Music is the poetry of sound. It embraces harmony, concord, and melody. It moves with the succession of the same or similar sounds, and moves on velvet wings, waved so gently and gracefully that naught but onward motion is known or felt. Oh, the rapturous charm of music! What power it has to soften, melt, enchain, in its spirit-chords of subduing harmony! Truly there is power in music, an almost omnipotent power. It will tyrannize over the soul; it will force it to bow down and worship; it will wring adoration from it, and compel the heart to yield its treasures of love. Every emotion, from the most reverent devotion to the wildest gushes of frolicsome joy, it holds subject to its imperative will. Music being the voice of love, how appropriate a vehicle is it to bear up to the great home of everlasting love the incense of human affections! Sing unto the Lord, because He is love. Sing to Him, because music is the voice of love. Sing to Him, because He loves the songs of devout hearts. Sing unto Him, because a sacred song melts the heart in love to Him. Sing unto Him, because music elevates the soul to heaven. Sing to Him, because music is the type of the infinite, and enlarges the sphere of our thoughts and aspirations. Sing unto Him, because music is the

link unseen that binds all hearts in one, and all with God.

Who does not know the softening power of music, especially the music of the human voice? It is like the angel-whisperings of kind words in the hour of trouble. Who can be angry when the voice of love speaks in song? Who hears the harsh voice of selfishness and brutalizing passion when music gathers up her pearly love-notes to salute the ear with a stray song of paradise? Sing to the wicked man, sing to the disconsolate, sing to the sufferer, sing to the old, and sing to children, for music will inspire them all. When we think how much the world wants awakening, we can think of no power better calculated to do it than that which dwells in the mysterious melodies of music. Let everybody become musicians, and surely they would become loving souls. The dead would be raised, the stupid vitalized, and the enervate, mindless creature of *ennui* stirred into a breathing, active, emotional existence. Music never suggests vulgarity and baseness, never tends to the coarse and low. It not only gives an additional warmth, fervor, and vigor to the powers within, but it gives refinement. Then, let every father and mother encourage their children to learn music, both vocal and instrumental. Let singing societies abound, and let every village and town have its "band" of instrumental performers.—*Hopes and Helps.*

LABOR IN HEAVEN.

"LABOR in heaven," repeated the merchant, as he closed his ledger and turned his steps toward home; "I thought there was no labor there, no anxiety to meet notes, no solicitude about the responsibility of debtors or speculations of dishonest clerks." Still there was a thought floating in his mind, that absolute rest could not bring unalloyed happiness; and revolving this thought he proceeded on his way.

As he entered his private parlor, where Margaret, his invalid daughter, was reclining, and who looked up, with her large liquid eyes brightened by a smile of gladness at his entrance, he said, for he was in the habit of referring most spiritual questions to her, "Margaret, do you think there can be labor in heaven?"

"Father, I hope so."

"And why do you hope so, daughter?"

"There is so little I can do in this world, in my infirmity, that I hope in that world, where imperfect limbs are unknown, to find some blessed employment; do not you think so too?"

"Yes, Margaret," he replied, in a more positive tone, "there will be labor there—the labor of love; and you are doing it here, my sweet ministering spirit;" and he kissed the fair brow with evident emotion. "It will only be a difference in kind; but some exercise of our faculties, which we are not to suppose to be less in a spiritual state than in a natural one, is necessary for our happiness; nay, more, is necessary to prevent misery."

"But, father," said his wife, playfully, "you

do not expect to be selling beautiful shawls there, to more beautiful ladies, do you?"

"No, no; but will not thoughts be woven out into beautiful forms here, as here? Did you ever think of the thought necessary to produce the intricate patterns of our India shawls, and where it must have its rise? Surely wisdom and discretion, and all the powers of the mind, are from the Lord. Does it not read that, 'Them hath he filled with wisdom of heart, to work all manner of work, of the engraver, and of the cunning workman, and of the embroiderer in blue, and in purple, in scarlet, and in fine linen, and of the weaver, even of them that do any work, and of those who devise cunning work.'"

"And you think," observed Margaret, "if it descends from heaven to man, it must be in greater perfection and use there."

"Yes, daughter; was not Moses commanded to have everything made after the pattern that was showed him? And somehow it does seem to me that there can be no heaven in a state of idleness. Is not our heavenly Father always working? Did He not, when upon earth, fill every moment with some labor of love and compassion?"

"Why, you will only make heaven a change of state," said his wife.

"And what is it more?" inquired the merchant.

"He that does his Maker's will,
Bears his heaven about him still,"

says the couplet; and does it make any difference where we are, if it is within?" E. G. D. P.

"GOOD-BYE."

"FORGIVE, sweet flowers," the rain-drops said,
Kissing a dear little violet bed
Under the forest trees.

"They live! they live! their dying bloom
Left with the drops their sweet perfume,"
Whispers the passing breeze.

Like the rain-drops fell those magic words,
With a tender touch over memory's chords,
Waking a thrilling strain.

"I'll not forget you," oh! shall that last
Mysterious echo of the past
Leave but remembered pain?

Like the modest violet, I would claim
"A place in thy memory" for my name,—
Memory, mysterious power!
Some lingering spirit of a dream,
Some "guardian angel" I would seem,
In sorrow's trying hour.

Oh! say "forgive," but never "forget,"
For we shall meet each other yet;

My soul to thine was given.
Yes, they were *one* in that "long ago,"
And shall be one again I know,
If not on earth, IN HEAVEN. EMMA.

RELIGION is as necessary to reason as reason is to religion; the one can not exist without the other. A reasoning being would lose his reason in attempting to account for the phenomena of nature, had he not a Supreme Being to refer to. If there had been no God, mankind would have been obliged to imagine one.—*Washington.*

NEW YORK, APRIL, 1868.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous precipice of telling unbiased truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*De Pte.*

LIFE ILLUSTRATED is published monthly at \$3 a year in
advance; single numbers, 30 cents. Please address,
SAMUEL R. WELLS, 389 Broadway, New York.

DISSIPATION—DISEASE.

CONSIDERING the "tax" on the human system, by the numerous unnatural drafts upon it, and that the frame endures so much without utterly breaking down, we are led to exclaim with Dr. Watts, when referring to the body, that it is indeed

"Strange, that a harp of a thousand strings
Should keep in tune so long."

We have come to regard man as a *perverted* being, the world over. We leave the matter of "original sin" and the "fall of man" out of this discussion; knowing the clergy, the priests, the rabbis, and other theologians, will take care of *that*, while we look at man as he is to-day, through physiological science. Dissected, we find so many bones, so many muscles, tendons, arteries, veins, and nerves, each part performing its allotted functions, and culminating in the manifestation of mind, spirit, soul! It is this—the immortal part—that makes the man. But without the bony framework, and without the filling up—the vital parts, which is the physiology—there would be no growth, no recuperation, no perpetuation of the race; and without the brain and nervous system, there would be no mental manifestation, no mind, no knowledge, no man. But with all the parts combined and in healthy action, we may well exclaim

"What a piece of work is man! How noble in reason! how infinite in faculties! in form and moving how express and admirable! in action, how like an angel! in apprehension, how like a God!"

This is what God intended man—ALL MEN—to be! He endowed him with reason, or powers of comprehension and analysis, powers of invention, abilities to navigate the seas; to till the ground, and grow crops; to imitate the beauties and grandeurs of nature in painting and sculp-

ture; to erect temples, cathedrals, palaces, universities, and comfortable dwellings. To construct railways, by which we may transport ourselves and effects at our pleasure where we will; to place a wire net-work—which may be likened to the nerves of the human body—throughout all parts of the world, with which we may be in constant communication! Is not this wonderful? Man alone possesses faculties and powers to do all these things. When we consider the possibilities of man's performance, his originality, versatility, powers of endurance, length of life, the magnitude and reach of his mental conceptions, his control over or ability to use the forces of nature, earth, sea air, and electricity, we can but admire and regard him as God's last, greatest, and best creation.

But there is to-day a physical curse on man throughout the world. Nor can it be charged to the Author of our being. It is clearly a wicked *perversion* of His will and His wish. That curse so palpable, so blighting, so everywhere apparent, is **INTEMPERANCE**. Few, if any, escape its effects or its ravages. Every family, near or remote, have felt its withering touch. A father, a son, or a brother has fallen a victim to the destroyer. A mother, a daughter, or a sister has suffered the pangs of a broken heart from this insidious enemy. We repeat that, though here and there may be found a specimen of the most rigid sobriety among all nations, mankind generally are included in this category and curse. We find in a late French medical journal an article, by an eminent authority, on the subject of intoxication. It is sad and humiliating to observe how wide-spread is this terrible vice. Every nation, savage or civilized, seems to have its intoxicating drug.

Siberia has its fungus; Turkey, India, and China, have their opium; Persia, India, Turkey, and Africa, from Morocco down to the Cape of Good Hope, and even the Indians of Brazil, have their hemp and hashish; India, China, and the Eastern Archipelago have their betel and betel-pepper; the islands of the Pacific have their daily hawa; Peru and Bolivia their eternal cocoa; New Granada and the chains of the Himalaya their red, thorny apple; Asia, America, and the whole world perhaps, patronize tobacco. England and Germany use immense quantities of stimulating beer or ale; Ireland and Scotland, use whisky; France, Italy, Spain, etc., use wines to intoxication. The statistics concerning the use of these drugs are really startling. The votaries of tobacco are estimated at 900,000,000; those of opium at about 400,000,000. Hashish, a drug quite as intoxicating as

opium, and even worse in its effects on mind and body, is used by 300,000,000 of people, while betel, which is a stimulant, controls the appetites of about 100,000,000. Other stimulating drugs are consumed by about 25,000,000 of the human race. How much pains reasonable creatures will take to destroy the health that God has given them!"

There is but one remedy for this curse, and that is to totally abstain. None of these substances are proper food or drink, and have no business in the human stomach. They are, one and all, only enemies, and must be so regarded and treated.

The office of the stomach is to digest food, converting it into blood, tissue, muscle, bone, nerve; and foreign substances, such as are enumerated above, only derange, degrade, destroy.

A stimulant only excites; it does not, can not strengthen, any more than a spur or the lash can strengthen a horse. But learned physicians prescribe these poisons as medicines! Sanctimonious priests pronounce them "good creatures of God," and mercenary manufacturers and merchants supply the demand created by these "miserable sinners." Great God! how can immortal man be so blind to his highest interest? Why will he continue in this physical sin? Why will he thus pervert himself, and suffer? There is no necessity for any of this. It is a downright wickedness, for which there is no palliation, no excuse. Reader, where do you stand on this question? On which side do you vote? Do you enjoy the "fragrant weed?" Then you are *perverted* already. Do you find it necessary to take a mug of ale, a cup of beer, a glass of wine or brandy with your meals? You are in an abnormal condition, *perverted*, diseased! and *not* as God made you. You are on the road which leads to premature death and perdition! Stop! You have *no right* to mar the image of God by defiling your own person. You have *no right* to transmit a tendency to disease, sensuality, or dissipation to your offspring. God has endowed you with the faculties of a man. This is a proposition which you would fearlessly maintain in theory. Why not as boldly and consistently maintain the honor of those faculties in practice? Why reduce them to a lower level than the brute's? Stand up! Look heavenward, and ask what is the will of God with regard to yourself, AND BE TEMPERATE! Be a self-denying, manly man!

IS THERE A GOD?

THE question is often asked: "Are there not tribes of human beings so low in the scale of development that they are totally without any idea of a God?" And our answer has been, and is, "No." As the eye is adapted to light, the appetite to food, Causality to reason, Benevolence to kindness, Conscientiousness to justice, so is VENERATION adapted to the worship of a God. As there is light for the eye, so there is a God to be adored. He who denies this puts himself in opposition to science, revelation, and common sense.

But we grant there are idiots and imbeciles among many highly-civilized nations who are totally benighted—totally incapable of self-control or regulation—who may not recognize a Supreme Being. So far as we know, Indians, Negroes, and even the Fijian Island cannibals recognize a God. Again, we find, here and there in our phrenological observations, moral or religious skeptics, who are fairly developed in other directions—men who are, so to speak, spiritually blind—men who ignore any intelligent power or principle above their own finite minds. Such are lacking a faculty, as much so as the one who is color blind, or he who can not distinguish the harmony of sounds. They are in this respect idiotic, and, when boasting of their skepticism, simply proclaim themselves "unfortunate."

Here are nearly fifty different languages in which the name of God is recognized. How many more there may be we do not know.

Hebrew, *Elohim* or *Eloah*.
Chaldaic, *Elah*.
Assyrian, *Ellah*.
Syriac and Turkish, *Alah*.
Malay, *Alla*.
Arabic, *Allah*.
Language of the Magi, *Ordi*.
Old Egyptian, *Teut*.
Armorican, *Tvut*.
Modern Egyptian, *Tenn*.
Greek, *Theos*.
Cretan, *Thios*.
Æolian and Doric, *Ios*.
Latin, *Deus*.
Low Latin, *Diez*.
Celtic and old Gallic, *Diu*.
French, *Dieu*.
Spanish, *Dios*.
Portuguese, *Deos*.
Old German, *Diet*.
Provencal, *Diou*.
Low Breton, *Doua*.
Italian, *Dio*.
Irish, *Dia*.

Olala tongue, *Den*.
German and Swiss, *Gott*.
Flemish, *Goed*.
Dutch, *Godt*.
English and old Saxon, *God*.
Teutonic, *Goth*.
Danish and Swedish, *Gut*.
Norwegian, *Gud*.
Slavic, *Buch*.
Polish, *Bog*.
Polacca, *Bung*.
Lapp, *Jubinal*.
Finnish, *Jumala*.
Runic, *As*.
Pannonian, *Istu*.
Zemblan, *Feltzo*.
Hindostanee, *Rain*.
Coromandel, *Brama*.
Tartar, *Migatal*.
Persian, *Sire*.
Chinese, *Pussa*.
Japanese, *Goezur*.
Madagascar, *Zannar*.
Peruvian, *Puchocama*.

All well-organized human beings are created alike in framework and in faculty. They differ in temperament, quality, condition, complexion, development. Each has two feet, two hands, two eyes, two ears; and for that matter, man may be said to be double throughout. And when one side of the body or brain becomes paralyzed, the other side may perform all the functions belonging to the whole. If one eye be destroyed, the other does the seeing for both. So with ear, arm, and so forth. But the question is: Are all men alike in structure? Yes; with the aforesaid modifications of temperament, development, etc. All have the same number of bones, muscles, nerves, and organs of body and brain. One tribe may have certain faculties more fully developed than another. Indeed, it is quite true

that there are many barbarians who seem to manifest only the rudiments of mechanism, art, poetry, philosophy, science, and religion. But they have the rudiments, and are capable of culture. Were it not so, why send missionaries among them? If not human beings, why notice them? And if human, why not educate, develop, and improve them? The line of demarkation between man and animal is as clearly drawn by Phrenology as it is between reason and instinct.* Finally, human beings, the world over, no matter what their language or color, have certain organs and faculties which lift them up above all animals, and which put them in relation with their creator, God, and incline them to worship. If enlightened by culture, they worship Him. If still in the darkness of ignorance, and undeveloped, they worship idols and images.

As in other things, many individuals there are who remain all through this life in the bud; they may attain the stature of men, with only the minds of children. Nevertheless, they have the organs of VENERATION, and manifest, however feebly or blindly, a sense of devotion. Such will be judged according to the use they make of their talents. We pity alike the poor heathen, whose ignorance is his misfortune rather than his fault, and the proud and lofty skeptic, who boasts of his indifference to sacred subjects and to God. The dark veil which almost obscures the spiritual vision of the one will ultimately be removed by the light of reason and religion; while the other, by his willful blindness, shuts out the light of heaven, which would otherwise illuminate his path and lead him on to the realms of life, light, and a full intellectual realization of glorious immortality. All men have souls. Let us try to save them alive.

PROF. AMOS DEAN.

PROFESSOR AMOS DEAN, whose death was briefly announced in our last number, was a gentleman of well-known legal ability and acknowledged moral excellence of character. He was born at Barnard, Vermont, February 16th, 1803. Aiming early at an elevated standard of intellectual culture he fitted himself for college. Graduating from Union College, in 1822 he gave his attention to the study of law, and for the promotion of that end entered the office of Jabez D. Hammond, an uncle, and Judge Alfred Conkling, in Albany, N. Y. On the completion of his apprenticeship he became the partner of Azor Taber, a prominent jurist of that city. Being constitutionally disinclined to forensic display, he was, eminently, the adviser or counselor, a department which he honored by the extent of his reading and the penetrating acumen of his judgment. In Albany he continued to reside until his death.

* For a scientific presentation of this whole subject, see *Grades of Intelligence*, in *New Physiognomy*, pp. 533 to 603.

On the opening of the Law School, by the authorities of the State University, he was appointed a professor, and year after year won from the students who flocked to his lecture-room the highest encomiums for ability and fidelity. As a lecturer on legal science he was unsurpassed for zeal and laborious activity. The extent of his investigations and preparation are evinced by his private library, which in its line is one of the largest and most diversified in the country. He aimed at furnishing those who came under his legal tutorage the most substantial and practical information. This is evidenced in the works which he has published, and which have taken rank as standard legal treatises. Fully appreciating the advantages of the association of young men for literary purposes, he inaugurated, thirty-five years ago, the Young Men's Association of Albany, which may be termed the mother of the Lyceum system in this country, and which still flourishes.

With the introduction of phrenological teachings in this country, Professor Dean was to some extent identified. Impressed by the lectures of George Combe, he gave some attention to an examination of the principles promulgated, and became a hearty advocate of the new doctrines. A series of lectures delivered by him before the Young Men's Association in 1834 have been preserved in book form—now out of print—and are distinguished by the cogency of their reasoning, the aptness of their illustrations, and the elevated though clear style of the language. Down to the present time, between Professor Dean and ourselves there subsisted the most cordial friendship. Whatever aid he could offer, consistent with his University duties, for the promotion of phrenological science, was ever cheerfully accorded. A cast of his head stands on one of the shelves of our cabinet. For several years past he had been employed on an extensive work treating of the history of Civilization. In the furtherance of this undertaking he had made researches in the history of extinct ages and nations, Egyptian and Oriental literature being thoroughly scrutinized for their contributions in behalf of his subject. It was his purpose to prepare an exhaustive treatise, comprehending the earliest known periods. In the PHRENOLOGICAL JOURNAL for 1866 is given a partial synopsis of his arrangement of the work. It had already grown to several volumes, but as the master hand which framed it has left it incomplete, American literature can not but regret the abrupt termination. Let not a scrap of this great work be lost. Every line will be valuable.

Professor Dean was distinguished for his retiring yet frank and cordial disposition. His ruddy face ever beamed with a genial good-humor which won the friendship and encouraged the confidence of all who approached him. He will be missed much from the professional and literary circles of Albany, where his influence was ever conducive to moral and intellectual improvements.

OUR CONGRESSMEN. THEIR AGES, OCCUPATIONS, ETC.

A WASHINGTON correspondent of the *Chicago Tribune* gives the following personal gossip in regard to the members of the present Congress:

"In looking over a list of the members of the present House, the singularity in the names is striking. For instance, we have a Butler, a Baker, a Cook, and a Cake; an Archer, a Burr, a Cobb, and a Fox; a Loan, a Nunn, a Pike, a Pile, and a Price; a Kerr, a Kitchen, and a Knott; a Sawyer, a Stone, and a Taylor. Make your own puns on them. Stevens, of Pennsylvania; Spaulding, of Ohio; and Thomas, of Maryland (75, 69, and 68 respectively), are the three oldest men. Haight, of New Jersey; Adams, of Kentucky; and Washburn, of Indiana (29, 30, and 35 respectively), are the youngest members of the House. The following are the ages of the more prominent members, including the Illinois delegation:

Wm. B. Allison, Iowa	38
James M. Ashley, Ohio	43
John Baker, Illinois	43
N. P. Banks, Massachusetts	43
Demas Barnes, New York	51
John A. Bingham, Ohio	40
James G. Blaine, Maine	52
George S. Boutwell, Massachusetts	37
H. P. B. Brownell, Illinois	44
James Brooks, New York	57
Albert G. Brown, Illinois	38
Benj. F. Butler, Massachusetts	49
Samuel F. Cary, Ohio	49
John C. Chaswell, New York	53
Burton C. Cook, Illinois	46
John Corode, Pennsylvania	59
Schuyler Colfax, Indiana	44
Shelby M. Cullom, Illinois	38
Henry L. Dawes, Massachusetts	51
John F. Farnsworth, Illinois	47
James A. Garfield, Ohio	36
Samuel Hooper, Massachusetts	59
E. C. Ingersoll, Illinois	36
Thomas H. Jenckes, Rhode Island	49
N. B. Judd, Illinois	52
Wm. D. Kelly, Pennsylvania	53
T. M. Pomeroy, New York	43
J. V. L. Pruyn, New York	56
Samuel J. Randall, Pennsylvania	39
Wm. E. Robinson, New York	43
Abner C. Harding, Illinois	60
Robert C. Schenck, Ohio	58
Samuel Shellabarger, Ohio	50
Charles H. Van Wyck, New York	43
C. C. Washburn, Wisconsin	49
E. B. Washburn, Illinois	51
H. D. Washburn, Indiana	35
W. B. Washburn, Massachusetts	47
James F. Wilson, Iowa	39
Fernando Wood, New York	55
George W. Woodward, Pennsylvania	59
Horace Maynard, Tennessee	53

Here are some of the *Tribune* man's speculations and comments, which are frank, if not flattering.

"Schenck, of Ohio, and Tobias A. Plants, of New York, are the two ugliest men in the House; Fernando Wood is the finest-looking; while George M. Adams, of Kentucky, Thomas E. Stewart, of New York, Allison, of Iowa, and Pomeroy, of New York, are among the handsomest; Baldwin, of Massachusetts, is the fattest man, and Maynard, of Tennessee, is the leanest.

"In the Senate, James Guthrie, of Kentucky, is the oldest man, being seventy-five years of age, and Reverdy Johnson, of Maryland, next, being seventy-one. Sprague, of Rhode Island, is thirty-seven, and the youngest man in the Senate, and Conkling, of New York, is the next youngest, being thirty-nine. Conkling, also, is the handsomest senator and the most

imperious. [It is probable that his Self-Esteem is large.] The following are the ages of some of the prominent senators:

Willard Saulsbury, Delaware	47
Lyman Trumbull, Illinois	54
Richard Yates, Illinois	50
Oliver P. Morton, Indiana	44
William Pitt Fessenden, Maine	61
Charles Sumner, Massachusetts	57
Henry Wilson, Massachusetts	56
John B. Henderson, Missouri	44
James W. Patterson, New Hampshire	44
Edwin D. Morgan, New York	57
Benjamin F. Wade, Ohio	67
John Sherman, Ohio	44
Simon Cameron, Pennsylvania	68

"Senator Guthrie, on account of failing health, has been unable to occupy his seat for several sessions, but a recent effort to compel him to resign that the State might be represented, obtained the promise from his friends that he would take his seat soon after the holidays. [He has since resigned.]

"In the House there are: Lawyers, 87; editors, 5, namely, Baldwin, of Massachusetts; Blaine, of Maine; Brooks, of New York; Glossbrenner, of Pennsylvania; and Getz, of Pennsylvania; manufacturers, 13; merchants, 9; farmers, 13; bankers, 5; clergyman, 1; hotel keeper, 1; physician, 1; coal operator, 1; general business, 3; civil engineer, 1; railroad manager, 1; horticulturist, 1; lumbermen, 2; real estate agent, 1; and (stand aside, ye mudsills and common men) gentleman, 1—George M. Adams, of Kentucky. The real estate agent is John Fox, of New York; lumbermen, Philetus Sawyer, Wisconsin, and Thomas W. Ferry, Michigan; horticulturist, C. A. Newcomb, Missouri; railroad manager, Ginery Twichell, Massachusetts; civil engineer, G. M. Dodge, Iowa; general business, Sidney Clark, Kansas; J. F. Driggs, Michigan; and B. F. Hopkins, Wisconsin; coal operator, Henry L. Cake, Pennsylvania; clergyman, William A. Pile, Missouri. John Morrissey, of New York, is put upon the rolls as banker—not faro banker, but simply banker."

[We think this analysis could be greatly extended, to the edification of all readers. Let us know the parentage and pedigree of each, where born and educated; and, when about it, why not give scientific sketches, based on Phrenology and Physiognomy—including height, weight, complexion, and a close description of each and all the features? But who can do all this? If our hundred thousand admirers decide to send the editor of the *PHRENOLOGICAL JOURNAL* to Congress, he would probably examine the heads of all the members, write out charts for each, and publish them. When this shall be done, woe be to the bad men "who sit in high places!" They could never be elected a second time.]

SPECIAL.—In our next issue, we purpose giving some account of the Abyssinians, with illustrations of their king, Theodoros, and his warriors. An account of the celebrated trial of Charles I. before the Roundhead Parliament will close the sketch, commenced in this number, of that unfortunate English king. A

portrait of the celebrated composer and musician Verdi, with some account of his life, and an excellent article on the Diversity of Gifts, may also be expected. We take great pleasure in directing the attention of our readers to the sermon on Inordinate Affection, and the continued paper on Consciousness and Mental Action, published in this number.

MY NOSE.

It was my misfortune to bring into this world of perplexities an exceedingly large nose, which appeared all the more huge standing out, as it did, from a most cadaverous-looking face. During my school days I suffered from numberless jokes from my companions, and sometimes I was tempted to exclaim, "I wish I had been born without any nose at all!" I could never play a game of ball but some one would shout, "Look out for Jones' nose!" And, in the classes, "Jones knows," became quite a proverb when any question was asked. Viewed in one way, it might be considered a compliment.

Well, time flew on, and still my misfortune followed me, or, rather, *went before*. I came out of jackets into long-tailed coats, and a few more years made me a man; but, gradually, I began to overcome my foolish sensitiveness regarding my principal feature; or, perhaps, it did not seem so conspicuous as my face grew fuller; but I have always thought that my finding a piece of a phrenological chart in the street one day, was the spring that wound up my life and set it into a steady motion of duty. These were the words that I read on that little piece of paper:

"Bonaparte chose large-nosed men for his generals, and the opinion prevails that large noses indicate long heads and strong minds."

Well, I concluded, if that's the case, then my mind was never equaled; but I kept thinking of it, and more seriously than at first, until I determined to find out whether it was true.

It wouldn't be very modest to tell you the conclusion I have arrived at, and perhaps if I should, it might not be very flattering to me; but this I will say, that my nose has long since ceased to be a misfortune. Prosperity has crowned my efforts. I have a happy home, and a wife with the smallest apology for a nose you ever saw. If it hadn't been for mine, I don't know that I should ever have obtained her. She had advertised for a husband—in a spirit of mischief—saying, "I have a great admiration for large noses; but am, myself, afflicted with an uncommonly small one. It is said we should marry our opposites, and if I can find one who is the opposite of me in that respect, I will marry him; that is, if he will have me."

Well, I concluded I was the one, and fortunately for me, I was. And so I can trace all my good fortune—my wife, money, lands, everything, to—my nose.

THE MOVEMENT CURE.*

THERE is a growing tendency among the people to release themselves from drug treatment and find out some better way to mitigate the pains and avoid the perils of disease, and to regain health when it is lost. It is but a comparatively short time since hydropathy was introduced, yet it in part or entirely has been adopted in general practice; the world has learned its advantages, and will not readily surrender them. And also within a comparatively few years past, what is denominated the Swedish Movement Cure has also been proved to be a great curative agent. The various manipulations have not been unknown from remote ages. The gymnasiums of the Greeks, and the Romans by their severe physical training, promoted health. The science of movements now known as a remedial agency was first systematized by Peter Henry Ling, a Swede, born in 1766, and died in 1839.

It is not our purpose to explain here the science of these movements, nor to urge their advantages. But there is not a farmer in the land who does not know that rubbing the limb of a lame horse is more effective for its cure than all the liniments that can be applied. Those who are troubled with a lame back practice rubbing for its relief; in short, movements, friction, etc., are employed as curative agencies by the people generally. If a dog has a wounded foot, or a leg which some other dog has severely bitten, he lies and licks the wound or injured part by the hour; the action of the tongue promotes circulation, and aids the parts to dispose of the morbid matter and replenish the injured structure. This process, therefore, is practically the movement cure.

Dr. Wark maintains that incipient consumption can be cured by this system, and his little work goes on to explain the manner by which it is done, and the reasons which underlie it.

The world is aware that consumption is an almost incurable disease by the old-school treatment, and the drug doctors have for years been accustomed to send their consumptive patients into the open air, and trust to sunshine and exercise to do the work.

We introduce a few engravings from Dr. Wark's book, showing the methods employed; and as his treatise contains directions for the home application of movements as a cure for consumption, it must be interesting to the mass of the people. Dr. Wark writes as if he understood his subject, and had a desire to benefit mankind. His description of the different movements is concise and clear, and his work is well worth the special consideration we here give it.

* Prevention and Cure of Consumption by the Swedish Movement Cure, with Directions for its Home Application. By David Wark, M.D., Physician to the Institute for the Treatment of Chronic Diseases and Deformities, Saratoga Springs. New York, S. R. Wells, publisher; sent post free for 30cts.

FIRST MOVEMENT—PULLING THE ARMS.

EFFECT.—The blood in the capillaries is pressed into the minutest ramifications of these vessels in greatly augmented quantities, and gently urged onward into the veins, through which it must pass to the heart, and lastly to the lungs for aeration. As soon as the pressure is removed, the capillaries are re-filled with fresh blood from the arteries supplying the part; the blood circulation thus secured in the part subjected to the pulling is so perfect, that the patient will feel the whole limb, to the finger ends, tingling with the vital current. At the same time, waste matters are made to pass by endosmosis into the venous circulation, to be removed from the body. The nutritive materials contained in the blood are brought to the parts that are also placed in the best possible condition to assimilate them.

SECOND MOVEMENT—VIBRATION OF THE LEG.

EFFECT.—This movement causes attrition of the elementary fibers and cells of the muscular and other tissues, brings together waste matters seeking union, by which their ultimate removal from the body is facilitated, and increases the blood circulation and nutrition of the parts subjected to the movement.

THIRD MOVEMENT—PULLING THE THIGHS.

EFFECT.—Same as that caused by movement No. 1.

FOURTH MOVEMENT—ROTATION OF THE FOOT.

EFFECT.—This movement is actively derivative. Each time the toe describes a circle, all the muscles below the knee are alternately passively stretched and relaxed. Now, muscular contraction always increases the demand for blood in the acting muscles. When all the remainder of the body except the parts being acted on are at rest, the system is then able to respond more promptly and effectually to the call for blood at that particular point; there being, at that moment, no urgent demand for it elsewhere, the vital current is thus made to flow downward to the feet. The cold, clammy extremities of consumptives are thus rendered warmed, although the temperature would not have been increased by as much walking as the invalid had strength to take.

FIFTH MOVEMENT—KNEADING THE BOWELS.

EFFECT.—Under this treatment the muscles forming the walls of the abdomen acquire strength, etc.

SIXTH MOVEMENT—ANGLING THE ARMS.

All the preceding operations, it will be observed, are passive; their application involves

no exertion on the part of the patient. This, however, is an active movement.

EFFECT.—All the respiratory muscles on the anterior part of the body are gently but effectually stretched, the circulation in them improved, and their strength increased; rigidity of the thoracic walls is overcome; the chest vigorously but safely expanded; the air is made to penetrate and inflate collapsed portions of the lung, and dislodge the pus and mucus with which such portions are obstructed.

SEVENTH MOVEMENT—DRAWING THE SHOULDERS BACKWARD.

EFFECT.—With due caution, this movement may be applied to the most delicate invalid. It safely but powerfully expands the chest and invigorates the respiratory muscles. The effect on the patient's feelings is most grateful; it affords the consumptive an immediate sense of relief; he feels as if a load had been lifted from his chest.

EIGHTH MOVEMENT—ARM PUMPING.

NINTH MOVEMENT—PERCUSSION ON THE BACK.

TENTH MOVEMENT—PULLING THE BACK.

ELEVENTH MOVEMENT—PULLING THE POSTERIOR PART OF THE LOWER EXTREMITIES.

[The movements are fully explained, and their peculiar benefits described in the work referred to. If anything can serve to mitigate or allay the terrible scourge to the human race, it should be widely known and practiced.]

HYDROPHOBIA.—We have, on several occasions, when consulted as to what we would do if bitten by a mad dog, answered, "we would try sweating," and we do verily believe that the Turkish bath, alternated with wet-sheet packs, would draw out the poison. We should do the same in case of snake bites. The Richmond (Va.) *Whig* publishes the following:

"A Frenchman who was bitten by a mad dog, and seized with hydrophobia, suffered so that his friends resolved to suffocate him. Four of them extended a feather bed on the floor, threw the unhappy man upon it, and covered him with a second bed, on which they placed themselves to press upon and smother him. During this time his wife was held by main force in the adjoining room by some of her relations. The unhappy woman remained at first apparently stupefied, but when a frightful silence had succeeded the tumult, she seemed to break loose from her apathy, the full horror of the scene rushed upon her mind, and with a shriek of despair she rushed into the chamber of death. With superhuman force she threw aside the men who were holding her husband down, and pulled away the bed which covered him. Life had almost departed, but respiration was soon re-established, and at last he opened his eyes. The efforts he made had covered him with so profuse a respiration that it ran in streams from the whole of his body and the disease was broken up. It is now believed that hydrophobia can be thus sweated out of the system."

Communications.

Under this head we publish such voluntary contributions as we deem sufficiently interesting or suggestive to merit a place here, but without indorsing either the opinions or the alleged facts.

ORIGIN OF MIND IN COMPOUND ANIMALS.

In union there is strength, mentally as well as physically. Here it is considered that mind, or soul (synonymous), is a high degree of subtilty, therefore material. With this view, can it be possible that minds, in compound animals, have their direct derivative from the united intelligences of all the peculiar animalcules whose bodies are sacrificed in building up all the organs and entire frame-works of the different species of animal organization? Brain, with certain known advantages of peculiar form and size, is the terminal of nerve organization, which constitutes its quality; and in proportion to the delicacy or sensitiveness of such organization, depends the capacity for use, by absorption, incorporation, or mere contact of mind; and as each animalcule sacrifices its simple organism by adding to and thus forming, with their bodies, the cell-like structures of all compound animal organizations, so may their simple intelligences likewise accumulate in, unite, and be thus transmitted or retained in the compound brain organization. Such is, probably, the origin and appointed progress of mind, from the simple to the complex, by union. Thus may incipient mind, in the infant state, be correspondingly accounted feeble, and expanding, or growing, with its animal growth; standing still (in the equilibrium of animalcule reproduction within our frames) at maturity of the compound frame, and subsiding in power, or becoming enfeebled, in proportion as animalcule force recedes from their worn-out homes and constructions, our bodies.

Cell-life, the lowest in the scale of being, and therefore, probably, the first or original sentient creation, may be thus formatively accumulated and incorporated in compound animal organizations, equally for the production of their higher capacities for intelligence as for their more highly complicated forms, by the union of these primal constructionists.

Thus would be accounted for that mysterious introduction, evidently by inheritance, of both mind and similarity of character into offspring; both in the fetal state, and just before emerging from the egg in lower animals, with a simplicity of formative derivation in harmony with the general simple principles of creation, which by time and gradual accretion form all compounds, mental as well as physical. All minds, in their origin, are simple and of a low grade of power, expanding by growth as well as use, and proportionally with the sensitiveness of nerve connections. A world is produced by accretion of atoms, so may be mind with less than microscopic sentient additions accumulated within the animal frame, and transmitted from parent to offspring, thus inheriting parental characteristics.

If such is the origin of minds in compound animals, which very many concurring circumstances render in the highest degree probable, there is no more derogation from its unity and majesty than if acquired intact, individually; as in both cases they, necessarily, come from a Great First Cause as a noble bequestment, whether directly or indirectly, as in both cases mind is at first only incipient, unknowing and unknown to finite comprehension; and, in either case, acquires knowledge only by the slow process of inductive reasoning through the use of the animal organs. Neither, by either process of acquirement of mind, is its lofty destiny here or hereafter compromised; but as only recognizing more readily by such theory, some appreciable mode of individual mental introduction, growth, or increase, as the crowning glory of an all-wise and beneficent Creator, whose fiat finds expression in the simplest modes of procedure, wherever we find opportunity to trace effects to their causes.

Our bodies grow by the gradual addition of atom to atom, and why not mind by a similar process? since everything we know of thus originates by the laws of creation, and thus are compound animals made as co-workers in the development of mind, as are animalcules in its combination by the blending of their united incipient intelligences for a harmonious unity of progression in compound organizations. CHAS. E. TOWNSEND.

THE OLD, AND THE NEW, BROOM.

BY A. A. G.

Two years ago the Rev. David McLean resigned himself to the common fate of "common ministers," and sent in his resignation, and the church and congregation unanimously declared themselves resigned to said resignation. But they thought it would be most appropriate (it would look so well) to drop a few expressive tears over the departing minister. So, dry eyes suddenly became moist, and drops which bore a striking resemblance to tears ran off the noses, and trickled down the cheeks, and trembled on the eyelids of all those who had learned how to cry in the right time and place. This wet testimonial of affection, united to a dry one in the form of a letter, full of "heartfelt regret," caused the Rev. David McLean to waver a little in his decision; but Mrs. David McLean had a woman's wit and a woman's quick perceptions, as well as a woman's "spunk," and she said: "Ah, David, don't you know that there is nothing but *water* in those tears? There is no sympathy or sincerity in them. You have been called 'the old broom' for the last two years, and the people all wish you were safe in heaven, or somewhere so far away that you could never come back here."

Mrs. McLean told the truth. If the Rev. David McLean had concluded to stay,—if the tears and the "heartfelt regrets" had made him unresigned to his resignation, there would have been crying on a magnificent scale through all the parish. Yes, there would have been such a deluge as has never been known since Noah's ark rode over the waters that covered the earth. And the most "heartfelt regrets!" oh, how they would have mounted up! There would have been ten thousand more than were put into that letter. But the Rev. David McLean did not conclude to stay. If he wavered a moment, before the tears and "heartfelt regrets," he was soon firm in his purpose to leave, and for the wise reason that the people wanted him to leave. He had written and preached barrels of sermons in the parish of —. He had, for ten winters, braved piercing winds and driving storms, on Sundays and on all days. He had baptized nearly all of the children of the church. He had married young men and maidens, and had buried, oh, how many! He had stood by their dying beds, and pointed the way to Paradise. Often, at midnight, he had answered the call and gone with the messenger, to help the dying to die, or to soothe the anguish of those who bent over the dead. Yes, wearisome days and wearisome nights had been appointed to him, and they had left their mark. He was weather-beaten, storm-beaten, life-beaten. The furrows in his cheeks were deep furrows, and his hair was growing gray.

"He is an old broom," said the people. "His sweeping days are over,—at least he can no longer sweep our *parlor*, our *city church*,

but he might answer for the *suburbs* of a city; he might sweep a while in some *kitchen*."

Poor old broom! Poor David McLean! Not all that was said about him reached his ears; but elders and deacons, and officious women, burdened with a sense of responsibility, had ventured, even before he sent in his resignation, to suggest a smaller and a *plainer* parish. They had even gone so far as to say (but of course they expressed their "heartfelt regret") that a different kind of talent was needed for a *modern church*, and a *modern pulpit*, and a *just age*. They must have some one who could draw a full house, and make church-going and religion in general both easy and popular. This the Rev. David McLean could not do, for he had learned, by the experience he had had of mankind, that it was very difficult and inconvenient for some men to be positively religious. And as to the *popularity* of religion, he had found out that the form was more popular, in certain directions, than the power. So it seemed to be best he should leave, in spite of the "heartfelt regret" of the people. And he did leave. The resignation accepted, the carpets taken up, the furniture packed, the trunks packed, there was nothing to prevent them from being gone, and no reason why the people should not have the comfort of knowing that he was clean gone forever.

At last the morning—and a *rainy morning* it was—came, when the cars were to take David McLean and his wife and children—not excepting poor little Susy, who cried because she "didn't want to go off and leave Hattie May"—with all their furniture, boxes, and trunks, to—to where? "To some place that the good Lord will show us," trustfully and humbly said Mr. McLean; but Mrs. McLean said to herself: "The good Lord often allows a minister to look around a long time for a place, and during that time the minister and his family feel decidedly unsettled. This, considering that everybody likes to feel anchored somewhere, is decidedly unpleasant."

Mrs. McLean did not, however, allow Mr. McLean to see that she for a moment doubted that "the good Lord would show them some place," although she was very much afraid he wouldn't do it until they were all tired of hanging around the world. But, whatever she feared or hoped, the morning to go had come, come with clouds and rain, mixed with little Susy's tears. When they reached the cars, many of the people, with their "heartfelt regret," were there to say good-bye. It was thought "appropriate that the church and congregation should be represented there, that the minister and his family might leave with pleasant feelings." "It wouldn't look well for no one to be there."

What the poor cast-off parson thought when he found some of his people at the depot, no one will know until the day of doom; but as he sat in the cars with his hat pulled down over his eyes, and his head bent forward on his breast, he probably had other than "pleas-

ant feelings." It is to be presumed that he was wondering what kind of a place "the good Lord would show him," and how long it would be before he would show it to him.

And Mrs. McLean, what was she thinking about? Ah, any physiognomist could have told. She was thinking that there were two things that could never be depended upon—two things that were always changing—*people* and the *weather*, and she then and there determined not to hang her happiness upon either. Occasionally, as the train moved on, she glanced at Mr. McLean with an eye that seemed to say: "Poor old broom!" What place it was that the good Lord at last showed him isn't known, or how long it was before he showed it to him isn't known. It is only known that he left the city of — because he was an *old broom*!

This old broom was, or was not, sweeping somewhere, when the old parsonage was entirely pulled down, chimneys and all, to be made over and fitted up for the *new broom*. The Rev. Theophilus Tinklebell had been called to take the place of the old broom, and, although he at first declined the call, he accepted at last, "overcome by pressing letters." "You are just the man to build us up in" —. In what? In the most holy faith? No; there was nothing said about that. "You are just the man to build us up in *numbers*!" So ran the letter, and so ran many other letters, until the Rev. Theophilus Tinklebell made up his mind, that if he yielded to the loud and pressing call, and went to the city of —, he should ring such a bell as would call all the city to his church and thin out all the other churches. And what a great thing that would be to accomplish! So the Rev. Theophilus Tinklebell told Mrs. Theophilus Tinklebell, and all the young Tinklebells, that he had decided to make a change and accept the call. Then began the preparations to leave. But as the parsonage had been demolished, and was undergoing the process of being re-created, he had been requested not to "hasten on."

"You must take time to do the work well," said one of the prominent members of the church to the carpenter who had "taken the job," "for Mr. Tinklebell sacrifices a great deal to come to us. He leaves a beautiful home, and, more than this, Mrs. Tinklebell is a very *particular* woman and a woman of unusual *taste*." The carpenter promised that the house should be all that Mr. and Mrs. Theophilus Tinklebell could desire, and he kept his promise. The parsonage, when finished, was beautiful. Then followed "the last touches," as the people called them. Great rolls of rich carpeting were taken into the house, and new furniture too—furniture of modern style. And oh, how great was the cost of it all! But the money slipped as easily as oil out of all pockets, for it was for the *new broom*!

The glory of a June morning rested on everything—on trees, and birds, and flowers, and on the new parsonage too—when the cars

came rushing into the city of —, bearing the new broom, and every one of the procession (for there was a procession there to welcome the new broom) thought, "Oh, how different he is from the old broom! What an impression he will make! How the church will fill up! No staying at home any more on stormy Sundays! No Sabbath-day headaches to keep people at home! No complaints of a cold church! No great, staring empty pews! Oh, how could we have kept the *old* broom so long!"

The first Sunday, the people (and among them were "a great many outsiders," strangers) came flocking into church, "like doves to their windows." And wasn't it pleasant, after long mourning the thinness of the congregation, to sit and see the waves of people as they came swelling into the house?

"Why," said deacon Boyle to himself, "it makes me grow in grace just to look at 'em! I came early to church to watch the progress of things, but I had no idea that the people would *pour* in as they have! What a blessed sight! My soul mounts up as on eagles' wings, for I can thank the Lord that the Church isn't running down. No, it's running up! And the blessing of Heaven is coming down upon us!" Old deacon Boyle's eyes shone that day. His heart was full of gladness and praise, for he had "never expected to see the day when that house would fill up again."

No one could have watched him, while he was watching the people, without saying that the deacon was now ready to depart in peace, because he had "seen the church packed with —worshippers!" Deacon Boyle called them "worshippers," and so they were; but he didn't say whether they were worshippers of the living God or of Mr. Theophilus Tinklebell.

For a long time all weather was alike to that *built up, spiritual* church. Come rain or shine, come wind or calm, the people were all in their places, and as they passed out of church they said to each other: "What a powerful sermon!" "What an eloquent man!" "Oh, what a difference there is between an old broom and a new broom! And some brooms always stay new. *Ours* will, I am sure. Mr. Tinklebell is a man who will wear well. He will be able to hold out as he has begun. He is not at all like Mr. McLean."

Poor Mr. McLean—poor old broom! He was gone—gone, never to return to burden the church that was made glad by being relieved of him; but the people were fond of instituting comparisons, and, with such a man as Mr. Theophilus Tinklebell in the pulpit, how could they help comparing the old and the new broom?

Mr. Tinklebell was in the habit of speaking very kindly of Mr. McLean, but these comparisons were not altogether disagreeable to him, neither were the honors conferred upon him at all unpleasant, and yet they were borne with becoming meekness. It is true, he was not entirely free from the vanity of human nature,

for the *man* was not lost in the *profession*, and he had also a fair share of ambition. He preferred a rich and prominent church to a poor and insignificant one. He preferred to be known as a big gun rather than as a little gun; but deacon Boyle said that he had "a prodigious amount of grace, and not enough human nature to hurt him." "Why," said the deacon, in one of his fits of enthusiasm, "it's a wonder to me that brother Tinklebell is so humble. He don't seem to know how smart he is, and how much everybody admires him."

But deacon Boyle was a simple-hearted man, and not at all suspicious, so he did not suspect the truth, which was, that parson Tinklebell had a secret admiration for himself,—a certain self-appreciation, a peculiar consciousness of the individuality of Mr. Theophilus Tinklebell. This was all true of the new broom, and yet it would be unjust to say that he was a selfish man, and bestowed no thought on others, for he took proper, reasonable care of the lambs and sheep of the flock, and lived for others, so far as he could consistently with the care of himself, and his fame, and his family.

As to human applause, he did not run after it, neither did he sound a trumpet before him. The most that he did was to tinkle a bell. He was never loud and noisy in self-praise, but always alluded modestly to his endowments and his popularity, and pitied—not blamed—such men as Mr. McLean, who were obliged to do good in hidden ways and retired places. Perfect Mr. Theophilus Tinklebell, will he never be an old broom? Nearly two years have gone since he received a loud call from the church of —, and answered it, and came and took possession of the made-over parsonage, and began his brilliant career in his new parish, but still he is *new*.

And yet if, before another two years are gone, he is seen flying on after poor David McLean—after the old broom—having at last become, himself, an old broom, will there be any cause for wonder? The world is growing old, but it likes *new* things, and nothing new is so delightful as a new minister—a new broom. Therefore, if it should be noised abroad, by-and-by, that the Rev. Theophilus Tinklebell has sent in his resignation, and that it has been accepted without a struggle, and without one dissenting voice—not even deacon Boyle's—let no one be surprised. Until time shall be no longer, human nature will continue to thirst for what is *new*, and nothing can long remain new, not even the Rev. Theophilus Tinklebell.

HOW TO PAY OUR NATIONAL DEBT.

OUR large national debt bids fair to be a very troublesome thing. We are glad to learn that the Secretary of the Treasury, and the majority of our public men, are in favor of paying our honorable debts. Can we not make the Pacific Railroad, indirectly, by the increase of the value of the land along its route, contribute greatly toward this purpose? At every fifty or one hundred miles throughout the country there is a large town or city; such will be the case, ere many years, along the

Pacific Railroad. By locating many of these towns, which Government has the power now to do, much profit can be realized. In that new country, people will congregate where there is a fort and garrison for better protection and security against the uncivilized tribes of Indians and ruffians who surround them and infest a new country. Let Government select good localities—localities having the best natural advantages—and there establish military headquarters for the protection of settlers, lay out the grounds, and establish post-offices, etc., sell at low prices, or even give away say three-quarters or more of the land; retain the rest, and it, being exempt from taxation, would in the course of twenty years, by the mere rise in property, contribute largely, if disposed of, to liquidate our national debt. Will not this be better policy for the Government than to be obliged, when towns and cities have grown, to pay millions for eligible positions in each town and city for the necessary government buildings? In the mean time, our taxation could be reduced, say one half, or more, as our Congress may see fit.

I. P. N.

NEW PREMIUMS.

We offer the following to all who may feel an interest in the PHRENOLOGICAL JOURNAL:

For 350 new subscribers, at \$3 each, we will give a Steinway or Weber Rosewood Piano, worth \$650.

For 100 subscribers, at \$3 each, we will give a Horace Waters five Octave Parlor Organ, worth \$170.

For 60 subscribers, at \$3 each, a Horace Waters five Octave Melodeon, for church or parlor, worth \$100.

For 40 subscribers, at \$3 each, a Florence Sewing Machine, worth \$65.

For 30 subscribers, at \$3 each, a Weed Sewing Machine, new style, worth \$60.

For 25 subscribers, at \$3 each, a Wheeler & Wilson's Family Sewing Machine, worth \$55.

For 15 subscribers, at \$3 each, the worth of \$16 in any of our own publications.

For 12 subscribers, at \$3 each, a handsome Rosewood Writing Case furnished with materials, worth \$12.

For 10 subscribers, at \$3 each, the Universal Clothes Wringer, worth \$12.

For 7 subscribers, at \$3 each, a handsomely finished Stereoscope, a beautiful and useful article for home amusement, with 12 views, worth \$6.

Those persons desiring our own publications instead of the premiums offered, can select from our catalogue books amounting to the value of the premium for which they would have such books substituted.

All subscriptions commence with January number.

PERSONAL.

HON. ANSON BURLINGAME left China for San Francisco on the 25th of February, as the Chinese minister at large to the treaty-making powers. His suite consists of thirty persons of high rank, who are to be tutored in the arts of diplomacy. His salary is \$55,000 in gold.

BISHOP COXE, of Western New York, has issued an earnest pastoral address to women, remonstrating against the tawdry fashions, the costly vulgarity, and the wicked extravagance of the times. He entreats women to begin a reformation.

ADMIRAL FARRAGUT has been handsomely entertained at Florence. The Admiral deserved it.

JEFFERSON DAVIS has been nominated for the Presidency of the Texas Pacific Railroad.

SIR DAVID BREWSTER.—English papers announce the death of this eminent chemist and scientific investigator. Among his many discoveries in optics, that of the kaleidoscope is perhaps the most generally known.

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office at prices annexed.]

EARLY EFFORTS. By Linda Warfel. 12mo, pp. 136; price \$1 25. Philadelphia: J. W. Daughaday & Co.; New York: S. R. Wells.

A young poet, with rare abilities, and the promise of fame, if not of fortune, in the not far distant future. She writes with that *naïveté* which is the soul of poetic sweetness. If her body be equal to her brain, we shall hear much more of her.

A MANUAL OF INSTRUCTION IN THE ART OF WOOD ENGRAVING. With a description of the necessary tools and apparatus, and concise directions for their use; explanation of the terms used, and the methods employed for producing the various classes of wood engravings. By S. E. Fuller. With illustrations by the Author. 12mo, pp. 48; price 50c. Published by Joseph Watson.

A useful little work for the would-be wood engraver, and should be read by every apprentice to this excellent art.

THE LITTLE CHIEF; a Monthly Visitor to the School-room and the Home circle. Indianapolis, Ind.: Dowling & Shortridge, publishers. Only 75 cents a year.

A competitor for public favor and patronage with *The Little Corporal, School-day Visitor*, and other magazines for juveniles. It is richly worth a dollar a year in every family.

AMERICAN HORTICULTURAL ANNUAL, 1863. A Year-Book of Horticultural Progress, for the professional and amateur gardener, fruit-grower, and florist. Illustrated. Price 50c. New York: Orange Judd & Co., publishers.

If the reader has a liking for luscious fruits, beautiful flowers, and a good garden, he will appreciate this excellent annual, which aims to give directions for their care and culture, such as should be known to all men and all women.

AMERICAN AGRICULTURAL ANNUAL, 1863. A Farmer's Year-Book, exhibiting recent progress in agricultural theory and practice, and a guide to present and future labors. Illustrated. Price 50c. New York: Orange Judd & Co., publishers.

It is a real luxury to peruse a well-written, nicely illustrated, and beautifully printed yearly hand-book like this. The price in money is vastly less than its real value to any one who can read the English language.

THE POETRY OF COMPLIMENT AND COURTSHIP. Selected and arranged by John Williamson Palmer, editor of "Folk Songs." 12mo, pp. 219; price \$1 50. Boston: Ticknor & Fields.

Dr. Palmer has performed a real service for young lovers, and others, who would avail themselves of the best practical expressions in communicating their thoughts and emotions to each other. Here is a handy book full of the best complimentary sayings ever put into poetic verse.

JOHNNIE DODGE; or, the Freaks and Fortunes of an Idle Boy. By Charles D. Gardette. 12mo, pp. 274; price \$1 25. Philadelphia: J. W. Daughaday & Co.; New York: S. R. Wells.

Of the unfortunate predicaments that disobedient boys usually get into, this is the best record we have ever read. It is a capital book for boys—and girls also—with small Cautiousness, who forget their errands, and get into all sorts of trouble, on all sorts of occasions. It would be worth more than any number of floggings to any bad boy.

THE LIFTING-CURE; an Original Scientific Application of the Laws of Motion on Mechanical Action to Physical Culture and the Cure of Disease. With a discussion of true and false methods of physical training. By D. P. Butler. One octavo vol., pp. 104; price \$1 50.

This work is a candid and strong statement of the author's views, derived from experience, in respect to the curative and health-reviving agency of orderly and judicious lifting. We have examined the apparatus employed by Mr. Butler, and regard it as most excellent for the purposes for which it was designed. It is so constructed that the lifting is so equable as not to strain any part of the system.

We once tried his lifting apparatus, raising 350 lbs. the first time and 450 lbs. the second, and confidently expected to feel lame and sore the next day, but, to our surprise, did not in the slightest degree. The apparatus enables every fiber of the system to do its part, hence the person can exert his entire strength without special strain to any part. Mr. Butler argues his point well, is much in earnest, and fully believes in the merits of his system. We commend a perusal of this work to educators, physicians, and those who seek the means of building up an impaired constitution or of preserving their health and vigor.

CHAMBERS'S ENCYCLOPEDIA. A Dictionary of Universal Knowledge for the People. Illustrated with engravings and maps. Nos. 125 and 126. Price 25 cents each. Philadelphia: J. B. Lipincott & Co.

This valuable work is rapidly approaching its completion. In No. 125 the last of Z is represented, and the supplement commenced.

MAGAZINES FOR MARCH.—We have received from their publishers the following:

GODEY'S LADY'S BOOK, which contains much pleasing matter for the household. The engraving entitled "Bird Catching" is a very good hit on that exceptionable boyish sport. \$3 a year.

THE LADY'S FRIEND.—A monthly magazine of literature and fashion, with engravings, colored and plain, and miscellaneous reading. \$3 50 a year. Deacon & Peterson, Philadelphia.

LE PETIT MESSAGEUR.—Containing *Modes de Paris*, literature, etc. \$5 a year, 50c. single numbers. S. T. Taylor, New York.

LA LITTÉRATURE FRANÇAISE CONTEMPORAINE. Recueil en prose et en vers de morceaux empruntés aux écrivains les plus renommés du XIXe Siècle. Avec des Notices biographiques et littéraires. Tirées des ouvrages de P. Poltevin, M. Roche, L. Granger, G. Vapereau, etc. New York: Leopold & Holt. Cloth, beveled edges. Price, \$1 50.

This book supplies a long existing vacancy in French literature on this side of the Atlantic. American students of *la belle langue*, which is spoken more extensively in European circles than any other Continental tongue, have ever felt the need of a work which would furnish them the best models of French composition in the different styles of distinguished authors, whose writings are regarded as fresh and in keeping with modern philosophy. This collection of cotemporary French authors includes the most widely known of the present century. We find creamy extracts from some of the happiest pen jottings of Joseph de Maistre, Madame de Staël, Corinne, Chateaubriand, Napoleon 1st, Cuvier, Béranger, Guizot, Lamartine, Scribe, Cousin, Thiers, Michelet, Victor Hugo, Eugene Sue, Alexander Dumas,

George Sand, Laboulaye, Réman, About, and many others of scarcely less celebrity.

The Franco-American who would preserve his knowledge of classic French, and the American student who would perfect himself in the highest graces of that polite language, should have at hand such a book. The brief biographies attached to the extracts are in themselves valuable to the reader and philologist.

WAVERLEY. By Sir Walter Scott. With a portrait of the Author. Philadelphia: T. B. Peterson & Brothers. Price 35 cents.

To a cheap edition of the works of Scotland's minstrel-novelist we can offer no objection. We understand that the above publishers intend bringing out a complete set of the "Waverley Novels" at the above-named price for each, or \$5 for the entire set of twenty-six volumes.

A TALE OF TWO CITIES. By Charles Dickens. Paper, price 25 cents. **SKETCHES BY "BOZ."** By Charles Dickens. Comprising, Our Parish, Scenes, The Last Cab-driver, A Parliamentary Sketch, Misplaced Attachment of Mr. John Bounce, A Visit to Newgate, The Boarding House, Sentiment, The Black Ball, The Great Winglebury Duel, etc., etc. Price 35 cents.

LITTLE DORRIT. By Charles Dickens. 8vo. pp. 318; price 35 cents.

OUR MUTUAL FRIEND. By Charles Dickens. With 40 original illustrations. Price 35 cents.

The foregoing issues of the Peterson Brothers' Cheap Edition for the Million, of Dickens' writings, assert their own merits. Buyers will at least get the worth of their money in paper and printers' ink.

DICKENS' NEW STORIES. Containing "Hard Times" and "Pictures from Italy." By Charles Dickens. With illustrations, from designs by Marcus Stone. Price \$1 50, in cloth. T. B. Peterson & Brothers, Philadelphia.

MARTIN CHuzzlewit. By Charles Dickens. With twelve original illustrations, from designs by Phiz and Cruikshank. Price \$1 50, in cloth. T. B. Peterson & Brothers, Philadelphia.

NICHOLAS NICKLEBY. By Charles Dickens. With twelve original illustrations, from designs by George Cruikshank. Price \$1 50, in cloth. T. B. Peterson & Brothers, Philadelphia.

GREAT EXPECTATIONS. By Charles Dickens. With twelve original illustrations, from designs by John McLenan. Price \$1 50, in cloth. T. B. Peterson & Brothers, Philadelphia.

We must acknowledge the high consideration which the Brothers Peterson manifest for us by sending their different editions of Charles Dickens' novels to our office. The four volumes specified above are among the most interesting, and certainly among the most diversified, of their author's literary accomplishments. The "New Stories" treat of various subjects, under the titles of "Hard Times" and "Pictures from Italy." "Martin Chuzzlewit" has much to do with American life and scenery. "Nicholas Nickleby" depicts the sad effects of family disagreements and the barbarous practices pursued in English boarding-schools twenty-five or thirty years ago. "Great Expectations," as its title implies, has much to do with that class of persons who are looking forward to the occupation of others' shoes, or "waiting for something to turn up" which will carry them on the easy tide of fortune.

REPORT OF THE COMMISSIONER OF AGRICULTURE FOR THE YEAR 1866. Washington: Government Printing-office.

Treating as this excellent work does of those interests which form one of the grand-

est features in the maintenance and progress of our nation, and considering them from the unprejudiced point of view of scientific observation and experiment, the volume is eminently valuable to American agriculturists. The illustrations which adorn as well as add to the intrinsic worth of the book are numerous. It would be well if the large edition which has been printed of this report found its way into the hands of those who have the prior claim to its examination—our farmers, planters, horticulturists, and stockbreeders.

REPORTS UPON THE MINERAL RESOURCES OF THE UNITED STATES. By Special Commissioners J. Ross Brown and James W. Taylor. Washington: Government Printing-office.

This scientific contribution to our national literature, wrung from the mountains and plains, the valleys, and even the bowels of the soil we call our own, develops to the mind of the reader the astonishing mineral resources of America. The report deals chiefly with the results of investigations west of the Rocky Mountains. We have to thank our friend Hon. Schuyler Colfax for this addition to our library.

ANNUAL REPORT OF THE BOARD OF TRADE OF EVANSVILLE, Indiana, for 1867, with a Historical Sketch of the City. Compiled by John W. Foster, of the Evansville Journal Company.

Mr. Foster has made a very interesting document, giving the history and commercial progress of Evansville, together with its geographical position, its newspapers, schools, churches, banks, dwellings, etc.; also its trade, growth of city in population, and improvements.

One interesting item is the fact that Evansville stands on an apparently inexhaustible bed of coal of superior quality, and within a short distance of abundance of iron ore, which is easily brought by water, and worked in the large iron-furnaces. They have also white and yellow pine, walnut, oak, and other timbers within easy reach and in unlimited quantities. Its manufactories include cotton and woolen mills, printing and binding, blacksmithing, wagons, carriages, and fixtures, leather and saddlery, furniture, lumber, iron in various branches, agricultural machinery, building materials, silverware, sheet iron, tin, brass, etc., which are shipped by water and rail in every direction, giving employment to many individuals, and thus attracting population as fast as dwellings can be supplied for their accommodation. Evansville promises soon to become a populous and wealthy city.

NORWOOD: A Tale of Village Life in New England. By Henry Ward Beecher. Crown 8vo. 600 pp. \$1 50.

This book needs no further recommendation than the simple announcement of the name of its author. It abounds in vivid portrayments of New England scenery, and in life-like delineations of character, from that true basis which an extensive knowledge of our science alone furnishes. Orders for the book received at this office.

NAVY REGISTER OF THE UNITED STATES for the year 1868.—Printed by order of the Secretary of the Navy, in compliance with a resolution of the Senate of the United States, December 13th, 1815. Washington: Government Printing-office. A handsome octavo pamphlet of 176 pages, containing a list of all the ships in the U. S. service and names of all the officers, etc. We are indebted to the politeness of Mr. John T. Hoover, of the U. S. Coast Survey-office, for a copy of this Register, and also for other official documents.

THE NAUTCH GIRL.—Our venerable neighbor, the N. Y. *Evening Post*, has commenced the publication of a story entitled "The Nautch Girl—a tale of the Indian Ocean." It will appear regularly, being printed from the completed manuscript of the author, in the possession of the publishers. "The Nautch Girl" is a story of American adventure in some of the obscurer parts of the East Indian seas, told by a participant in the scenes described; it has novel situations, and describes new and strange manners and customs; it is essentially a sea story, "The Nautch Girl" being the name of a clipper schooner, a smuggler. *The Post* issues three editions, as follows: daily, at \$7 a year; semi-weekly, at \$4; weekly, at \$3. Address, THE EVENING POST, New York.

THE LITTLE CORPORAL is as full of pluck, push, and patriotism as ever. He flies the old flag, and shouts "Come on, boys!" "Onward and upward" is his motto. It costs but a dollar to join the company, and every member gets lots of good reading in return. Send stamps for a sample number, to L. A. Sewell, Chicago, Illinois, and take a look at "The Little Corporal." The children are all in love with him.

New Books.

Notices under this head are of selections from the late issues of the press, and rank among the more valuable for literary merit and substantial information.

THE FRIENDSHIPS OF WOMEN. By W. R. Alger. Cloth, \$2 25.

ILLUSTRATED ANNUAL REGISTER OF RURAL AFFAIRS AND CULTIVATOR ALMANAC FOR 1868. By J. J. Thomas. Paper, 35 cents.

FRANK LESLIE'S ILLUSTRATED ALMANAC FOR 1868. Large 8vo. Paper, 55 cents.

THE FRANKLIN ALMANAC AND DIARY FOR 1868. 4to, pp. 32. Paper, 45 cents.

THE FAMILY PHYSICIAN AND HOUSEHOLD COMPANION: being a Treatise, in Plain Language, on the Art of Preserving Health and Prolonging Life. A Description of all Diseases, with the Most Approved Treatment. For the Use of Families. By M. L. Byrn, M.D. Illustrated. 8vo, pp. 377. Cloth, \$3 85.

THE WELL-SPENT HOUR. By Eliza Lee Follen. Illustrated. Cloth, \$1 15.

MANNERS; or, Happy Homes and Good Society all the Year Round. By Mrs. Hale. Cloth, \$2 85.

MEMOIR OF SWEDENBORG. By O. P. Hiller. Paper, 60 cents.

WILLOW-BEND; or, School Influences. By Luola. Cloth, 60 cents.

MABEL'S PROGRESS. By the Author of "Aunt Margaret's Trouble." Paper, 60c.

PARIS IN '67; or, the Great Exposition, its Side-Shows and Excursions. By H. Morford. Cloth, \$2.

SHORT STUDIES FOR SUNDAY-SCHOOL TEACHERS. By C. S. Robinson, D.D. Cloth, \$1 75.

SWEDEN AND NORWAY: Sketches and Stories of their Scenery, Customs, History, Legends, etc. By M. G. Sleeper. Illustrated. Cloth, \$1 40.

THE DEMOCRATIC ALMANAC AND POLITICAL COMPENDIUM FOR 1868. Paper, 30 cents.

THE TRIBUNE ALMANAC FOR 1868. A. J. Schem, Compiler. Paper, 30 cents.

AMERICAN HORTICULTURAL ANNUAL. 1868. Illustrated. Paper, 50 cents.

ROME AND THE POPES. Translated from the German of Dr. K. Brandes, by Rev. W. J. Wiseman. Cloth, \$1 40.

THE READINGS OF MR. C. DICKENS, as condensed by Himself. Dr. Marigold, and The Trial from Pickwick. Paper, 30 cents.

AN ADDRESS ON SUCCESS IN BUSINESS. By Hon. H. Greeley. Portrait. Cloth, 55 cents.

A PARTING WORD. By Newman Hall. Cloth, 70 cents.

NEWMAN HALL IN AMERICA. Rev. Dr. Hall's Lectures, etc. Reported by William Anderson. Cloth, \$1 15.

THE NEW YORK ILLUSTRATED ALMANAC and Year Book of Useful Knowledge. 1868. Paper. 60 cents.

THE AMERICAN FARMER'S ALMANAC. 1868. Sq. 12mo, pp. 36. Paper. 12 cents.

THE DOMESTIC ALTAR: a Manual of Family Prayers. With Prayers, etc., for Special Occasions. By Rev. H. Crowell, D.D. Fifth Edition, Revised, Corrected, and Enlarged. Cloth, \$1 40.

THE ART OF ENGLISH COMPOSITION. By H. N. Day. 12mo, pp. xli., 356. Cloth, \$1 70.

HAND-BOOK ON COTTON MANUFACTURE; or, Guide to Machine Building, Spinning, and Weaving. For the Use of Millwrights, Managers, Operatives, etc. Illustrated. Cloth, \$2 75.

KATHERINA: Her Life and Mine, in a Poem. By J. G. Holland. 12mo, pp. 287. Cloth, \$1 75.

A POCKET-DICTIONARY OF GERMAN AND ENGLISH, with the Pronunciation of every German Word in English Characters. By Fr. Koehler and C. Witter. 1. German and English. 2. English and German. 18mo, pp. 447, 866. Cloth, \$2.

SPIRITUALISM AS IT IS; or, The Results of a Scientific Investigation of Spirit Manifestations, etc. By W. B. Potter, M.D. Second Edition. Paper, 30 cents.

LORD BACON'S ESSAYS, with a Sketch of his Life, etc. By James R. Boyd. 12mo, pp. 426. Cloth, \$2.

COMPANION TO THE BIBLE. By Rev. A. P. Barrows, D.D. Part I. Evidences of Revealed Religion. Large 12mo, pp. 139. 50 cents.

HYMNS OF FAITH AND HOPE. By H. Bonar, D.D. Third Series. Cloth, \$1 75.

GRAMMAR OF THE FRENCH LANGUAGE. By M. Schele De Vere, LL.D. Half roan. \$2.

HUGO BLANC, THE ARTIST. A Tale of Practical and Ideal Life. By an Artist. Cloth, \$2.

LOUIS SINCLAIR; or, The Silver Prize Medals. By Lawrence Lancewood. 16mo, pp. 241. Boston: Graves Young. Cloth, \$1 40.

THE MIND OF JESUS. By Rev. J. R. Macduff. Cloth, 35 cents.

THE WORDS OF JESUS. By Rev. J. R. Macduff. Cloth, 35 cents.

THE MIND AND WORDS OF JESUS. In one vol. 75 cents.

NETTY AND HER SISTER; or, The Two Paths. By Mrs. Martyn. Cloth, 90 cents.

THE HISTORY OF THE ENGLISH PURITANS. By W. C. Martyn. Cloth, \$1 40.

THE GRAPE VINE: a Practical Scientific Treatise on its Management. By F. Mohr. Translated from the German, and with Hints as to American Varieties and Management, by Horticola. Cloth, \$1 15.

REVIVAL AND CAMP-MEETING MINSTREL. Containing the best Hymns and Spiritual Songs, Original and Selected. Roan. 90 cents.

To our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter, if a stamp be inclosed for the return postage. If questions be brief, and distinctly stated, we will respond in the earliest number practicable. As a rule, we receive more than double the number of questions per month for which we have space to answer them in; therefore it is better for all inquirers to inclose the requisite stamp to insure an early reply by letter, if the editor prefers such direct course. Your "BEST THOUGHTS" solicited.

TEA AND COFFEE.—A number of your subscribers would like to have your opinion, through the columns of the JOURNAL, upon the following subject. The people of this Territory—Utah—are making strenuous efforts to abandon the pernicious habit of drinking tea and coffee. Persons who have been in the habit of drinking those beverages twice, and sometimes three times a day, find it hard to partake of a meal on a cold winter day without the accustomed beverage.

Do you think it necessary in our cold climate that we should drink hot or warm drinks of any kind? or, in other words, does the system, when in health, require hot or warm drinks to give tone to it, or to create an artificial heat sufficient to withstand the inclemency of our cold winter season.

Ans. Tea and coffee are simply luxuries, not necessary to health or life. Hot drinks are injurious. More colds are contracted in consequence of the general habit of using them, than from almost any other one cause. The sugar and the cream used in tea and coffee are nutritious, and therefore food. But neither tea nor coffee afford anything which can prolong life. No harm can come from their total abandonment.

If one's stomach has been accustomed to hot tea or coffee for years, it may not be best to drop it at once; but lessen its strength from day to day till reduced to water with the sugar and cream. Then, instead of pouring it down hot from the pot, let it cool—and in time pure cold water will be relished as well, and to an unperverted appetite, better than any mixture. Try it.

PHONOGRAPHY.—H. W. H. Please inform me which is the best work by which to learn phonography without a teacher.

Ans. There are three principal phonographic text-books, all reaching about the same result. Persons can learn reporting from any one of them with facility. Some persons prefer Graham's, others Pitman's, and still others, Munson's, which latter is the latest. They are all good, and good reporters can be found who follow after each respectively. Each author has his partisans or his admirers, and we know some persons who understand every style, and are about equally divided as to which is best. We sometimes have three reporters, one following each of the authors named, and they serve us equally well. It is generally conceded by those who understand all the systems, that Graham's is the most extended and profound, but that the others are a little easier to learn.

NEW YORK READER.—A history of shorthand is published by Mr. Benn Pitman, in the reporting style. It is rather full in its details relating to older systems of reporting. It does not contain the most recent modifications in phono-

graphy, but it is an excellent reading and exercise book for any one who would perfect himself in phonographic shorthand. Price, \$1 25. The Complete Phonographer is founded on the eleventh edition of Isaac Pitman's Phonography, and is the most recent treatise of the kind. Our best reporters, or the majority of them, indorse the book. We would not advise any one who has attained some degree of proficiency in reporting by the old style of phonography to change, for the reason that we consider the older Pitman's system sufficient for all purposes. Its legibility is unquestionable. A description of the comparative merits of different phonographic authors would require more space than we could well devote to it. A recent trial between Mr. Graham and Mr. Pitman brought out in detail the merits of their respective systems. In the report of that trial you would find a satisfactory answer to your question—price 50 cents. The English Reporter, published in this month's edition, is one who ignores abbreviations and contractions to a great extent, and notwithstanding his very lengthy style, is acknowledged to be one of the most rapid shorthand writers in the world.

JOINT STOCK ASSOCIATIONS.—Are such associations in accordance with the organization of man?

Ans. In some sense co-partnership, co-operation, joint-stock interests are in harmony with the nature of man. United or co-ordinate effort is in harmony with man's fraternal nature. Companionship is one of the essential qualities of the human constitution. We do not believe, however, that this unitary or fraternal tendency should cover the whole ground of human nature. There is such a thing as individualism. The family, perhaps, best represents nature in its complete or co-ordinate condition. In the family we have individualism as well as co-ordination. The individual husband—the individual wife—each has a sphere which none else can fill. The children are related to the parents, not only by personal friendship, but by dependence, and when they ripen, so that dependence ceases, the friendship remains, and they go out and establish for themselves individual relationships.

Co-ordination in business ought to have a friendly as well as a financial basis.

If fifty men could co-operate in running a factory or a farm, and share a joint-stock interest; and if, again, each could be rated and paid according to his ability—and here would be the rub—association on a large scale would be useful, and perhaps desirable. It would have a tendency, we think, to raise up the common man, and make more of him. It might prevent the uncommon man from becoming relatively so high and so influential a spirit, though the best mind would take the highest place, and be looked up to, and justly so.

Some people argue that in a perfect state of society the strong and wise should spend all their strength and wisdom for the common good; that he who has only the talent necessary to guide a shovel, or an ax, or a hoe, should rank in compensation and position with the man of thought, inventive talent, and comprehensiveness of mind.

Some streams of water which we have seen are able just to turn a grindstone. Must Niagara reduce itself to such service, or must it put itself on a par with the diminutive rivulet? The world is pushed forward in civilization, in wealth, and learning, by giving the men of ability a chance to shine; room in which to grow;

and though there is a world of selfishness connected with power, we have yet to see a weak man who was not quite as selfish in trying to absorb something from another man's earnings to make up his own deficiencies, as the strong man is in drinking up the earnings of the poor.

The common multitude of men would merely keep body and soul together; would get, perhaps, three plain meals a day and a shelter from the storm; but a Franklin, a Fulton, a Whitney, a Stephenson, and a Morse, with their power of invention, would put excellent clothing upon the poor man's back instead of that which is coarse; put school-books into their hands, carpets on their floors, give the wife a clock, and a rocking-chair, and a piano. In short, lift civilization from a semi-savage condition to one of comfort and refinement. These inventors, these great thinkers, these natural kings among men do a thousand times more for the community than the community ever does for them.

In fact, most of them, for their great improvements, get poverty, buffeting, and privation, if not contempt, during their lives, and monuments to their memory from the generation that follows them and learns their value to mankind. But we believe that he who has the talent to employ a whole neighborhood; to raise every man in it from poverty to comparative independence, has a right to the larger share of the reward than simply a numerical *pro-rata* portion. Suppose he went off by himself and worked out his own success, he would accomplish four times as much as a common man would do unaided. Why should he therefore have relatively less when his efforts are combined with those of others? If the laborer is worthy of his hire, certainly he who has talent to double "five talents" should have a higher place and more authority than he who can only use "one talent," and double that.

SHAKER PRINCIPLES vs. PRINCIPLES.—In the February number, page 75, we published an article entitled "Principles," written, we suppose, by a Lebanon Shaker. We have received a communication, of about equal length, sharply reviewing it, accompanied by a desire that we publish the review. We wish it understood that theological controversy in these columns is out of the question. We have offered to the various religious denominations and sects an opportunity to make for themselves a fair statement of their belief, principles, and practice, in our columns. Various sects have availed themselves of this offer; among them Presbyterians, Congregationalists, Episcopalians, Methodists, Baptists, Swedenborgians, and Unitarians. Even the Mormon and the Communist, as well as the Shaker, have had the opportunity to make their statement; but we never expected, and can not permit controversy by opposing sects. It is well known that one party or sect, influenced by a love of their own side, does not always give a fair, candid statement of the faith, views, and principles of their opponents; indeed, this is rarely if ever done.

The offer we made, and which has been accepted by so many, contemplated giving our readers an opportunity of knowing what each sect is understood itself to believe.

The Jews shall have their say; but we do not propose to revive the Jewish controversy by admitting some Gentile rejoinder; and therefore we desire our readers to feel that the JOURNAL is not a battleground for sectarists.

The communication we have received in

reply to the article mentioned is well written, and, if we mistake not, contains many things that would be hard to dispose of or set aside; and therefore we trust that this correspondent, and any other friend who might desire to controvert the opinions he disbelieved, will feel that we proposed simply to make a record of the divers faiths, and leave the argument in support of or against these various creeds to be conducted elsewhere.

We are not supposed to believe with all who are admitted to make an exposition of their faith in our columns, or to accept or indorse each and all; hence we are not responsible for what these advocates may say of their own faith, and therefore can not open our columns for replies or counter-explanations.

MEDDLING IN DOMESTIC MATTERS.—A lady complains that her husband's relatives interfere in their concerns, and have caused estrangement between them; that they have been married two years, have one son, in whom the father feels the deepest interest, but that he treats her with indifference, if not neglect. The question is: What shall she do in the premises? Shall she remain and suffer? or return to her parents?

Ans. Get away from the meddlesome persons as soon as possible, and keep away. By the time you have lived together long enough to understand each other, you will begin to assimilate, and become alike in thought, opinion, and sentiment. Then you will be impervious to the influence of meddlers, and pursue the even tenor of your way. Be conciliating, kindly, forgiving, and show no revenge toward each other. Better not separate while there is the remotest hope of final agreement. Don't "jump out of a frying-pan into the fire."

PUBLIC LANDS IN THE WEST.—*Mr. Editor.*—Will you be so kind as to inform me, through the JOURNAL, whether there are any wild lands in Illinois? If so, whom to address for particulars.—C. R. SEWARD, Battersea P. O., Ontario, Canada.

Ans. Address "Clerk of the Land Office," Chicago, Illinois. For a description of all the Western States, including population, square miles, number of acres, location of land offices, etc., see the new book, just published at this office, entitled *LIFE IN THE WEST*. Price, post-paid, \$2.

THE HUMAN WILL.—We suppose no quality of the mind is more widely misunderstood than the will. Phrenology, we think, settles it, as it does also the innateness of Conscience or the moral sense. The following, from Combe's *Lectures*, p. 306, published at this office, says: "The will we regard as constituted by the intellectual faculties. It is very often confounded with the manifestation of the affective faculties—that desire which overcomes the others receiving this appellation. Firmness gives determination, and this is frequently called will. It would be just as proper to say that an ass or a mule manifests will strongly when it refuses to move, placing its fore feet forward and its hind feet backward, in the attitude of perfect stubbornness, whereas it merely manifests firmness in the highest degree. Will is that mental operation which appreciates the desires and chooses among them. Suppose I feel very indignant on account of an injury received, and a strong desire to wreak vengeance; but I see the consequence, and recognize the superiority of the moral sentiments. The intellect says, 'Do not strike,' and the hand is powerless; for, by an admirable provision, the nerves of motion are under the control of the intellectual organs, those being

connected with the anterior or motory tract of the spinal marrow. Will, therefore, is proportionate to the intellect. An idiot has no will. Such a man as Napoleon has a tremendous will, and is able to subject the will of others to his own."

INFORMATION WANTED.—An Indian, by the name of Yan-tan-seh, of Wyandotte, Kansas, desires the address of W. A. Payne, a phrenologist, whom he met at Calumet Station, in Illinois. The aforesaid Yan-tan-seh has become very much interested in Phrenology.

HINDOSTAN PHRENOLOGIST.—There is a phrenologist in Illinois who calls himself a Brahmin philosopher, and says he is master of forty-eight languages—ten more than Elihu Burritt—and is the best phrenologist in the world, and has traveled twice around the world. He writes his name Luximon Roy, A.M., M.D. Do you know him, and what do you think of him?

Ans. We do not know him, and guess if half he says of himself is true, he would not long need to blow his own horn. Burritt understands fifty-two languages, so the Brahmin is still four languages behind the modest Yankee.

WHAT TO DO.—I am puzzled to determine what to do, and desire your advice. How can I get an examination from likenesses, as I live at too great a distance from your office to visit you in person?

Ans. If you will send a stamp, or a stamped envelope, properly directed to yourself, and ask for the "Mirror of the Mind," you will learn by it how to have likenesses taken for examination; also the measurements, complexion, etc., which we should have, in order to do you justice. Ask for the "Mirror of the Mind," and it will give all the particulars.

CURE OF CANCER.—Some time ago I noticed an "Item" in the JOURNAL of a person cured (but the means of cure doubted by the JOURNAL) of cancer, by using common red clover tea for a wash and a beverage. And knowing an old lady friend to be afflicted for a number of years with the cancer on one eye, which threatened to end her life very soon, I thought I would send her the receipt, which she used diligently, and firmly believes it is a sure cure, for to her great relief she is almost well.

Those curious to see the original prescription may find it on page 159, October number PHRENOLOGICAL JOURNAL, 1867. We have nothing to add.

TENPENNY NAILS AGAIN.—*Messrs. Editors of the JOURNAL:* Your recent explanations of the term "penny," in connection with nails, are scarcely correct. The best authorities, among which is Mr. G. P. Marsh, say that penny is a corruption for pound, and means, with the prefixes four, six, ten, etc., that a thousand nails will weigh four, six, or ten pounds.

This nomenclature is of practical utility in estimating the quantity of nails to use for a given piece of work. If 500 pales require two nails each, and eightpenny nails are used, then eight pounds must be supplied. ONUX.

THE AMERICAN INSTITUTE, New York, is already moving in the interest of a grand fair to be held next fall. With the experience of the past, and the promise of future good management, its usefulness and success is absolutely certain. Let our enterprising New York merchants, and others, take an interest in placing the American Institute in the front rank of scientific progress and improvement.

Several Queries remain over for want of room.

Publisher's Department.

THE PHRENOLOGICAL JOURNAL, as an Advertising Medium. While we rigidly exclude all swindling schemes, including lotteries, gift enterprises, and cheap jewelry concerns, we are open to useful and legitimate business announcements. Our very large circulation, among a thinking and active class of readers, renders it a very desirable medium. The JOURNAL is less ephemeral than common papers, every number being carefully read and preserved. Some of our advertisers have informed us that their announcements in this JOURNAL have done them more good than those in any other. Our editions being very large, printed very handsomely, the same as book work, we are compelled to go to press a month in advance of date. Therefore those who would avail themselves of our circulation must hand in their advertisements accordingly. Books, stationery, papers, trees, plants, seeds, lands, schools, machinery, inventions, and the like, would get patronage if advertised in these pages.

BACK NUMBERS.—We can supply all the numbers from the commencement of the present volume. All new subscribers may therefore complete their sets for binding.

AN EXPERIMENT.—Every-body wants a copy of that splendid work, "NEW PHRENOLOGY," the price of which is \$5. It is handsomely illustrated, beautifully printed on toned paper, and elegantly bound in one large volume. For five new subscribers to this JOURNAL, at \$3 a year, we will give a copy of NEW PHRENOLOGY. Here is a rare chance. Who will have the book? A new edition just printed. This offer shall remain in force till the 1st of June next.

THE WORKS OF JOHN RUSKIN.—Among the authors of the present day, no other has won the palm in esthetic literature so fairly as John Ruskin. With an eye, an ear, in fine, a soul, ever in sympathy with the beautiful, he portrays in gushing melodious prose the striking features of art and nature. With respect to the former, there is not a critic more genial and more appreciative. With reference to the latter, he finds therein his approximate ideal, and his heart overflows in enthusiasm. No one can read his works, one or all of them, without profit. His suggestions on social ethics are earnest, practical, and vigorous, and at once command the approval of the generous reader. In our advertising columns we print the entire series of Mr. Ruskin's works, and cordially direct our readers to their consideration.

RECIPE FOR MAKING BOOTS WATER-TIGHT.—*Messrs. Editors:* As the slushy, muddy weather of early spring is approaching, it may be of interest to many of our readers to know how to preserve their boots and make them at the same time pliable and water-proof. It can be done in this way: In a pint of the best winter-strained lard oil dissolve a piece of paraffine the size of a hickory nut, aiding the solution with a gentle heat, say 130° or 140° F. The readiest way to get pure paraffine is to take a piece of paraffine candle. Rub this solution on your boots about once a month; they can be blacked in the meantime. If the oil should make the leather too stiff, decrease the proportion of paraffine, and vice versa.

I have used this for eight years past, and

boots have lasted me two winters, the uppers always remaining soft, and never cracking. I have tried beeswax, rosin, tar, etc., but never found any other preparation half so good.

HARD TIMES IN THE SOUTH.—A correspondent, writing from Texas, says: "I regret I can not take the JOURNAL this year. Our disasters were very great here last year. Prospects are now brightening somewhat; and as soon as starvation leaves my door, you will have my name on your list again. With very high esteem, I remain, yours, etc."

[This statement is evidently true, and is applicable to tens of thousands throughout the "sunny South." But with energy, enterprise, and intelligence, that land may be made such a paradise as we read of; work, work—work will do it.

It was "No Go."—We received through a lady friend a hand-bill, of which the following is a copy:

"Phrenology False. A popular lecture on the fallacies and inconsistencies of this science will be delivered at Room No. 44, Cooper Institute, on Friday evening, Feb. 28, 1868. By T. KILLINGWORTH SLINGS. Admission, twenty-five cents. Tickets to be obtained at the store, No. 31 Seventh Street, and at the door of the lecture-room. To commence at eight o'clock."

On reading this announcement, the editor, having previous engagements, dispatched two competent shorthand writers, with instructions to bring a complete or verbatim report, that he might publish the same, with such comments as the case might seem to demand. Imagine his disappointment next morning on receiving the following:

"The lecturer arrived at the appointed hour—eight o'clock—and was favored with an audience consisting of two men and four children, one of which, a boy about twelve, acted as doorkeeper.

"Mr. Staines remarked that he would deliver the lecture if the audience wished it, but they suggested that it would hardly be advisable, probably sorry that they gave the 25 cents. So, after the money was refunded—75 cents—the meeting adjourned *sine die*.

We felt a pang of pity for the enterprising lecturer, who had incurred expenses for hall rent, show-bills, advertising, door tending, and no doubt the wear and tear of much study and anxious thought. He rang the bell, blew the horn, but few heard. He baited his hook, and cast in his line, but caught no fish. He fired his gun, but got no game. He spent his money, and got only empty benches.

PHOTOGRAPHY IN WHEELING, West Va.—We have often acknowledged our obligations for favors to Mr. A. C. Partridge, of that city, who has promptly sent us the likenesses of noted men with which to illustrate our science. His most recent favor is a *carte-de-visite* of John Shafer, *alias* Joseph Elsie, murderer of Joseph Lillenthal, Aloys Ulrick, and Rudolph Tentor, and also the would-be assassin of John White, Esq., of Parkersburg, W. Va. When we can obtain the facts as to his birthplace, age, occupation, habits, etc., we will publish him in this JOURNAL.

It is with regret that we notice the following in the photographic journals:

"Gallery for sale, at a great bargain. Partridge's gallery and stock depot, in Wheeling, West Va. For twenty years the leading gallery and the only stock house in that section of the country. Owing to the ill health of the proprietor, it will be transferred to any one who will pay for the apparatus and stock on hand. For particulars, address A. C. PARTRIDGE, Wheeling, W. Va."

We regard this a rare opportunity for

one with the necessary means and enterprise to avail himself of an established business in a beautiful art. As heretofore, it must continue to be pleasant and profitable.

DOUBLE SUBSCRIPTION.—We have made arrangements with other publishers by which we can associate several magazines respectively with the PHRENOLOGICAL JOURNAL, and offer both at a reduction from the aggregate price.

We can send the JOURNAL and PUTNAM'S MAGAZINE (the subscription price of which is \$4) to new subscribers for one year for \$6. The JOURNAL and HOURS AT HOME for \$5. The JOURNAL and LIPPINCOTT'S MAGAZINE for \$6. The JOURNAL and THE WEEK for \$5. The JOURNAL and the ROUND TABLE for \$7. The JOURNAL and the RIVERSIDE MAGAZINE for \$4 50. The JOURNAL and DEMOREST'S MAGAZINE for \$5. The JOURNAL and the ATLANTIC MONTHLY for \$6. The JOURNAL and LIVING AGE for \$9. We will send any magazine, or newspaper, or book, published in New York, at publisher's prices. Address this office.

General Items.

TENNESSEE MANUAL LABOR UNIVERSITY, incorporated December 10th, 1867. Instituted for the benefit of colored youth, etc. The circular says: "This is the first application ever made by the colored people of the South for assistance to found an institution for the improvement of their race. We take pleasure in commending this enterprise and its authors to the confidence and liberality of a generous public. We have every confidence in the capacity, zeal, and integrity of the parties to perfect the design they have in view." Signed: JOSEPH S. FOWLER, United States Senator; A. J. FLETCHER, Secretary of State; G. W. BLACKBURN, Comptroller; JOHN R. HENRY, Treasurer; W. P. CARLIN, Bvt.-Maj. Gen'l., and Asst. Com. Freedmen's Bureau; JOHN EATON, Jr., Sup't. Public Instruction.

Here is the indorsement of the Governor of Tennessee:

NASHVILLE, October 12, 1867.

HON. EUGENE CARR, Mayor of Chattanooga: *Dear Sir*—This will introduce to you Rev. Peter Lowry, of this city, who is engaged in raising funds for the purpose of endowing a Manual Labor College, for the benefit of his race. I commend him and his object to you, and all good men, as worthy of your confidence and support. By order of GOVERNOR BROWNLOW. H. H. THOMAS, Acting Private Secretary.

Here is a chance for charity. Let the rich men, North and South, come up to the help of the poor. By thoroughly educating even a limited number of colored youth, they will soon be able to educate many more. By all means let the work go on. Who knows but what this may prove the first step toward effectively educating and civilizing Africa itself?

CONANT'S BINDER. This is a device for binding magazines similar to the PHRENOLOGICAL JOURNAL, *Agricultural*, etc. Each number as it comes out can be added by the subscriber, and thus all the numbers be preserved during the year. If desired, the covers can then be removed, and they will serve for subsequent volumes, or they constitute a cheap binding to remain permanently. Price for No. 4, the size for this JOURNAL, is 75 cents prepaid.

"TALKING TURKEY." The old story has it, that a white man and an Indian went out hunting together, agreeing

to share the game equally; an owl and a turkey were secured as the product of the hunt, and they were to divide. The white man said to the Indian, "I will take the turkey, and you may take the owl; or you may take the owl, and I will take the turkey." The Indian instantly remarked, "White man no talk turkey to Indian at all." But the case reported below is by a young lady—a Friend or Quaker—who writes us from Ohio, relating how she made turkey pay for the PHRENOLOGICAL JOURNAL. She says:

"I will tell you how I got the money to pay my subscription. I raised twelve turkeys last year, and sold them, and had enough to take the JOURNAL, and a good bit besides. I could not do without it; and you may consider me a *life* subscriber. I read everything in it."

That young lady will make a good help-mate for a worthy young man.

IN THE "DORG" BUSINESS.

When we proposed to fill city orders for country friends, we did not expect so soon to be called on to visit the dog market. We have sent new milch "goats" by ship and by rail for those needing milk for very young babes, where the supply of the natural article was short at home; and we rejoice to learn, with the best results, babes and goats are doing as well as could be expected. We have also sent Shanghais, Dorkings, Polanders, Black Spanish fowl, Seabrights, and bantams, rabbits, guinea pigs—and other pigs—turkeys, geese, ducks, doves, and the like by express to the rural districts; while there is no end to the orders we receive for guns, sewing machines, melodeons, pianos, books, seeds, clothes washers, wringers, and other household objects. Indeed, we have bought and shipped a thousand barrels of apples to European markets by a single steamer. Being on the spot, we can take advantage of circumstances, and buy at wholesale rates, and give our friends the benefit of our knowledge and experience. But we do nothing on the *credit* system. Cash with the order is the rule; and when we C. O. D. we must have funds enough to cover expenses should goods be returned or damaged. Here is a copy of a letter of inquiry, which explains itself:

PETROLEUM CENTER. *Dear Sir*—As I have seen it stated in my JOURNAL that anything, except whisky and tobacco, can be ordered through you, I have taken the liberty of writing to learn whether you can ship me a black-and-tan pup. I could, of course, send to the dog-fanciers, but am afraid that might be the last I would hear of dog or money. I have ordered books twice through you, and of course I would feel perfectly secure in sending the money to you, as I am a constant reader of your JOURNAL, and know that the house is "O. K." I want a black-and-tan dog, four to six months old, full blooded, one that when fully matured will weigh about five or six pounds; and I am perfectly willing to trust your judgment for picking out a neat and intelligent animal (must have a good head, of course), so I will give you no further instruction; I will simply say I want lightness and activity. Please let me know what you can afford to place a dog of the above description at the express office for, and I will send the amount. Truly yours, etc.

For the information of others, as well as our correspondent, we may state that prices range from \$5 to \$50; depending on age, sex, size, quality, and culture. The smallest dog may bring the highest price. But fancy specimens are not generally for sale. They are taken up and nursed by very fine ladies, as substitutes for live babies.

GARDEN SEEDS AND FLOWER SEEDS. In our February and March numbers we gave a list, with prices, post-

paid. If any of our distant readers wish any of these seeds, they may be obtained prepaid, by return of the first post. If for spring planting, they should be ordered at once.

MR. W. W. WILCOX, of Middletown, Conn., has patented an invention which he calls the Galvanized Iron Trellis, intended for flower and vegetable gardens. The utility of this novelty is set forth in a circular, which the manufacturer will send on receipt of stamp.

A STRONG WORD.—An office-boy in an establishment "down town" was much annoyed by the men in the office on account of their carelessness in spilling water on the floor about the wash-stand. Accordingly he wrote an order to the effect that such carelessness can be endured no longer, etc., signed it in the name of the proprietor, and placed it in a conspicuous place. Then by way of emphasis he added, "This order is to be strictly prohibited."

A LITTLE girl possessed with the idea that "Santa Claus" really came down the chimney, to bring his gifts, said to her mother that she hoped he would bring her a doll. Her mother told her that she must ask "Santa Claus" for a doll, if she wished for one. The little girl immediately went to the fireplace and called out, "Santa Claus, I want you should bring me a doll." Her grandmother was in the room below, and hearing what the child said, answered, "Yes, I'll bring you a doll." The little girl was not prepared for this, and being very much startled, immediately left for another part of the room, probably thinking that although she did not object to "Santa Claus" bringing her a doll, she would rather he would not say anything about it.

LITTLE five-year-old Maud was seated on the floor by her mother, trying to sew. Suddenly looking up she said, "Mamma, I was thinking that God must be getting quite along in years."

HEALTH REFORM IN VIRGINIA. AN OLD APPLE TREE. FLOUR FOR SHIPPING.—Commissioners chosen by an organized society have selected, through their agents, a place called EVERGREEN HOUSE, five miles from Harper's Ferry, as the best adapted to their wants for a colony of Health Reformers. They have a farm of 230 acres on which to commence operations. It is said that the natural advantages of this region can not be surpassed in America; soil, climate, water, and scenery are all that can be desired. A correspondent writes us at length on the subject, from which we copy several extracts, viz.:

"Near us is the original London plppin apple-tree, now known to be 80 years old, and it has borne from 45 to 75 bushels ever since it can be remembered. The apples are of the largest size, and of the best quality, quite as large as a Greening; none who eat of them dare call them less than first-rate.

"The tree is about 45 feet high, and was wide across the top, until two years ago, when it was partially broken down, but is yet full of life. The oldest inhabitants can not remember when the apple crop failed. It is about 650 feet above tide water. As to the scenery here, Thomas Jefferson once said it was well worth a voyage across the Atlantic to see. This piedmont section is renowned for producing the best quality of wheat, to manufacture flour for shipping across the equator, on long voyages.

"Having been in the nursery and seed business here for twenty years, I challenge any one to find a better spot for grain, fruit, and vegetable growing. Persons wishing further information can inclose a stamp, and address OLIVER TAYLOR, Lincoln, Loudon County, Virginia."

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED, and charged according to the space occupied, at the rate of \$1 a line.]

THE HYGEIAN HOME.—At this establishment all the Water-Cure appliances are given, with the Swedish Movements and Electricity. Send for our circular. Address A. SMITH, M.D., Wernersville, Berks County, Pa.

THE MOVEMENT-CURE.—Chronic Invalids may learn the particulars of this mode of treatment by sending for Dr. Geo. H. Taylor's illustrated sketch of the Movement-Cure, 25 cents. Address 67 West 38th Street, N. Y. City. Aug., 11.

MRS. E. DE LA VERGNE, M.D., 325 ADELPHI STREET, BROOKLYN.

HYGIENIC CURE, BUFFALO, N. Y.—Compressed Air Baths, Turkish Baths, Electric Baths, and all the appliances of a first-class Cure. Please send for a Circular. Address H. P. BURDICK, M.D., or Mrs. BRYANT BURDICK, M.D., Burdick House, Buffalo, N. Y.

THE KITTATINNY, introduced by the subscriber, is everywhere acknowledged the very BEST BLACKBERRY yet known. Having the original stock, we are enabled to furnish fruit growers and amateurs genuine plants in large or small quantities at low rates.

We have also the WILSON Blackberry, and a good stock of the BEST Raspberries, Strawberries, Currants, and Grapes.

Reader, if you want genuine plants of the best varieties that will give satisfaction, we can supply you at low rates.

For catalogues, etc., address E. & J. C. WILLIAMS, Montclair, N. J.

See JOURNAL for October, 1867.
[For five new subscribers to the PHRENOLOGICAL JOURNAL, at \$3 each, we will send one dozen first-class plants, worth \$5, post-paid by mail. Address this office.

N. B.—This offer relates strictly to NEW subscribers. Feb. 31.*

INSTITUTE of Practical Civil Engineering, Surveying, and Drawing, at Tolleston, Ind. For Circular, address A. VANDER NAILLEN.

WORKS ON MAN.—For New Illustrated Catalogue of best Books on Physiology, Anatomy, Gymnastics, Dietetics, Physiognomy, Shorthand Writing, Memory, Self-Improvement, Phrenology, and Ethnology, send two stamps to S. R. WELLS, Publisher, No. 389 Broadway, New York. Agents wanted.

JENKINS' VEST-POCKET LEXICON. An English Dictionary of all except Familiar Words; including the Principal Scientific and Technical Terms, and Foreign Monies, Weights, and Measures. Price, in Gilt Morocco, Tuck, \$1; in Leather Gilt, 75 cents. Sent post-paid by S. R. WELLS, New York.

TO PHRENOLOGISTS, LECTURERS, AND OTHERS. A Complete Set of Phrenological and Physiological Plates for sale, by one who is obliged to give up the business. It is altogether the most complete apparatus of the kind in the country. See next page, and address

S. R. WELLS, 389 Broadway, N. Y.

Advertisements.

[Announcements for this or the preceding department must reach the publishers by the 1st of the month preceding the date in which they are intended to appear. Terms for advertising, 50 cents a line, or \$50 a column.]

ELECTRO VITAL.—DR. JEROME KIDDER'S Highest Premium Electro-Medical Apparatus, warranted greater magnetic power of any called magnetic.

The patent labels of the United States, England, and France are on the machine itself, as the law requires for all genuine patentee districts.

"The best yet devised in any country for the treatment of disease."—Dr. Hammond, late Surgeon-General U. S. A.

Caution.—The latest improved bears the patent labels of 1860 and 1866.

Address DR. J. KIDDER, 478 Broadway, New York.

PACKARD'S MONTHLY—AN AMERICAN MAGAZINE devoted to the interests and adapted to the tastes of the Young Men of the Country.

Subscription Price: One Dollar a year, in advance; Single Copies, Fifteen Cents.

This magazine is designed to meet the demand for a first-class Young Men's Magazine; and without aiming to compete, in literary excellence, with any of the established monthlies, it will maintain a character for intelligent devotion to its purpose which can not fail to command the respect and co-operation of the class in whose interest it labors. Each number will contain a brief biographical sketch—with portrait—of some eminent American, living or dead, together with original articles from some of our best writers and thinkers.

The first number, commencing with April, will be issued about the 15th of March. The following is a partial list of its contents:

1.—BIOGRAPHICAL, HISTORICAL, AND MISCELLANEOUS.

Biography (with portrait) of HENRY DWIGHT STRATTON, founder of the International Chain of Business Colleges—Sketches of the Lives and Characters of the Four Wealthy Men of America: STEPHEN GIRARD, JOHN JACOB ASTOR, CORNELIUS VANDERBILT, and ALEXANDER T. STEWART—Commercial Anecdotes, and Reminiscences of Great Men.

2.—CONTRIBUTED ARTICLES.

"CITY AND COUNTRY: A Plain Talk with Young Men," by Horace Greeley.—"THE LESSON OF THE HOUR," by J. L. Hunt, A.M.—"OUR NATIONAL LITERATURE," by an eminent writer.

3.—EDITORIALS AND PARAGRAPHS.

Our Mission—Indecencies of Art—Responsibility of Journalists—International Copyright—Economy is Wealth—The Christening, and How it Happened—The "President's English"—English Composition—Inverted Sentences—He "Did It"—Make Friends—Words of Cheer—Answers to Correspondents, etc.

4.—NOTICES AND REVIEWS.

CLUB RATES.

The following Club Rates will hold good until the 1st of May, the subscription commencing with the first number:

1. To each single subscriber who sends us \$1, we will, in addition to the magazine for one year, send, post-paid, the Counting-House edition of Mr. Greeley's book on "Success in Business," advertised elsewhere; or

2. To such subscriber we will send, prepaid, one fifty-cent box of Williams & Packard's fine-pointed, double-elastic steel pen—the best pen for business writing ever manufactured; or

3. We will send, prepaid, five specimen pages of Williams & Packard's "Gems of Penmanship," the most artistic work on this subject ever produced, each page of which is a study in itself.

4. To the person who will send us a club of twenty-five subscribers, accompanied by the subscription price, we will (besides sending to each of the subscribers whichever of the above premiums is designated) send, prepaid, Williams & Packard's Gems of Penmanship, beautifully bound in fine cloth, and, in all respects, the most beautiful book of the kind ever published. The uniform price of this book is \$5.

We will send specimen copies of *The Monthly* after March 1, with blanks for club lists, on receipt of two three-cent stamps.

All communications should be addressed to

S. S. Packard

387 BROADWAY, NEW YORK.

THE NEW YORK SUN.—An Independent Daily Newspaper, giving All the News in a fresh, readable, attractive manner, condensed so that a business man can find time to read the whole. CHARLES A. DANA, Editor and Manager. Price: \$5 a year; \$1 50 for three months.

THE WEEKLY SUN.

Prepared with great care for country subscribers. Farmers' Club fully reported. Markets accurately given. Horticultural and Agricultural Department edited by ANDREW S. FELLER. Great variety of interesting miscellaneous reading, making it a first-rate

GENERAL FAMILY NEWSPAPER.

Price: \$1 a year; 20 copies to one address, \$17; 50 copies to one address, \$35.

Subscribers to the WEEKLY SUN who wish also to receive the *Rural New Yorker*—one of the best agricultural and literary journals in the country—can do so on very advantageous terms. The two papers will be sent for one year to any one remitting \$3 25.

THE SEMI-WEEKLY SUN.

Same size and character as the Weekly, but furnishing twice as much reading matter, and giving the News with greater freshness. Price: \$3 a year; 10 copies to one address, \$18; 20 copies to one address, \$35; 50 copies to one address, \$80; always in advance.

Address:

THE SUN, New York City.

CHEAPEST BOOKSTORE IN THE WORLD.—New Catalogue, No. 18, free. Send a stamp. 100,000 Old and New Books on hand. Immense Prices paid for Old Books. LEGGATT BROTHERS, 113 Nassau Street, New York.

THE CHURCH UNION.

"The Freest Organ of Thought in the World." It aims to lead public opinion upon all subjects, and to represent or echo the sentiments of no party or sect. Edited by seven editors, from seven different denominations, whose names are not known even to each other.

Terms, per year, \$3 50. Terms to Agents (for each subscriber), \$1.

The CHURCH UNION is the only paper that publishes Henry Ward Beecher's Sermons, which it does each week, publishing the morning or evening Sermon of the Sunday preceding. Send for a specimen copy, including 10 cents.

Address, CHARLES ALBERTSON, Publisher, 9 Beekman Street, New York City.

Sent post-paid on receipt of price.

For wholesale terms to agents please address S. R. WELLS, 389 Broadway, N. Y.

"PUBLIC SPIRIT,"—A MAGAZINE FOR THE MILLION.—The Publisher of this new and distinctively American monthly Magazine can not refrain, with the successful close of its Second Volume, from expressing his thanks for the patronage which has sustained it during the perilous first year, and secured for it an unquestionable permanence.

Inspired by this result, and enabled now clearly to see his way to more signal success, he has made arrangements for the improvement of the Magazine in all its departments, and can confidently promise for it hereafter a degree of merit equal at least to that of any contemporary.

With the commencement of the **THIRD VOLUME**, "PUBLIC SPIRIT" will be so

ENLARGED AND IMPROVED as to place it in the front rank of elegant periodical literature. Its range of topics will be increased, while it will demand for their treatment a higher grade of ability. The best attainable talent will be employed, irrespective of the reputation of the writers. Indeed, its sympathies will always be given to developing genius, and aid gladly rendered in securing for it deserved recognition.

As indicated by its name, the character of "PUBLIC SPIRIT" will be thoroughly American, but in the highest and most liberal sense. Its specific aim will be to fill a place between the best newspaper literature and the ponderous matter of more pretensions magazines. While paying due court to the Muses, and by no means disdaining the fascinations of Fiction, it will give much attention to those practical topics which closely concern our material welfare and the comfort of our daily lives. By studying brevity in treatment, it will secure increased variety in subject; and thus gratify diverse tastes while adding to the stock of useful knowledge.

LITERATURE AND THE FINE ARTS will receive special attention, but not at the expense of other subjects. New books of apparent merit will be carefully read; and short criticisms given of those only which deserve mention. Elaborate reviews, except for the elucidation of some important subject, will not be allowed to displace more entertaining matter. The same policy will control our criticisms on Art.

While "PUBLIC SPIRIT" will not tolerate the intrusion of partisan politics, yet it can not be indifferent to great events, or ignore the vital questions on which depend the improvement of Society and the stability of our Government. Reconstruction, Finance, Suffrage, and similar subjects will occasionally be treated in brief, well-written and reflective articles. In short, "PUBLIC SPIRIT" is to be

A MAGAZINE OF THE AGE, thoroughly alive, free from all demoralizing influence, and aiming to improve and amuse the people.

Notwithstanding its excellent and expressive features, the Publisher is resolved that "PUBLIC SPIRIT" shall be the

CHEAPEST MAGAZINE OF THE DAY. Believing in the breadth of the field he has undertaken to occupy, he has determined worthily to fill it by achieving

AN UNPARALLELED CIRCULATION. The more easily to accomplish this result, the price of the Magazine, thus enlarged and in every way improved, will be only

TWENTY-FIVE CENTS per number, or \$3 per annum.

The advantages of this Magazine as an **ADVERTISING MEDIUM** must be apparent from its character. The prices have been arranged on a scale of liberality, and are as follows:

ONE MONTH. ONE YEAR.
Per Line.....20 cts. Per Line.....\$ 2 00
Half-Page.....\$15 00 Half-Page.....150 00
Page.....25 00 Page.....250 00

CLUB RATES—Two Copies for Five Dollars; Three Copies for Seven Dollars; Five Copies for Ten Dollars; and each additional Copy, Two Dollars. For every Club of Twenty Subscribers, an Extra Copy will be furnished **GRATIS**. **SPECIMEN NUMBERS** sent to any Address, on receipt of Twenty Cents.

THE AMERICAN NEWS COMPANY are Agents for "PUBLIC SPIRIT," and will supply it through all newsdealers; or it can be ordered direct from the Publisher,

LE GRAND BENEDICT,
No. 37 Park Row, New York.

ORATORY—SACRED AND SECULAR;

OR, THE EXTEMPORANEOUS SPEAKER. Including a Chairman's Guide for conducting Public Meetings according to the best Parliamentary forms. By Wm. FITZGERALD, with an Introduction by Hon. JOHN A. BINGHAM, M.C. A clear and succinct Exposition of the Rules and Methods of Practice by which Readiness in the Expression of Thought, and an acceptable style, may be acquired, both in composition and gesture. Beveled boards. One handsome 12mo volume of 220 pages, tinted paper, post-paid, \$1 50. S. R. Wells, publisher, 389 Broadway, New York.

This book aspires to a place which has hitherto been vacant in the world of letters. Many works describe the external qualities of an oration, and a few treat of its substance. Not more than one or two embrace both departments, and trace the process by which thoughts, that may be very vague at first, and expression in definite and powerfully spoken words. And even these are deficient in illustrative examples and practical directions for the student, as well as diffuse and obscure. "ORATORY" covers the whole field, and shows in a plain and simple style how every hindrance in the way of successful speech may be removed. The following sketch will give a fuller idea of the purpose of the book.

The different kinds of oratory—some six in all—from the fully written to the utterly unprepared, are considered, and the preference given to that in which the matter is carefully pre-arranged and the words extemporized. This preference is powerfully enforced by Hon. JOHN A. BINGHAM, who shows, in an able introductory letter, that extemporaneous speaking is the most natural and therefore the highest of all modes.

Several chapters are devoted to *general preparation*, a subject of great importance: for while men undergo long courses of training for trades and professions, oratory is often thought to be accessible without previous culture. The mental qualities necessary for efficient speech are specified at length, and full directions given for increasing their efficiency and acquiring the knowledge necessary to form a solid basis for eloquence. In this section a mass of valuable information and suggestion is

The book is written in a compact but graceful style, and from beginning to end is thoroughly readable. We confidently believe that the public will find it, in its special province, to be the best and most useful American treatise yet published. The external appearance of the volume is very fine. Its handsome binding, tinted paper, and clear type are in perfect correspondence with the permanent value of its contents. Agents wanted.

ACTIVE AGENTS can make

from five to ten dollars daily in selling Mr. and Mrs. LYMAN's new and brilliant written book—**THE PHILOSOPHY OF HOUSEKEEPING**. High percentage and exclusive territory given. For circulars and agencies apply to **GOODWIN & BETTS**, Hartford, Ct. Oct. 7.

IMPORTANT TO OWNERS OF

STOCK.—THE AMERICAN STOCK JOURNAL AND FARMERS' AND STOCK BREEDERS' ADVERTISER.

A first-class Monthly Journal devoted to Farming and Stock Breeding. Each number contains thirty-six large double-column pages, illustrated with numerous engravings. Only one dollar a year. Specimen copies free, for stamp.

HORSE AND CATTLE DOCTOR FREE.

The publishers of the **AMERICAN STOCK JOURNAL** have established a Veterinary Department in the columns of the Journal, which is placed under the charge of a distinguished Veterinary Professor, whose duty it is to receive questions as to the ailments or injuries of all kinds of stock, and to answer in *print* in connection with the question, how they should be treated for a cure. These prescriptions are given *gratis*, and thus every subscriber to the Journal has always at his command a Veterinary Surgeon *free of charge*. Every Farmer and Stock Breeder should subscribe for it. We will send from June until the 1st of January for 50 cents.

Address **N. F. BOYER & CO.**
S. Tex. Gum Tree, Chester Co., Pa.

accumulated which could not easily be found elsewhere, and the whole enlivened by frequent anecdotes of speakers remarkable for their possession of the qualities referred to, or for their lack of them.

Parts Second and Third treat of the preparation and delivery of particular discourses. The divers embarrassments and exigencies that may arise in the course of speech are discussed with a clearness of insight which implies that the author must have met them in his own experience. Chapter fourth, which describes the several stages of a discourse, can not be read by the practiced speaker without arousing feelings like those of an old soldier when he listens to a well-told tale of a sharp battle. Hints are given for all departments of address from preaching to stump oratory, and scarcely any one whose manner of speech is not unalterably fixed, can fail to find something that may be of advantage to him.

Part Fourth is, perhaps, generally, the most interesting of the book. Short sketches of the more characteristic achievements of celebrated speakers are given, with particular accounts of their modes of preparation. Many of the latter are received directly from the speakers themselves, and their testimony is overwhelmingly in favor of unwritten eloquence.

The Chairman's Guide, or rules of order, adapted to the conducting of all kinds of public meetings, is condensed into an appendix. Nothing of importance in parliamentary usage is omitted, and the whole thrown into a very concise and convenient form. This feature will be found of great value to those participating in literary societies, debating clubs, or other assemblies.

For the Family.

THE METHODIST: an eight-page weekly newspaper—Religious and Literary.

This Journal is now in its eighth year of highly successful publication. It is edited by Rev. George R. Crooks, D.D., assisted by the following contributors: Rev. Abel Stevens, LL.D., Rev. KATHRINA. Her Life and Mine:

in a Poem. By J. G. Holland, Author of "Bitter Sweet." One vol., 12mo., about 300 pages. Price: \$1 50; full gilt, \$3 50.

"Though popular before, through his numerous publications, Dr. Holland's last production has written his name indelibly on the hearts of humanity. His KATHRINA will be translated into other languages, and will become classical when he shall have gone to the spirit-land. We shall attempt no description of the book, but simply ask all to read it, to remember its lessons, and be improved by them."

Sent by mail, post-paid. Address S. R. WELLS, 389 Broadway, New York.

THE PEOPLE'S MAGAZINE, an Illustrated Miscellany of Instructive and Amusing Literature.

Each number has Two Full-Page Illustrations, one of which will be a beautifully colored CHROMO-LITHOGRAPH, alone worth more than the price of the number, besides numerous Wood Engravings.

It is printed in clear, legible type, on extra thick paper. 64 large pages, price only 25 cents.

For sale by all the principal Bookstores and News Depots throughout the country. THE PEOPLE'S MAGAZINE has a circulation already more than double that of any imported monthly; it is becoming rapidly popular, and its sale increases with every new issue.

NOTICES OF THE PRESS.

It has many fine illustrations, and an admirable collection of reading matter. We cordially recommend this Magazine.—*American Churchman*, Chicago.

We can not speak too highly of this beautiful and instructive publication. Printed in the best style, with fine chromo plates and excellent wood engravings, together with the best reading matter, and all for twenty-five cents a number, it certainly has every attraction, and deserves the largest success.—*The Episcopalian*, Philadelphia.

THE PEOPLE'S MAGAZINE is pre-eminently what its name indicates, and should find a place in every house.—*Evening Mail*.

It is a very handsome as well as a very entertaining publication, and deserves to have a large circulation in this country, not only for the excellence of its articles, but because of its many other good features, one of which is its beautiful illustrations, and another its cheapness.—*Press*, Providence.

This Magazine is beautifully printed on excellent paper, and is cleverly and copiously illustrated.—*Baltimore Gazette*.

The character of the work will recommend itself to any person who will take the pains to examine it.—*Journal*, Indianapolis.

Subscriptions for the year, \$3. Two copies, \$5 50; three copies, \$8; five copies, \$12 50; ten copies, \$25, and an extra copy free.

Liberal inducements offered to Canvasers and Agents. Send for a circular. Sample numbers sent by mail prepaid for 25 cents. Send remittances direct to

AMERICAN ARTISAN AND PATENT RECORD.—New Series.

The *American Artisan*, now in the fourth year of its publication, is a Weekly Journal, devoted to fostering the interests of Artisans and Manufacturers, encouraging the genius of Inventors, and protecting the rights of Patentes.

Each number contains numerous original engravings and descriptions of new machinery, etc., both American and Foreign; reliable receipts for use in the field, the workshop, and the household; practical rules for mechanics and advice to farmers; "Mechanical Movements," and other useful lessons for young artisans; the official list of claims of all patents issued weekly from the United States Patent Office; reports of law cases relating to patents, etc.

Each number of the *American Artisan* contains sixteen pages of instructive and interesting reading matter, in which the progress of the arts and sciences is recorded in familiar language. Twenty-six numbers form a handsome half-yearly volume. The columns of the *American Artisan* are rendered attractive by articles from the pens of many talented American writers upon scientific and mechanical subjects.

Terms of subscription: Single copies, by mail, per year, \$2 50 in advance. Single copies, by mail, six months, \$1 25 in advance.

The publishers of the *American Artisan* are also extensively engaged as Solicitors of American and Foreign Patents, and will promptly forward to all who desire it, per mail, gratis, a pamphlet, entitled "Important Information for Inventors and Patentees." Address

BROWN, COOMBS & CO.,
Proprietors of the *American Artisan*,
Mch. U. No. 189 Broadway, New York.

LIFE IN THE WEST; or, Stories of the Mississippi Valley. By N. C. Meeker, Agricultural Editor of the New York Tribune and Reporter of Farmers' Club. One large 12mo volume, on tinted paper, pp. 360, beveled boards. Price \$2. Published by SAMUEL R. WELLS, 389 Broadway, New York. Sent post-paid.

WHAT THE PAPERS SAY.

"Mr. MEEKER has successfully caught the peculiar features of the scene. His stories present a vivid illustration of the life which he has largely shared in his personal experience. They are founded on events of actual occurrence, and have received but little embellishment from the fancy of the author. Of course, he has not neglected the comic aspects of the situation, but they are made to alternate with frequent passages of simple pathos. The style of the book is happily adapted to its prevailing themes. The short, crisp sentences in which the author delights have a breezy fragrance, like a fresh prairie wind."—*N. Y. Tribune*.

"They are plain, practical transcripts of personal experience, and offer the best means, except direct contact, for learning the spirit, tone, and characteristics of Western rural society. The volume contains also a brief description of the Mississippi valley, particularly the soil, climate, products, and other items of importance to emigrants and business men."—*Home Journal*.

"If you are going West, or want to go West, or have friends that talk of going West, if they can sell out, this is the book for you."—*N. Y. World*.

"The stories are exceedingly miscellaneous in character, some amusing, and others plaintive and pathetic. They reveal a state of society which most Northern and Eastern people of the present generation know very little about. Read LIFE IN THE WEST."—*Liberal Christian*.

"A service of years as Illinois correspondent of the New York Tribune, a long residence in the West, and frequent journeys throughout its whole extent, have given the author peculiar advantages for producing the entertaining and instructive volume before us."—*Sunday-School Times*.

"Has a certain hearty Western flavor about it that will prove attractive to the reader."—*Springfield Republican*.

THE NEW YORK SUN.—An Independent Daily Newspaper, giving All the News in a fresh, readable, attractive manner, condensed so that a business man can find time to read the whole. CHARLES A. DANA, Editor and Manager. Price: \$6 a year; \$1 50 for three months.

THE WEEKLY SUN.

Prepared with great care for country subscribers. Farmers' Club fully reported. Markets accurately given. Horticultural and Agricultural Department edited by ANDREW S. FULLER. Great variety of interesting miscellaneous reading, making it a first-rate

GENERAL FAMILY NEWSPAPER.

Price: \$1 a year; 20 copies to one address, \$17; 50 copies to one address, \$35.

Subscribers to the WEEKLY SUN who wish also to receive the *Rural New Yorker*—one of the best agricultural and literary journals in the country—can do so on very advantageous terms. The two papers will be sent for one year to any one remitting \$3 25.

THE SEMI-WEEKLY SUN.

Same size and character as the Weekly, but furnishing twice as much reading matter, and giving the News with greater freshness. Price: \$2 a year; 10 copies to one address, \$18; 20 copies to one address, \$35; 50 copies to one address, \$80; always in advance. Apr. 3t. Address: THE SUN, New York City.

KATHRINA. Her Life and Mine: In a Poem. By J. G. Holland, Author of "Bitter Sweet." One vol. 12mo., about 300 pages. Price: \$1 50; full gilt, \$3 50.

"Though popular before, through his numerous publications, Dr. Holland's last production has written his name indelibly on the hearts of humanity. His KATHRINA

"Full of facts, philosophy, history, and personal experience."—*Ohio Farmer*.

"Good stories of their kind; healthy and moral in tone."—*N. Y. Tablet*.

"Not only a fascinating work, but one, likewise, from which much may be learned."—*Religious Herald*.

"This collection of stories—LIFE IN THE WEST—is one of the very best records of the great West, and perfectly original. It has all Walt Whitman's merits, with none of his faults."—*Phil. Post*.

"Aside from the interest attached to the narrative, the book contains much valuable information concerning the States which border on the great river, including land offices."—*Phil. Evening Telegraph*.

"He is in full sympathy with the people of the great West; and in a series of short stories presents Western life, habits, and manners in a true and attractive form."—*Phil. Inquirer*.

"We predict for it a large sale in the West; and it will no doubt become popular with the young folks of all agricultural districts."—*N. Y. Evening Mail*.

"As a picture of society and social affairs in the West, it is more correct than flattering, though it is, on the whole, favorable in its conclusions."—*Christian Advocate*.

"Some of the stories are founded on incidents in the late war, and show in a good light the spirit of the Western boys."—*Rural New Yorker*.

Any number of similar testimonials could be added. The book is indispensable to those who would obtain the greatest amount of valuable information and richest entertainment at the smallest cost of time and money. What commercial reports are to the merchant, this work is, or should be, to the family. It is a panoramic view of Western life, painted, or printed, by one who has lived there. Agents wanted.

ESTABLISHED 1861—THE GREAT AMERICAN TEA COMPANY

HAVE JUST RECEIVED TWO FULL CARGOES OF THE

FINEST NEW CROP TEAS.

22,000 Half Chests by ship Golden State.
12,000 Half Chests by ship George Shotton.

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyane districts of China, which are unrivaled for fineness and sweetness of flavor.

To give our readers an idea of the profits which have been made in the Tea Trade (previous to the establishment of the GREAT AMERICAN TEA COMPANY), we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors.

First. The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in this country have made their immense fortunes through their Houses in China.

Second. The Banker makes large profits upon the foreign exchange used in the purchase of Teas.

Third. The Importer makes a profit of 30 to 50 per cent in many cases.

Fourth. On its arrival here it is sold by the cargo, and the purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth. The Speculator sells it to the Wholesale Tea Dealer in the lines, at a profit of 10 to 15 per cent.

Sixth. The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh. The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth. The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so much lower than small dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages, and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same price, with the small additional expense of transportation, as though they bought them at our Warehouse in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this: Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price-List, as published in the paper, or in our circulars. Write the names, kinds, and amounts plainly on the list, as seen in the club-order published below, and when the club is complete send it to us by mail, and

we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members can divide equitably among themselves.

Parties sending club or other orders for less than thirty dollars, had better send Post-office draft or money with their orders, to save the expense of collections by express; but larger orders we will forward by express, to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for clubs of less than \$30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom-House stores to our Warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within thirty days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of clubs. They are sold at cargo prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

COLORED (Black), 70c., 80c., 90c., best, \$1 per lb.
MIXED (Green and Black), 70c., 80c., 90c., best, \$1 per lb.
ENGLISH BREAKFAST (Black), 80c., 90c., \$1, \$1 10, best, \$1 20 per lb.
IMPERIAL (Green), 80c., 90c., \$1, \$1 10, best, \$1 25 per lb.
YOUNG HYSON (Green), 80c., 90c., \$1, \$1 10, best \$1 25 per lb.
UNCOLORED JAPAN, 90c., \$1, \$1 10, best, \$1 25 per lb.
GUNPOWDER (Green), \$1 25, best, \$1 50 per lb.

COFFEES ROASTED AND GROUND DAILY.

GROUND COFFEE, 20c., 25c., 30c., 35c., best, 40c., per lb. Hotels, Saloons, Boarding-house keepers, and Families who use large quantities of Coffee, can economize in that article by using our *French Breakfast* and *Dinner Coffee*, which we sell at the low price of 30 c. per lb., and warranted to give perfect satisfaction.

Consumers can save from 50c. to \$1 per lb. by purchasing their Teas of the

COMPLIMENTARY LETTERS FROM CLUBS.

MANHATTAN, KANSAS, July 25, 1867.
GREAT AMERICAN TEA COMPANY,
31 and 33 Vessey Street, New York.

Your "Advocate" is received and circulated. Please accept my thanks. You are extending a blessing to us old tea drinkers in the West.

My profession keeps me in my office, but the limited opportunities I have shall be devoted to the extension of your trade. The orders I have sent have been purely from private families. I have recommended your house to our merchants, with what success you know, not I. They might not like to have their customers see the profits they make.

I remain, very respectfully yours,
LORENZO WESTOVER.

DEARBORNVILLE, MICH., July 6, 1867.
GREAT AMERICAN TEA COMPANY,
31 and 33 Vessey Street, New York.

Gents: This day I forward you, by M. U. Express Company, \$107 50, being amount due you on one box of tea.

It may be proper here to state that the tea received gives entire satisfaction. This makes two orders from this place. Your patrons are so well pleased with the tea that you may expect to furnish us our tea and coffee. I have sent your papers to Linden, Genesee County, in this State, and other places, from whence you may expect to receive orders.

Please accept our thanks for the promptness with which you responded to our order.

Respectfully yours,
AMOS GAGE.

BRUNSWICK, MO., March 26, 1867.
TO THE GREAT AMERICAN TEA COMPANY,
31 and 33 Vessey Street, New York.

The order we sent you last month reached us in due time, and with which we are well pleased. We think there is, at least, 50 to 75 cents difference in your favor, compared with the prices of St. Louis, where we have been buying our teas for several years past. You may expect to receive our future orders.

Yours truly,
MERCHANT BEAZLEY.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the GREAT AMERICAN TEA COMPANY.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name, either wholly or in part, as they are *bores* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

TAKE NOTICE.—Clubs and quantity buyers are only furnished from our Wholesale and Club Department.

Post-Office orders and drafts made payable to the order of the GREAT AMERICAN TEA COMPANY. Direct letters and orders to the

GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vessey Street, New York.

DR. DIO LEWIS' SEMINARY FOR YOUNG LADIES AT LEXINGTON, MASS.

PHYSICO-MENTAL EDUCATION.

THE above cut is an accurate representation of the Lexington House, at Lexington, Mass., in which Dr. Dio Lewis established his well-known school. The building was burned on the 7th of September, 1867. As this institution is the only young ladies' seminary in the country in which a determined and successful attempt has ever been made to combine a thorough scientific physical training with a broad and complete intellectual and moral culture, a few words relating to its history may prove interesting to our readers.

Dr. Lewis' labors on behalf of physical education are so well known to the American public that nothing more than a mere outline, necessary to the completeness of this sketch, will be given. Educated to the medical profession, and engaged during several years in its practice, Dr. Lewis was deeply impressed with the uselessness of pill peddling, and with the great value of preventive measures. Finally, abandoning the practice of his profession, he gave himself during several years to the development of a new system of gymnastics, adapted equally to both sexes, to the old and young, and to the strong and weak. When satisfied that his system had been sufficiently matured to justify the training of teachers in the new school, he removed from the West to Boston, Mass., to establish the **NORMAL INSTITUTE FOR PHYSICAL EDUCATION**. From this institution 270 ladies and gentlemen have graduated, and gone out East, West, North, and South, to act as guides in bodily training.

After several years had been given to the training of teachers in the new school of gymnastics, Dr. Lewis determined to illustrate its possibilities in combining physical and intellectual culture in a young ladies' seminary.

Seeking in New England suitable buildings,

he found them in the Lexington House. Lexington is about ten miles from Boston, and more than two hundred feet above the sea. Free from the fogs so common and unfriendly on the New England coast, and remarkably quiet and orderly, even among New England villages, its selection was found a most happy one. The buildings were fitted up at large expense, and the school began in the autumn of 1864. A large corps of experienced teachers (including Theodore D. Weld, formerly principal of the institution at Eagleswood, N. J.) was engaged. During the first year the pupils numbered 30; during the second year, about 100; and during the third year, 144.

These pupils came from far and near; from California, from Central America, from Missouri, Iowa; in brief, more or less, from every part of our country.

Girls of naturally delicate constitutions were sent to the Institution, and almost without exception they became healthy and strong. Beginning very cautiously with the practice of the mildest forms of muscular movement a few minutes each day, they soon were able to practice two or three hours a day in vigorous gymnastic exercises. Many young ladies came with the condition that they were not to go up-stairs, for they were not able to ascend a flight of stairs. Almost without exception, within a few months, these most delicate girls found themselves able to practice the more active gymnastic exercises for more than two hours a day, and on occasions walked ten or fifteen miles. Careful measurements of the size of the chest under the arms, of the waist, shoulders, and arms, were made when the pupils entered the school. It was found that the average gain in a single year's training was, about the chest, two inches and a half, and much in the same proportion about the waist, arms, and shoulders; while all learned to walk with a grace and dignity quite re-

markable. It perhaps should be remarked that the progress of the pupils in all the intellectual departments of the school, which were as broad and complete as in any institution in America, was singularly rapid.

The loss sustained by Dr. Lewis in the destruction of this building was very large. A hundred thousand dollars are required to rebuild and furnish it. As he has found it impossible to raise the necessary funds, he will at the close of this year—during which the school has been carried on in a small way in another building near the site of that which was burned—he will be obliged to abandon the school project, and engage again in training teachers in the new gymnastics, and lecturing before the lyceums on the subject of physical culture.

Fortunately for the country, the graduates of the Normal Institute for Physical Education are carrying on the work in various parts of the country. Mrs. Plumb, in New York; Mr. Ellinwood, in Brooklyn; several teachers in Philadelphia, and others elsewhere, are pushing bravely forward this most promising movement toward the combination of intellectual and physical culture.

SALLUST'S HOME IN POMPEII.

BEHOLD in Pompeii, at Sallust's home,
The relics of an orgie in a tomb!
The bosom of a dancing girl is prest
Against the bony framer of a jest;
The unbaked bread is in the oven left,
And by the froit the knife with which 'twas cleft.
The supper-table charred, the wine-jars dry,
And those who came to dance remained to die.
It hurts our huge ambition to survey
The folly death overcomes us at, the play!
Earth's humble ones, the men whom circumstance
Hath favored, all are targets for death's lance,
All low alike at last; and none can tell
If this dust was a king, that heap a belle;
What alchemist can take this time-charred bone
And say: "This served; this sat upon a throne;
This bony cheek blushed beauty's bygone bloom;
Once this head's wit rang round the rustic room."
Ah, yes! the skull, still eloquent in death—
For thought still rules beyond the bounds of breath—
Bequeaths an index to th' immortal mind,
Of those who lived to bless or curse mankind.

Man, know thyself. All wisdom centers there;
To none man seems ignoble, but to man.—Young.

GEORGE HALL, FIRST MAYOR OF BROOKLYN.

THE recent death of this gentleman has left a vacancy in Brooklyn circles which few men can fill. Having long maintained a high and honorable political standing, and also having won the respect of all classes for his zeal and candor in promoting temperance and other reformatory measures, he merits a special consideration at our hands.

As long ago as 1835 he submitted his head to a public examination, and from being an obdurate skeptic became converted to an admiring believer and a warm friend of the science of Phrenology.

In form, Mr. Hall was rather short and broad, yet well proportioned; he had much power of constitution, toughness,

PORTRAIT OF GEORGE HALL, FIRST MAYOR OF BROOKLYN.

and endurance. His motions were | organism, and indicated both power and
sprightly and elastic, in keeping with his | quickness, force and elasticity.

His three most prominent characteristics resulted from predominant phrenological conditions—Benevolence, Conscientiousness, indomitable energy arising from large Firmness and Combativeness, and aspiring ambition. In very few heads have we found Benevolence as largely indicated as it was in his, and this constituted his predominant life motive. He lived and wielded the official power from time to time intrusted to him mainly to do good; selfish ends were no part of his consideration. Even his selfish faculties were under the control of philanthropy. He was ambitious, but not for mere notoriety; his zeal was very great, and sought to ameliorate the condition of others, to improve society rather than promote any selfish aim. Combativeness drove forward some good cause instead of struggling to obtain merely mercenary objects. Perseverance supplemented and stimulated by large Firmness was also a strongly marked characteristic. In whatever enterprise he embarked he was earnest and energetic. His talents for managing business, conducting any building or mechanical operation, were superior. He had very little Secretiveness, and was therefore not cunning or compromising, but plain-spoken and frank almost to a fault.

As a public man and as a private citizen, his integrity in and zeal for those measures which had in view the good of the community were unsurpassed. No man with political reputation can exhibit a more clear and unblemished record than that of George Hall. His Benevolence was his crowning characteristic. His heart was mellow toward the poor and the troubled, and his tears readily mingled with those of the afflicted. His courage made him a most marked man, as hundreds of rowdies and villains could attest, who in riots and rough crowds defied the ordinary officers of the law until the bold hand of George Hall was laid on them, and his mandatory voice bid them submit.

BIOGRAPHY.

George Hall was born in the city of New York, on the 21st September, 1795. In the following year, his father having purchased a farm in the neighborhood of Flatbush, removed with his family thither, and thence shortly after to Brooklyn, then an inconsiderable village. Educated at Erasmus Hall, a well-known

and deservedly popular institution of learning, he received a good English education, which, based on his naturally active and healthy mental organization, contributed largely to the formation of the sterling man he ever proved himself to be. Early distinguished for the benevolence as well as energy of his disposition, he became the friend and counselor of his associates, the leader in, and the advocate of, every movement promotive of the good of man. And through a long life his consistent and upright course won for him the approval and affection of the virtuous and true.

In 1832 Mr. Hall was elected trustee of the third ward of the then village of Brooklyn; in 1833 he was unanimously elected President of the village; and in 1834, when the village became a city, he was chosen first Mayor.

All who have known him will bear willing testimony to the industry, faithfulness, discretion, and fearlessness with which he devoted himself to the duties of his office. His indefatigable efforts to execute the laws—his still more praiseworthy acts of benevolence and charity to the objects of wretchedness with whom his station brought him in contact, all attest that the first Mayor of Brooklyn was no ordinary man.

Early and uncompromising in his efforts for the suppression of intemperance, and allied as this evil has ever been with political power, it is not surprising that he met with opposition and incurred obloquy from the politicians of every stamp; and indisposed as he always was to countenance or even wink at corruption in high places, it could not be expected that he would receive support from those whose only object in seeking office is their own personal aggrandizement. The despised fanatics, as temperance men were called in former years, grew in numbers and increased in influence; it became no longer safe to despise them, in entering upon a political canvass; and the Whig party, with a full knowledge of their views of Mr. Hall, in relation to the liquor traffic, again nominated him for the office of mayor, in the fall of 1854; and at the subsequent election he was triumphantly elected as the first Mayor of the consolidated city. His administration was such as won golden opinions from all good men.

Mr. Hall's connection with the Temperance Reformation is so well known, we have felt it unnecessary to say much in relation thereto. He was a faithful advocate of our principles, laboring that the blessings they bring might be felt and enjoyed by all, and by his example setting his seal to the faith that was in him, and leading others thereby to their embrace. He was the first to sign in Brooklyn the "Old Temperance Pledge," and the first also to sign the Washingtonian pledge, although he had no personal failings on the score of intemperance. In 1845 he was elected G. W. P. of the Grand Division of the Sons of Temperance of the State of New York, and was appointed one of the representatives from

that body to the National Division of North America.

During the war Mr. Hall took a most active part in the raising of troops, sustaining the public credit, and in every possible way aiding the national cause. He was a prominent officer of the Union League of Brooklyn, and in this, as in every other field of usefulness, his voice and personal efforts were enlisted. No man in Brooklyn was so widely known as George Hall. He had been a mechanic, and was generally known to that class in the community. He had been a fireman, and everybody knew him in that sphere. He was widely known in the Temperance movement, and nearly everybody in sympathy with that knew him personally.

During his mayoralty, the cholera raged in Brooklyn. Forsaking every thought of individual security, he went personally to care for the sick and the dying. He spent his time day and night among the cholera patients, and though he took the disease, his stern will and a good constitution enabled him to triumph over it. It being rumored in the city that he had died of cholera, a great crowd of people assembled around the City Hall, and not until he had shown himself before them were they willing to go home satisfied that the public's great favorite was still living. In consideration of his great heroism and personal sacrifice on behalf of the poor cholera patients, the citizens made voluntary contributions, and bought a handsome mansion, No. 37 Livingston Street, and presented it to Mayor Hall as a testimonial of their regard. Here he lived many years, and here he died, and here did the citizens pour forth on Sunday, April 19th, 1868, to do honor to his memory and take a last look at the honest face of George Hall.

He had a tear for every poor man's sorrow, a word of encouragement for every soul struggling with poverty and hardship, and a scathing reproof for all stalwart and brazen villainy. One of his chief qualities was his personal courage. While mayor, he not unfrequently rushed into a crowd of ruffians that defied policemen, and leveling one with his fist, and taking another by the collar, brought forth his prisoner in triumph. His frankness was proverbial. He had no concealments. No man doubted George Hall's word, or believed that after he had spoken he had any sinister or concealed purposes. His generosity knew no bounds, and his benefactions were measured only by his means. We shall not soon "see his like again." We enjoyed the pleasure of an intimate acquaintance with him for years, and feel assured that no man deserves more hearty encomiums, or will leave behind more personal friends than he.

INCONSISTENT MORALITY.—A distinguished divine remarked lately that, "Some men will not shave on Sunday, and yet they spend all the week in shaving their fellow-men; and many folks think it very wicked to black their boots on Sunday morning, yet they do not hesitate to black their neighbor's reputation on week-days."

BLESSINGS OF PEACE.

How beautiful the spectacle presented by that land which is habitually at peace with all the world! See the thriving cities, towns, and villages in which the hum of business, the clanking of manufactures, and the familiar sights and sounds of successful industry everywhere prevail! See the fields waving with the rich products of the soil—the garners teeming bountifully with food for man and beast—the harbors crowded with vessels, which bring their tributes of wealth and comfort from every land—the smiling homes and firesides—the farmer singing at his plow, and the mechanic at his work! See the pervading life and energy which infuses itself into every department of human effort—the arts and sciences flourishing—education more and more widely extended—men running to and fro, and knowledge increased—the sphere of Christian activity enlarged—new churches built—missions and Sabbath-schools planted in destitute places—preachers and colporteurs sent forth to possess the land for Christ—the Gospel acquiring daily new trophies to its divine power, and truth achieving new victories over error. Souls which might have been hardened and destroyed by the influences of war, are, under the mild reign of peace, rendered susceptible to the appeals of the pulpit and press, and instead of swelling the number of God's enemies, go to augment the army of his followers. Many a prodigal returns to his Father's house, and many a lost one is found. The church rejoices in an increase of her strength, and there is "joy in heaven among the angels of God" over repenting sinners. The heavenly hope finds readier access to human hearts—souls are saved, and God is glorified. Nor is this all. The abounding life and exuberant sympathy of God's people will not, in time of peace, be confined to the narrow limits of a country or a continent, but overflow all boundaries, and baptize distant nations with the waters of life. As war impedes our efforts for the spread of the Gospel, so peace encourages them, and enables the Church to extend the circling ripples of her influence far and wide, until they embrace the globe itself. Peace places in our hands the means; peace affords opportunities for employing them to advantage; peace wafts the missionary across the seas; peace casts down the walls of prejudice, and secures a ready access to the homes and hearts of the heathen; peace sustains him there, and provides the bread of life for millions of famishing souls, and with the Bibles which it prints, affords a practical and convincing commentary upon its truths; peace affords the sinews which God strengthens for the demolition of Satan's kingdom; peace supplies, sustains, and co-operates with many of those forces which, under God, are to evangelize the world and inaugurate the reign of the *Prince of Peace*.

We do not affirm that the universal prevalence of peace would, of itself alone, secure all

these blessings. No. "The Word of God only, the grace of Christ only, the work of the spirit only," are the hope of the nation, the church, and the world. Yet the very letter of that word, the character of that grace, and the known operations of that spirit assure us that if ever these blessings are to be looked for, it is in times of peace; the reign of peace will go far toward securing the reign of happiness and righteousness.

JOSEPH A. COLLIER.

RECENT observations regarding the weight of the brain have led to some curious developments. The general average of the Asiatic brain shows a diminution of more than two ounces when compared with the European. The general mean of African races is less than that of European races, although there are great differences, the Caffre rising high and the Bushman sinking low in the scale. The average of the whole of the aboriginal American races reaches 44.78 ounces, which is 2.14 ounces less than that of the European races. The Australian races show a brain weight of one-ninth less than that of the general average of Europeans.—*Daily Star*.

[Now will the *Star* condescend to enlighten the world on the temperament of the races, and show the *quality* of each. Quantity is one thing, quality quite another. American nerve and muscle must not be offset by European beer, beef, and adipose. Size and *quality* are the measure of power.]

CONSCIOUSNESS AND MENTAL ACTION.

BY B. H. WASHINGTON, M.D.

[CONCLUSION.]

In dreaming, the spirit, never sleeping like the body, amuses itself by making a kaleidoscope of its organ of consciousness; and being able to view all the treasures of memory at once, instead of there being "wild confusion worse confounded," the various images are still viewed harmoniously arranged and linked together by virtue of the above-mentioned automatic law of control, and the spirit is thus enabled to recall at once all the treasures secured in its previous passage through life, and also to re-work them over and over again in the most wonderful profusion of variety, magnificence, gorgeousness, sublimity, grandeur, fear, pain, pleasure, hope, or gloom. Though able then, while sleeping, to review the whole past life at a glance, in the same manner as my friend, and as drowning persons do, yet when the waking state is approached, or reached, only a few of the vast number inspected can be remembered and reproduced in consciousness, and *those few must then be represented in succession*, and the consequence is that enough images are recollected to produce the impression, when thus successively recalled in consciousness of a great lapse of time, while in reality the time occupied in taking the view of those images in the dreaming state was not probably more than a second.

Some writer on Intellectual Philosophy (whom we do not now recollect) mentions a singular dream of his own. He dreamed that he had left England on a long journey, and, after sailing many days, he had been shipwrecked in a violent storm and thrown on a deserted island with various other persons from the vessel; had there married, and raised a large family of children, some of them to adult age, and was rejoicing greatly at the sound of a booming cannon fired from a newly arrived vessel, which was to carry them back to England; and on awakening found that he had been awakened by a sudden noise which had created the impression of the sound of a cannon, and that he had dreamed the whole dream, occupying apparently at least the term of twenty years, in the extremely short space of time between the hearing of the noise and his awakening, and asks in vain, "whence this wonderful unconsciousness of time in dreaming?"

This truly extraordinary unconsciousness of time in dreaming no metaphysician has ever yet been able to explain (so far as known to the writer) in any age, but if we apply the phrenological exposition of man's organization, the portals of the dark chamber so long and successively concealing the much sought arcanum, quickly responds to the magical key, and opening wide yields up the treasure.

In the case of the above dreamer, at the time he heard the noise which awakened him, all the particulars of the past life were visible at once, as in the case of my friend above mentioned, from the organ of consciousness, but the images necessary to fill out the appropriate particulars of the dream happened to be those remembered, but on reaching the awakened state it was not possible for the dreamer to grasp them all at once in consciousness, and it became necessary for them to be reproduced in consciousness, successively, thus creating the impression of a great lapse of time. The ship—the departure—the voyage—the storm—the shipwreck—the island—the passengers—the woman—the infants—children—adolescents—the second ship—the noise (imagined to be that of a cannon)—were all perceptible at a single glance from consciousness, and were remembered; but on awakening and recalling them in memory, it was absolutely impossible for him to see them all at once, and of course being represented in consciousness successively, created the impression of a great lapse of time.

Thus we find the phrenological hypothesis complying with all the permissible hypotheses laid down by Sir William Hamilton himself, and also to give a clear, beautiful, and rational exposition of the puzzling phenomena of dreaming, and harmonizing most admirably with the facts of the case, and with such an exposition no metaphysician from the days of Aristotle down to the present time has ever been able to present us.

INSANITY.

Let us now turn our attention to the abnormal state, and we shall find the same light from Phrenology shining through the mental

phenomena, then developed and harmonizing remarkably with them.

We will first consider the insanity and death of Hugh Miller: from long, unremitting, and most intense application, his organ of Concentrativeness became so weakened that it broke down, and the voluntary control of his mental operations was therefore lost, and those operations became subject solely to the automatic law of control above mentioned.

In his vain endeavors to fasten his thoughts down to a given subject, the horrifying consciousness that he had lost all control of his mental operations, and that insanity was near at hand, appalled and weakened him still more; mortified Self-Esteem and Approbativeness sent their chilling feelings to Consciousness; to the anxious inquiry suggested by Consciousness, can this state be cured? Hope failed to respond with a cheering answer, and gloom as black as the darkness of Egypt suddenly settled upon him. The excitement of the moment added intensity to the vivid play of the automatic law, utterly interrupting all connected thought, and during this paroxysmal interruption of rational thought, his faculty of Destructiveness, under the automatic law, allowing an opportunity for all faculties to present their claims to Consciousness for gratification, obtained the sway in Consciousness and suggested self destruction; mortified Self-Esteem and Approbativeness seconded the motion, Hope was mute, and the consequence was, the fatal pistol was applied and his career brought to an untimely end by his disregard of the physiological law, which requires rest for the mind as well as for the body.

Thus we might analyze and trace the various phases of thousands of cases of insanity, and we should find the phrenological hypothesis always fulfilling the permissible hypothesis, clearly explaining the phenomena.

The violent and rapid play of this automatic law for the control of our faculties can be readily traced in the following description of a paroxysm in a case of mania, extracted from Wood's Practice, Vol. II., p. 3:

"The brain is now obviously laboring under great excitement, the face is often flushed, the eyes are wild and fiery, and the temples throb with the increased current of blood; the patient talks loudly, rapidly, incoherently, flies from one topic to another, and finishes none; vociferates, screams, implores, threatens, and curses; now shrieks with the anguish of despair, and then breaks out into savage laughter, gesticulates violently, breaks everything fragile about him, strikes, throws, tears his clothes, rends in pieces the covering of his bed, strips himself naked, and even bites his own flesh in his insane fury. Broken thoughts chase each other with fierce haste through his brain; every wild and evil passion, malice, fury, hatred, revenge, and despair, struggle as if for mastery in his agitated features; his hair stands on end, every trait of his meagre countenance is distorted, even his intimate friend would scarcely recognize an acquaintance in the demoniac before him."

The working of this automatic law, under a milder phase of insanity, is readily traceable in the following quotation from pp. 194 and 195:

"The patient can often follow out traits of ratiocination with considerable correctness, and sometimes with much ingenuity. But he is apt to change abruptly from one course of thought to another, before the first is completed; each idea that presents itself, however irrelevant, becomes the standing-point of a new succession, which is in its turn soon interrupted, and his intellectual action is thus broken up into disjointed fragments, which are fitted to no useful purpose."

As with the thought in mania, so it is generally with the feelings. The patient passes rapidly from one state to the opposite. The mental chords vibrate in quick succession with the whole gamut of the passions.

No one could reasonably expect any hypothesis to harmonize more admirably with facts in nature than does the phrenological with the above abnormal mental phenomena.

PHANTASMAGORIA—No. 2.

BY JOHN NEAL.

"Come like shadows—so depart."

HURRIED photographs are oftentimes the best. Dots and lines may tell a better story than a finished picture, and the merest outlines, deftly managed, may suggest better likenesses than were ever found in a labored portrait. Give the imagination fair play, and a single hint may beget a picture.

Among the remarkable, or out-of-the-way men I have met with over sea, standing almost always head and shoulders above their fellows, like Saul among the prophets, and all more or less distinguished in one way or another, are the following, of whom I catch brief glimpses now and then, as they go trooping by into the darkness beyond—some to the grave, and others into forgetfulness—revealed for a moment, as by flashes from a lighted mirror cast upon a hurrying crowd. These have to be caught flying, or they vanish forever, and their photographs, like that of a cannon-ball from the swamp-angel, are changed from a dot into a line before you have secured what you want.

JOHN A. ROEBUCK, M.P. FOR SHEFFIELD.

When I first encountered this uncomfortable man, who is never satisfied with anybody, nor anything—not even himself—he was in the flush and flower of early manhood, like generous fruit souring on the stem. A small, compactly-built, positive-looking fellow, about five-and-twenty years of age, and five feet five or six in stature, with his head thrown back, after the fashion of most undersized men, with a suspicious or troublesome temper, who are never quite sure of themselves. The impression he made on all strangers, at a first interview, was far from being favorable. Being both dictatorial and captious, passionately fond of paradox, and delighting in contradic-

tion and gladiatorial controversy, upon any and all subjects, his manners were anything but conciliatory, deferential, or attractive.

He seemed to be always at war with the world, and with everybody in it, and thoroughly dissatisfied with all the prevalent opinions of the age, all the arrangements of Providence, and all the doings of man. Evidently shy and sensitive, though unwilling to acknowledge it even to himself, he wanted to pass for a cynic. His carriage and bearing were meant for stateliness, but were in fact provincial, not to say plebeian; and as he walked slowly and emphatically, with his head thrown out of the perpendicular, he sometimes appeared to be strutting backward. He affected reserve, but his reserve was a discontented peevishness, and superciliousness, alike offensive and posterous.

According to my present recollection, his head was not large, though well proportioned and well balanced; yet he must have had a prodigious amount of Self-Esteem and Combativeness, with very moderate Caution. His temperament was a mixture of the nervous and sanguineous, with a dash of the bilious, just enough to flavor the combination and counteract a tendency to change; for, with all his noisy perseverance and blustering, both in Parliament and out, I can not believe that he was endowed by nature with more than moderate Firmness. With a pallid complexion, good eyes, brown hair, and a flexible mouth, he was a fluent and rather agreeable speaker, notwithstanding his peremptory self-assertion and rasping voice; but he seldom propounded the simplest question, without appearing to offer a challenge, or to be dashing a glove in your face.

Already, even at the age of twenty-five or thereabouts, he was believed, by those who knew him best, to have his eye upon the Lord Chancellorship. Nothing could have been more hopeless or preposterous, and I, for one, could not believe that he had any such hope, and still less, that, having such a hope, he would ever acknowledge it, or so betray himself to anybody alive. And yet, with no reputation to begin with, and no experience—a presumptuous provincial at best—he began from the first, after he reached England, to fly at the highest game, and after a few years, we find his presumption rewarded by a seat in the House of Commons, and our embryo Chancellor quarreling of course with everybody about him, whether friend or foe. And why should he not reach the woolstack at last—or the scaffold? He would be satisfied with either, so covetous of notoriety is he. At the time I knew him, he certainly seemed to stand about as good a chance for the royal succession, as for Parliament, although, like D'Israeli, he carried a fire shut up in his bones—the uplifting, inappeasable, transfiguring fire that makes people eminent sometimes, in spite of themselves.

We were both members of two different debating societies at the time I speak of; one,

which met in Jeremy Bentham's great library, having Mr. John Stuart Mill, and Mr. George Grote, the banker, and author of sundry works on Greece and Grecian history, and Walter Coulson, editor of a leading London paper, and the younger Austin, for confederates or associates; and another, made up of Oxford and Cambridge students, members of Parliament, abroad on their good behavior, with a ticket of leave, and young barristers, which met in the celebrated Freemason's Tavern, where two parties were immediately formed, through elective affinities, and we had quite a respectable opposition to balance the ministerial power. I was one of the managers, and among the questions proposed by different members for discussion, I find the following, which, it must be acknowledged, were somewhat prophetic of the career which their several authors entered upon after a few years, and have continued in, up to this hour. Run your eye over them and say if they are not amusingly characteristic. Our embryo Lord Chancellor proposed to show "that the ends of penal law can be obtained *without the punishment of death*;" Mr. John S. Mill—now Stuart Mill—"that the *French Revolution was necessary*," and that "freedom of discussion upon religious subjects should not be restricted by law;" and I myself—I—"that the intellectual powers of the sexes are equal," pointed "of the *two sexes*," just as if there were ever more than two. How thoroughly we have been working out all these great problems ever since, may be seen by tracing our varied labors from that day to this, in our writings, lectures, and speeches, though we had little idea then of what was before us, or within us, or how stupendous the task would be. Yet we were only boys—overgrown boys if you will, though boys nevertheless—when we gave out these innermost revealings of what was within us, and gnawing away like the Spartan boy's fox, or smouldering in darkness, and waiting only to be fanned into a blaze by the breath of Opportunity.

No sooner were Mr. Roebuck's guns in position, as one of the associate managers of the London Debating Society, than he undertook to show, beyond all question, that Cateline was a much-abused patriot and trustworthy citizen, and Cicero a slanderer and a sneak; and really, though there was nothing very new in the facts he brought to bear upon his theory, they were so ingeniously paraded and so cleverly urged, that the impression he made was quite favorable. He seemed so much in earnest, and so thoroughly convinced himself, that one had not the heart to disbelieve, or contradict him, though his argument was crowded with paradox and assumption, from beginning to end.

Of his temper upon trivial occasions, the following incident will furnish a fair illustration: We were together in St. Paul's Cathedral one week day, when the charity scholars and choristers of that huge establishment, by hundreds and hundreds—I might say by thou-

sands—were in full blast. Never did I hear such a tempest of musical sound. It was a church festival. Near by sat a dignified personage with a shovel hat, who took the liberty of reprimanding Roebuck, after a clerical fashion, I must acknowledge, for whispering. Never shall I forget the stinging reply of my little waspish friend, nor the portentous death-like stillness that followed a remark he made about the overbearing arrogance and insolence of churchmen, who seemed to think that wherever they were, it was always the Sabbath, and always a church. On the whole, it was more offensive than the reprimand. What one lacked in Christian courtesy, the other lacked in common sense. I intermeddled so far as to say that such language and behavior between persons of respectable appearance, claiming to be at least gentlemen, if not Christians, appeared to me rather unbecoming in such a place and at such a time. Roebuck laughed, for the first time in all his life, I dare say, under such circumstances; and there the matter ended, though I had my fears at one time that the grave, pompous-looking prebendary, for such he was at least, if nothing more, might call up a verger or beadle to remonstrate with us, or to take part in the affray. But, after all, the "wicked wasp" has got "a name to live;" and is now the bitterest enemy we have in the British Parliament, or perhaps in the British Empire, chiefly because he happened to be born in British America, where he was obliged to see the growth of our institutions, and the progress of our opinions, without being able to foresee the final issue—a man to be turned to account hereafter, when he finds it for his interest to take sides with us, and eschew paradox—for a consideration. Till then, of course, he will be both unsparing and unrelenting.

SIR HUMPHREY DAVY

is one of the little giants we have heard so much of, ever since the Douglas went through our land like a thunderbolt. Picture to yourself a small, daintily fashioned, pleasant-looking, fashionably-dressed man, about forty-five, with a remarkably fine head, eyes all lighted up from within; and the bearing, not so much of a man of the world as of one who wanted to sink the shop, and not pass for "a wit among lords," but rather for "a lord among wits," and you have the living and breathing representation of that justly celebrated man the world is so much indebted to for the safety-lamp, and for numberless other great and useful discoveries in the world of science. I can see him now, carrying his hat in his hand with the air of a *petit maître*, and tilting on his toes at the *conversations* of Mr. Surgeon Pettigrew, with the Duke of Sussex listening to his delightful gossip, like a good-natured, overgrown school-boy. His conversation would always disappoint a stranger, if he were looking for the signs of greatness, or for glimpses of the lecture-room or the laboratory, though it was full of anecdote and pleasantry, whenever he forgot himself so far as to over-

look the fashionable notoriety about him, and give his whole attention to the immediate companions of his Royal Highness.

HENRY FRANCIS CAREY,

translator of Dante. A tall, dark, swarthy, silent man, about fifty-five or sixty, with deep, thoughtful, melancholy eyes, and just such a complexion as we should look for in Dante Alighieri himself, after he had been through purgatory. And yet, if one might be allowed to judge by the expression about his mouth, when he overheard some pleasantry not intended for such big men, he had perhaps a strong, deep sense of, and a hearty relish for, humor—a solemn sense of humor, I might say—which under favorable circumstances might become playfulness, though somewhat of the Johnsonian type, when that amiable gentleman was said to "laugh like a rhinoceros." It was quite impossible to look at the man, however, standing over six feet in his shoes, rigid and massive, as though built of ship timber, or cast in bronze, and hear the distant rumbling of his voice, without fancying that he must have been a fellow-traveler with Dante before he undertook the translation of that wonderful man's diary into our old-fashioned, wholesome, ponderous English; which translation, up to the appearance of Longfellow's, had come to be regarded as the *no plus ultra* of human labor in that field, and which, I should say, must continue to be regarded with reverence and bodily fear to the last, notwithstanding the graceful and free, though strong and scrupulously exact translation of our countryman. Each had a conscientious theory for his groundwork, and both have succeeded at least in vindicating themselves, however much we may be inclined to differ from them in our estimate of what are called faithful translations. Let me add that his head was large, the forehead high, and the phrenological developments well pronounced, though Ideality and Wonder were by no means what one would have expected from the translator of Dante.

JEREMY BENTHAM.

The people, for whom this great and good man labored so long and so faithfully, are but just beginning to understand his true character, and their great obligations. All our law reforms, and all our law reformers, both of English and American law, for the last fifty years, are but interpretations or interpreters of Jeremy Bentham; and of his "Theory of Rewards and Punishments," his system of jurisprudence and adjudication, or that which relates to the administration of justice, and his manifold suggestions relating to procedure, the treatment of criminals, the rights of women, the usury laws, and universal suffrage. Lord Brougham, Sir Samuel Romilly, Joseph Parkes, the solicitor, Mr. Humphries, the conveyancer, James Mill, John Stuart Mill, John Austin, the barrister and jurist, Sir John Bowring, Sir Francis Burdett, Chief Justice Appleton, of Maine, and the late Professor Hoffman, of Baltimore—to say nothing of

Aaron Burr and John Pierpont, and scores of other eminent men—were all the disciples of Jeremy Bentham. And all the great reforms in Europe, and especially in France, and Spain, and Portugal, and Belgium, are but the natural growth of Benthamism; and Mexico and Brazil, and all the South American republics owe the best part of all their laws to him. The abolition of capital punishment, the admission of parties as witnesses for themselves, the overthrow or modification of usury laws everywhere, and all the movements we see or hear of relating to universal suffrage, and prison discipline, are but so many phases of Benthamism.

In looking over some old letters, not long since, which were saved from the great Portland fire, I found the following from Mr. Bentham—the last he ever wrote me—and among the very last he ever wrote anybody. It is made up of short characteristic paragraphs, like minute-guns, or axioms, and is dated "Q. S. P.," meaning Queen Square Place, Westminster, "5th January, 1830."

"My dear J. N.," says he, "a word or two just to certify to you that I exist, and that I hold you in kind remembrance.

"The works I have sent, and am sending, speak for themselves. [He had just sent me the "Rationale of Judicial Evidence," in 5 vols., royal octavo, edited by John Stuart Mill.]

"Your prosperity rejoices me.

"The collections you made and left me are a valuable legacy; they are of very considerable use to me." [Referring to a collection of cases from Dane's Abridgment, which he wanted to work into an improved system of jurisprudence, just as he had worked the principles of certain British cases into Humphrey's Property Code, as it appears in the *Westminster Review*.]

"I feel nothing that should hinder me from living a year or two longer.

"Sight, I fear, will not last as long as life.

"I can no more. Every moment I give to individuals I regard as stolen from mankind.

"You have fought the good fight of faith. Persevere!—Yours most truly,

"JEREMY BENTHAM."

At the time when this was written, Mr. Bentham was more than four-score*— hale and hearty—the very image of Dr. Franklin, with a magnificent head, of large size, and great breadth of forehead, though deficient in Veneration, and rather low just where, with his great reasoning powers, logical aptitudes, and large Benevolence, you would look for amplitude and elevation; and withal, deficient in Ideality, as might have been expected, though he was much given to reading Richardson's novels in—I dare not say how many volumes—rather disposed to wondering, and very fond of playing Handel's best music for himself on the organ, thereby showing that he had a sense of sublimity, at least, for the Hallelujah Chorus and Messiah. All that he had ever done, he

used to say was the result of downright persevering drudgery—in other words, that he had literally made himself, and that too of the stubbornest material, without help, and with no predisposition or special aptitude for anything. And here he was right in a measure, though large Destructiveness and Self-Esteem had been his helps and motive powers from the first. Certainly he was not a genius, though a man of prodigious talent, which he turned to the best account through a long and laborious life, so that he might be ranked with Aristotle, with Lord Bacon, with Hobbes, and with D'Alembert, and Swedenborg as a seer and a soothsayer, if not as a prophet.

MAJOR CARTWRIGHT THE REFORMER.

Here is another of these old-fashioned, sturdy, uncompromising Reformers, who, but the other day, were toiling at the deepest foundations of the British empire, like so many long-imprisoned giants; and always more to be dreaded than either Lord George Gordon or Mr. Hunt, Sir Francis Burdett, or O'Connell, or Cobbett, although undemonstrative. His book on the British Constitution published in 1823, is not only a powerful and eloquent, but masterly demonstration of his theory, that the very elements which have always been supposed wanting in *Magna Carta* are, nevertheless, part and parcel of the British Constitution, whether written or unwritten.

Major Cartwright stood six feet two, I should say, with a majestic presence, and at the age of sixty-five or upward of such a dignified carriage and bearing, as to make him appear to be in the very prime of life. He was a republican I believe, in heart, and so fond of our country, that he had always some one of us about him. Hospitable, generous, and hearty, it was really a great privilege to know him well; and though, by many of his coadjutors, his notions of what he called the British Constitution were thought visionary and useless, at the best, if not clearly hurtful, the book he wrote upon the subject was both learned and plausible, if not satisfactory and conclusive. His large noble head was a demonstration of the great leading truths of Phrenology, and his temperament and personal history were capital illustrations.

JOHN DUNN HUNTER.

No man of his day was more generally believed in than this remarkable impostor. I knew him well—better than most of those who made so much fuss about him in the day of his strength. He pretended to have been kidnapped and carried off in his childhood by the savages—or Indians, rather—for he would allow no man to call them savages; to remember nothing of his father or mother, or brothers and sisters—if any he had—to have been brought up among the red men, and to have matured a prodigious plan for uniting all the northwestern tribes in a confederacy; and it is probable that many of those who believed in him over sea, and lavished their favors on him, like the Duke of Sussex and Mr. Coke of Norfolk, afterward Lord Leicester, were firmly

persuaded both of his willingness and ability to lay the foundations of another empire in the New World. We boarded together for several months, and yet I never suspected the truth, nor the man's untruthfulness, till he had left the country, after securing remittances to his "bankers" in New York, and various agricultural implements, such as were used in England, from the philanthropists who had been carried away by his modest pretensions, and felt sure that he was about entering on a great mission. Believing, from what I knew, that he had not only deceived me, but others of more experience and greater sagacity, I lost no time in exposing him through the pages of the *London Magazine*.

A letter of his, now before me, will give a good idea of his style in conversation and writing. The authorship of his book was then ascribed to somebody in New York; but my belief was, and still is, that not only were the materials furnished, lies and all, by Hunter himself, but that the whole book was written by him from beginning to end, though it may have been revised in proof, or manuscript, by somebody else.

He was a light-haired, light-complexioned fellow, with all the distinguishing features of a native Yankee; about five feet seven, and substantially put together. His head was rather small and not strongly marked. That he had never been much with the Indians, I believed, because he could neither leap nor run, was a poor shot, and a worse walker, and could not bear pain, being really afraid to have a tooth taken out by a celebrated dentist.

The last letter I received from him reads thus:

"PHILADELPHIA, Oct. 15th, 1824.

"My N—, although I have had the good fortune to hear frequently from (of?) and very particularly about you, yet I have never received a line from you. I have seen your friends generally here, and have been as much with them as I was able, from my many occupations.

"Your friend Miss W. (a natural daughter of George IV. it was believed), for she is a friend of yours indeed, has been kind enough to make frequent and friendly mention of you in all her communications. I really have not had time to write as I would have wished. It was not from want of disposition to do so. No—anything else but want of interest for you. I am on the eve of leaving this hospitable land for a land of greater simplicity and rudeness, and should ere this have been off, but for the fever which has afflicted New Orleans for months past. I find I can not cross the Alleghany Mountains to advantage. The route by sea to the mouth of the Mississippi, up that to the mouth of the Arkansas is much better, and as soon as I get information to be relied on of the health of New Orleans, I shall set sail.

"I am now engaged. I can only tell you how much I wish to hear from you. I wish I had heard more from Harding (Chester Harding) I hear he has gone to Scotland or I would have dropped him a line. When he returns I wish you would tell him, I want him to send my portrait of the Duke (Duke of Sussex) and Mr. Coke (Lord Leicester) to Philadelphia, to the care of Elliot Cresson, No. 30 Sansom Street. I want them in this country very much indeed, that is, I want to be certain that they are safely arrived. I have to-day had a long chat with Sully (Thomas Sully) about you. Is not he a

* Jeremy Bentham was born February 15, 1748.

fine fellow? I called on Mr. Secretary Watkins (Dr. Watkins), but had not time to make his acquaintance. There is too much division here to judge who will be President. I do believe, however, that the federalists are the ruling power. I have spent some time with Mr. Jefferson (Thomas). The Virginians are all for Crawford. I was across the Alleghany. I have been up the North River to Albany, and so up the canal to the *Coho Falls*—it is a stupendous work and is the admiration of all who see it. Van Buren's party seems less formidable than formerly. I trust Dewitt Clinton will yet obtain the suffrages of his country; but the election takes place for governor in a few days, and he is a candidate. You perhaps never witnessed such a scene of intrigue and circumvention as in this country. Whether we ever meet again on this side eternity, time, the arbiter of events, alone can determine—be that as it may, I shall ever be pleased to hear of your welfare and prosperity. Adieu, my dear fellow, and believe me yours truly and sincerely, JOHN D. HUNTER."

About the time of my writing that paper for the *London Magazine*, above referred to, another article appeared in the *North American Review*, founded on the testimony of General Cass, and written by Mr. Sparks, the editor. In a letter to me from that gentleman dated July 26th, 1826, he says: "I am fully convinced that the charges against him (Hunter) are substantially correct, and if so, he can hardly be treated too severely. I have read the London pamphlet in his defense," (by Mr. Norgate, who introduced him at Holkham to Mr. Coke, afterward Lord Leicester, and to the Duke of Sussex, at Kensington Palace, and who in defending Hunter was, in fact defending himself. It was written in reply to my paper in the *London Magazine*, where I had shown how the fellow had swindled Mr. Norgate after he had left the country), "but it evidently makes out no case at all, and is rather an injury than a favor to Hunter. I have other facts to substantiate the charge, which will be brought out, if necessary. He has not been heard of in this country since the article (in the *N. A. R.*) came out, though he has some defenders in Philadelphia. Mr. Walsh (Robert Walsh, Junior) is very reluctant to give him up," and so were many others in New York and Philadelphia, and some of them too among the worthiest, and least credulous of their day; but having committed themselves in his favor, how was it possible to undeceive them? How could they listen patiently to evidence which was intended to show, not only that John Dunn Hunter was a knave, but that they themselves were no better than—blockheads; for if Hunter was what some said he was, and offered to prove, then, what were they? But how happened it, you will say, that he was never questioned by anybody competent for the purpose, about the Indian languages? The fact is that nobody he met with happened to know anything about them, either in England or in this country; and all took him upon trust, and believed in him, as people buy at auction upon the judgment of others, because they saw that others who believed in him were no wiser than themselves. You remember the story told by the celebrated Oriental scholar Barthelemy, of himself and a

learned Jew, who professed to be unacquainted with our European languages, and able to talk only in Hebrew or Arabic or Persian. After much solicitation, Barthelemy consented to an interview, saying that his friends must not expect him to *talk* with the stranger, though he might be able to correspond with him in writing. The Jew appeared, and opened upon Barthelemy with part of a Hebrew Psalm, which, it so happened, strangely enough, the French savant had once learned by heart. When the Jew had finished, Barthelemy answered with the rest of the psalm—the only one he had ever committed to memory in all his life; whereupon the stranger declared that he was perfectly satisfied, that Barthelemy well deserved his reputation as a linguist, and that he was by far the most accomplished scholar he had met with anywhere. After the impostor had gone, Barthelemy acknowledged the truth, and fell of course, ninety-nine per cent. in the estimation of his brethren of the French Academy. And so it was with poor Hunter; there was a general conspiracy to uphold him, whatever appearances might say, and if there were facts in the way, *tant pis pour les faits*, until he was dethroned.

SIR STRATFORD CANNING—NOW LORD REDCLIFFE.

Most of our leading statesmen, literati, politicians, editors, and lawgivers knew this gentleman, while he was the British minister at Washington, as Sir Stratford Canning; but since he left us, and went up, and entered upon his duties at Constantinople, as Lord Redcliffe, they seem to have lost sight of him altogether, notwithstanding his great kindness to the American missionaries, in a season of special danger and discouragement.

He was a tall, slender, graceful man, with a pleasant countenance, amiable manners, and a sort of princely courtesy, very captivating to all that came near him. Without relationship to the aristocracy—without a drop of that blood which is thought to ennoble even the lowliest, he had an air of high breeding, such as may be found among the Persians who have Circassian mothers, and such as I never saw anything to compare with but once, and that was in a printer—only a printer—but a king's printer, and I might say a kingly printer, one of the London Spottiswoods.

With a beautiful head, set like those you see in Sir Thomas Lawrence's pictures of the nobility about him, but indicating in its configuration not so much greatness or strength, as refinement, sensibility, and gentleness, I must acknowledge that when I knew his lordship, as only Sir Stratford, he seemed to be the type of all that was most to be desired in the English gentleman. But enough. Even hurried sketches, however faithful and spirited, may be tiresome, if multiplied or long continued; and so I stop here.

"Why do you show favor to your enemies instead of destroying them?" said a chieftain to the Emperor Sigismund. "Do I not destroy my enemies by making them my friends?" was the Emperor's noble reply. Kindness is the best weapon with which to beat an adversary.

MR. BEECHER'S PHILOSOPHY. HOW HE BECAME A PHRENOLOGIST.

[From advance sheets of Mrs. Stowe's biographical sketch of her brother Rev. H. W. Beecher, we transcribe the following interesting paragraphs, which state freshly and spiritedly his position in regard to mental philosophy and Phrenology.]

"In the course of the sophomore year, Mr. Beecher was led, as a mere jovial frolic, to begin a course of investigation which colored his whole after-life. A tall, grave, sober fellow had been reading some articles on Phrenology, on which Spurzheim was then lecturing in Boston, and avowed himself a convert. Quick as thought, the wits of the college saw in this an occasion for glorious fun. They proposed to him with great apparent earnestness that he should deliver a course of lectures on the subject in Beecher's room.

"With all simplicity and solemnity he complied, while the ingenuous young inquirers began busily arming themselves with objections to and puzzles for him, by reading the scoffing articles in *Blackwood* and the *Edinburgh*. The fun waxed hearty, and many saw nothing in it but a new pasture-ground to be plowed and seeded down for an endless harvest of college jokes. But one day, one of the clearest-headed and most powerful thinkers of the class said to Beecher, 'What is your estimate of the real logical validity of these objections to Phrenology?' 'Why,' said Beecher, 'I was thinking that if these objections were all that could be alleged, I could knock them to pieces.' 'So I think,' said the other. In fact, the inanity of the crusade against the theory brought forth converts faster than its direct defense. Mr. Beecher and his associates formed immediately a club for physiological research. He himself commenced reading right and left, in all the works of anatomy and physiology which he could lay hands on, either in the college or village libraries. He sent and bought for his own private use Magendie's Physiology, Combe's Phrenology, and the works of Gall and Spurzheim. A phrenological union was formed to purchase together charts, models, and dissecting tests, for the study of comparative anatomy. It was even planned, in the enthusiasm of young discipleship, to establish a private dissecting-room for the club, but the difficulties attending the procuring of proper subjects prevented its being carried into effect. By correspondence with his brother Charles, however, who was then in Bowdoin College, an affiliated phrenological club was formed in that institution, and his letters of this period were all on and about phrenological subjects, and in full phrenological dialect. Mr. Beecher delivered three lectures on the subject in the village lyceum, and did an infinity of private writing and study. * * * * *

"The phrenological and physiological course thus begun in college was pursued by few of the phrenological club in after-life. With many it died out as a boyish enthusiasm; with

one or two, as Messrs. Fowler, it became a continuous source of interest and profit. With Mr. Beecher it led to a broad course of physiological study and inquiry, which, collated with metaphysics and theology, has formed his system of thought through life. From that day he has continued the reading and study of all the physiological writers in the English language. In fact, he may be said during his college life to have constructed for himself a physiological mental philosophy out of the writings of the Scotch metaphysical school and that of Combe, Spurzheim, and the other physiologists. Mr. Beecher is far from looking on Phrenology as a perfected science. He regards it in relation to real truth as an artist's study toward a completed landscape; a study on right principles and in a right direction, but not as a completed work. In his view, the phrenologists, physiologists, and mental philosophers of past days have all been partialists, giving a limited view of the great subject. The true mental philosophy, as he thinks, is yet to arise from a consideration of all the facts and principles evolved by all of them.

"This much is due for the understanding of Mr. Beecher's style, in which to a great extent he uses the phrenological terminology, a terminology so neat and descriptive, and definite in respect to human beings as they really exist, that it gives a great advantage to any speaker. The terms of Phrenology have in fact become accepted as conveniences in treating of human nature, as much as the algebraic signs in numbers."

ON "BOOKWORMS."

I ONCE owned a work on Christian Charity, written by a monk who thrived in England in 1602. The volume had its pages eaten through by a worm, a genuine ancient bookworm, which after stuffing itself with literary matter had turned to dust ages ago, adding nothing to literature.

Let me describe two youthful, modern bookworms. One, a boy slim and loosely jointed, with shoulders stooped and a slow step. The ambition of Approbativeness, the force of Combativeness or Destructiveness, the deference of Veneration, and the sentiment of Ideality he lacked. The cunning of Secretiveness (not the cunning of wisdom) and a gormandizing of food, sleep, and books he had. He ate, slept, and read like a human hog. An avidity to eat, sleep, and read summed up the activities of his organization. A volume of three hundred pages would be devoured in three hours—one and two-third pages per minute. I have watched him as he bent over the volume, with his eye racing along the lines as a colt would fly over the pasture, and as untrained as the colt to labor was he in his judgment as to what he should read. In vain were books selected to encourage the growth of good taste and reflection. It mattered not, all that offered was meat to his literary stomach. To cloy or gorge him was impossible. He could not appreciate the fact

that the mental stomach should not be overfed any more than the physical stomach; that for the health of the mind as well as for the health of the body, moderation should be observed in the amount of food taken, else disease followed. Tales, travels, anecdotes, history, biography, in fact, everything that appears in print so that "he who runs may read," he delighted in, nor drew a moral or idea from all he read. He preserved a meager skeleton in his memory of what he read—the vital parts were lost. In fact, a bookworm as useless to literature as the worm that ate my book two centuries old.

"He is so fond of reading," said a doting mother of her son. "What does he read?" "Why, everything he can lay his hands on," she replied. "Don't you disapprove his reading everything?" "Why, no; I approve my boy's reading everything, because he learns what *life* is in so doing. He reads the current literature, novels, etc., and when he becomes older he will indulge in more solid reading." After awhile this son disappeared. The mother searched for him, and then learned that her darling son had reached a depth of infamy that she had never dreamed possible. His reading had been food to him. His mind digested it as the human stomach would digest highly stimulating aliment. Consequently his mind and morals had become diseased; he went astray to return to her no more, for I believe she died not knowing what had become of him. He was a bookworm as useless to literature as the worm that ate my book two centuries old, and far more pernicious. Are there not too many bookworms of all kinds? Bookworms perhaps only for a time, but bookworms nevertheless? H. C.

UNAPPRECIATED TALENTS.—A man that hath any truth in him important to be given to his generation need not much concern himself as to *where* he shall speak it. With what twaddle about unappreciated genius are we frequently sickened. Young men part their hair in the middle, roll down their collars, indulge in excesses until they grow poetically pale, and go whining among weak school misses about the cold world. And others dream that if they had only *such* a position in such a city, *such* an editor's place, *such* a pulpit, *such* a theater of display, they would shake the world. Many a young preacher in an obscure country parish has this temptation. Many a young poet, who can not secure a publisher, goes into this fog. But it is all a mistake. It is a shrewd old world with which we have to deal, and it generally knows the price of things. There is little unappreciated genius, little worth keeping that the world allows itself to lose, and *no uttered sentence worth remembering has ever been forgotten*. The world may appreciate some things too highly for a season, but in the long run the value of all things comes to be ascertained. If you have on your slate a poem that is a live *voice*, hath appreciable articulate speech for the human heart, you may

print an edition of only one copy on brown grocer's paper, and give it to a bootblack and go your way, and live or die, but that true musical thought of yours will surely get itself repeated to the generations to come. Go, walk up and down in the wilderness, and say your say, and cry your cry, and just as sure as the truth is in it, it will empty the city and fetch the people to your voice, or else God, who has most special providence of truth, will set you and your voice and your cry down in the very heart of that city to shake it. Away with your talk about your not being appreciated. Whenever a man in any society talks about his talents being neglected, we may be sure that they deserve to be neglected.—*Dr. Deems*.

Our Social Relations.

Domestic happiness, thou only bliss
Of paradise that has survived the fall!
Thou art the nurse of virtue. In thine arms
She smiles, appearing as in truth she is,
Heav'n-born, and destined to the skies again.—*Cooper*.

THE ABSENT.

As stars, the vigilants of night,
Resign their posts at ope of day;
As summer songsters take their flight,
When summer hours have passed away;

As fair and fragrant flow'rets fold
Their dewy cups, when day is o'er,
So, from our fond and gentle hold,
Pure spirits seek the heavenly shore.

But not as stars each even burn,
And birds come back to hill and glen,
And flow'rets ope at day's return,
Do our belov'd ones come again.

Adieu, fond hearts! the funeral pall,
The bleeding heart, the burning tear,
Are but the common lot of all
Who make their habitation here.

REV. E. R. LATTA.

HINTS FOR EVERY-DAY USE.

BY MRS. GEORGE WASHINGTON WYLLIS.

FAVOR yourself! Show a little Christian charity toward the patient body that performs the behests of your will, if you haven't any toward the soul that is helping you upward. Don't expect too much of yourself!

Take trouble coolly. Do not despair when the dark hour of trial comes down upon you, as it must, sooner or later, upon us all. Nature never folds her hands in despair when the lightning strikes down the noblest oak in all the forest. Not she! She goes to work and covers the unsightly black stump with blossoming vines and velvet moss and silver-outlined lichens, until it is lovelier than it was before. Just borrow a suggestion from the mighty mother when you are inclined to despond.

Don't go round with a face a quarter of a

yard long! What right have you to inflict your woes on society at large? A man who can't look cheerful ought to be locked up somewhere until his countenance ceases to be a libel on the bright world around him. Is there no one who has ever known trial save yourself? Troubles are like rolling snowballs, they gather strength and size as they go, until some day you will be crushed beneath their weight. If you once make up your mind that you are an ill-used personage, there will be plenty of collateral evidence on hand to prove it. Nobody ever yet looked for a grievance without finding it. Be a man, and resolve to conquer yourself. Starve your trouble to death—give it nothing to feed on—no brooding thought, no morbid sympathy; and when it is dead, bury it—roll a great stone over its grave and start afresh.

Give yourself a fair chance in life. Let black draughts and patent medicines alone. A brisk walk in the open air, once a day without fail, is better than pills and potions. Be good company for yourself, too. Don't go out, sauntering along, with your hands in your pockets and your head sunk down upon your breast, imagining that you are taking excellent exercise. You might as well be traveling over the treadmill. Think of pleasant things—call up bright remembrances—freshen your mind and brain as well as your body. If you were entertaining company, you would not range all your cares and trials and tribulations before them by way of light conversation. Why should you be less considerate of yourself? Leave your afflictions at home—they need no exercise—and take a blessing with you to ponder on, as you walk. There is no man so poor that he has not at least *one* blessing to accompany him on his daily walk!

Speak pleasantly to those at home. Cross words are like the rows of dominoes we used to set up on the table in our childish games. When one fell, it drew after it ruin indescribable. One cross word seldom lacks company—it is contagious.

Do your share toward keeping the world in good-humor. Courtesy is cheap, and he who can give nothing else, certainly can afford a polite word and a pleasant look. There are enough curmudgeons to more than balance civilized society, and you certainly owe your allegiance to the latter.

Look on the bright side of things! If it rains to-day, look out for sunshine and blue sky to-morrow. Don't take it for granted that every man you meet is a villain; don't spend your time in trying to guess at "the motive" of your neighbor's kindly deeds. It takes no more breath to laugh than it does to groan, and it is an infinitely more becoming process to the face!

Take things as they come, and never say, "I would rather it had been any other sorrow!" It is never safe to open a debit and credit account with the Almighty! There is a Hand beyond the darkness that scatters blessings, if only you wait its time, patiently.

PHINEAS STAUNTON, A.M.*

This gentleman had a large head, which gave him breadth of thought, strong feelings, and a great deal of character. That which most signalized him was the unusual fineness of texture and susceptibility of his whole nature. His temperament indicated a predominance of the Mental, with enough of the Vital to give grace, ease, and smoothness to his characteristics. He had a happy combination of the qualities of the feminine nature, sustained by enough of the trellis-work of character derived from the masculine nature, to bring the gentle and refined elements into proper relief. His intellect, like the feminine, was intuitive. Volumes of fact and inference flashed upon him instantaneously, and his first judgments rarely needed modification. He was remarkable for his close observation, for his power of analysis, as well as of combination; for his memory of things, their qualities, adaptations, and uses, for his memory of facts and ability to store up knowledge. He had Language enough to give freedom of utterance; but one so highly organized as he can never give full voice to his thoughts. He had the temperament of an artist, as well as the organization adapting him to art culture. He had large Ideality and Sublimity, and a fertile imagination. He had a strong sense of the spiritual, which gave him an insight of the life to come; and in the realms of the esthetical and the spiritual he found his chief delight.

* "Reminiscences of the Life and Character of Colonel Phineas Staunton, A.M. A Memorial." November, 1867.

He had manly courage and executive force, and whenever duty called to the performance of stern service, he was capable of maintaining such a position. He had a sensitive regard for the good opinion of his friends, and a dread of the criticism of his opponents. He was firm, conscientious, hopeful, and truthful. He had respect for things sacred; was devout, sympathetic, liberal, and comprehensive in his sympathies. His social nature rendered him peculiarly awake to all the gentle influences of affection; he was a firm friend and an ardent lover. He had a tender regard for the young and helpless; and while he was able to perform the stern duties of manhood successfully, he had the gentle and motherly qualities which enabled him to appreciate the infant and awaken its affection.

Had he devoted himself to trade or mechanism or commerce, he would have made his mark. His true sphere in life was that in which the refinements of literature and art, the cultivation of the spiritual, and the enjoyment of all that belongs to the affectional, could be made available. The world needs a million such men in the room of the pugilists, tricksters, and political stock-jobbers of our times. In him was a rare combination of those qualities which are the basis of virtue, refinement, affection, and religion. May the number of such be multiplied, and the example of all such men be earnestly followed.

BIOGRAPHY.

"His noblest name deserv'd, and not derived."

It is well that good men be had in remembrance, especially when united with their integrity and virtue are acknowledged intellectual abilities and high official position. The youth of our land need to have set before them in "characters of living light" those exemplars of true nobility of soul and mind who have graced manhood and womanhood by their life. The death of Colonel Staunton—Vice-Chancellor of Ingham University—at Quito, on the 5th of September last, was the occasion of no ordinary sorrow and regret to the large circle that loved and esteemed him; and the volume which lies before us is in commemoration of no ordinary man. It deserves a wider circulation than merely among those who claimed a more or less intimate acquaintance, for its influence could not be otherwise than ameliorating and refining. We are informed in the memoir that as a lad Col. Staunton was quiet, thoughtful, affectionate, and, like all noble natures, retiring and diffident. Well organized, mentally and physically, he seemed to be destined for some

superior sphere. The refinement of his nature, the excellent quality of his temperament, and the rare unity in the grouping of his powers, made him an object of interest to all his associates. At an early age he was exposed by circumstances to those temptations which beset young men who leave a cherished home to engage in some pursuit among strangers, but such was the staunchness of his principles that he was enticed into no vicious practice, no social excess. Entertaining a strong love of Art, he pursued it with zeal, but it was for a purpose—one of true devotion—the good of Ingham University. In artist life he displayed the Christian by concentrating his efforts upon the development on canvas of some of the most vivid scenes and incidents recorded in the Scriptures. Among the productions of his pencil and palette are *Lot's Escape from Sodom*, *The Walk to Emmaus*, *Casting out Devils*, and *The Ascension*, which are considered by some connoisseurs to be equal in conception and careful handling to the best religious productions of modern art. Fidelity to the free institutions of his country and an earnest patriotism led him to engage in the war for the Union, which has so recently become historic, and whose effects still remain. He soon took a commanding position, and served his country efficiently. Having associated himself with a number of scientific gentlemen who, with the co-operation of the Government, purposed to explore certain portions of South America, he went with them, brush and palette in hand, thinking to gather fresh trophies for his studio and for the university which commanded his regard.

In the course of their investigations, the expedition made Quito, one of the finest as well as oldest of the South American cities, a halting-place. Col. Staunton entered it weak and exhausted, supported by his friends. There, amid some of the grandest mountain scenery of the western hemisphere, he breathed his last, and was sorrowfully interred in a cemetery for the first time consecrated in that region to Protestant burial. He was fifty years of age.

The Memorial contains the several addresses which were delivered on the occasion of the services commemorative of his death, at the Presbyterian Church in Le Roy, N. Y., the locale of Ingham University, and the resolutions adopted by the Board of Councilors connected with the institution.

Published with the foregoing is a sermon, on the death of Miss Marietta Ingham, one of the founders of Ingham University, preached by Rev. Wm. L. Parsons, D.D., June 6th, 1867.

ACROSTIC.

EACH name doth fold a meaning in its heart,
Like slumbering roses dreaming in the bud;
If rightly given, the meaning wakes to flower.
So yours. Elisabeth means "consecrate,
Allied to God"—or good, 'tis all the same;
But goodness hides itself in varying forms—
Enchanted eyes may see it everywhere;
To me it seemeth best revealed in that
High harmony where soul doth chord with soul.

E. OLDCHILD.

AUNT PRISCILLA.

BY VIRGINIA VARLEY.

AUNT PRISCILLA is an oddity; one of those peculiar people who attract by their good qualities and repel by their disagreeable ones, and in regard to whom you are compelled to take a neutral position, not knowing whether to extend to them the right hand of friendship or the cold shoulder of disdain.

Find her in the right mood and she seems a jewel of inestimable value, a veritable "well-spring of pleasure;" for then the household machinery moves on without a jar; and being useful rather than ornamental, the amount of work she manages to accomplish is really surprising.

But Aunt Priscilla is very much like bitter beer, which if kept too long in the house is sure to turn sour; and vinegar bears no comparison with the temper of my relative when she gets fidgety. And when she begins to fidget, you might as well try to hold a hurricane; have her blow out she will, in spite of all attempts at pacification; and you may go to bed at night with your head full of plans for the morrow, and wake in the morning to find your useful member "over the hills and far away."

There is not the least atom of patience in her composition; to "stand and wait" would be the most excruciating service in which she could ever engage, and the wages would be no compensation for the agony endured.

If she proposes going any distance, and you send John at once to harness up the team, she would be more than a mile on her way before he came round to the door. The only way to circumvent her is by taking a circuitous route; I speak metaphorically, for if you should overtake her on the road after she had started, ten chances to one if she would stop long enough to get in.

Her greatest weakness is her desire to prove that she is independent of everybody; but when she gets "on a rampage," we are pretty well convinced that she is under the control of Satan himself, and she can't leave the house too soon—if she hurries. I well remember the last visit she made us. We were aware of her antipathy to black tea; which she said was "sticks, and slops not fit to drink," so we put the favorite "Young Hyson" where she could prepare it to suit herself. Do you suppose she'd touch it? Not she. All our expostulations were in vain. "I only want a little hot water," she declared, "and that seems the hardest thing in the world to get!"

So she drank the hot water, unadulterated, for several meals, until a happy thought struck us. A tête-à-tête set, the property of a married sister, was brought out of its retirement; the green tea steeped in the little tea-pot and set under the nose, almost, of the old lady, where its delicate odor might charm away the evil spirit that sat in our midst. Well, it had the desired effect, and was such a restorer of peace and harmony that we made a memorandum of

it at the time, intending to profit by it in the future. Strange, incomprehensible being!

Here is her history, told in her own words, as nearly as I can recollect them:

"Father moved from Massachusetts to Western New York in the early part of the century, taking with him a stiff leg which he got at Yorktown, and a good amount of money with which he intended buying a farm. But the money turned out to be worthless shin-plaster, and many a time father wished himself back in New Braintree.

"The country was new, and it was hard scratching to get a decent living in those days. The boys were put to trades; and we girls had to turn in and help at the grindstone. I took a place at the tavern as hired girl, and had as much work and fun as I wanted. The landlord's son was a handsome fellow, and half the girls in Madison County were just crazy after him. I was as big a fool as any of them—girls are so carried away with good looks!—although I never put myself in the way of his attentions, for I had nothing in the world to recommend me but a fair skin.

"It hurt my pride awfully that I could not make as good an appearance as the other girls did; but when William Brown asked me to marry him, I walked in satin for awhile, I was so amazed and overjoyed. We married; and for the first year or two were supremely happy. Then William went into the distillery business, and our troubles began; it did seem as though all our happiness ran out faster than the liquor. He began to drink, and grew more and more careless every day, never minding in the least how we fared at home. There were sixteen hogs to feed; and many a time have I seen the whole sixteen standing on their hind legs, looking piteously over their pen and squealing like mad, and their distress would drive me to look after their master and drag him away from his boon companions.

"I went hungry many a day; for I was too proud to beg, and my babies kept me from doing much besides taking care of them.

"The distillery failed,—as of course anything will that isn't half attended to,—and pretty soon what little we owned the creditors were determined to have, and it was mighty little that William had left us. The constable came at night, and, finding the door locked, banged and battered at every convenient place; but I kept quiet. William had disappeared, I didn't know where, and there I lay in a chill of terror, dreading disgrace worse than poverty. Morning found me completely bewildered, and, as it always happens when you're in trouble, the children wanted more waiting on than usual, and tormented me until I was nigh about crazy.

"One of my neighbors came in and gave me some words of sympathy, and what I valued most just then, sent the children into his own kitchen, where I knew they would be warmed and fed. He heard the constable was about to seize William's property, but too late to get me word in time, and so he had lain awake all

night fearful that, being a woman, and in distress, I would open the door if only to inquire their errand. I'm sure I don't know what kept me from it.

"It was a relief to the good man to see that I had not quite lost courage; there was too much fire in me for that, and acting on his advice I gathered up a few articles I could call my own, and left the place early in the day.

"I did not go far, for I had precious little money, and I couldn't afford to waste a cent of it traveling around, so I set my face like a flint, and took in washing and plain sewing, to support myself and little ones.

"William's family were wealthy, but they never volunteered any assistance, and I wouldn't apply to them or any one else for aid so long as I had the use of my hands. William's desertion was the hardest thing I had to bear, and yet every day I felt my heart grow colder and colder, until I ceased to feel any regret at his continued absence. I buried him. Then my little Willie, the only boy, took sick and died; and warned perhaps in a dream, for Willie was always his pet,—I shall never think that love for me had anything to do with it,—William returned, and seemed to be a better man. I thought the cloud had passed over, and the sunshine would come into our house once more; but his promises so easily made, so easily broken, went for naught, and the appetite for strong drink mastered him once more, and brought him down again to the level from which he had endeavored to rise.

"He went away, or I drove him away, for I was mad enough to do anything; and when another little girl was born, I vowed I would never see his face again. He wrote occasionally, begging me to forgive him this once, only this once, but I was deaf to all entreaty; I couldn't support him and the children too, and I believe I was as happy to hear I was his widow as I was the day I became his wife. I hate the men; they are all alike!"

She does hate the wickedness of the men, and the folly of the women; and would rather follow her children to the grave than prepare them for the bridal. Feeling thus she has completely isolated herself from all sympathy with her fellow-creatures, and with a fine nature warped and scarred by the injuries done her in her youth, she has intrenched herself behind an armory of weapons whose points are tipped with most malicious venom.

Yet she is not happy; and our lips betray the feeling that is in the heart when we mournfully exclaim—"Poor Aunt Priscilla!"

"SIMILIA SIMILIBUS CURANTUR"—(LIKE CURES LIKE).—A young man says he cured a severe attack of palpitation of the heart by the application of another palpitating heart to the part affected. We see no objection to this sort of treatment; and he could, no doubt, furnish any number of certificates to prove its efficacy. But look out and not take too much of a good thing.

ANTONIO CANOVA;
OR, THE GIFT OF SCULPTURE.
FROM THE GERMAN OF FERDINAND SCHMIDT.

IN the little town of Passagno, in Italy, is a beautiful castle, which, about the middle of the last century, belonged to the Nobile Faleri. Opposite the castle stood a poor little house, in which an old man, the mason Passino, lived. As the latter came home from his work one evening he saw from the distance a boy standing at his door. As soon as the child saw the old man he ran toward him, threw his arms around him, and cried,

"Grandfather, dear grandfather!"

"My boy!" said Passino, "is it really you? Is it you, my Antonio? Oh, my heart's darling, how you have grown since I saw you!" And he seized the curly head of the beautiful boy with both his hands, and kissed him, while tears of joy ran down his brown cheeks. "But now tell me," continued he, "how is it at home? Is my daughter, your mother, still well? Well; thank God! You are a brave boy to come so far to see your old grandfather! But, come in; you must be tired and hungry."

Both went into the little house, and the old man brought for his grandchild whatever kitchen and cellar were able to afford.

The next morning, when Antonio had finished his breakfast, Passino said:

"I must now go to work, my boy; how will you amuse yourself while I am gone?"

"I'll look at yonder castle," replied the boy.

"Will that give you pleasure, Antonio? Then why will you not go in?"

"May I?" asked Antonio.

"Yes, indeed!" replied his grandfather. "I am working in the castle. Come with me, and you shall see all the beautiful things in the garden. Oh, they will not refuse old Passino such a request for his grandson!"

So Antonio passed a delightful day. The colonnades and the statues awoke in him a delightful astonishment. "Oh! if I could but see the splendor of the rooms and halls!" thought he; but he dared not hope for that. In the garden he admired the flowers and the picturesque grouping of the trees. But he was attracted still more by the marble groups, of which there were many. He went from one to another, and could not be satisfied with looking at them. In the middle of the garden was a fountain, at which he stopped most frequently. On a pedestal, which was sculptured with great art, stood a colossal lion, from whose mouth a stream of water rushed into a marble bowl.

At dinner-time Antonio was called by his grandfather, who took him into the servants' room, where their dinner was set. But the boy's soul was so full of all the beautiful things he had seen that he was not hungry.

"You are not sick," said Passino, kindly; "I see that in your eyes. So you may say your prayers, and go again. When you hear the Ave, come and fetch me from the yard."

After Antonio had said his prayers he hurried out again, and the afternoon passed like a

happy dream. Shortly before the ringing of the evening bell, visitors of high rank had arrived at the castle, and the gardener had answered the old mason's question whether he would be allowed to bring his grandson again on the morrow, thus,

"No, Passino, as long as we have visitors here, the boy must stay at home."

During the evening Passino moved to and fro on his chair and rubbed his brow, not knowing how to tell Antonio that for the present he must avoid the castle garden. When he looked at the boy, whose eyes were beaming with delight, it seemed cruel to tell him, and it seemed equally cruel to let him cherish a hope which would not be fulfilled. The old man could think of nothing that in his opinion would be pleasant for Antonio to hear, and he became so angry at his own awkwardness, that he suddenly sprang up and struck the table with his fist. Antonio looked at his grandfather terrified. This man, whose old Italian blood boiled in his veins, ran up and down the room like one mad, and raged at the visit that had come so untimely. Passino had no idea that Antonio could take it to himself. At last he stopped before the table, and cried,

"Now, you dare no more go in the garden; that is what comes of it!"

Tears came into the boy's eyes, and he said:

"What have I done, dear grandfather, that you are angry with me?"

"I angry with you?" cried Passino. "My boy! how did such an idea occur to you? I am only beside myself because for the present you are not allowed to go either into the castle or in the garden!"

"Have I done anything wrong there, grandfather?"

"No, no, my darling! but a whole household of visitors are there, and no stranger is allowed to go in. That is what vexes me so."

Antonio dried his tears, for a weight had fallen from his heart when he found that his grandfather was not angry with him. The old man seized the boy and kissed him, saying that if the visitors should stay for four weeks, he would not let his heart's darling go until he had seen the castle and the garden at least ten times. So they were both cheerful again, and the grandfather told the boy many merry stories.

When Antonio awoke the next morning he found that his grandfather had already gone; and having partaken of the food which was left for him on the table, he considered what he should do. He soon decided on his favorite occupation, which consisted in forming figures of wax and clay. Wax was not to be had; but he brought a big lump of clay, put it on the bench before the little house, and began to form imitations of those figures that had pleased him the most in the castle garden. When one was finished he carried it into the room and put it on the table.

At dinner-time Passino came. Entering the house, he noticed something on the table

covered with a piece of cloth. Antonio cautiously lifted the cover.

"What is that?" cried the astonished grandfather, looking first at the figure and then at the boy.

"A pastime, grandfather," replied the boy, "that almost made me feel that I was in the castle garden again."

"Blessed boy! Did you make this?"

"Yes, grandfather."

The old mason clapped his hands together in astonishment. After a pause, he said, in a voice shaken with emotion,

"My heart's darling! I saw at the first moment that there was something in you! I was thinking last night that you should learn the mason's trade; but now I know better. You must become a confectioner. If the confectioner *Algerie*, in the city, sees that you can make such artistic figures, he will take you on the spot, and without a fee! Otherwise, it could not be done, for you are a poor boy. Or — yet! The *Nobile Falieri* will settle that with the confectioner! He is a kind gentleman, and willing to speak a good word in a good cause."

Very happy was the grandfather, and his praise stopped only when the hour called him back to his work. With a glad heart he went to the castle, and the walk was easier than ever before. From his scaffold he could look into the open kitchen windows, where they were very busy. The kitchen-master gave his orders in a thundering voice, swinging his ladle like a scepter. Suddenly *Passino* heard a terrible noise coming from the kitchen. It excited his curiosity, and made him step to the window. There he saw the kitchen-master, raving like a madman, because he had forgotten to order from the city an ornament for the central figure of the table. The *Nobile Falieri* was informed of this, and came to the kitchen. At first he was angry, but when he saw that the kitchen-master took the mistake so deeply to heart he became calmer, and said:

"Be not like a child or a fool, but consider what can be done, that the company may not notice it."

But good advice was dear. Neither one nor the other of the things proposed could be done. Then an idea suddenly flashed through the old mason's head. He leaned into the kitchen window, and said, with great gravity,

"I beg your pardon, but I have some good advice."

All looked up. *Falieri* broke out into a loud laugh as he saw the adviser hanging from the kitchen window; and even the afflicted kitchen-master was infected, and soon every one in the room was laughing. The serious face of the mason, who had the welfare of his grandchild at heart, contrasted powerfully with the merry faces in the kitchen. He was not at all disturbed by it, but screamed through the laughter,

"If I give not good advice, my gracious master may have me by the ears!"

At last *Falieri* recovered, and was able to ask what he would advise. Then the mason

began with eloquent words to praise his grandson, who was, he said, a born confectioner, and capable of forming any figure. *Falieri*, who had taken the whole thing for a good joke, now thought he would go through with it. Therefore he told the mason to go for his grandson, and ordered the confounded kitchen-master to give him the necessary dough for a figure. Then he went back to the drawing-room, and with great hilarity told the occurrence to his guests, who were all anxious for the moment when the central figure would appear. *Passino* had led his grandson to the castle, and informed him of everything, adding,

"If you do the work well, I warrant you the *Nobile* will make you apprentice to a confectioner!"

At last the central figure was brought, hung over with a white cover, and the servants put it in the middle of the table. Then the cover was removed, and, instead of the expected laughter, an exclamation of astonishment was heard through the room.

They saw before them an artistically-formed lion; and from all sides arose a loud demand to see the little artist. Upon an order from the *Nobile*, the mason appeared with his grandson, and the boy was overwhelmed with praise. Tears came into the old mason's eyes as he looked on Antonio, whose countenance beamed with delight, though his demeanor was modest. Turning his cap in his hands, *Passino* stepped toward the *Nobile*, and said,

"I would beg pardon,—but it is a poor boy; and if my gracious master would speak a good word to the confectioner in the city, Antonio might become a confectioner."

"A confectioner!" said *Falieri*. "No, *Passino*; thy grandson, Antonio, shall become a sculptor!"

And, through the favor of the *Nobile Falieri*, Antonio Canova became a sculptor whose works still excite the wonder and admiration of beholders. He first went to Bassano, and was placed with a capable artist; and when in his seventeenth year he had sculptured *Eurydice* in marble, he was sent to the Academy of Art in Venice. He soon gained a high position, and his chisel created a number of famous groups. Later, he filled high offices in institutions dedicated to art, and was honored by being made a knight. But not only his artistic power made him worthy the veneration of all times, his heart put him as high as the imperishable creations of his genius. One who knew him intimately says: "He was active, open, mild, obliging, and kind. He knew neither the pride nor the envy of an artist. He was modest, notwithstanding that his fame spread over Europe. Animated by the noblest beneficence, he supported talented young artists, and set prizes to encourage them. In short, his moral character was so excellent that even among the many who envied, there was but one voice as to his worth."

How fortunate for the world that Canova's genius was early appreciated and stimulated by the encouragement of the powerful!

DOMESTIC ECONOMY; OR, WHAT WE PAY GO-BETWEENS.

READER, did it ever occur to you how far apart are producers and consumers? Do you who live in cities know how much more you pay for what you consume than you need to pay? Do you realize how many profits are made on a pound of dried peaches before said peaches reach your table? Let us see.

The grower produces, gathers, and dries the fruit. He sells it to his country merchant in exchange for drygoods and groceries. The country merchant sells it—at a profit—to the wholesale city merchant; and he, in turn, sells it to the jobber at a profit; and the jobber to the retailer at a profit; and the retailer to the consumer at a profit. Here are *five* go-betweens and five profits, which come out of the producer and the consumer. Our example of dried peaches will apply equally to nearly everything produced in the country and consumed in the city. Is there no remedy for this? Consider the large number of useless hucksters who ought to be either producers or simply the paid agents of the producer and consumer. The remedy is in "TRADE UNIONS," and sensible people will organize them and do away with all unnecessary "go-betweens," thus greatly reducing the cost of living in towns and cities. The same plan may be adopted by artisans, manufacturers, shippers, and by others who believe in co-operation. Economy is now the watchword of the laborer, of the middle classes, and of all who earn, instead of "sponging" on others to get their living at little or no cost. Let us try to bring the producers and the consumers as near together as possible, not only for the sake of reducing the cost of the necessities of life, but also for the sake of obtaining fresher and better supplies of those perishable things, like vegetables and fruits, which are as delicious as healthful.

ON THE TRACK.—The other day I heard a mother ask her little son to do something. "In a minute," he said. She spoke again. But it was one, two, three, four, five minutes before he minded her. It makes me think of the switch-tender's boy. What if he had waited a minute before minding his father? A switch-tender in Prussia was just going to move the rail, in order to put a coming train of cars on a side track, when he caught sight of his little son playing on the track. The engine was in sight, and he had not a moment to spare. He might jump and save his child; but he could not do that and turn the switch in time; and if it were not done, the on-coming train would meet another train, and a terrible crash and smash take place. The safety of hundreds of lives depended upon his fidelity. What could he do? What did he do? "Lie down! lie down!" he called, with a loud, quick voice to the child; and seizing the switch, the train passed safely on its proper track. Did the heavy train run over the little boy? Was he killed? Was he crushed to pieces? No, for he did just as his father told him, and did it

instantly. He fell flat between the rails, and the cars went high over his head; and when the anxious father sprang to the spot, there he was alive and well—not a hair was touched. It was his quick obedience, you see, that saved his life. He did not stop a minute. Even a moment's hesitation would have been too late.

MEMORY.

A SUBLIME train of purest thought;
A wondrous, firm, mysterious band;
The ethereal cord by nature wrought;
A viewless thread; a myetic wand;
Magician in the brain confined,
To make past present to the mind.
The charmer waves his magic rod.
Life's lengthened way is but a span;
The thorny path in torture trod,
Seems paradise on earth began.
Illusion sweet! past woe is fled;
The years are filled with bliss instead.
The vision grows. Excitement warms
The frozen chambers of the heart:
Before the sense pass sainted forms,
And of the present are a part.
The dust is waked from the dark tomb,
The spirit called from its heavenly home.
Bright Memory falls as years increase.
Does death destroy this power divine?
Oblivion make the past to cease?
The soul no bliss in old-time find?
Memory expands forevermore,
And ne'er forgets aught gone before.

ISAAC MURPHY, GOVERNOR OF ARKANSAS.

To the casual observer this portrait would not be likely to offer an attractive or interesting feature. To the unscientific observer this face would only prove expressive and striking when its owner's history was known, and the part enacted by him in a most rigorous life-drama appreciated. The homely plainness of the features, which is due chiefly to the sharpness and shrivel of advanced age, would at first sight dissuade close scrutiny and prompt but common-place remark. Let us, however, analyze this countenance. First, we perceive the evidences of the blending of the mental and motive temperament, each contributing in a large measure to the mental character; the one supplying force, energy, and endurance, the other engendering susceptibility, acuteness, and penetration. Second, we notice that while the head is not by any means narrow at the base, its greatest breadth is in the region of the sentiments: the upper side-head, generally, is expanded, showing large Cautiousness, Ideality, and Constructiveness. Third, the coronal region is well marked.

PORTRAIT OF ISAAC MURPHY.

Firmness and the organs which cluster about it, especially Conscientiousness and Self-Esteem, are largely developed. Fourth, the forehead is sufficiently pronounced to impress us with the opinion that the intellectual faculties, especially those which sustain a relation to the meditative spirit, are active and controlling.

From these premises we conclude that Governor Murphy is a man of inflexible purpose, staunch principle, and earnest endeavor. With him to make choice of a principle or of an undertaking is to act upon it. He would be careful in deciding a matter, especially when antagonistic and important issues were involved in its development; but having decided, the matter, so far as he is concerned, is settled. His strong moral qualities, acted upon by a thoughtful and even speculative intellect, give an exalted character to his decisions, so that he feels drawn on, as it were, by an influence beyond himself, actuated by unaccountable impulses. The intuitional element is powerful in his disposition; he comprehends at once those who come within the sphere of his observation, and is often inclined to yield to his first impressions against the suggestions of logic and the representations of others. He would be forbearing toward others, though disagreeing in sentiment; the openness of his nature, however, would not permit him to dissimulate or deceive. As a man of

opinion and action he may be regarded as individual, and even eccentric.

In fine, sympathy, emotion, imagination, justice, and pride are the major qualities of his character, while covetousness, cunning, selfishness, and severity are relatively weak or entirely subordinated.

As a writer or a speaker, he would be brief, but smooth, agreeable, and logical. Appreciative of truth in the highest degree, he would aim to give it clear significance divested of all qualifying tautology. As a member of the domestic circle he evidently is sympathetic, kind, generous, and affectionate; willing to sacrifice his personal interests for the benefit of those who look to him for support or counsel.

BIOGRAPHY.

The war of the American Rebellion has made historic the names of many who, with all the same qualities of soul and mind, would otherwise have been forgotten. It has created for us thinkers, statesmen, and generals, on both sides, of the most wonderfully varied talents and abilities, with whose fame the world is now filled. It has associated the names of others with story and poetry, and out of materials the most ordinary there will be imaginary characters figuring in future romance, the pure creations of fancy. Ellsworth, who threw away his life and hopes of future distinction for a useless rag, will appear with poetic prominence. Booth, a weak, licentious actor, is now a Brutus with many; and even "Wild Bill," a contemptible bully and desperado of the Western border, occupies the front of a prominent magazine with a highly colored and misrepresented account of his wicked life.

There are, however, few names less known and more deserving of notice in connection with the civil war than the name of Isaac Murphy, Governor of Arkansas, who by one act of remarkable moral heroism and love of the Union, at the risk of his own life and the safety of his family, revealed his incorruptible purity and resolution to a wild and infuriated body of rebels, of which he was the sole loyal member, the Arkansas Secession Convention of 1861.

The previous life of Governor Murphy differed little from the lives of many around us. He was born at Pittsburg, Pennsylvania, October 16th, 1803, and attended Jefferson College two sessions, but was obliged to abridge his collegiate course on account of ill health, most of his education being subsequently acquired at private schools. While quite young he was thrown on his own resources by the loss of both his parents. He had, however, already been thoroughly educated in the doctrines and discipline of the Scotch Covenanters, and his earliest recollections were of the West

minster Confession of Faith and the solemn League and Covenant. To the stern morality thus early instilled we may trace the lofty resolution and loyalty of his later life.

On July 30th, 1830, while teaching a small school in Montgomery County, Tennessee, he was married to Miss Angeline Lockart, daughter of William and Elizabeth Lockart. She was a lady of most estimable moral and intellectual character, by whom Governor Murphy had ten children, six girls and four sons. Mrs. Murphy died in 1856; and of the family the Governor and four daughters alone survive.

In the fall of 1834 he moved to Fayetteville, in northwestern Arkansas, where he taught school for two years, and about this time was admitted to the bar. For a time he was director of a bank at Fayetteville, and in 1840 took a contract, and was engaged for two years in surveying public lands. In 1846, and again in 1848, he served as a member of the lower house of the Arkansas Legislature from Washington County, and also represented Madison and Benton counties to fill a vacancy in the Senate during the session of 1848 and 1849.

On April 18th, 1849, he started for California. He remained there some years, during which time he worked in the mines, and accumulated some property, but, through misfortune, the most of it was lost; and he returned to his home in Arkansas in September, 1853, where he resumed his legal practice. In 1855 he removed to Madison County, and in 1856 was again elected to the State Senate to fill a vacancy caused by death.

We thus see in Governor Murphy at the commencement of the rebellion a man of local importance in northwestern Arkansas, respected and trusted by his fellow-citizens. At that time it is beyond doubt that the majority in Arkansas, and especially in the northwestern part of the State, were opposed to secession. In February, 1861, he was elected as a Union delegate to the State Convention, and it was considered a certainty that a majority of the Convention were loyal, and Arkansas would not secede. But the storm of rebellion steadily gained strength, and swept the entire South. In Arkansas secession began to be popular. As elsewhere, most of the wealthy planters and citizens were disloyal, while only the vast majority of the poorer population were loyal. The former used their powerful influence to aid their cause and terrify Unionists. The few wealthy Unionists, fearing for the safety, both of their person and property, maintained a silent course or openly avowed themselves secessionists. By such a reign of terror, notwithstanding a majority of loyal votes, Arkansas was dragged out of the Union, and the bitterness of the subsequent contest made most of her people sincerely rebellious.

The Convention assembled, and at once it was evident that members elected as Unionists had become tainted with secession. Nor was this all. Everything that the wealthy, aristocratic secession element could do, either to terrify or to purchase the votes of members, was

done. The United States arsenal at Little Rock was seized by the rebel Governor Rector. Major Sturges, commanding the United States troops at Fort Smith, was compelled to escape through the Indian Territory to Union soil. Nowhere was it safe to express a love of the Union or condemnation of the course of the Southern leaders.

Some debate ensued in the Convention, as a few Unionists still held out against the reign of terror; but one by one they were compelled to yield through the force of circumstances. It is due to many of them to say that nothing but fears for the lives of their families caused them to succumb. It is, however, due to one man alone to say that not even considerations like these could force him to abandon principle.

On the 6th of May the vote was taken on the question of secession. Unionist after Unionist voted aye with the rebels. When the vote had been taken, Isaac Murphy had alone voted in the negative. The excitement in the Convention was intense. The "Chivalry" were rampant. This old man must yield, and he would do so when he found himself alone. A motion was made that the vote be declared unanimous. Arkansas should enter the Confederacy without a dissenting voice. Again the vote was taken, and again Isaac Murphy alone voted in the negative.

Said Governor Murphy to the writer: "The scene at this time beggared description. Everywhere arose oaths, curses, and cries of 'Kill the old traitor, the infernal abolitionist!' I never expected to get out of that hall alive!"

It is not necessary to dwell on the moral heroism of this action, nor of the subsequent conduct of Governor Murphy. Let us simply ask how many of us would have had the courage to do as he did, at such enormous risks, merely for the sake of a right principle! Only those who know the savage spirit of Southwestern rebels can fully appreciate his position while in their midst. There were among them some honorable men, but the State of Arkansas was soon overrun with guerrillas. These were scoundrels of the worst stamp, who hesitated at no atrocity. The evidence before courts-martial proved that Union men were tied to trees, had their finger and toe nails extracted one at a time with bullet moulds, and were then brutally murdered. Similar and worse outrages were innumerable, and among such characters Governor Murphy, with his family, lived for months, constantly liable to every imaginable outrage.

But, notwithstanding the imminent danger to his life, he escaped, and upon the adjournment of the Convention returned to his home in Madison County. From this time until the arrival of the army of Curtis in Arkansas in March, 1862, his life was in constant danger. Remote from the Union army, all chance of escape was cut off. The country swarmed with guerrillas and rebel citizens, and from these he endured innumerable persecutions. Yet he constantly and openly avowed his Union sentiments, and denounced secession as the greatest

curse that could befall the country. A notice, said to be intended especially for him, was posted at the Court House door, warning all Union men to leave the country within ten days. The intervention of friends in his behalf was without avail, and the danger to his life became so great that on the 18th of April, 1862, he made his escape to the army of Curtis in southwestern Missouri. After his departure his family was robbed by guerrillas.

During the long march of General Curtis through southern Missouri and Arkansas to Helena on the Mississippi, where he arrived in July, 1862, Governor Murphy traveled with the army, sharing in all the hardships of the campaign. In January, 1863, he returned to his home with the army of Schofield, and remained until the departure of the army, when he removed with his family to St. Louis. Owing to the severity of the weather and the unusual exposure to which they were subjected, two of his daughters died soon after their arrival in St. Louis, and the remainder of his family was reduced to great poverty and suffering. Common soldiers in St. Louis, as well as others, who had known him as a patriot and kind companion on the march, subscribed money for his immediate relief; and partly by such means Governor Murphy was enabled to struggle through the winter of 1862-63.

During the summer and fall of 1863, movements for the capture of the capital of Arkansas were for the first time successfully carried into effect under Generals Steele and Davidson. Governor Murphy accompanied their army, and was present at the capture of Little Rock, September 10th, 1863, ever since which time he has remained in Arkansas.

The patriotism and suffering of Isaac Murphy during the war had won for him the confidence and esteem of the loyalists of Arkansas. Under a proclamation of President Lincoln, Provisional State Governments were at this time instituted in most of the seceded States. A loyal Convention was called in Arkansas, and by this Convention Isaac Murphy was appointed Provisional Governor of the State in January, 1864. Subsequently, at an election held on the 14th, 15th, and 16th days of March, 1864, his office was confirmed, and he was chosen Governor by the loyal people of Arkansas. This office he has since continued to hold, and his administration has thus far met with general approval.

Governor Murphy's own estimate of his character is given in a letter to the writer in the following words: "I was by nature a dreamer and enthusiast. My enjoyments were in thought, books, and family affections. I have been too much of a dreamer for success in life."

In the accumulation of property he has certainly not been successful. He is to-day a poor man. But he has met with far higher and nobler success in the life that he has lived—the life of a conscientious and incorruptible man.

Of a retiring and modest disposition, he has never sought that prominence in the politics

of the day which his position as a loyal Governor of a once rebel State might have given him. He has never courted the fame of being a martyr to the Union cause. Brownlow, of Tennessee, with no firmer adherence to principle, and probably having endured no greater suffering in person or in family, is probably known throughout the Union more by his talent for controversy and the prominence he has assumed as a politician than on account of the personal sufferings he endured as a Union man under rebel rule. Governor Murphy's indisposition for publicity has retired him from popular notice, as much as possible, to a quiet, private life and the happiness of the home circle. Yet are not both of these men equally deserving of consideration for true patriotism shown in the hour of danger? Certainly; there are not too many men in the nation like Governor Murphy, and history ought not to permit his example to be forgotten.

PULPIT ORATORY.

UNDER the title of Earnestness, the N. Y. *Christian Intelligencer* of recent date says: In the delivery of a sermon nothing can compensate for the lack of a becoming earnestness of manner. And as earnestness can not be counterfeited by mere noise or varied vociferation, therefore it must needs be kindled in the heart, and show itself in that inimitable grace which is described by only one name—*unction*.

An eminent advocate in Rome accused Quintus Gallius of an attempt to poison him, and came forward to produce his evidence; but the languid manner of the accuser was interpreted by Cicero into a favorable construction for his client. He exclaimed, "*Ubi dolor? ubi ardor animi? qui etiam ex infantium ingeniis elicere voces, et querelas solet.*"—Where is that grief? where that burning earnestness which is wont to draw out, even from the minds of children, both cries and lamentations?

The great Roman orator knew full well that a dull, drowsy, monotonous, and prosaic manner of delivery could neither impress nor persuade those who were compelled to give it their reluctant ears. Genuine earnestness produces a natural vivacity which shapes sentences, and throws the stress of the voice upon emphatic words. And vivacity in a preacher will kindle animation in an audience, and produce that wonderful medium of power, an intense sympathy between the one and the other.

Beecher, Spurgeon, Newman Hall, and others who might be easily named, are not superior to all other men in the grandeur of their thoughts nor in the splendor of their diction. But they are what are styled "live preachers." They carry no stilted dignity, no sanctimonious whine, no pulpit drawl, no dreary solemnity, no owl's pomp with them when they come to appear before the people with messages of truth.

What could have been more impressive than

the style of address employed by Him who spoke as never man spake, and which in his day was so novel, and in such striking opposition to the dogmatic manner of the Scribes and Pharisees? The matchless preacher abounded in figures, similes, and parables. He vocalized common things. The pearl, the twittering sparrow, the fisherman's net, the humble lamp, were converted by him into oracles of truth. Mechanical logic, formulated propositions, wire-drawn discussions, dogmatic repetitions of abstract principles, which now oppress so many very learned and very dry pulpit discourses, have no charm and no value for the average of church-going people. They want the living word presented to them in a living way. Therefore it is not too much to affirm that in a preacher everything should be made tributary to the formation of an earnest, vivacious, natural, and simple manner, both of style and of address. They who have these rare possessions are richly furnished for their great work, and never fail to enrich others.

[Young preachers, and those not young, may read with benefit to themselves and profit to their hearers, the volume just published at this office entitled "Oratory, Sacred and Secular," in which the gist of the whole subject of success in the pulpit is given. We commend this work by a clergyman to every clergyman.]

GOOD RULES FOR A TEACHER.

A NEW ENGLAND teacher keeps the following excellent rules on his desk, by which to be governed. We commend the same to all teachers, parents, preachers, editors, and others. Besides having the best influence on children, such rules will tend to greatly improve one's own physiognomy as well as his whole nature.

HERE ARE THE RULES.

1st. Sympathy with the minds and hearts of children.

2d. Energy of personal character.

WHAT I SHALL CONSTANTLY DO:

1. Keep a good temper.
2. Always be cheerful.
3. Have patience.
4. Encourage and praise.
5. Be faithful.

WHAT I SHALL CONSTANTLY AVOID:

1. Moroseness.
2. Fretfulness.
3. Anger.
4. Scolding.
5. Fault-finding.
6. A cold, unsympathetic manner.

What a volume in these few sentences! Let us analyze them. "Sympathy with the minds and hearts of children" implies *aptitude* for enlisting attention and calling out the faculties of those to be impressed and educated.

"Energy of personal character." He who would awaken or inspire energy in another must himself exhibit earnestness, energy, and enterprise.

"Keep a good temper." This means "self-control"—a condition indispensable to one who would lead or control others.

"Always be cheerful." Is this possible? Yes; if one is fit to teach, he is capable of constant cheerfulness, and he has no right to bring anything less than this into a school-room. He must keep his aches, his pains, and annoyances to himself, and not inflict them on others. Invalids, dyspeptics, and those with "jaded nerves" should be sent to the hospital, and not to the school-house, to crucify others.

"Have patience." Children are of necessity more or less impatient; but a teacher must never show a want of this admirable Christian quality. Patience is akin to peace; impatience, to disorder.

"Encouragement." No matter how self-assured a child may seem to be; no matter how presumptuous, or how indifferent apparently to praise or blame, all well-organized human beings, young and old, are susceptible to encouragement and liable to be discouraged. When one needs a word of cheer, it is folly for a teacher to withhold it. Many good people confound praise with flattery, and for fear of the latter, seldom or never use the former. Teachers should discriminate and encourage when necessary.

"Be faithful." This implies integrity; and no one who is not honest should for a moment be trusted with the high office of teacher. Faithfulness on his part will beget the same condition or spirit in children, while the lack of it will be as promptly imitated.

"Moroseness" comes of an evil spirit. It is of the passions, and a *perversion* at that. Only a low mind indulges a spirit of moroseness. So of "fretfulness," "scolding," and "fault-finding." These feelings beget resistance, turbulence, disorder, rebellion, anarchy, and the school is disturbed or broken up in consequence of an evilly-disposed or ill-tempered teacher.

To be a good teacher, one must be good. To subdue a turbulent child, or a horse, one must first be self-subduing. In short, one must have himself the qualities, the spirit, and the *knowledge* he would have in others. Inconsiderate parents and teachers look for consistency and perfection, while they themselves are nothing but inconsistencies and imperfection. This is a theme on which *all* may profitably dwell. Let us try to be in disposition and character what we would have others become. Then our efforts will be rewarded with good results. To this end let us observe the very sensible and Christian rules, in our everyday affairs, of the NEW ENGLAND SCHOOL TEACHER.

OBITUARY.—Mrs. Mary M. Braner, the mother of an esteemed correspondent of ours, died recently at Americus, Georgia. She was an affectionate wife, a devoted mother, an earnest Christian, and a kind neighbor. Her death leaves a vacancy in the large circle of her family and friends which will be long and painfully felt.

THE SEARCH.

How do we strive to find the Uncreate
In the create; in poor humanity,
Image of God! We seek for it—
That absolute perfection which our souls
Yearn for forever, and yet vainly yearn.
Through what fond, mad delusions God doth lead
The errant soul up to Himself, the One.
We worship beauty; seek it, strive for it:
Possession of it seems to be for us
The one necessity of our souls. Without,
We think we die. We find it in the flower,
The stream, the wood, the human face, the mind,
The soul; then, reaching higher up, in God.
'Tis useless thus to strive; all paths of good,
Of pleasure innocent, in innocence
Pursued lead straight to Him. You say, perhaps,
You do not see it now. Think, wait, live on;
It will appear some time to you.

Yet still,
We, finite, looking on infinity,
Draw yet finite conclusions. It takes time—
Eternity to comprehend a God,
As it takes space to hold sublimity.
One must know all things to know God; one must
Explore the heights of heaven, the depths of hell.
The great wide-circling spread of universe,
And all therein contained from small to great,
From monad up to man. Even *then* we fail.
To where this universe had being, thought
Creeps back, through the dim corridors of Time,
To step upon the precipice set down
Into unfathomable chaos where
God manifest from out its awful depths
Commanded into being all the world.
Thence how the awful mystery widening grows.
Vague speculations of the Trinity
Branch out and grow, with still new buds a-top
Of thought eternal, growing evermore
A constant miracle, from chaos sprung,
Until it reaches God. In wonderment
We children ask such questions: Who made God?
And where is heaven? content with vague replies;
Until at last we learn to comprehend
How little we *do* know, so prove our lore.
All knowledge but a line infinite—which
Begins in God and ends—who can tell *where*?

But here we stop, as out of breath, and well.
Souls do get out of breath ere they reach God,
As well as bodies; it is a long way
From earth to heaven however fast we go.
Thoughts are the wings of mind; spirit indeed,
But 'las! create, hence finite. So we make
This ratio to work out the perfect Sum:
As is the creature to Creator, so
The finite to the Infinite; and we
Must have the first three terms to find the fourth.

SPRINGFIELD.

J. G. HOLLAND.

THIS gentleman has a very finely organized body and brain. He is not large or heavily built, but of good size, well proportioned, above the medium height, and as lithe and springy as a race-horse. His whole *personnel* gives the appearance of a clear thinker, a sharp observer, a man of intense feeling, quickness, ease, and accuracy of motion, and one whose thoughts, sentiments, and susceptibilities are fine and high toned. His features are prominent and well defined, indicating positiveness of character, quickness of perception, intensity of thought and

J. G. HOLLAND ("TIMOTHY TITCOMB.")

emotion, and a practical wide-awake intellect.

His brain, of the same quality, of course, as his body, works easily and rapidly; sometimes, perhaps, too intensely for health and endurance; but for a man of his susceptibility, he is rather remarkable for toughness and endurance.

The reader will notice that the lower part of the forehead is particularly sharp and prominent, the perceptive organs, as a whole, being large. That squareness at the outer angle of the eyebrow evinces precision, method, system. That sharp ridge running up from the root of the nose to the hair, indicates memory of facts, power of analysis, criticism, discrimination, and, joined with his large Language, the power of description. He has a prominent development of the quality that reads human character; not only the ability to judge of character at sight, to form an impression favorable or adverse to the person whom he meets, but the power to enter into the intricacies and sympathies of human nature, and to describe such characteristics as he perceives in persons, or conceives to be possible, through his own consciousness; hence his graphic pictures of disposition and of thought are remarkable.

The central line of the head from the root of the nose over the top to the back of the head is high and prominent, indicating the qualities we have named, and also sympathy for suffering, reverence

for truth, goodness, and greatness; self-reliance, determination, will-power, independence, positiveness, and self-esteem, or the love of individual liberty and power. He loves children, and home, and woman. Has a passionate friendship, which enables him to win associates and hold them for life. He has a quick, polished imagination; but he does not allow it to cut loose from practical life, or from the realm of common sense, which tend to regulate and guide it. His imagination is not like a balloon that goes careering whithersoever it will. It is more like a steamer, obeying the will of the pilot; or like a locomotive, which is governed by definite laws and regulated by the will of its engineer.

There is in this organization a great deal of the historical and the descriptive; something of the didactic, and considerable of the metaphysical blended with the imaginative, sympathetical, and practical. He can write for common-sense people; is able to reach the realm of their every-day life, and of their common sympathies; and through these qualities to lead them up as high as they are able to go with him. In his writings, and especially in his lectures, there is a point-blank earnestness, vividness, and brilliancy which enables him to please while he instructs.

BIOGRAPHY.

Josiah Gilbert Holland was born in Belcher-town, Hampshire County, Mass., July 24, 1819. His father was a machinist and inventor, a man of singular simplicity and purity of character, whose virtues his son has celebrated in a poem entitled "Daniel Gray," published several years ago in the *Atlantic Monthly*. Owing to an entire failure of health while fitting for college, he was obliged to relinquish an academic course; and when twenty-one years old he entered the office of Drs. Barrett and Thompson, of Northampton, as a student of medicine. He was graduated a doctor of medicine at the Berkshire Medical College in 1844, and immediately thereafter selected Springfield as the theater of his professional practice. He associated for a time with Dr. Charles Bailey, a classmate, and afterward with Dr. Charles Robinson, also a classmate. (Dr. Robinson will be recognized as the recent Governor of Kansas.) After a three years' experience Dr. Holland gave up his profession and entered upon a more congenial line of life, literature, to which all his natural tastes led him. While preparing for this new field he became teacher in a private school in Richmond, Va., and while thus engaged, was chosen superintendent of the public

schools of the city of Vicksburg, in Mississippi. This office he accepted, and satisfactorily discharged its duties for a year and a quarter, when events of a domestic nature called him back to Massachusetts. On his arrival at his Springfield home he was induced to accept a position, then vacant, in the office of the Springfield *Republican*. Here, associated with Samuel Bowles, he entered upon his first hard work as editor. The earlier years of this connection were years of severe labor, the two young men doing the entire editorial work of the establishment.

Two years after entering the office he became joint proprietor, and continued his interest in the business throughout the entire period which was occupied in raising the concern to its present magnitude and prosperity. In 1866 Dr. Holland withdrew from the management. Besides his editorial writings and occasional contributions to prominent magazines and other periodicals, he has given to the world several volumes of superior merit. His first book was "The History of Western Massachusetts," written for his paper, and subsequently published in two volumes. This work has much local value, and involved an incredible amount of drudgery. Then followed a novel, also written for the paper, and afterward published by Putnam, entitled "The Bay Path." Subsequently he produced "Bitter Sweet," a poem which has been generally admired; "The Titcomb Letters," an exceedingly pleasant volume; "Gold Foil," a series of essays; "Miss Gilbert's Career," a novel; "Lessons in Life;" "Letters to the Joneses;" "Plain Talks on Familiar Subjects;" and "Kathrina," a poem of unusual sweetness.

All Dr. Holland's writings have been received with general favor; their refined, didactic, yet humorous character being nicely adapted to the tastes of educated American society. Of "Kathrina" the publishers sold 40,000 copies during the first six months—an extraordinary sale for an American volume of poetry. The following extracts will give our readers who have not seen the work, some idea of its character. In Part II., where Kathrina is seen confessing her faith and receiving the sacrament of baptism, it reads:

* * * * * "All this scene
I saw through blinding tears. The poetry
That like a soft aureole embraced
Within its scope those two contrasted forms;
The eager observation and the hush
That reigned through all the house; the breathless spell
Of sweet solemnity and tender awe
Which held all hearts when she, The Beautiful,
Received the sign of marriage to The Good,
O'erwhelmed me, and I wept. Shall I confess
That in the struggle to repress my tears
And hold my swelling heart, I grudged her gift,
And felt that, by the measure she had risen,
She had put space between herself and me,
And quenched my hope."

In Part III. we read:

"Strange, how a man may carry in his heart,
From year to year—through all his life, indeed—
A truth, or a conviction which shall be
No more a part of it, and no more worth
Than to his flask the cork that slips within!
Of this he learns by sourness of his wine,

Or muddle of its color; by the bits
That vex his lip while drinking; but he feels
No impulse in his hand to draw it forth,
And bid it crown and keep the draught it spoils."

The poem thus abounds in richly molded gems of sentiment and philosophy.

Dr. Holland married, at twenty-six, Elizabeth L. Chapin, of Springfield—the Elizabeth to whom he dedicates "Kathrina"—has three children, two daughters just entering upon womanhood, and a son who is but a boy. His residence, known in the Connecticut Valley as Brightwood, is located among the trees, a mile and a half north of the Springfield Railroad depot, and overlooks the river and the meadows. Here the summer finds him, and holds him; but the winter calls him to all parts of the country as a lecturer. He is now making arrangements for a residence of two or three years in Europe, whither he will shortly depart with his family. His early life was a struggle with poverty, and like all such struggles on the part of men of genius, it was marked with many and peculiar changes. His later years have been abundant with the fruitage of successes bravely and meritoriously won.

THE SECRET OF SUCCESS.

BY A BANKER.

[The rules laid down in the following sketch are applicable, in a great measure, to every pursuit in life. It is a statement of an Englishman's experience, slightly altered to adapt it to American readers. The style is matter-of-fact, even homely, but none the less apt. We commend it to all young men who hope to rise in life and reap success.]

ONE day, early in my fifteenth year, I found myself in the High-street of Sillerton, with a very ragged coat to my back, and possessed of a capital of four cents. I did not know a soul in the town. Half a century has passed over my head since that day. I have now a professional business worth \$15,000 a year. My estate of Goldsworth Hall now yields me \$7,500 a year; and I have one or two other little investments not altogether to be despised. I am chief magistrate of Sillerton, a town which has upward of fifty thousand inhabitants. I am, I say, a professional man, and my success, such as it is, has not been achieved by lucky speculation like that of many who succeed in trade. I have run no risks. I have worked my way slowly up the hill, step by step; and my own success has as much astonished me, as their own want of it has, I see, astonished many of those who began life in advance of me. As I have always observed, that to disclose the secret machinery of success acts somehow as an anodyne to the sting of failure, I now purpose to afford this compensation to those to whom I can see that my better fortune has been the cause of some jealousy and heart-burning.

The causes of fame, one of your literary men says, are obvious, while those of fortune are hidden. Hidden, I suppose they are, from foolish, unpractical men; but, really, they are not very difficult to discover by a man of plain

common sense, who is not blinded by self-conceit.

When seventeen, I was promoted from message-boy to be clerk in the office of one of the leading attorneys in Sillerton. My salary for three years was \$150, and I lived on \$125. I am not, however, going to take up time with an account of how I fought with poverty, or of how I made myself a sound lawyer by studying while others were smoking or sleeping. I have known many men who were as diligent as I was, but who have stuck in the mud, nevertheless. You will hardly make your way in business without being industrious, and without knowing your business—and these qualifications, so far as I have seen, are ordinarily quite sufficient to keep a business which has been made for you, but not to make one.

I saw this very early in life; yet I was not what is called a smart fellow, and luckily I never thought I was. My fellow-clerk, Sam, could write a business letter in a quarter the time it took me. Then, Sam's letter was neat, sharp, and to the point, while mine was hardly respectable grammar. Conceive, then, the astonishment of Sam, of myself, and of the whole office, when the situation of corresponding clerk—the most dignified and best paid in the office—was given to me. I could not understand it at the time, but subsequently the mystery was made plain to me. Two of those above me had a mark against them for immoral conduct, while the temperament of my friend Sam was not a business one. He had an irresistible tendency, both in speech and correspondence, to let men see what he thought of them. My own letters, I can see on looking back, never fell into this error, and so never got our employer into hot water. So long as we gained our point, and did what was fair ourselves, where was the use of letting one man see that you thought him silly, and another that you thought him dishonest? I took precious good care to see as far as other people, but I took, if possible, greater care that nobody should see how much I saw. My cue was always to make a man, if possible, well pleased with himself, and, at the same time, to make him *feel* that he could not get the better of me.

Then I was always good-humored. I was not going to let a man cut me because he had done me an injury—nor, on the other hand, was I going to cut him because I saw that he suspected that I had done him one. While I strove, and I believe with success, to be good-humored and pleasant to every one, I avoided excessive intimacy with any one—having observed that this is almost always the prelude to a quarrel; first comes hot weather, then a thunder-storm, and then cold. I never was "confidential," as it is called, with any one. Was anybody ever so without repenting of it?

I had a hard fight, too, and I was on the other side of thirty before I saw my way to being anything more than a clerk. I saw a good many men get a step or two in advance of me, through luck, but I never consumed my

energy in jealous fretting on this account. Nature gave me a good digestion, and I took the affairs of life coolly and with good temper. My chance would come—and even if it did not, though I desired fortune, I was frugal and could enjoy life without it. An uncle of Sam's, I remember, who had much in his power, passed him over in a good appointment. The cause was plain. The young man to whom he gave it was the son of a man from whom the uncle expected something. Could anything have been more reasonable and natural? Yet what did the silly Sam do? He wrote an angry letter to his uncle, full of bosh about "conduct to his own brother's son—the brother who had helped him so generously when he was poor," etc. Now, how can men expect the world to reward them if they won't adapt themselves to it? Do they think that it is going out of its daily path to meet their notions of justice and generosity? No good, it was plain to me, could ever come of being out of humor with any one, and I hardly ever felt the inclination. If a man tried to cheat me, I didn't allow him, but I felt no anger with him. Men pursued their own interests, I pursued mine. I endeavored by good-humor, knowledge of business, and attention, and by scrupulous conformity to the usages of society, to merit the reward which society has to give; and by patience I got it.

I soon saw that, of all things to be avoided by those who have their position to make, is the affectation of conventional non-conformity. Who but an ass, Sam used to say, would mind your wearing a cap instead of a hat, if you find a cap more comfortable? and then Sam would glance with contempt at my well-brushed beaver, and at my neat black kid gloves, which I always wore when I had got as far up in the world as to justify the expense. But, ha, ha! Sam, my boy, I used to think, let those laugh who win. I never troubled my head much with what the world *ought* to think; I was not smart enough to put it right, and what it *did* think always seemed to me much the more important point.

Nature, I admit, has given me some outward advantages for getting on. Of these I have carefully made the most. I am tall and broad-chested, with gray hair standing erect upon an ample and commanding-looking forehead. My "presence," I have often observed, in the bank of which I am manager, is sufficient to bring guilt and confusion into the face of the man who brings me a doubtful bill for discount, while the heartiness of my laugh—the style of one's laughter is a point to be carefully attended to—and the cordial way in which I can shake hands when I choose, has brought many a strong man's account to the bank. I have always been most attentive to dress—and my costume has been nearly the same for twenty years. I wear a black frock-coat, vest of the same material, with dark-gray trowsers. Since I was made manager of the bank I have carried a gold-headed cane, with which I walk to and from the office. On the same occasion I

bought a gold repeater watch, which I wear with gold seals, in the good old fashion. I must say that I laid aside my old silver turnip with regret; it had kept me true to many a business engagement in the days of youthful struggle.

MARRIAGE.

I know of nothing which argues more against a man being possessed of a prudent business-like spirit, and is, therefore, more calculated to tell against his business prospects, than marrying on an insufficient or precarious income; but, on the other hand, when he has a certain and sufficient income, and has reached a becoming period of life, there can be no doubt that a prudent and sensible marriage adds to his weight and respectability.

As for myself, I felt the gravity of marriage to be so great that I had been in a position to marry for some years before I could fairly make up my mind to it; but when I got the bank, I began to see distinctly that the inferior social status of a single man was altogether inappropriate and unbecoming to my position.

In choosing a wife I was guided just by the same principles which have guided me in the other affairs of life, and which have led me, not altogether discreditably, I venture to hope. If I did not marry for love, as it is called, at least I did not tire of my wife at the end of three months. If I did not tell her before we were married that she was an angel, I was never uncivil to her afterward.

I chose my wife because, having known her for several years, she appeared to be prudent, sensible, and economical, and likely to manage my house creditably; and, on the whole, my expectations were reasonably well fulfilled. I may add that she was good-looking, which I frankly confess that I regard as an advantage in a woman. We were not blessed with any family; and when she was called away from me last year I did feel very queer and lonely. But when two agree to journey through life together, it is plain that one must die first. I dedicated such an amount of time to grief as the world has seen fit to require and sanction; but I did not allow myself to sink into a morbid and sentimental condition. The period of legitimate grief having expired, I resumed my attention to business, and I am not ashamed to say that I was able to resume my interest in it.

GOSSIPING.

There are, I think, few common habits more fatal to business reputation than a habit of chattering. When I hear a young man starting in life ready to deliver his opinion at a moment's notice on the questions of the day, I mark him as one whom I shall certainly not be the first to send business to. No man should presume to engage the attention of the company by talk, unless his age and position are markedly superior. No unmade man should ever talk to the company. I feel that I can not give too great weight to this important truth. By talking, you not only allow others to take note of your vanities and weak-

nesses—and we all have our share, only some are cleverer in hiding them than others—but, by the mere fact of talking, you affront men of age and position, and thus make them indisposed to help you. They think, and think rightly, that it is for age to talk and for youth to listen. But even among those of your own standing, young man, with your way to make, be advised. Nature has given you two ears; keep both fully employed. You have but one tongue; let it enjoy plenty of leisure.

RELIGION.

If conformity in details be desirable for those who wish to do well in the world, it is strictly indispensable in matters intrinsically important. For any one to talk irreverently of, or conduct himself with levity toward, any institution of church or state, is what I have never been able to tolerate; and it is a style of conduct which, I am glad to say, society is certain to visit with its severest displeasure. Busy as we used to be in the office all the week when I was a young man, I rejoice to say that I never was once willfully absent from church, either forenoon or afternoon; and, higher considerations apart, I may say that I know of no better way for a young man to show that he possesses a steady and tractable spirit, deserving advancement and encouragement, than by regular attendance at church. Nor do I know anything which tells more, or tells more justly, against a young man's prospect in business, than neglect of the ordinances of religion.

ENTERTAINMENT.

I have said that I cultivated silence in company, yet I took care not to be morosely taciturn. I listened with deference and interest to the conversation of my elders and social superiors, and was always ready to laugh at a joke, provided it was proper and harmless. And when my age and position became such as to call on me to lead the conversation, I could amuse the young fellows, too, with harmless tale and anecdote. What I have always avoided, both as junior and senior, was the delivery of views and opinions. I never, in my recollection, said a word to the prejudice of any one, or ever said a word which could hurt the feelings or prejudices of any respectable member of society. My aim was always to impress those whom I met with a feeling that I was a sound, cautious, good-tempered man of business, and of business aims.

HORSES.

If I have a taste for anything besides business, it is what I believe no man ever suspected. I am fond of horses; and what is more, I am a good judge of a horse. But no one ever heard me talk of horses. Even since my success in business became decided, I have not indulged myself in keeping a horse. The young man who wants to succeed will do well to follow my example. If he allows himself even to talk about any amusement for which he may have a taste, it is astonishing how soon he may have a reputation fixed upon him for being knowing in it. He will have plenty of rivals eager to talk of him as a good shot, a good

fisher, knowing in horses—being well aware that such a reputation is certain to be most injurious, probably fatal, to his business prospects.

DRINKING AND SMOKING.

When a young man, I was a member of a debating society in our town. I never spoke except when the business of the society was concerned. My reason for being a member was that a good many men of influence belonged to it, with whom I had thus an opportunity of becoming acquainted. My friend Sam was a distinguished member; and I recollect going to his lodgings one night out of curiosity, when he had a meeting of his choicest friends. They were drinking *toddy*—a composition which I hate; indeed, I hate all spirits; and as to smoking, it is a method of employing time which has always seemed to me suitable only for those of weak intellect. I was prevailed on, I remember, to try a pipe—laugh! It was the first time and the last. They tried to encourage me to “persevere,” by holding out the prospect that by so doing I should become a smoker in time. Dare say I might have succeeded in making myself a slave to an expensive and idiotic habit had I chosen; but that I should, by learning to smoke, be putting down the smallest item to the credit of my account with Fortune, was what I could not see; much less did I see that any balance was thereby likely to accrue to *Profit*. I thought it as well to reserve my perseverance for somewhat different objects. So much, I suppose, for not being smart. But the talk was the wonderful thing. “What was love?”—“Did men act from free-will or from necessity?”—and I fancy that they drank whisky-and-water, smoked their vile tobacco, and muddled the small modicum of brains which God had given them, two or three nights a week in this way. If there is anything for which, from my boyhood, I have found it difficult to hide my contempt, it is a man occupying himself with poetry, metaphysics, and such stuff, instead of giving himself to the honest and obvious work of life, and pocketing the honest payment for it. I well remember how my clothes smelt of tobacco next morning, and what a fright I was in lest our master should notice this. I was, however, at the office as usual half an hour before regulation time, and I can remember that I got a job to do which would have fallen to Sam had he been there in time. It put half a sovereign in my pocket—a sum not to be despised in those days.

FINALE.

Now I do not mean to say, in giving the above sketch of my own animus, that men have not arrived at fortune whose mental machinery would, if dissected, show a very different arrangement of wheels and pivots. Sheer audacity will sometimes do wonders, especially in public life. Yet I think my own plan has been about as sure and as easy a one as can be followed. If I were to name one advantage of mind which I have had over

other men, I should say it is this—I was a sensible fellow *as a young man*. By reason of pride, conceit, or being over-ambitious, you will often see a man between his twentieth and twenty-fifth year commit an error which he never has a chance of retrieving. Opportunity gone is gone forever. He is thrown off the line—shunted—so to speak, and the rest of life is embittered, not only by the consciousness of failure, but by the consciousness that he has only his own vanity to blame for the failure. Generally I have noticed that the causes of a man's failure are distinctly visible to every one but himself. I have known men with capital business heads, and with all the inclination to work, the mystery of whose lives—inscrutable to, and undreamt of by, themselves—lay in their manner; shy, retiring fellows, who never make acquaintances, but allow any man to cultivate them; hence their tendency is inevitably downward in the social scale. A shy man, whose mental cuticle is so tender that the blood comes at every scratch, may, perhaps, succeed as a clergyman, or as a doctor, or chance may put him in a safe business position, but to push his way through the rough and thorny brushwood which besets the outset of a business career, is what he need never try.

Know your business, scrupulously respect the world's conventionalities, face it boldly, receive its kicks and its cuffs—of which you will have a good allowance at starting—with invincible patience and good-humor, and it will come round to you in time. But it is a coy mistress, and one with many lovers. Unless you woo with perfect self-mastery, and with knowledge of its ways, your suit will not prosper.

SOCIAL CLUBS vs. LONGEVITY.—The organization of social clubs is becoming more and more prevalent among American youth. An old merchant related in our hearing a few evenings since, his own experience and observation in regard to this matter. When he left home to go into business in the city, he felt lonely in the evenings, and longed for some companionship. He was diffident, and had no influential friends to take him into society. A friend invited him to join a social club. They spent their time in song and jest, eating and drinking, and general jollity. He kept a list of all who belonged to the club during his connection with it, and has traced their history since. Of forty-nine, but three now remain, enjoying a green old age. Most of the others went to early graves, the victims of intemperance. Very few of them were ever successful in business, though some of them were young men of fine business capacities. Our venerable friend thinks the seeds of their ruin were sown in the club room. He said, with great emphasis, “Had I an iron voice, which I could ring through our whole country, I would say to every young man, beware of the club room, and especially the room of a drinking club. Many a young man is ruined there before he is aware of his danger.”

“BE COURTEOUS.”

THIS simple exhortation of the Christian Apostle is brimful of practical good sense. It applies to the whole of human life, and its aim is to make life more intensely and Christianly human; to make men think of and feel for each other in all the possible relations of pleasure and business and calamity. Courteousness is quite synonymous with the true idea of politeness. You may gather its full significance from these shades of meaning: be civil—be obliging—be friendly-minded—be polite.

There is a vast deal of vagueness respecting politeness. The cold mannerisms of aristocracy are known to be mere hollow pretenses. The rough boorishness of the untutored is alike defective in the real virtue of civility. Genuine politeness is from the heart. It springs spontaneously forth, and is a grace which can not be readily counterfeited. We can account for and forgive awkwardness, where there are unmistakable evidences of an honest heart. True heart-actions have always in them the virtue of elegance.

The entire system of etiquette is most beautifully epitomized in that suggestive utterance of Jesus: “Thou shalt love thy neighbor as thyself.” Here is couched the life and spirit of politeness. When we properly respect ourselves, then, and not till then, will we show proper respect for our fellow-men.

Love that takes upon itself nothing but the mere type of profession is valueless; but that which speaks and ministers, alone causes the heart to rejoice!

Politeness is of practical use daily. How it lightens the heavy burdens of the weary! how it sweetens the bitter potions of the suffering! how it gladdens the sorrowful! It costs nothing, and yet how inestimable! Its price is above rubies. Sunshine is in its presence; and beneath its fostering care grow all the nobler graces of life in luxuriant richness.

The idea that constant politeness would render social life stiff and restrained, springs from a most false estimate of it. True politeness is the perfect ease and freedom of feeling and acting. It simply consists in treating others as you would like to be treated yourself. Happy the family where courtesy prevails! Happy they who know how to be polite.

O ye surly, uncouth, boorish ones, but for you earth would be a thousand-fold more lovely! And you, ye fretting, stewing, and scolding ones, how ye fill to the very brim the cup of the weak and suffering, who otherwise would be as happy as the morning lark! Is it your mission to make souls chant perpetually the woeful *miserere* of sorrow? No! this is the mission of *demons*, not *men*!

Go thou, and by thy kindness flash thy bright rays of sunlight across the shadowed path of thy brother. Go and be courteous.

H. C. FARRAR.

WATERFORD, N. Y.

NEW YORK, JUNE, 1868.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous precipice of telling unbiased truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*De Poe.*

THE PHRENOLOGICAL JOURNAL AND
LIFE ILLUSTRATED is published monthly at \$3 a year in
advance; single numbers, 30 cents. Please address,
SAMUEL R. WELLS, 389 Broadway, New York.

WRITING FOR THE PRESS.

To the inexperienced it may seem a very easy matter to pen one's thoughts and then to print them. Such do not consider the necessity of previous study and careful preparation to qualify one for this particular work. When one has learned to perform the mechanical part of writing, which, unlike speaking, is altogether artificial, he has the more difficult object to attain, namely, the education of his faculties of observation, reason, analysis, and memory, in such a manner that they will serve him on call. To excel as a speaker, one must be fitted, and the fitting is a matter of training. An extemporaneous speaker draws inspiration from those he addresses. His audience magnetizes *him*, and he becomes aroused and filled with an influence which elevates and enables him, as it were, to "surpass himself." The writer, however, must proceed alone, and without external aids. If he have originality, imagination, memory, and power of description, he sets about his work like an artist, to place on paper his ideas, figures, images, or mental pictures, for the edification, instruction, or entertainment of others. At best, his pen can not keep pace with his thoughts, and many of his most brilliant and lucid impressions "take to themselves wings and fly away" before he can commit them to paper. One with small Language may write even better than he can speak; but the rule is, or should be, the other way. In writing for the press, one needs to be more particular than when merely speaking—and this particularity is another hindrance to the easy expression of thought. A careful writer may, however, become, with practice, an accurate speaker.

SCRIBES.

All writing for the press should be done by scribes or reporters, as of old. The Scriptures were so written; nor could they have been produced in the ordinary way of modern authorship. The great thinkers, poets, and prophets, had their scribes, who took down *verbatim* what they desired to have recorded. This mode leaves the whole mind—all the faculties—free to act on a subject, and we then get the thought in full. If editors, authors, lecturers, and clergymen would first study up their subjects on which they would write and speak; then dictate the matter to a phonographic reporter, who would take it down as fast as spoken; then write it out for careful revision by the author, readers and hearers would get the real life and spirit of their productions. By this means twice or thrice the labor could be performed in the same time, and it would be much better done, and with far less cost to the producer.*

WHO MAY WRITE.

Writing for the press need not be confined—as now—to a comparatively small class who do nothing else. On the contrary, every public journal ought to enlist the services of the best minds in the community. Is a magazine devoted to education? No one mind can cover the whole ground and fill its pages with the ripest and richest matter. A sensible editor will obtain the assistance of all the best educators in the State. He will thus obtain a complete knowledge of the best methods of teaching, discipline, and government, also the best books and apparatus, decide on the hours of study, and on every topic connected therewith. So in agriculture. Every good farmer is supposed to be in possession of information which it would be useful for others to know. Let him communicate the same through a spirited journal, and thus add to the value of the journal and to the sum total of agricultural knowledge. It should be the same with a paper devoted to science, art, philosophy, or mechanism. What mines of riches editors may work by inviting—inducing—these classes to reveal the secret stores of their intellectual wealth,

* This art—phonography, or shorthand writing, which is now reduced to a system—should be taught in all the schools. Those who become proficient in it are enabled to turn it to profitable account.

which would otherwise die with the inventor or discoverer.

It is not profitable for editors and publishers, or for the people, to have the same old ideas iterated and reiterated through the same blow-pipe, month after month, when new, fresh, and burning thoughts lie smouldering all unseen for want of an opportunity to give them utterance. One *new* idea often leavens the minds of many and sets them to thinking.

Political journals—mere *party* organs—are generally conducted by low, unprincipled demagogues, who have more regard for "place" and "pap" than for patriotism, the interests of the people, or the honor of the nation. These degenerate sons do all they can to debauch, pervert, and degrade all whom they reach. They are *bad*. "Can an evil tree bring forth good fruit?"

A high-toned paper, written by scholarly Christian statesmen, devoted to the best interests of the whole country, would be a power for good, and elevate politics to the high functions of just government.

Many professedly religious newspapers are simply sectarian propagandists; others are mercenary sheets stuffed with filthy quack medicine advertisements, and are simply printed for the lucre they make. Then come the pharisaical, narrow-minded, bigoted papers, that can see no good in any who do not accept *their* dogmas. All, except themselves, are at once consigned to perdition. Of course such journals can have but a very limited circulation or influence. But an honestly conducted religious journal, alive to the interests of true Christianity, aggressive and progressive, must reach the hearts and convince the minds of the most skeptical. Its conductors will confess and repent their own sins before rebuking those of others. They will be charitable, just, prudent, circumspect, and *lead* the godly lives they would have others live. What a power for good or for evil is *EXAMPLE*! A true Christian journalist has words of encouragement for *all* real workers in God's great human vineyard, without regard to your creed or my creed, your "doxy" or my "doxy;" without regard to station, color, or condition. The great God of heaven is the Father of us all. Have we, to-day, a religious journal conducted on these

comprehensive principles? a journal—like Christianity itself—which comprehends mankind? No. Mankind are yet in their religious infancy, and are pleased with their little sectarian penny whistles—which only keep alive sectarian animosities.

He is the *best* journalist who fully realizes the wants of all the mental faculties, and can properly feed them. One who is above selfishness, hatred, malice, and all uncharitableness—one who is master of himself—can regulate all his impulses, and is willing to sacrifice self for the good of others.

It may be asserted that it would be no easy task to find such a writer—such a journalist. If this be true—and there is but little doubt of it—how great the necessity for reform in our great army of authors! No man should put pen to paper without a fixed and proper purpose—a purpose founded on truth, duty, and charity. In short, he must recognize the truths of Phrenology, and subordinate the lower to the higher nature—the propensities to the moral sentiments. A complete periodical must have well-filled departments answering to the several groups of organs: the SOCIAL, in which the affections, including home, the family, and all their interests shall be treated; the PROPENSITIES, furnishing advice with reference to their training, direction, and regulation; the INTELLECTUAL faculties, considered in their relations to education, memory, music, art, etc.; the MORAL SENTIMENTS, indicating our relations to the future and to God; so also our duties to the world and to each other.

FINALLY.

In the great journal of the future, a journal of a higher civilization, every pen shall have a place, every mind shall have a voice, and all interests shall be represented. Its platform will be as broad as the globe on which humanity may stand. The educator, reformer, preacher, physician, inventor, poet, philosopher, artist, composer, navigator, explorer, discoverer, merchant, manufacturer, mechanic, *all* will find in that great journal of HUMAN LIFE the best thoughts of the best minds. Then, every one who is educated and can *think*, can also write for the press.

END OF THE VOLUME.

THIS number completes the Forty-seventh Volume of the PHRENOLOGICAL JOURNAL. The Forty-eighth Volume commences with the next—JULY—number. The past has spoken for itself. Each monthly part is a link in the great chain of years, connecting the past with the present, and recording, by the “art preservative of all arts,” the history and progress of this science of mind. Each reader may judge for himself whether or not the JOURNAL has profited him; whether its instructions have been followed; whether the influence of its teachings has been bad; whether he cherishes what he has acquired, or whether he would eradicate and forget it. If he has been encouraged to make the most of himself; to correct any bad habit; to overcome any besetting sin; to form and strengthen good resolutions; to elevate the standard of moral character, then he will feel satisfied that he has not been fed on literary husks, but on scientific and substantial mental pabulum—something to make him *grow*.

The past must be our guaranty for the future. We shall keep “RIGHT ON.” Our work is more a “labor of love” than a pecuniary enterprise. By the generous co-operation of warm-hearted friends to the cause, we are enjoying a comparatively large circulation, and are *not* “running in debt.” It is the aim of the editor to make the JOURNAL richly worth all it costs. He feels it a duty to aid with all the means in his power the dissemination of the truth as revealed by our God-given science and the Holy Scriptures. His *first* most anxious care shall be to discover the *truth*; and his *second*, to *apply* it. So far he has been eminently successful in securing for his work the indorsement of many of the best minds in the old and in the new countries. The press, everywhere—religious and secular—seldom speak except to praise. Opposition has subsided. Competition would be welcomed, and do us good. We rejoice in all well-directed efforts in behalf of our noble science. In proper hands it may be made most efficient in all that is worthy and ennobling. But bad men not only pervert themselves, but they prostitute both science and religion to base purposes. The people must wisely discriminate, or they will be misled and

deceived. “By their fruits ye may know them.” Look out for the counterfeits. The better the bank, the more likely it is to become the coveted prey of the wicked. But selfishness and wickedness will, in the end, defeat itself, and go down.

“Truth, crushed to earth, will rise again;
The immortal years of God are hers;
But Error, wounded, writhes in pain,
And dies amid her worshippers.”

The time is up for which many subscribed; and we await their renewals. Our terms being payable in advance, no more JOURNALS will be sent until ordered. New subscription books are opened, and names—new and old—will be welcomed, and promptly recorded. Reader, may we again be favored with your handsome autograph? It would look well when transferred to our new books. We become attached to familiar names. Will you continue the voyage of life with us? We will try to make it “pleasant and profitable” to one and all.

INSANITY.

Report of the Pennsylvania Hospital for the Insane, for the year 1867. By Thomas S. Kirkbride, M.D., Physician in Chief and Superintendent. Published by order of the Board of Managers. Philadelphia, 1868.

A VERY satisfactory report, showing real progress in the successful treatment of the insane. We print one of the tables showing the supposed causes of insanity in 5,064 patients in that hospital

	Males.	Females.	Total.
Ill health of various kinds.....	470	418	888
Intemperance.....	339	30	369

We venture a few comments on some of these supposed causes. We think a closer classification could have been made by a careful inquiry into the history of each particular

case. Of the 883 who became insane from "ill health of various kinds," it would be interesting to know what was the *cause* of that "ill health?" Was it from fashionable dissipation; late dinners; late hours; improper diet; worldly cares; sordidness; prodigality; inordinate affection; a lack of faith; or of hopelessness? It may be one or all these combined.

"Intemperance" counts its crazy victims by hundreds. Constitutions are undermined by drink and tobacco to a fearful extent. Indeed, it is very rare to meet a middle-aged man now-a-days who has not damaged himself by one or both of these substances; nor does the evil end with him—his children inherit tendencies to excess in the same directions.

"Loss of property" is, of course, a misfortune. But one's treasures should not *all* be laid up in this world's goods. Right training as to the use and abuse of money would tend to resign one's hold on the "lucre" without producing insanity. All misers are without godliness or true Christian principle.

"Disappointed affection" is a terrible evil—and he who trifles with the affections of another is simply inhuman, or, we should say, wanting in the higher nature. One thus afflicted must look to religion for consolation, and dismiss at once and forever the unworthy object of her or his grief. Instead of "Intense study," it is more frequently bad digestion produced by bad living that causes insanity. Put away the books, and give the subject horse-back riding, with a proper diet, and the processes of recuperation will be again resumed.

"Fright." Inconsiderate persons—servants—do irreparable mischief by frightening children. When Cautiousness becomes unduly excited, it causes timidity, and tends to keep the person always in the background.

"Grief from loss of friends" is always sad, but right Christian teachings would enable all to be resigned to the inevitable, and to say, in *all* such cases, "*Thy will be done.*"

"Religious excitement" carried to extremes no doubt dethrones the reason and leaves the mind a wreck. Feeble-bodied persons should be careful and keep out of mental "whirlpools."

"Want of employment" is very likely to engender despondency, and so affect the mind and body. But "where there is a will there is a way," and no man in America need remain long idle. The trouble is, such persons are usually more "nice than wise" as to *what* they should do. If they would go on farms, off with coats and set to work, instead of waiting for a vacancy behind a counter or at a desk, they would not fail.

"Mental anxiety" is a very general term, and may mean one thing or another. The predisposing cause is what we want to know. It is probable we should find excessive Cautiousness and small Hope in all these cases. The remedy, then, is the quietness and repose of the former, and the encouragement of the latter. Let there be an effort to energize the executive nature—call out courage and self-re-

liance. In time, a better balance would be effected.

"Unascertained." We can only conjecture the possible causes of insanity in this, the largest of all the classes. It is probable that the "foundations" were undermined, and constitutions destroyed by nameless bad habits concealed from parents, and the slow processes of nature failed to repair the damages in time, and bodies and minds became wrecks together. Oh, the woeful ignorance of parents and youth in regard to their own constitutions is truly lamentable! The penalty of violated law is sure to follow sooner or later, and imbecility, insanity, disease, and premature death is the forfeit. A fearful responsibility rests on those whose duty it is to warn the unwary, and to enlighten the ignorant as to the laws of life, health, and happiness. Let us try to teach the world what it is to have "sound minds in sound bodies."

THE WORKS OF DR. GALL.

MORE than thirty years since, an English translation of Dr. Gall's great works was published. The original French edition, in large quarto, sells at something more than a hundred dollars—we paid one hundred and twelve for the last copy we imported—and the English translation, in six 12mo volumes, now sells at \$15—when they can be found. We have been importuned to re-publish the work. We hesitate. It will be expensive. It should be illustrated. To bring it out handsomely, with notes and illustrations, would cost several thousand dollars. Now, the question is—and it is a question—"Will it pay?" Who wants the work? If published, the price should be \$2 a single volume, or for the complete set, \$10. We submit the question to the public; especially to the readers of the PHRENOLOGICAL JOURNAL. If one thousand subscribers be secured in advance, a publisher would be justified in undertaking the work.

We may state that this is the ground-work of the whole system or structure. One who would begin at the beginning in his study of scientific character-reading must begin with Dr. Gall. Many other writers have given the "surface indications"—as the oil-men say; but Dr. Gall went more *deeply* into the matter than all previous writers. Here is the testimony of Joseph Vimont, M.D., of Paris, an eminent physician and author: "No sooner had I read Dr. Gall's work, than I found I had made the acquaintance of one of those extraordinary men whom dark envy is always eager to exclude from the rank to which their genius calls, and against whom it employs the arms of cowardice and hypocrisy. High cerebral capacity, profound penetration, good sense, varied information were the qualities which struck me as distinguishing Dr. Gall. The indifference which I first entertained for his writings gave place to the most profound veneration. Phrenology is true. The mental faculties of men may be appreciated by an examination of their heads.

Now the question is, Who wants this great work enough to pay \$10 for it? We submit this, not as a proposition, but simply as a question, and should like to hear from those who approve and would like the work. Reader, what say you?

OUR BOOK NOTICES.

It is seldom that we can afford space to give a lengthy *review* of new books. All the ends of the public, ourselves, and the book publishers are met by our giving a full title and a suitable *description* of the work. From such description our readers are enabled to judge whether or not to buy the book, and *this* serves the publisher in obtaining the desired publicity. If newspapers generally would adopt this plan, and instead of praising or criticising new works, would give truthful descriptions of them, it would be an object for book publishers to send them their new books for notice. This would be reciprocal, and all parties be benefited.

We *commend* no questionable book; nor, indeed, books that have no other purpose than to amuse. But we may give the titles of many which are of this class.

The *public fancy fiction*. We regard *our* time too valuable to be thus thrown away. To us, "life is real; life is earnest;" and we can spend it more profitably than in hearing or in reading idle tales. Others, who are differently constituted and differently situated, whose time "hangs heavy," may enjoy the sweet mental intoxication of the exciting and ravishing romance.

There are books for every class. Our record aims to be tolerably complete. You pay your money and choose.

PHONETIC TEACHING.—This method of instructing children in the orthography of language has been introduced into many primary schools with the most satisfactory results.

At the South, since the institution of schools for the freedmen, the phonetic method has been tried by many progressive teachers, and their united testimony is that "it is the best and readiest means of acquiring a knowledge of the Romanic method," because, among other reasons, "it puts a common-place, but really inestimable privilege—the ability to read—within the reach of those who, without some such aid, would probably never possess themselves of the blessing." It would be greatly to the advantage of teachers in general to study this method, and apply it in their schools, because it is the most thorough system by which children may be taught not only to spell words analytically, but to pronounce them, as they are rarely heard, correctly and distinctly. It is the hope ardently cherished by most educationalists that the time will come when words in the English language will be spelled as they are pronounced; and it is evident that the surest way to attain such end is by the promotion of the phonetic reform.

KING THEODORE OF ABYSSINIA.

BY JOHN P. JACKSON.

[CONCLUDED.]

THEODORE, being settled quietly on his throne, gave some attention to the regulation of his people's private interests. The judges were known to be a very dishonest class, and Theodore determined to test them. So he brought a case before them in which he evidently was in the wrong, and demanded what the law decreed. "Your Majesty is the law and the code," replied they; "we can have no voice in the matter." So he took them at their word, and became the tribunal before which the meanest of his subjects might appear with safety. It was then his custom to sit before the door of his tent at certain hours during the day, surrounded by his officers, and listen to the various complaints. His judgments were generally admitted to be just; but he was equally severe. The poorest peasant could always obtain redress from the feudal chiefs, which they could not do under the judgeship régime. But Theodore's greatest pride was his army, which he always kept in the best condition. He was a friend to the soldier; and he made them trust him implicitly.

The year 1861, following six years' of comparative peace, found great changes in Theodore and his kingdom. Religious difficulties, which we have elsewhere sketched, caused him great annoyance. Theodore himself despised his corrupted priesthood, but still he did not wish foreign mission intervention. His savage pride was touched at any other hand than his own accomplishing Abyssinian regeneration. Mr. Bell was the only European that he would receive as an adviser; and as long as he lived everything prospered. His own people began to be dissatisfied—they felt disappointed in the non-fulfillment of the old tradition; the clergy were jealous; the petty feudal princes also were bitter enemies; his wife, to whom he was devotedly attached, had been dead some time; he had married again, but he did not live happily with his new wife. His troubles with the missionaries and his foreign relations increased every day; famine, epidemics, and desertions reduced the army, and rebellion spread over the land, far and near. It was then that he gave way to the devilish part of his nature, and the reforms which he had accomplished were soon obliterated amid the deeds of bloodshed, more treacherous and cruel than those of any of his predecessors, that he revealed in.

The nobility fought and pillaged; the peasants feared him; and the priests excommunicated him. The Mohammedans of Egypt pressed on together with the Turks, while rebellious chiefs from Shoa to Gondar beset him at all sides. Once more, however, he placed himself at the head of his army, and marched against the Agows and Tugrayans, his most powerful enemy. The day before he issued the following proclamation: "Thus says Jan-hoi, I pardon all those who shall this night

quit the camp of Negousie [the leader of his enemies], and I assign to them three places of refuge, namely, the church at Axum, that of Adona, and my own camp; as for those I find tomorrow under arms, they may expect no mercy!" In the morning, Negousie had only a few faithful soldiers left. He fought bravely, cut his way through Theodore's ranks, and managed to gain the mountains. Finally he was captured, and with his principal officers suffered a horrible death. The next morning Theodore was received by a deputation of the clergy at Axum, and he uttered probably the most vainglorious speech ever man has dared to utter. "I have made a compact with God," he said; "He has promised not to descend to the earth to smite me, and I have promised not to ascend to heaven to strive with Him." But he was evidently getting tired of this constant warring. Plots against his life were numerous. "God," said he, "who has drawn me out of the dust to supplant legitimate princes, has not performed this miracle without having a motive. I have a mission, but what is it? At first I believed it was given me to raise this people up by means of prosperity and peace; but in spite of all the good I have done for them, more rebels rise against me than ever rose in the time of the worst tyranny. It is evident I have deceived myself. This is a stiffnecked people, and it is needful to chastise them before they are called to enjoy the blessings which Providence has intended for them. I now see my true rôle: I shall be the Flail of the Wicked—the Judgment of God upon Abyssinia!" And as the beginning of the new programme for his reign he had engraved upon his gun-carriages and howitzers these words: "The Flail of the Wicked—Theodorus."

This course has been the means of most of his later disasters. But he has always kept at the head of his army, now reduced to a very small number, perpetrating excesses which we would prefer untold. As we see him, through Dr. Blanc, with his devoted followers, we involuntarily ask, Is this not a scene of the Middle Ages?

"The black and white tents of Theodore, pitched on a high conical hill, stood out in bold relief as the setting sun made the dark background darker still. A faint, distant hum, such as one hears on approaching a large city, came now and then to us, carried by the soft evening breeze, and the smoke that arose for miles around the dark hill, crowned by its silent tents, left us no doubt that we should before long find ourselves face to face with the African despot, and that we were even then almost in the midst of his countless host. As we approached, messenger after messenger came to meet us; we had to halt several times, march on again for a while, and then halt anew; at last the chief of the escort told us that it was time to dress. A small rowtie was accordingly pitched; we put on our uniforms, and, mounting again, had hardly proceeded a hundred yards, when, coming to a sudden turn

in the road, we saw displayed before us one of those Eastern scenes which brought back to our memory the days of Lobo and of Bruce. A conical wooded hill, opposite to the one honored by the imperial tents, was covered to the very summit by the gunners and spearmen of Theodorus, all in gala dress, clad in shirts of rich-colored silks, the black, brown, or red shama falling from their shoulders; the bright iron of the lances shining like so many stars as the midday sun poured its rays through the dark foliage of the cedars. In the valley between the hills, a large body of cavalry, about ten thousand strong, formed a double line, between which we advanced. On our right, dressed in gorgeous array, almost all bearing the silver shield and the bitwa, the horses adorned with richly-plated bridles, stood the whole of the officers of his Majesty's army and household, the governors of provinces and of districts, etc. All were mounted, some on really noble-looking animals, tribute from the plateaux of Gedjars and the highlands of the Shoa. On our left, the corps of cavalry was darker, but more compact, than its aristocratic *vis-à-vis*. We could well understand how thunder-stricken the poor scattered peasants must be when Theodore, at the head of the well-armed and well-mounted band of ruthless followers, suddenly appears among their peaceful homes, and, before his very presence is suspected, has come, destroyed, and gone."

Such is Theodore, bent upon the fulfillment of his mission as the "Flail of the Wicked." "One by one," adds Mr. Blanc, "he has lost all the jewels of his crown; and at the present, the great conqueror of Abyssinia, the really remarkable man, is nothing more than a robber chief, a wholesale murderer, without country, army, or friends. Of all the Abyssinian empire, some years ago crouching and trembling at his feet, he now only retains a few ambas; his very camp is pitched in the midst of his mortal foes. Mad with rage and despair, his cruelties know no bounds; his best friends, his staunchest supporters, his slavish followers, his enemies, all alike fall victims to his fury. He destroyed by fire the sacred churches, and cast into the flames aged priests and young maidens. He killed or loaded with fetters his friends, his faithful chiefs; he tortured to death his adopted father; caroused in blood; ruined whole provinces by fire and the sword. Still the cowardly slaves trembled and obeyed; but when at last he added to all these atrocities the murder in cold blood of six hundred and seventy of his own soldiers, the men from Wadela, a cry of horror re-echoed throughout the land, the cup filled to the brim overflowed, and, driven to despair, soldiers deserted *en masse*, and the peasants armed, preferring death on the battle-field to his sway, the quiet of the grave to constant fear and misery."

We have sketched Theodore as an aspirant to power, as emperor, at the head of his army, and in his tent. We have introduced him to our readers surrounded by all the pomp and magnificence of an Eastern potentate. We

shall now close our lengthy account of him by some descriptions of his personal appearance. M. Le Jean, the French consul, says: "In appearance he is of average stature, of imposing carriage, and of an open and sympathetic physiognomy. Regardless of matters of etiquette, he is negligent himself, but never in bad taste. A simple soldier's coat, a pair of trousers, and a belt, from which hang pistols and an English sword, and over which was a *chama* or embroidered toga, was his habitual costume. The furniture of his tent is simple, while his residences at Magdala and Debra Tabor are covered with silks and satins from France and India. He is proud, violent, and inclined to pleasure. He is sober, eats little, drinks more, but never up to any marked excitement. As to women, they have never had the least influence upon his public life."

Dr. Blanc, our latest, and, in most respects, best authority, says: "Theodore is about forty-eight years of age, darker than many of his countrymen; his black eyes are slightly depressed, the nose straight, the mouth large, the lips small; he is well knit, a splendid horseman, excels in the use of the spear, and on foot will tire his hardest followers. When in good-humor the expression of his countenance is pleasing, his smile attractive, his manners courteous, really kingly; but when in anger, his aspect is really frightful, his black face acquires an ashy hue, his eyes, bloodshot and fierce, seem to shed fire, his thin lips, compressed, have but a whitish margin round the mouth, his very hair seems to stand erect, and his whole deportment is that of savage and ungovernable fury."

We have been compelled in our sketch to omit some important details in Theodore's life connected with the present difficulty with England, which, however, are more connected with the political and religious history of the country than with Theodore himself. For that reason we have deemed it best to give

THE STORY OF THE CAPTIVES.

Rev. Dr. Gobat, the present Anglican bishop of Jerusalem, a Maltese clergyman, reported to England and Germany that it was their duty to evangelize the Abyssinian Jews; that it was a practicable task; but that they would not be allowed to preach to the native members of the Coptic or Christian Church. Missionaries were accordingly sent out at different times by the Society for the Propagation of Christianity Among the Jews, and by an evangelical mission at Basle, in Switzerland. Among the missionaries who took up their residence in Abyssinia was the Rev. H. A. Stern, who had been sent from the London Society in 1860. Theodore's reception of Mr. Stern, says M. Le Jean, was very cool, adding the remark, "I am very tired of your Bible." He, it appears, wrote something not very complimentary either to Theodore or his country; and he gave him permission to leave the country. But he had the imprudence to let the opportunity of escaping pass, and when the emperor saw him again in October, 1863, he said: "You have

offended me in not using the permission I gave you to return to Massowah; as you are a stranger I pardon you, but those of my subjects who ought to have enlightened you shall be severely punished." He then ordered the two servants to be bastinadoed. Mr. Stern was compelled to witness the cruelty, and involuntarily bit the first finger of his hand. This gesture, among the Abyssinians, denotes the menace of momentary impotent anger. This did not escape Theodore's notice, as well as that of his courtiers, who clamored for the punishment to be extended to Mr. Stern. The Negus, although alleging that Mr. Stern attached no importance to the gesture, acceded to their wishes, and the missionary was cruelly extended on the floor, and received the bastinado so severely that, though he escaped the death to which one of his servants had fallen, it kept him in bed for some time after.

A search was then made in the houses of the missionaries, which brought to light a number of letters in German and English relative to the biography of the emperor, and the latest events which had transpired in Abyssinia. Theodore had these translated, and the nature of their contents threw him into a violent passion. He immediately issued orders to arrest three of the most culpable offenders, but the soldiers, not able to distinguish, put in irons all connected with the two missions, among them being two young ladies, Miss Flad and Miss Rosenthal. These were subsequently released. Theodore then summoned all the European residents in Abyssinia to a sort of high-court at the capital, Gondar, when Messrs. Flad and Rosenthal, at whose houses the irritating documents had been found, were brought in. Theodore asked what sentence a European court would inflict upon those who spoke against their sovereign. The president of the commission said, "Death." The result was, however, that the two were sentenced to confinement in irons. "The most violent wound which the condemned papers inflicted on Theodore II.," adds Le Jean, "was not the description of the useless barbarities committed during the two previous years, but the fact—although spoken of publicly, as is known to all Abyssinia—that he was the offspring of a slave who at one time was a vender of a medicinal root called *kousso*."

Soon after, Mr. Cameron, the English consul, was put in irons. The most reasonable explanation of this conduct is, that Mr. Cameron, on leaving Abyssinia in November, 1862, took with him the agent that the Negus forced upon him, and who was undoubtedly a spy, but dismissed him directly he crossed the frontier, and this had touched Theodore's pride. Besides this, Mr. Cameron had been making a long tour in the neighboring districts of Sennar and Gallabat, to promote the commercial and political interests of Great Britain. Theodore could not understand Cameron's object; he imagined that it was to consort with his mortal enemies the Egyptians, who had received the consul with every mark of sym-

pathy. Besides this, he was offended at not receiving an answer to a letter he had sent to Queen Victoria. The servants and employees of Mr. Cameron were also imprisoned and put in irons. The only Europeans who are at liberty are the workmen in Theodore's foundry or arsenal at Gaffat.

The last addition to the band of prisoners is the mission, consisting of Mr. Rassam, Dr. Blanc, and Lieutenant Prideaux, which was charged with the conveyance of the Queen's letter to Theodore.

The condition of these captives is a critical one, for, writes Dr. Blanc, "we know not in the morning what the evening may bring. The emperor daily riots in blood and murder; he lives but for one object—revenge."

It is hoped the English expedition under General Napier will speedily accomplish their rescue, although the difficulties attending an invasion of Theodore's dominions, on account of the mountainous and wild character of the country, are very great.

On Ethnology.

True Christianity will gain by every step which is made in the knowledge of man.—*Spurzheim*.

ABYSSINIA AND ITS PEOPLE.

THE mad acts of Theodore has aroused public curiosity in regard to the people whom he represents. Abyssinian history is interesting, but at the same time confused, and in great part traditional and mythological. Indeed, everything connected with Abyssinia, and especially the origin of its various races, is involved in deep mystery. The influx of European scientific men along with the English expedition will, we hope, give us more light on these subjects. All that we can do at present is to present the facts. Philosophy must follow. We expect much from the distinguished German traveler and ethnologist, Dr. Rolfs, who is now in that country, having been sent out under the auspices of the Prussian government.

The Abyssinian people themselves claim that they descended from the Hebrew race; and their manners and customs, more especially in their religious doctrines and forms (though now nearly lost), would seem to favor this view. Its kings have always claimed their descent from the line of King Solomon. Their language, too, is not far removed from the Hebrew. "So striking is this resemblance," says Mr. Pritchard in his "Natural History of Man," between the modern Abyssinians and the Hebrews of old, that we can hardly look upon them but as branches of one family; and, if we had not convincing evidence to the contrary, and knew not for certain that the Abrahamidae originated in Chaldea, and to the northward and eastward of Chaldea, we might form a very probable hypothesis, which should bring them down as a band of wandering shepherds from the mountains of Habesh (Abyssinia), and identify them with the pastor

kings, who, according to Manetho, multiplied their bands in the land of the Pharaohs, and being, after some centuries, expelled thence by the will of the gods, sought refuge in Judea, and built the walls of Jerusalem.

The ethnological problem of their origin is very difficult to solve; indeed, almost impossible at the present stage of the development of facts concerning them. We find a Caucasian groundwork, and in some tribes a Caucasian superstructure, as in Theodore himself. Occasionally are found among them Caucasian features of the noblest type, set in material of the darkest hue. Again, we find traces of resemblance to the Bedouins of Arabia; and blendings with the Greek, the Portuguese, the Jew, the Gallas, and the negro.

Jackson questions whether they must not be considered as the true Ethnic root of the old Egyptian population, who descended from the uplands by the river-route till they reached northern Nubia, where, mingling with both correlated and alien tribes—that is, Semitic and Indo-European Caucasians—they, under the leadership of these more civilized immigrants, emerged into the Egyptians of Egypt.

The presence of the elements of the Jewish language and many of their religious customs prove that they must have once had a very intimate connection with the Jews.

GEOGRAPHICAL OUTLINES.

Before advancing to the people, we shall first give the land they live in. Abyssinia embraces an extent of territory situated between 9° and 16° north latitude, 36° east longitude, and the Red Sea, or rather the low land inhabited by the lawless tribes of Shoas, Danakils, and Adals. Its other boundaries are—to the west, the Sennar; to the south, the Galla country; to the north and east, the Soudan, Mensa, Bogos, etc.

The general aspect of the country has often been compared, especially by Germans, to Switzerland. There is a barrier of hills, which at a distance ranging from ten to seventy miles from the Red Sea, is a natural rocky barrier to invaders. These hills are raised, in three terraces, to a height of over ten thousand feet, and their summits lack only the eternal snow to crown them Alpine kings. Beyond lie the highlands of Abyssinia. These hills have been split into enormous clefts, and up these is the road which the English army will have to defile. The wild torrents that rush down these in the rainy season are appalling; and time has

deepened the abysses until they exclude the sun at midday. Sometimes these narrow passes become small valleys, and there the tired traveler wishes to rest from the burning sun; but woe to him if the torrent comes. Once a whole tribe of Arabs encamped in one of these valleys, but the torrent rushed down without a moment's warning, and they were all swept away.

These valleys in the hot season transport the observer by the luxuriance of their tropical vegetation. There range the elephant and the lion; the boa lurks in the tall reedy grass; while in the narrow defiles, the eagle finds a home amid the crags, and troops of dog-faced monkeys keep up a continual clamor. Such is the Badoda Pass. At length the highlands are reached. The tropical heat is now a temperate sun; and travelers describe it as a country flowing with "milk and honey." Three harvests a year spring from the soil, and its inhabitants should, in proportion, be prosperous and happy. Abyssinia is, indeed, allowed to

be the most beautiful land of Africa, and its climate the finest that can be wished.

THE PEOPLE.

On the low lands near the Red Sea are the tribes of the Shoas and numerous Bedouins. These latter have no record of their advent on the African coast, or the causes that induced them to leave the lands of their ancestors. They have long, black, silky hair, small extremities, a straight nose, small lips and dark, bronzed complexions. These roam about on the banks of the Barka and its tributaries, seeking pasture and water for their numerous flocks. Passing up on to the highlands we find the Tigreans, who, in general appearance, may be described with the Amharas, who dwell still farther inland. Theodore is a good representative of the latter tribe. These are generally classed as Abyssinians. Mr. Crawford thinks that they are a cognate race with the Gallas, although their language differs. He describes them as follows:

"The Abyssinians are a black people, of various shades of darkness; they have prominent features; but the flat nose, thick lips, and woolly hair of the negro are all absent. In complexion, person, and appearance they have been thought to resemble dark Arabs."

The entire Abyssinian population is estimated at between three and four millions, and is divided into two classes, the tillers of the land and their parasites.

Although the ground produces three harvests a year, the poor laborers are clad in rags, and are constantly plundered. Soldiers are the curse of the land. Beggars are numerous; and thousands have no homes. "Curious to say," says Dr. Blanc, "the peasant is despised; his very name is applied as an insulting epithet. The priest is not much respected; the soldier stands higher in the social scale; but the ragged, itchy, leprous beggar is exalted above all. Beggary is the only honorable profession in Abyssinia." The merchants, as a rule, are rich, and held in pretty good repute. Their profits are enormous, but their risks are great.

The Abyssinian dress consists principally of a large piece of cloth, which is alike the garb of the menial, the peasant, and the noble; the only difference is in the quality. The priests alone wear turbans; they and the lower orders shave their heads once a month. The soldiers' hair is allowed to grow long, is besmeared with butter, and powdered with a green leaf having a fragrant smell. All wear trowsers of

ABYSSINIAN WARRIORS.

white cotton. Great men alone are allowed to wear a shirt. This is an article conferred only by the sovereign. A "shirtman" is held in high esteem. The spear, the sword, and the shield are the soldier's arms.

The women's dress consists of a long shirt, reaching down to their feet, made of common cloth, and tied round the waist by a small band of the same material. Those of higher rank have embroidered calico shirts; some are said to be very handsomely worked. When traveling, they wear *libaleas*, or trowsers, and a *shama* thrown over the head, as well as covering the body, leaving only a small aperture for their black eyes to peep through. Silver rings—ten on the small finger, four on the index, and four on the third finger—are seen on almost every female's hand. Young girls shave the crown of the head; married women and those past sixteen years of age allow all the hair to grow, and wear it braided in small or large plaits, gathered in front and allowed to fall on the neck and shoulders. Butter in abundance adorns this coiffure—the greater the amount the more it indicates wealth and rank.

The Gallas, who are now the conquering race of Abyssinia, appear to be of finer organization than the other tribes inhabiting the plateau. They have taken advantage of Theodore's decline, and have reduced already to their sway forty-two kingdoms. They are a curious, mystical people, and originally are supposed to have come from the region of the equator, on the shores of the great Nile lakes, about the year 1537. They are much fairer than the Abyssinians; their hair is longer and more silky, while their features are more delicate. They have a somewhat noble appearance; are grave, thoughtful, and eloquent; generally handsome, with the pride of a nation of warriors, but still amenable to reason. Their women are not concealed, and mix freely in society. They are often beautiful, almost always graceful, liberal of their smiles and favors to the braves, and scorning a coward. Farther south, the women are said to be more chaste. Each Galla takes as many wives as he can support. Their features, when unmixed with other races, are Caucasian.

LANGUAGE AND LITERATURE.

Where only the priests and physicians can, as a rule, read and write, there can be, necessarily, but little literature. The extent of the knowledge of these classes of society is exceedingly small; to recite the Psalms of David is about the most they ever attempt. The Abyssinian script is very complicated; the consonants undergoing changes when attached to different vowels, so that the complete alphabet, though composed of only thirty-three consonants, consists of about two hundred lapidary characters. The priests have made some little use of it. It has enabled them to preserve an ancient language called the Geed, which is to the Abyssinians what the Sanscrit is to the Hindus, Pali to the Buddhists, Send to the Geres, and what the Slavic once was to the Javanese. The only remarkable work in it is

a translation of the Bible, which is to the Abyssinians what the Veda is to the Hindus, but being, like it, withheld from the laity, with the exception of the Psalms. They have some other works, generally borrowed from the Greek fathers; and have native historians, or, rather, chroniclers. The old Ethiopian language, which is now only the language of the ecclesiastics and scholars, resembles the Arabic somewhat, but still more the Hebrew. The present Amharic language is, like the race itself, impure and mixed. The greater number of words can be traced to Fez, Arabic, or Hebrew. The current tongues of Amhara and Tigré are also much mixed with Arabic words, which is easily explained by the narrowness of the sea that divides Arabia from Abyssinia, and the enterprising character of the Arabs of Yemen, under the name of Sabeans. As to education, there are no schools except the monasteries.

PRESENT RELIGIOUS CONDITION.

"The parasites of Abyssinia," says Dr. Blanc, "include the priests, the soldiers, and the beggars. The thousands of priests, who live on the fat of the land, are a heavy burden to the peasants. Churches arise on all sides, and to each of them a large number of priests is attached. When Gondar was the capital of the Abyssinian empire, it boasted of no less than forty-four churches, and each of them had to support three hundred and seventeen priests or deacons—not bad for a population of from twenty to twenty-five thousand. There may be some exceptions, but as a rule the Abyssinian priest is ignorant and bigoted. Many can not read, few can write. They learn by heart a certain number of Ethiopic prayers; these are chanted, accompanied by dances, for the edification of an ignorant and superstitious people. The Virgin Mary, some saints, or certain renowned anchorites are held in much higher esteem than God himself. The several ceremonies of the Church are a curious mixture of Christianity, Judaism, and ignorance. Christianity is here but a name—an empty epithet, by which the poor are duped and impostors thrive."

The revenues of the Church are in the hands of the princes; the influence of monasticism has checked all efforts at reform. The turbulent, ignorant, fanatical monks place themselves at the bottom of all political and state affairs, and have been a great hindrance to Theodore's success. Priests play a great part in sickness; in every desperate case they are called in to read and sing psalms, and to write charms, that are affixed to the patient, his bed, the doorposts of the house, and even to his favorite horse and mule! They also act as accoucheurs in this manner. Much of the church property has lain waste for centuries because of the laziness of the clergy. The corruption of the priests has poisoned the whole land. They spend two-thirds of the year as fast days; but the remainder are generally feast days and holydays; and it is said they are often not in a state to officiate on fast

days. King Theodore has always been a scourge to these drones.

The churches are sometimes very picturesque, being always built in a commanding position, and surrounded by cedar trees. They are all built on the same pattern—a large, circular stone building, composed of three concentric circles. The smaller central room is screened from the eyes of the people, and the priests alone can enter it. It is intended to represent the Holy of Holies. It contains the tabot, or ark, a small wooden box, the receptacle of the sacred volumes. The sanctuary where the priests officiate is formed by the second circle. This is in reality the church, as the nave where the congregation assemble is but a veranda. The interior of the church, and sometimes also the veranda, are adorned with rude paintings of favorite saints, the Virgin Mary, God, the devil, and the former emperors. The chief of the Abyssinian Church is called the Abouna (Our Father); he is a Coptic bishop, is chosen by the Coptic patriarchs in Cairo, and resides at Jerusalem.

MARRIAGE CUSTOMS—SOCIAL RELATIONS, ETC.

The Abyssinians can not be said to have an institution of marriage. Theodore was probably the most chaste person in all Abyssinia; and he set the example to his people in having but one wife. Polygamy exists to a fearful extent. All who can afford to do so keep several wives and concubines. Few avail themselves of the bonds of religious marriage; they prefer the more simple ceremony of marrying by the "King's death" (the usual form of oath in the country), which is as easily contracted as dissolved. The women are kept in a very degraded position; they are not allowed to sit or eat in the presence of the men, they cook the food, spin the cotton, clean the stables, and carry water and wood. Men, on the other hand, wash the clothes, go to the market, are dressmakers, embroiderers, and tailors.* As to social affection, it is almost out of the question altogether.

Marriages are consummated at a very early age. The Abyssinian youth begins to think about matrimony when he is twelve years of age, and the girl is often but nine or ten. After the terms have been agreed on, and the bargain sealed in oxen, on that day the bride is carefully washed by her female relatives—this probably being the first time for a year that she has undergone that process; her hair is plentifully besmeared with butter in the latest fashion, and a feast is prepared at the houses of both the bride and the bridegroom. During the festivities, the bride is brought in on the back of a male relative, dumped on the floor; and dances and other amusements consume the night. At daybreak, the bridegroom, who has been feasting at his own house, makes his appearance with a strong body of friends, well armed; fire a volley with their matchlocks; while he enters and claims his wife. A simple religious ceremony sometimes then

* Dr. Blanc.

takes place; kisses are exchanged, and the groom, seizing his wife, carries her out, and transfers her to the charge of a groomsman, while he himself sees to the settlement of the dowry. It is considered indispensable to the completion of this ceremony that two or three of the groomsman should occupy the same chamber as the couple for a few days. But, generally, everything in the above shape is dispensed with altogether. Burials are said to be about as revolting, for the dying are often buried before life is extinct, on the least sign of torpor. Then, sometimes, their voices are heard from the new-made graves; these are supposed to be the evil spirits claiming their prey. Boys, at birth, have the point of a spear placed in their mouths by a warrior, who stands outside the tent; and this is supposed to inspire courage.

Their social character, indeed, is dreadfully low. "Immoral, sensual, and ignorant," says Dr. Blanc, "it is impossible for Abyssinians to hold any social intercourse. Their festivals are but low and coarse orgies; they have no literature; no means of recreation; their power of conversation is most limited. It generally begins about God, and ends with lascivious talk or begging. Jealousy compels them to treat as prisoners their temporary wives; and though superstitious and bigoted, they fear more the despot than the Creator. 'There is a God in heaven, it is true,' they say, 'but there is also a Theodorus on earth; the first is far, the second near.' In short, what can be said of a people with whom prostitution is no shame; robbery, treachery, and murder are a glory; and who consider it the greatest shame to wash except once a year, on St. John's day? Better, far better, a savage race than a semi-civilized one." Let us conclude with Dr. Blanc's summary.

"I should like to find in the people among whom I have been detained so long a prisoner some good point, some redeeming virtue; to be able to extol their religious and moral life, their courage, their veracity, and not to be exposed to the charge that my judgment is prejudiced, and that my sufferings guide my pen. Alas! much as I regret it, in all honesty I must declare that, as far as I am aware, the Abyssinians have not a single good quality. They are cowards and treacherous, can not speak the truth, delight in robbery, and boast of most cruel and dastardly murders. Naturally drunkards and gluttons, they are only abstemious by necessity; of such coarse morality that the most debauched would blush at the sight of their corrupt manners; their pleasure is to bully the poor and helpless, while they humbly cringe before the rich and powerful."

Since the above was written, the news has been received of the unexpected collapse of the Anglo-Abyssinian war by a single battle at Magdala, where King Theodore and his army were completely routed. Theodore himself was found dead on the field, having, as reported, committed suicide rather than fall into the hands of the victors. The captives were found alive, and well.

CRAWFORD ON THE ORIGIN OF THE SPECIES BY NATURAL SELECTION.—The Darwinian theory of a profitable variation in every species of plants and animals, was the object of a refutation, delivered before the London Ethnological Society by the president, J. Crawford, Esq. The lecturer proceeded to show that in authenticated history, however remote, there is no trace of any variation in species; but that the mummies of the ibis and kestrel hawk, and drawings of the ox, ass, dog, and goose, which existed in ancient Egypt, declare them to be identical with the same species at the present day. The arguments of the Darwinian school are chiefly derived from the variations to be met with in animals and plants; and these seldom occur in a wild state, but only after subjection to the control of man. The disposition to variation, however, is not found in all species, the ass and the camel being notable instances. Whenever it does take place under man's influence, it results in a weakening in the animal of those qualities which render it most fit to maintain the "struggle for life." After a return to the wild state, the bird or animal loses the qualities it had acquired in domesticity, and again merges into the common stock. This, if the theory of progressive and profitable development were correct, it should not do, but should impart its own properties to its fellows. The same thing was seen in plants—the rose and pine-apple for instance—which by cultivation gained qualities agreeable to man, but lost the power of spontaneous reproduction.

On Physiolog.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—Gibbins.

My people are destroyed for lack of knowledge.—Hosea iv. 6.

DYING AT THE TOP.

"I SHALL die first a-top," was the mournful exclamation of Dean Swift, as he gazed on a noble oak whose upper branches had been struck by lightning. "I shall be like that tree—I shall die first a-top." Afflicted for years with giddiness and pain in the head, he looked forward with prophetic dread to insanity as the probable termination of his existence, and after nine years of mental and bodily suffering, the great satirist, the mighty polemic, the wit, and the poet died, as he had feared and half predicted, "in a rage, like a poisoned rat in a hole."

"Dying at the top" is the disease to which a fearful number of Americans are to-day exposed. In the high-wrought state of civilization to which we have attained, hardly any complaint is so common as that of a brain overworked. The complaint is not uttered by literary men and scholars only, but is echoed by all who are striving for fame or fortune against eager and formidable competitors. The lawyer, the clergyman, the merchant, the speculator—all are suffering from overwork,

from that strain of special faculties in the direction toward special objects out of which comes nervous exhaustion, with the maladies consequent on over-stimulus and prolonged fatigue. It is in our great cities that this evil has reached the most fearful pass. A person living a quiet, leisurely life in the country can have no adequate conception of the severe and exhausting labors to which hundreds subject themselves in a second-rate city in his neighborhood, especially in the higher walks of professional life; nor can the inhabitant of such a city, groan as he may under his toils, conceive of the more burdensome duties of the corresponding classes in a great commercial center. The brain of a leading lawyer, merchant, or business man is forever on the stretch. By day and by night he can think of nothing, and dream of nothing, but the iron realities of life. Anxious, perplexing thought sits on his brow as he rubs his eyes at day-break; hurrying to the breakfast table, he swallows his steak and his coffee in a twinkling, jumps up from his chair almost immediately, and, without having spoken a pleasant word, hastens away to the high-courts of Mammon, to engage in the sharp struggle for pelf. There he spends hour after hour in calculating how to change his hundreds to thousands; dinner and supper—which he bolts, never eats—come and go almost without observation; even nightfall finds him still employed, with body and mind jaded, and eyes smarting with sleeplessness; till at length, far in the night, the toil-worn laborer seeks his couch, only to think of the struggles and anxieties of the day, or to dream of those of tomorrow. Thus things go on day after day, till the poor bond-slave of Mammon finds his constitution shattered. The doctor is summoned, and sends him to Europe; he travels listlessly—he can not leave thought behind him; the disease creeps on apace; the undertaker soon takes his dimensions in his mind's eye; paralysis seizes him; he lives a few years organically alive to enjoy the fruits of his labors; and then descends to his everlasting rest, with the glorious satisfaction, perhaps, of having gained, for his joyless days and sleepless nights, a larger "pile" than any other man on 'Change.

Who will say that such a life has been spent as God designed? Can there be a more pitiful failure than when the means of happiness thus swallow up the end? Were suffering to follow instantly upon the heels of transgression—were the account to be settled with nature daily, few persons would violate her laws. Unfortunately for such fanatical devotees of business, she runs up long accounts with her children, and, like a chancery lawyer, seldom brings in "that little bill" till the whole subject of litigation has been eaten up. The poor devotee of Mammon, who thought to outwit her, finds at last that she is a most accurate bookkeeper—that, neglecting nothing, she has set down everything to his credit, and debited him with everything—that not the eighth part of a cent

has escaped her notice; and though the items are small, yet, added up, they show a frightful balance against him, and he finds himself at forty or fifty physically bankrupt, a broken-down, prematurely old man.

This madness—this *self-killing*, for self-killing it is, as truly as if he were to cut a vein, and drain away his own life-blood, drop by drop—is less astonishing in the case of the merchant than in that of the professional man, and the scholar who makes the acquisition of knowledge the principal end of life. The latter are, or ought to be, thoroughly acquainted with the laws of physiology; and yet the facts show that they are either ignorant of its most elementary principles or lack the self-command to act upon them. Not long since an English journal related of a leading barrister, that he acquired an income of fifteen thousand pounds, but was every night so completely exhausted by his labors that, for several hours after their cessation, he could not be addressed or approached without experiencing the acutest nervous distress. How many lawyers in our own large cities break down just as they have acquired a full mastery of the intricate science of jurisprudence, and when their faculties of mind and body should be in the highest vigor! How many clergymen are physically insolvent—mere wrecks of their former selves—at forty! And the scholar—who that is familiar with literary biography does not know that half of the languages of Europe may be mastered, while the prodigy that has stuffed himself with so much learning knows not, or seems not to know, that by perpetual study, without outdoor exercise, he is committing a slow suicide? When Leyden, a Scotch enthusiast of this stamp, was warned by his physician of the consequences, if he continued, while ill with a fever and liver complaint, to study ten hours a day, he coolly replied, "Whether I am to live or die, *the wheel must go round to the last*." * * * I may perish in the attempt; but if I die without surpassing Sir William Jones a hundred-fold in Oriental learning, let never a tear for me profane the eye of a borderer." No wonder that he sank into his grave in his thirty-sixth year, the victim of self-murder. Alexander Nicolly, a professor of Hebrew at Oxford, who, it was said, could walk to the wall of China without an interpreter, died a few years ago at the same age, chiefly from the effects of intense study; and Dr. Alexander Murray, a similar prodigy, died at thirty-eight of the same cause. Sir Humphrey Davy, in the height of his fame, nearly killed himself by the excessive eagerness with which he prosecuted his inquiries into the alkaline metals—pursuing his labors in the night till three or four o'clock, and even then often rising before the servants of the laboratory. Excessive application threw Boerhaave into a delirium for six weeks; it gave a shock to the powerful frame of Newton; it cut short the days of Sir Walter Scott; and it laid in the grave the celebrated Weber, whose mournful exclamation amid his multiplied engagements is familiar to many an

admirer of his weird-like music: "Would that I were a tailor, for then I should have a Sunday's holiday."

It is related of Sir Philip Sidney, that, when at Frankfort, he was advised by the celebrated printer Languet not to neglect his health during his studies, "lest he should resemble a traveler who, during a long journey, attends to himself, but not to his horse." When will professional men, business men, and scholars act upon this homely but sensible advice? What can be more crazy than the conduct of a traveler who, having a journey of five hundred miles to perform, which he can rightly perform only at the rate of fifty miles a day, lashes his horse into a speed of a hundred, at the risk of breaking him down in mid-journey? We are aware of the excuses given for this insanity. We know very well that the poor bond-slave of business pretends that he *must* overdraw his bank account with nature—though every draft will have ultimately to be repaid with compound interest—in order to maintain his position in society or on 'Change, and that the intellectual slave, besides this reason, will plead the deep enjoyment he finds in unceasing work or study. But it is simply absurd for any man to state that he is *compelled* to maintain a particular status in society—that he *must* move in this or that circle—that he *must* challenge this or that degree of respect from those around him. The argument is just that by which the Swartwouts, the Schuylers, and the whole race of swindlers, embezzlers, and defaulters have defended and excused their crimes. There is nothing but a wretched vanity underlying all these pretenses; and he who, to gratify so low a passion, deliberately overtasks his bodily and mental energies year after, from January to December, need not be astonished if, like Swift, he suddenly finds himself himself "dying a-top," or if the verdict of the public—the coroner's jury at large—should be, after the release of his weary spirit from the more weary body—*died by his own hand*.

[The writer of the above, in the *Chicago Tribune*, covers the ground in a very general manner. He quite overlooks some of the more important causes of "dying at the top," namely, the immoderate use of stimulants and improper food. But he is not discussing the subject from a physiological point of view, and he has not, therefore, given that close analysis which the subject is entitled to receive. Had he expatiated on the effects of alcoholic stimulants; on the use of tobacco in its various forms; on the irregular hours at which meals are taken; the indifferent quality of food eaten, and its hasty and imperfect preparation; badly ventilated sleeping rooms; the almost total neglect of bathing; and last, but not least, the deplorable indifference to a religious life, so prevalent in refined society, he would have greatly added to the practical value of his truly excellent article.

He says nothing of the hot-house method in which children are now educated in the schools—the mere brain development, and the almost

total neglect of bodily training. From the child of ten up to the students in our colleges, little or no attention is given to the most essential part of one's growth and culture; all is concentrated on intellect, and we have the ill-formed, cadaverous weaklings, such as we see turned out for scholars—dyspeptic stomachs, contracted lungs, feeble voices, and feeble minds. What but alcoholic stimulants, tobacco, and the like, could get a response from such poor mental machinery? And how long can it last, under the spur? Sensible parents and sensible teachers will, it is hoped, do what they can to correct this sad state of things, and put the child in the way to become a man, and the man in the way to live a life of health, usefulness, and godliness.]

TEMPERANCE vs. INTemperance.

DURING the great rebellion the floodgates of intemperance were everywhere opened, and thousands who never before drank alcoholic liquors were induced by physicians and others to take just a little, when exposed to either heat or cold, night or day, wet or dry. Many young men thus contracted the habit of drinking. It is believed that the actual drunkenness of officers lost us thousands of men. The Confederates confess that it was this which caused the most serious disasters to certain of their generals who by drink were disqualified for doing their duty. The demoralization thus caused is perpetuated. When the appetite becomes thoroughly perverted, it is "up-hill work" to bring it again into a normal or healthy state. Just now a great national election is absorbing the minds of many, and the excitement runs high. Not a few weak men will be so carried away as to forget themselves, and be led into the temptation of drinking. Hence the necessity of extra vigilance on the part of temperance men at this time. Men, women, and children will form themselves into societies, Bands of Hope, Sons of Temperance, and Good Templars throughout the country. And while the demon of temptation will appear on every hand, these good angels will also be present, to warn and to guard. With a view to instruct, re-impress, and fortify those who are willing to be saved themselves, and to help save others, we have published a list of twenty or more of the best works yet issued on the subject, including speeches, essays, lectures, sermons, addresses, and orations. Copies of these works in every family would tend to save many of the rising generation from becoming drunkards. This catalogue will be sent free to any address, from this office, on receipt of stamp with which to prepay postage. Circulate the documents.

HIGH-HEELED SHOES, CROOKED LEGS, AND SORE TOES.—It would seem that one absurd fashion must quickly follow another the world over. One of the latest—it has been creeping on for a year or two—is high-heeled and short-toed boots and shoes. The evil resulting from

short-toed shoes is this: it causes the toe-nails to grow down into the flesh, often rendering surgical operations necessary. Read what the *Pacific Medical Journal* says of high heels: "When the heel is raised an inch above the sole of the foot, the bones of the leg, thigh, and pelvis, to say nothing of those of the foot itself, are thrown out of their normal relations to each other in standing and walking. Deformity in some degree is an inevitable result. With children the result is sooner effected, and more strongly marked. But if fashion pronounce for high heels, the question is settled. Did not doctors write libraries thirty years ago against tight lacing? And what effect had their denunciations so long as fashion prescribed lacing, and called for wasp-like waists? Quite probably the present prevalence of uterine disorders is partly the effect of this vicious practice in the present and the past generations. So fashion discards the bonnet, and women who have been accustomed to warm hoods, go forth into the wintry wind bareheaded, with the exception of a small patch of covering over the forehead, thus courting neuralgia. There is a blessing, however, in the very fickleness of fashion, and a new costume will soon be dictated. So there is hope that before a generation of girls with crooked shins shall be produced, the high heels will be banished; much more hope from this source than from respectful attention to reason and the laws of hygiene."

[Better wear the moccasins of our native squaws, who can walk miles without tiring, than the short-toed, high-heeled cripplers that *spoil* our feet. We are getting so near to China now that we shall probably ere long adopt the fashions of that Flowery Kingdom.]

THOMAS D. MCGEE.

LATE MEMBER OF CANADIAN PARLIAMENT.

A VERY large brain and a very active temperament, with an excitable, impetuous nature, were prominent characteristics in this man. That he had by inheritance great *natural* capabilities could not be doubted. Add to this, high culture and great ambition, an insatiable love for fame, and we have the character he was. How much real moral principle, as compared with his brilliant intellect, he possessed, is known to those who came in contact with him. His head indicates the self-seeking, self-inspired politician. He would do all things for *his* sake, nothing for *your* sake, save to make you serve as a round in the ladder on which *he* might climb up. After attaining his ends, reaching the goal of his ambition, he would relapse into a state of repose, and enjoy the fruits of his exertions. That he would be animated by high philanthropy, that he would subordinate self to principle, we do not affirm, as we do not observe any marked indication.

PORTRAIT OF THOMAS D. MCGEE.

His social nature made him friendly and glib, and smoothed his path to success. He had energy and enterprise, and was well calculated to impress others favorably through the vigor of his mind and the impulsive and magnetic energy of his character.

As a speaker, he was earnest and free, and knew how to warm up the sympathy and affection of his auditors. His imagination was strong, and his language being copious, he possessed more than common ability as a speaker and writer.

The substance of the following biographical sketch is taken mainly from the *Montreal Gazette*.

Mr. McGee was born on the 13th April, 1825, at Carlingford, in the county of Louth, Ireland, and was the second son of the late Mr. James McGee, of Wexford. His parents were in humble circumstances, and unable to give their son all those advantages of education and position which his genius would have turned to such wonderful profit. Yet he received some education, the elements of a liberal education, at Wexford, and inherited from his mother the gift of a poetic, sensitive nature, and a love for books, particularly for poetry and belles lettres.

At the age of 17, an ambitious boy, fretting at the obstacles which bar the advancement of the young and poor man in all old and settled communities, he repaired to the New World to seek his fortune. Three years were passed in Boston. The lad, clinging to literature and readily mingling politics with it, procured employment on the Boston press, and even thus early commenced to deliver lectures! Among

those who noticed him there, and, perceiving his talents, strove at once to help and to advise him, was Mr. Grant, then British consul at Boston. Ere he had been three years at work, his writings began to be talked of, and attracted attention not only among Irishmen in America, but on the other side of the Atlantic. They were brought under O'Connell's attention, and procured for Mr. McGee, then but 20, an offer of an engagement on the *Dublin Freeman's Journal*, which he accepted.

From 1842 or '43 until 1858 he chiefly depended for his daily bread upon his work for the newspaper and periodical press, eked out for many years, or down to his acceptance of office in 1862, by lecturing.

After several years of severe literary labor in Ireland, where he drew upon himself general consideration by his bold advocacy of Irish liberty, and where he suffered with the keenest sorrow and humiliation the failure of the rising of 1848, he returned to America, and made New York his residence. Here he edited successively the *Nation* and the *American Celt*. Subsequently he removed to Buffalo, N. Y., and finally fixed his abode in Canada, where the Irish residents at first generally regarded

him with feelings of the warmest consideration. His political opinions had by this time been much modified; he had become somewhat conservative, and exhibited a marked interest in the growth and prosperity of Canada. He entered Parliament, and soon won the admiration and respect of his fellow-representatives by his eloquence and ability. He labored to inspire a feeling of independent nationality in the Irish population of Canada. He desired to make their interests Canadian, like his own had become. The steadfast, unyielding pursuit of that policy cost him his life, for no other cause can be alleged for his assassination. He denounced Orangeism, Ribandism, and Fenianism, and warmly advocated the introduction of the federal principle into the government of Canada. The cause of immigration also had in him an earnest and unfailing advocate. In 1863 and 1864 Mr. McGee held important positions in the Canadian ministry, and displayed much administrative ability.

During the Fenian raids and arrests Mr. McGee was among the foremost in denouncing them. At that time he was threatened several times with personal violence if he did not desist from his active opposition to Fenianism, but he was in no wise intimidated. Feeling himself a representative man of a suspected class he took a decided course, and maintained it boldly. He also denounced the machinations of agents from the late Southern Confederacy whenever circumstances led to an avowal of his sentiments respecting the American civil war.

He was murdered at Ottawa by some person

unknown, shortly after leaving the Parliament house, where the debate had been protracted to a late hour of the night, and just as he had opened the front-door of the house where he lodged. A single pistol-shot terminated the life of a highly respected and talented man. The citizens of Montreal, his home, testified their concern at his death by closing their places of business on the day of his funeral, April 13th last.

Several rewards have been offered by the Dominion Government and chief cities of Canada for the apprehension of the assassin, which amount in the aggregate to nearly \$20,000.

His life had been somewhat stained, as his health had been much impaired, by an unfortunate tendency to intemperance, but his brilliant intellectual endowments, notwithstanding the marring influence of dissipated habits, challenged admiration whenever displayed in the halls of legislation or on the public platform.

A correspondent who has taken the trouble to send us some particulars relating to the autopsy of Mr. McGee, states that his brain was of unusually large dimensions, weighing 59 ounces, and that the skull was very thin, almost transparent. Thinness of the skull is a general indication of active mentality. The brains of Cuvier and Dupuytren are among the heaviest on record, Cuvier's weighing 59½ ounces and Dupuytren's 58. That of the great Irish O'Connell weighed 54 ounces. The medium weight of the human brain is about 45 ounces. Hence is seen the unusual size of Mr. McGee's.

LEARN TO SWIM.

Who would not know how to swim? What man or woman is there who, having once experienced the exhilaration of a roll in the sandy beach when the waves were sweeping in, can say that it is not a most delightful exercise to plunge in the foaming water! How free and joyous the sport of the good swimmer in the liquid depths of old ocean! How natural and how healthful the swimmer's movements! In some parts of the world there are tribes of which the men, women, and children all swim; they take to the water as freely and naturally as ducks; they are almost amphibious. The islands of the Pacific, especially those in equatorial latitudes, are peopled with races and tribes who seem to pass half of their lives in water.

We believe in the hygienic properties of water. Internal and external applications are conducive to cleanliness and health. We believe in bathing and swimming, and have a strong compassion for those who do not or will not bathe and swim. The warm and genial days of summer will soon be upon us, when those who appreciate the water-side will hasten thither and eagerly resume their acquaintance with the sea and sandy bank. For those who would participate in the sports of the bather, and yet are restrained from carrying their inclinations into action because they do not know how to "strike out" hand and foot, and propel themselves through the gushing element, we have a little work entitled "The Swimmer's Guide," which furnishes all the necessary instructions to those who would sport like frogs in the latter's home.

This little book has much to say on the science of swimming, as taught and practiced in civilized and savage nations, and gives numerous examples, incidents,

and illustrations of a most entertaining and instructive character. It contains those most sensible "Hints to Swimmers," by Dr. Benjamin Franklin, and remarks on the causes of drowning; how to save persons from drowning; resuscitating the drowned; and all that is necessary for a person to know, preparatory to leaping into river, lake, or sea. It is an excellent swimmer's *vade mecum*, and will repay any one more than its cost by the perusal. Price 25 cents. Published at this office.

PERSONAL.

DEATH OF DR. ELLIOTSON.—From late English papers we have tidings of the death of Dr. John Elliotson, confessedly one of the most distinguished scientists of the age. He introduced the stethoscope into England, discovered the curative properties of quinine and prussic acid, and founded the North London Hospital. He was educated at Edinburgh, and took his medical degree at Cambridge. He first became known to the profession at large by his "Lumleyan" lectures on diseases of the heart, before the College of Physicians in 1820, and was soon afterward appointed professor of the Practice of Medicine in the University of London. His greatest work was his "Translation of Blumenbach's Physiology," the original notes in which are almost encyclopedic.

Dr. Elliotson was a confirmed convert to the doctrines of Mesmer, and even resigned his professorship rather than forego his convictions in this matter. He was one of the oldest Fellows of the Royal Society, and also of the Royal College of Physicians; and had been president of the Phrenological Society (of which he was the founder), and of the Royal Medical and Chirurgical Society of London. Possessed of a large fortune and a large professional income, it is not too much to say that he sacrificed the former to his benevolence and the latter to his innate love of truth. He lived and died unmarried. In 1835 he published an elaborate treatise on Human Physiology, of which he devotes a considerable portion to the discussion of phrenological doctrines. He was an earnest disciple of Gall, and exerted a strong influence among medical men favorable for Phrenology.

DEATH OF MRS. GEORGE COMBE.—On Tuesday, March 3d, 1868, the grave closed over the remains of this estimable lady; a daughter of the great Mrs. Siddons, and widow of the author of the "Constitution of Man." Mrs. Combe has survived her husband nearly ten years, Mr. Combe having died in the autumn of 1853. They were married in 1833, and during the twenty-five years between these dates, Mrs. Combe was her husband's inseparable companion in all his journeys: spending three years with him in his tour through America, where he lectured in most of the principal towns, and collected materials for his important work on the United States. After Mr. Combe's death, his widow lived for the most part abroad, often suffering from ill health, and she died at Nice on the 19th of February. In accordance with her wish, her body was brought to Edinburgh and interred beside that of her husband. Mrs. Combe was the last survivor of her family, her brothers and sisters having predeceased her.

PARLOR READINGS.—We have had the pleasure of listening to some good recitations lately on the part of Mr. Augustus Waters at the Cooper Institute. Although quite youthful and without much stage experience, Mr. Waters is nevertheless an admirable elocutionist. In our opinion, the chief feature of his reading is

its naturalness—nay, its simplicity. He obeys no artificial rule, employs no mechanical effect. His temperament, being of the mento-sanguineous type, warmly responds to emotional influences, so that passages glowing with feeling and sentiment are fully appreciated and aptly uttered. He is delicate and subdued in his intonations—no rant. To express the harsh phases of human character is not so much his forte as the delicate and feeling. As a reader of Shakespeare, especially those selections which move the heart by their pathos, he is excellent—in fact, equal to any reader we have heard. His nervous restlessness at times somewhat impairs the effect of his intonation, but care as to *pose* may modify that.

THE LINCOLN MONUMENT was dedicated in Washington on Wednesday, April 15th, with appropriate ceremonies, President Johnson unveiling the statue.

MR. THOMAS NAST, the artist, is doing the illustrations for *Our Boys and Girls*, a pictorial magazine, published every week, by Messrs. Lee & Shepard, of Boston. Also for the new pictorial weekly published in Chicago. How could Messrs. Harper afford to dispense with his services?

THE EMPEROR NAPOLEON read and revised the proofs of his "Life of Julius Cæsar" twenty-seven times—an unprecedented instance of careful authorship.

MR. GARRIT H. STRIKER, of New York, died lately in New York, at the advanced age of eighty-four. He was one of the few survivors of the old Knickerbockers, and resided at Striker's Basin, North River, below 57th Street.

PROFESSOR AGASSIZ denies that he made any announcement with reference to the number of snow-storms during the past winter, as has been generally reported. He says in a letter: "I have never meddled with predictions of storms or changes of weather, well knowing that meteorology is not yet sufficiently advanced to justify such attempts."

MCCORMICK, the inventor of the well-known reaping machine, returned an income of \$202,306 for the year 1867. Pretty good reaping that for one year!

CAPTAIN RALPH FRITZ died recently in San Francisco, leaving a will in which is a bequest of \$20,000 to the United States, to be applied toward canceling the public debt. Patriotic!

DESIRABLE PREMIUMS.

We offer the following to all who may feel an interest in the circulation of the PHRENOLOGICAL JOURNAL:

For 350 new subscribers, at \$3 each, we will give a Steinway or Weber Rosewood Piano, worth \$650.

For 100 subscribers, at \$3 each, we will give a Horace Waters five Octave Parlor Organ, worth \$170.

For 60 subscribers, at \$3 each, a Horace Waters five Octave Melodeon, for church or parlor, worth \$100.

For 40 subscribers, at \$3 each, a Florence Sewing Machine, worth \$65.

For 30 subscribers, at \$3 each, a Weed Sewing Machine, new style, worth \$60.

For 25 subscribers, at \$3 each, a Wheeler & Wilson's Family Sewing Machine, worth \$55.

For 25 new subscribers, at \$3, we will give a Gentleman's Tool Chest, worth \$35; and for 18 new subscribers, at \$3, a Youth's Tool Chest, worth \$25. For 10 new subscribers, at \$3, a Boy's Tool Chest, worth \$15. See advertisement on cover.

For 15 subscribers, at \$3 each, the worth of \$16 in any of our own publications.

For 12 subscribers, at \$3 each, a handsome Rosewood Writing Case furnished with materials, worth \$12.

For 10 subscribers, at \$3 each, the Universal Clothes Winger, worth \$10.

For 7 subscribers, at \$3 each, a handsomely finished Stereoscope, a beautiful and useful article for home amusement, with 12 views, worth \$6.

Those persons desiring our own publications instead of the premiums offered, can select from our catalogue books amounting to the value of the premium for which they would have such books substituted. Subscriptions commence with January or July numbers.

"What They Say."

Here we give space for readers to express, briefly, their views on various topics not provided for in other departments. Statements and opinions—not discussions—will be in order. Be brief.

LEND YOUR BOOKS.—A book unused and idle upon our shelves is a loss. How many there are which are never looked into except by their owners, and even by them not touched from one year's end to another year's end! Why not circulate them? Why not let others who are not as fortunate as ourselves have the good of our books? Why be miserly with them? If they are a source of pleasure and profit to us, we ought to be willing that others should have the same benefit from them. The desire and aim of an author is to be read; and in no better way can we express our gratitude to him for the good we have derived from his work than by bringing it to the notice of those who need it or would appreciate it. "To read a good book and be silent about it is theft." How often have we had occasion to be thankful to some friend for calling our attention to a book that we might not otherwise have seen! and shall not we confer the same favor upon others? Hawthorne says, "We taste our intellectual pleasure twice, and with double the result when we taste it with a friend." This is true. And it is equally true that a book which has afforded comfort or gratification to a friend becomes more valuable to ourselves. The good we thus do comes back to us, for by every act of liberality we become more liberal, just as by every selfish action or want of action we become more selfish. Generosity and selfishness equally "grow by what they feed on."

Lend your JOURNALS, too. Perhaps by doing so you may induce some persons to subscribe for it. Those who can not afford to subscribe will be grateful to you for your kindness; and those who are too stingy to do it may find something in the JOURNAL to shame them for their stinginess, and influence them to correct their fault; and those who are indifferent may become interested and instructed. Solend your books and JOURNALS. It is an easy, a pleasant, and a powerful way of doing good.

But I hear some one say, "There is another side to the question—so many persons are careless about using and returning borrowed books." Yes, there are a good many such, and they can not always be avoided. Tell such persons in a gentle, polite manner to be careful of them; say that you would like the book to be returned as soon as it has been read, so that you can lend it to another; or, set a time when you would like to have it returned, and you will seldom have cause to complain. All borrowed books should be conscientiously, scrupulously taken care of and returned to their owners. A word to the wise is sufficient. But then every one is not careless. You will find many who will be prompt as well as pleased.

So, lend your books, dear reader. Cover them with stout paper, put in a ribbon that will serve for a mark, write your name on the fly-leaf, and add a motto if you please. A good sample of a motto for a book is the following, from the pen of the late Joseph P. Engles Esq., of Philadelphia:

"If thou art borrowed by a friend,
Right welcome shall he be.
To read, to study, not to lend,
But to return to me;

Not that imparted knowledge doth
Diminish learning's store,
But books, I find, if often lent,
Return to me no more.

Read slowly; pause frequently; think seriously; keep cleanly; return duly, with the corners of the leaves not turned down."

Let me add another motto from a number of such which the contributor of this article wrote "for the fun of it."

"Much pleased am I this book to lend
To each desirous, reading friend,
With only this one requisition—
A prompt return in good condition."

Perhaps some of the young folks may find the writing of such mottoes a good exercise in composition. They had better try it.—M. S. A., PROVIDENCE, R. I.

SOUL! BODY! LIFE!—There are three distinct entities, attributes, or essential principles in man. Take one away and the man is lost. Remove a man's soul, and what is there remaining? A mere animal, from which he can only be distinguished by his superior form, and perhaps a higher manifestation of the animal faculties. Remove the body and you must take the life also, but where is the soul? When the life is removed there is nothing left, as we can perceive, but a body.

Your correspondent, C. E. T., has told us, in the February number of the JOURNAL, how man is *not* in the image of his Maker, but he neglected to tell us how or in what manner man *is* in the image of God. I wish to advance an opinion on this important point, and shall attempt to do so with all possible brevity.

God has three attributes which your correspondent names, "infinite wisdom, power, and beneficence." Now my idea of how God made man in His own image is this: He gave man a portion of this wisdom, power, and beneficence; bestowed upon him the Supreme's own attributes, although in an infinitely less degree. There are three cardinal virtues which are collateral with and depend on the attributes. These are M. Cousin's, "True, beautiful, and good." In bestowing the attributes, the virtues were necessarily bestowed with them. We are not speaking of man as he is, but as he was. Man was therefore made like God, in the attributes and virtues. But how shall he manifest them? How make them apparent to others? A soul is given him to manifest the true, to receive and impart wisdom; a body, to make the beautiful apparent, and to bestow an individual presence; a life, to manifest the good, and so that beneficence can be exercised. Thus, we find man to be in the image of God, in having the same attributes and the same virtues. Where the Creator is omniscient, man has some knowledge; where He is omnipresent, man has an individual presence in one specific place; where He is omnipotent, we have a measure of power.

LONG PINE, CAL. A. JOHNSON.

HE LIKES IT.—When renewing his subscription, A. H. says: Your valuable JOURNAL is alike interesting and instructive, and in my estimation ought to be in the hands of every young man, especially those who are not born with a silver spoon in their mouth.

THE "MOUTHFUL OF BREAD" IN SCHOOL.—Mr. E. A. Gibbons, of the Harvard Room School, N. Y., says: "I like your recently published work by Macé, the 'History of a Mouthful of Bread,' very much, and propose to use it in my school." It is "just the thing," and should be used as a reading-book in all schools.

LIFE IS ILLUSTRATED in all its various phases in the PHRENOLOGICAL JOURNAL—a First-class Monthly Magazine—now in its Forty-eighth Volume, edited and published in the city of New York, at \$3 a year, by S. R. WELLS, at 389 Broadway.

SPECIAL OBJECTS OF THE JOURNAL.

ANTHROPOLOGY; or, the Science of Man, considered PHYSICALLY, INTELLECTUALLY, and SPIRITUALLY, forms a leading feature in the PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED.

PHRENOLOGY—the Brain and its Functions; the location of the different groups—social, selfish, perceptive, reflective, moral—and their respective organs, with the office or function of each, is given, with directions How to Cultivate the Memory, and to improve the mind.

PHYSIOLOGY—the Temperaments; Dietetics; Exercise; Bodily Growth; Hours of Study and Sleep; Laws of Life, with How to Secure and Retain "Health at Home," on strictly Hygienic principles.

PHYSIOGNOMY; or, the Science of Expression" in the Human Face, Voice, Walk, Action, with other Signs of Character, and "How to Read Them." If one may sometimes detect a rogue or an impostor without the rules of science, he can do so much more certainly with rules such as are taught in this JOURNAL.

PSYCHOLOGY; or, "the Science of the Soul." The Immortal part, in relation to the Here and the Hereafter, may be better understood and appreciated when looked at from our stand-point. We propose to give the History of All Religious Sects and Creeds, in connection with man's spiritual state, growth in grace, change of heart, the better life, etc.

"WHAT TO DO." The question "What Can I Do Best?" occurs to every one, and the choice of a life pursuit is the most important step in every man's history. Success or failure; riches or poverty; fame or infamy; happiness or misery, depend on the choice of a calling, or the occupation in which a person engages. One may shine in the law, another in medicine, another in divinity; one is inventive; another prefers agriculture, commerce, mechanism, or manufacturing. Phrenology "puts the right man in the right place."

MARRIAGE. "Be ye not unequally yoked." Temperament indicates who are and who are not adapted to each other in this relation. Phrenology discloses the natural disposition of each,

enabling the parties to know in advance what to expect, and how to conform where differences exist. Why not consult it?

CHILDREN. The right education and proper training of children is *very* important. The usual methods are faulty. Lives are often sacrificed by too close confinement to books and to brain work. Children should be *classified* by teachers according to temperament, constitution, and capacity. They should be *governed* according to organization and disposition. Our science affords the only means by which to arrive at correct conclusions concerning temperament, disposition, character, tendency, and capability.

THE CRIMINAL, the Insane, the Imbecile, the Idiotic, the Inebriate, the Pauper, and the Vagrant should be classified, employed, trained, educated, and developed according to their several characters. All may be *improved*; some, made self-supporting. Phrenology and Physiology should be understood and applied by those having charge of these classes.

FINALLY. Our public men, servants of trust, our preachers and our teachers, ought to be chosen or selected with reference to their constitutional fitness for the several posts to be filled. Neglect of this important principle gets communities into quarrels, contentions, confusion. Ignorance and corruption combine to put thieves in places of trust. We have perverted and dissipated gamblers and pot-house politicians where we should have statesmen. There are dull, narrow-minded, bigoted priests and stupid pedagogues where we need broad and liberal-minded preachers and bright, intelligent teachers. Would not a thorough knowledge of Phrenology serve to correct these evils? To disseminate such knowledge is one of the objects of THE PHRENOLOGICAL JOURNAL. Our writers are among the foremost in science, philosophy, literature, art, education, and religion. The editor rides no hobby; is tied to no ism, ology, party, or doxy. MAN is his theme; the world is his field, and with God for his guide, he will work for the improvement and elevation of the one, and the approval and glory of the other.

READER, this is our programme. Are you with us, against us, or are you indifferent? If you join us, it will increase our number, strength, influence, power, and usefulness. The field is almost unoccupied; at least there are but few, very few workers in it, and the demand is great and pressing. We feel almost alone. Good men oppose us; bad men revile us, and much ignorance, prejudice, and superstition must be overcome. A few choice, free, and brave spirits indorse us, commend us, sustain us. May we count you among the number? Put on a coat of mail; fortify yourself with truth and knowledge, and stand up for the right. Grace and strength will be given you according to your needs, when in the line of duty. Let every believer become a missionary. THE JOURNAL is but little known, except in its limited sphere, though gradually working its way, through the aid of its friends, into all parts of the world. We want all to share in its teachings. Lend your numbers. The best field in which to work is at home; indoctrinate your neighbors, and extend the circle till you include towns, counties, states, and nations! But begin at home. Begin at once, and may God abundantly bless with large accessions all good efforts in behalf of human improvement and human happiness!

ECHOES.—The propriety of "blowing one's own trumpet" may be questionable even when one has something good and meritorious to "blow" about. But to use the honest dicta of others in one's favor is the right of one who would extend the sphere of his influence. This is our position, and we now take the liberty to present to the notice of "all the world" a few testimonials of the general "press" relating to the character and standing of the PHRENOLOGICAL JOURNAL.

This widely circulated and popular JOURNAL is full of the variety of useful information that has established its reputation.—*New York Evening Post*.

Well stored with valuable and entertaining matter.—*Protestant Churchman*.

It contains a vast amount of entertaining and valuable matter; is thoroughly and ably edited, and its illustrations are well designed and well engraved.—*N. Y. Courier*.
Staunch and always welcome.—*Sun*.

It has many valuable articles and many rich suggestions as regards mental culture.—*Troy Weekly Press*.

The reading that is furnished each month in this periodical can not be met with anywhere else.—*Christian Instructor*.

Contains a vast amount of interesting and instructive matter, and is profusely illustrated.—*Springfield (Mass.) Union*.

As a family journal the PHRENOLOGICAL is unsurpassed, because it stimulates thought. It is much more important to learn to think than it is to acquire scientific knowledge or literary culture.—*Atlas*.
It is eminently moral in its tone and tendency. It advocates high and ennobling views of human nature, but it also recognizes deterioration from original purity.—*Methodist Times* (English).

The PHRENOLOGICAL JOURNAL, as usual, is a live magazine, because it has to do with living men and women. Its delineations of character are very accurate, and its moralization very just.—*Mothers' Journal*.
One of the most attractive periodicals, for a thoughtful and cultivated mind, ever published in this country.—*Decatur* (Ill.) *Exchange*.

Replete with practical erudition, and sound, healthful instructions.—*Hudson* (Mich.) *Post*.

The PHRENOLOGICAL JOURNAL has a rich table of contents, and apart from the hobby it rides with the greatest skill and grace, is as entertaining as well can be.—*Liberal Christian*, New York.

One of the best, most sensible, and readable of American journals. * * *
No household is complete without it.—*Decorah* (Iowa) *Republican*.

Of all the journals published in America, the PHRENOLOGICAL JOURNAL has the most valuable information, and is best calculated to aid in the great work of progression and civilization.—*Marion Co.* (Ill.) *Republican*.

Always contains valuable information.—*Jewish Messenger*.

One of the most enterprising periodicals of the day.—*Mobile Times*.

One of the most useful and beneficial works issued from the American press.—*Mystic Star*.

The JOURNAL is practical in its bearings, and is very readable and choice in every department, and is one of the live family periodicals of the country.—*Marshall Co.* (Ill.) *Republican*.

One of the most readable monthlies received at this office.—*Vir. Christian Sun*.

[Besides these "press" notices, many of our readers bear similar testimony in letters received at this office daily. Pretty good evidence of general approval.]

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office at prices annexed.]

THE AVOIDABLE CAUSES OF DISEASE, INSANITY, AND DEFORMITY. By John Ellis, M.D., Professor of the Principles and Practice of Medicine in the Western Medical College of Cleveland, Ohio; Author of "Marriage and its Violations." A Book for the People as well as for the Profession. Fifth edition. New York: S. R. Wells. \$2.

It always gives us pleasure to announce a book which we regard of genuine utility to society. Dr. Ellis, in the above entitled work, offers the results of much serious thought and careful investigation. His advice is intelligible, plain, and practical, and not couched in professional phraseology. It is adapted to all classes and vocations, "a book for the people as well as for the profession." Taking for his text, for he discourses of the gospel of Physiology, this axiom, "the prevention of disease is more important than its cure," he proceeds, chapter after chapter, to enlighten the ignorant and reprove the careless with reference to those habits and usages which undermine and pervert the human organization. He would exalt the physical tone of society by removing the causes of disease and deformity; he would strike at the root of the maladies and ills under which so large a proportion of civilized society groan and labor, and so ameliorate their condition by a radical improvement. The elements of physical growth are discussed at length, and improprieties of diet, dress, air, education, exercise, and association are specified and their nature definitely elucidated. Beginning with the new-born infant, and advancing to the full-grown man or woman, the prevailing unnatural and injurious customs directly affecting the health are carefully described. There is no volume possessing a medical character with which we are acquainted which is more practically instructing and more interesting than this of Dr. Ellis. The metaphorical "ounce of prevention," which this book more than contains, may, in the hands of the candid inquirer, save many golden "pounds of cure."

THE TEMPERANCE DOCTOR. By Mary Dwinell Chellis, author of "Deacon Sims' Prayers," etc. New York: National Temperance Society and Publication House. Price \$1.25. For sale at this office.

A well-written story of the struggles of a total abstinent physician to ameliorate the condition of his neighbors and patients in a country town much given to intoxicating drink. The personal descriptions and incidents are graphic and life-like. Many temperance books are overstrained and unnatural in the portrayments of character, or at least they do not impress the reader with the force of reality, and so lose the desired effect. Temperance authors, in their worthy enthusiasm, sometimes sacrifice consistency. The "Temperance Doctor" is quite free from such criticism.

THE PUBLIC SPIRIT. A Monthly Magazine for the Million. \$3 a year. The Public Spirit Association, 37 Park Row, New York.

Vol. III., No. 2 of this blood-red (cover), wide-awake, go-ahead candidate for fame and fortune is before us. New vigor of a high intellectual order has been infused into this magazine, and despite "hard times," competition, and other drawbacks,

the *Public Spirit* is bound to shine, if young and energetic spirit can make it. It may be had of newsmen, or obtained at 25 cents a number through the post.

THE PHILOSOPHY OF EATING.

By Albert J. Bellows, M.D., late Professor of Chemistry, Physiology, and Hygiene. Second edition. New York: Hurd & Houghton. Boston: E. P. Dutton & Company. Price \$2.

The industry and zeal exhibited by professional men during the past two or three years in publishing popular books on scientific subjects show an increasing interest on the part of the general public in such matters. Especially have books of a physiological nature been thus circulated. Investigators and medics, such as Ellis, Macé, Youmans, Jennings, Trall, have contributed in a great degree to instruct the unprofessional majority in those things which so intimately concern man, viz., the proper dietetic and hygienic methods. Dr. Bellows' book is a practical treatise on diet. He presents in a common-sense way the nature and quality of those articles which are generally received as food. Avoiding professional technology, he gives the composition, by analysis, of cereals, meats, and fruits, and clearly demonstrates the greater or less nutritious value of this or that article. The necessity for adapting one's food to the climate, age, employment, and physical state is discussed in a clear and convincing manner. The most approved methods for preparing the ordinary kinds of food and for preserving fruit make an important feature in the work. At the close of the volume are some excellent suggestions with reference to cleanliness, exercise, and fresh air.

THE READABLE DICTIONARY; or, Topical and Synonymic Lexicon: containing several thousands of the more useful Terms of the English Language, classified by subjects and arranged according to their affinities of meaning. By John Williams, A.M. New York: A. S. Barnes & Co.

This volume is an acquisition of considerable value to the student of language. The arrangement of words under topics, or according to kindred or cognate signification, is an admirable feature, and greatly relieves the study of definitions of the dryness and drudgery usually experienced in the study of an ordinary dictionary. The derivation of terms in common use is also a matter to which the author has given careful attention, so that they who diligently read the book will acquire some knowledge of Latin and Greek, at least as regards the important bearing of those languages on the English tongue. A large proportion of the words defined are illustrated also by brief sentences, and incidents in which their signification is brought out most clearly and pointedly. The completeness of the work is another meritorious feature. While most of the treatises on the derivation and philosophical relations of words embrace but a few of the many thousand terms in use, this work, by reason of its topical and synonymic arrangement, is made to comprehend all those in general use and very many besides of less frequent occurrence, but whose importance is unquestioned. The work is well worth the attention and use of teachers and private students.

THE NEW YORK COACH-MAKER'S MONTHLY MAGAZINE for May is handsomely illustrated and well printed. This periodical well subserves the interests of the craft of which it is the chief, if not the only representative in American literature. Price \$5 a year. Specimen numbers, 50 cents.

LECTURES ON VENTILATION: being a Course delivered in the Franklin Institute of Philadelphia during the Winter of 1866-67. By Lewis W. Leeds. New York: John Wiley & Son. Price, \$1.

These lectures possess that attractive quality, clearness, which is most desirable in the treatment of a subject eminently scientific. Their author has the testimonials of experiment and experience to sustain his reasonings, as he was during the war special agent of the Quartermaster-General for the Ventilation of Government Hospitals, and is Consulting Engineer of ventilation and heating for the U. S. Treasury Department. His lectures have received the cordial indorsement of several prominent physicians, and we trust that they will be widely circulated for the general instruction of society on a subject of such vital importance. Consumption is the chief foe which invades and reduces the sanitary condition of the American people, and its inroads are chiefly occasioned by the prevailing disregard of proper modes of ventilation.

Many apt and neatly colored illustrations illuminate the text of Mr. Leeds' book, and render the interesting details still more interesting and vivid.

HIGHLAND RAMBLES. A Poem.

By William B. Wright. Boston: Adams & Co.

At the first sight this volume is attractive because of the very neat binding and ornamentation which it displays, though only in "cloth." The author has certainly adopted a felicitous method in reciting the experiences of "three strayed spirits, Arthur, Vivian, Paul," while wandering amid the beauties of mountain scenery. Some of the passages approximate classicism, while others please by their rippling sprightliness. Metaphysical, ethical, and esthetic discussions are introduced as occurring between the three wanderers who are fresh from academic halls, and willing to enter the lists of debate whenever occasion may offer. This is a good bit, from a song of Paul's:

"He stands on the mountains,
He darts through the valleys,
From the foam of the fountains
He laughs and he sallies,
He leaps in the torrent, he speaks in the thunder,
Gaily flashing and flowing,
His fire and his passion
Lead him on, ever growing
Diviner in fashion,
Arrayed in fresh hues and new garments
of wonder."

The work evinces much thought and care in its preparation, and is infused with much genuine poetic *esprit*.

A PRACTICAL GRAMMAR OF THE HEBREW LANGUAGE, for Schools and Colleges. By B. Felsenthal, Ph. D., Minister of the Zion Congregation, Chicago. New York: L. H. Frank, Publisher.

A text-book for students in the ancient tongues should combine the elements of practicality and simplicity. So much pedantry characterizes the major portion of the grammars treating of the Greek, Hebrew, and Latin languages, that when we find one which presents the simplicity of naturalness we rejoice to give it publicity. The Hebrew Grammar above noticed is a simple presentation of the science of that tongue which was consecrated by being made the vehicle of revelation. It is progressive; giving first the principles of Orthography and Orthography with brief reading exercises; next, the principles of Etymology and Syntax with the different parts of speech, and the classifications and conjugations of the verbs. To the young student in Hebrew we cordially commend the book.

CONSEILS PRATIQUE DE SANTÉ, et Premiers Secours à donner en cas d'accident avant l'arrivée du médecin. Price, 25 cents. Office, Courrier Des Etats-Unis, New York.

An excellent little hand-book for the use of families and individuals, giving advice with reference to the treatment of sudden indispositions or injuries where immediate attention is requisite or a physician can not be readily summoned.

THE SUNDAY SCHOOL TEACHER. March, Adams, Blackmer & Lyon, Publishers, Chicago. Price, \$1 50 a year.

We heartily approve the arrangement of this magazine for Sunday-school teachers. It furnishes abundant suggestions for the management of a class or Sunday school. The skeletons of lessons are excellent. Every teacher should subscribe for such a periodical.

SOUTHERN SOCIETY. A Baltimore newspaper recently noticed in this JOURNAL has changed its name, and now appears under the title of the *Leader*. Besides news, stories, art, and the drama, the *Leader* will be strictly conservative in politics. It will sustain the Right of Representation, the dispensation of Impartial Justice, and the Supremacy of the Law of the Land. It will address itself particularly to the Material Interests of the South, to Local Commercial Relations, Agriculture, and Domestic Economy. It will take pains to note the newest things in Art, show how Society is refined, and the World amused, from a Southern stand-point. We wish its conductors the best success in reforming, and especially in Christianizing not only the "South," but the whole country.

THE NEW ECLECTIC; a Monthly Magazine of Select Literature, edited by Messrs. Turnbull & Murdoch, of New York and Baltimore, has, by its May number, entered upon its second volume. The selections exhibit a good degree of literary taste and critical acumen. Subscription price, \$4; specimen numbers, 40 cents.

ROUTLEDGE'S ILLUSTRATED NATURAL HISTORY OF MAN, in all countries of the world, has reached Part XII., and continues the interest excited by the initial numbers. The numerous illustrations which accompany the very entertaining text are graphic and striking. This work promises to be a most valuable addition to anthropology. Price, per number, 25 cents. George Routledge & Sons, New York.

New Books.

Notices under this head are of selections from the late issues of the press, and rank among the more valuable for literary merit and substantial information.

OLD CURIOSITY SHOP. By Charles Dickens. Price, 25 cents.
MUGBY JUNCTION. By Charles Dickens. Price, 25 cents.

OLD MORTALITY. By Sir Walter Scott. Price, 20 cents.

These are among the latest volumes issued from the fertile press of T. B. Peterson & Brothers. Their cheapness is palpable. Little Nell, in the "Old Curiosity Shop," never fails to excite sympathetic interest. "Mugby Junction" is a late production. "Old Mortality" carving on the Cameronian monuments has been immortalized in the bewitching pages of the great Scotsman.

THE PRESBYTERIAN PUBLICATION COMMITTEE have recently issued the following new books:

THE SHANNONS; or, From Darkness to Light. By Martha Farquharson. 336 pp. 16mo. Five illustrations. Price, \$1 25. This book is by a favorite author. It narrates simply, but with thrilling power, the elevation of a family from the degradation and wretchedness which Intemperance entails, to sobriety, intelligence, comfort, and usefulness. For the friends of Temperance and of the Sunday-School it will have especial attractions. The illustrations are very successful.

The following books designed for readers from seven to nine years of age:

THE PET LAMB. 72 pp. 18mo. Large type—with illustrations. Price, 35 cents.

THE BIRD AND THE ARROW. 127 pp. 18mo. Large type—with illustrations. Price, 40 cents.

THE NEW YORK NEEDLE WOMAN; or, Elsie's Stars. 254 pp. 16mo. Three illustrations. Price, \$1. This is a companion volume to the "Shoe Binders of New York," and by the same popular writer. The tale is graphic, touching, lively, and shows that the poor as well as the rich may raise the fallen and bless society. Elsie Ray, the sewing girl, is a fountain of good influences.

Good Stories for little readers.

CLIFF HUT; or, the Fortunes of a Fisherman's Family. 101 pp. 18mo. Large type—with illustrations. Price, 40 cents.

WILD ROSES. By Cousin Sue. 108 pp. 18mo. Large type—with illustrations. Price, 40 cents.

ALMOST A NUN. By the author of "Shoe Binders of New York," "New York Needle Woman," etc. 398 pp. 16mo. Six superior illustrations. Price, \$1 50. A book for the times. It should be in every Sunday-School library and in every family. The tale is one of extreme interest; its style is vivid; its characters *real persons*; its chief incidents *fads*.

DOCTOR LESLIE'S BOYS. By the author of "Bessie Lane's Mistake," "Flora Morris' Choice," "George Lee," etc. 228 pp. 18mo. Three illustrations. Price, 75 cents.

CARME'S PEACHES; or, Forgive Your Enemies. By the author of "Doctor Leslie's Boys." 69 pp. 18mo. Two illustrations. Price, 35 cents. May be ordered from this office.

THE MARRIAGE VERDICT. By Alexander Dumas. Complete in one volume. Price, 50 cents. Philadelphia: T. B. Peterson & Brothers.

Those who are fond of concreted sensationalism in novelistic dress can find it in Dumas' production. The above entitled work is on a par with the others. Passion, intrigue, and bloodshed being the argument.

PARTS 128 AND 129 OF CHAMBERS' ENCYCLOPEDIA; or, Dictionary of Universal Knowledge for the People, contain much interesting matter. The changes in the political and geographical character of Europe brought about by the recent Austro-Prussian war are the subject of an engaging and instructive article. Natural history and mechanics under the heads involving such scientific consideration are attractively illustrated.

NEW MUSIC.—Messrs. Root & Cady, of Chicago, publish the following pieces of new sheet music at 30 cents each, which, having *their* imprint, *must* be good.

Do they ever publish any other kind? "Mary of Fermoy," "The Soldier's Last Request," "Loving Thee Ever," "A Little Longer," "Dreaming of Angels," "First Blossom," "White Eagle," "Ida Waltz," "Album Leaf."

GLAD TIDINGS; or, Walks with the Wonderful, etc. By a Lover of the Word. With an Introduction by Rev. Wm. L. Parsons, D.D. \$1 75.

THE LAW OF HUMAN INCREASE; or, Population based on Physiology and Psychology. By N. Allen, M.D. (Repr. from "Quarterly Journal of Psychological Medicine.") 50 cents.

ELEMENTS OF ARITHMETIC, combining Analysis and Synthesis, adapted to the best mode of instruction for beginners. By James S. Eaton, M.A. 60 cents.

HARPER'S PHRASE-BOOK; or, Handbook of Travel Talk. Being a Guide to Conversation in English, French, German, and Italian, on a New and Improved Method. By W. P. Petridge. Flex. cloth, \$1 75.

LIVES OF THE TWELVE APOSTLES, to which is prefixed a Life of John the Baptist. By F. W. P. Greenwood. Cloth, 70 cents.

THE INVALUABLE COMPANION. Containing the Celebrated \$1,000 Receipt, and 459 Valuable Receipts, with Practical Hints to Housekeepers, Mechanics, Manufacturers, etc. Paper, 45 cents.

THE WATCH: its Construction, Merits, and Defects; how to Choose it, and how to Use it. With an Essay on Clocks. By H. F. Piaget. Second Edition. Cloth, 55 cents.

ITALY, ROME, AND NAPLES. From the French of H. Taine, by J. Durand. Cloth, \$2 25.

FROM NEW YORK TO WASHINGTON. A Descriptive Guide. With Sketches of Cities, etc., on the Route. By H. F. Walling. Maps. Paper, 25 cents.

THE STAR OUT OF JACOB. By the author of "Dollars and Cents." Cloth, \$1 75.

NEW GRAMMAR OF FRENCH GRAMMARS: Comprising the substance of all the most approved French Grammars extant, but more especially of the Standard work, "Grammaire des Grammaires," sanctioned by the French Academy and the University of Paris. With numerous Exercises and Examples, Illustrative of every Rule. By Dr. V. De Fivas, M.A., F.E.I.S., Member of the Grammatical Society of Paris, etc. \$1 40.

THE NEW GYMNASTICS. By Dio Lewis, M.D. Tenth Edition, greatly enlarged. Cloth, \$1 75.

MY SON'S WIFE. 12mo. Cloth, \$2.

THE CHIMNEY CORNER. By Mrs. H. B. Stowe. Uniform with House and Home Papers. \$1 75.

THE PROGRESS OF PHILOSOPHY, in the Past and in the Future. By Samuel Tyler, LL.D. Second Edition. Enlarged. \$2.

THE READABLE DICTIONARY; or, Topical and Synonymic Lexicon; containing the more useful Terms of the English Language, Classified by Subjects, and arranged according to their Affinities and Meaning, with accompanying Etymologies, Definitions, and Illustrations. By John Williams, A.M. Cloth, \$1 50.

THE AMERICAN GENEALOGIST. Being a Catalogue of Family Histories and Publications, containing Genealogical Information issued in the United States. Arranged Chronologically. By William H. Whitmore, A.M. Cloth, \$3 50.

Go our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter, if a stamp be inclosed for the return postage. If questions be brief, and distinctly stated, we will respond in the earliest number practicable. As a rule, we receive more than double the number of questions per month for which we have space to answer them in; therefore it is better for all inquirers to inclose the requisite stamp to insure an early reply by letter, if the editor prefers such direct course. Your "BEST THOUGHTS" solicited.

IS PHRENOLOGY A SCIENCE?

To make answer to this question with any show of definiteness we must first understand the meaning of the term "science." Its strict interpretation, in accordance with its generally received derivation, is *knowledge*. According to Webster, science is defined, "Truth ascertained; that which is known. Hence, specifically, knowledge duly arranged and referred to general truths and principles on which it is founded and from which it is derived." Under the caption of SYN. (synonyms) we find, further, "Science is literally *knowledge*, but more usually denotes a systematic and orderly arrangement of knowledge. In a more distinctive sense, *science* embraces those branches of knowledge of which the subject-matter is either ultimate principles, or facts as explained by principles, or laws thus arranged in natural order."

Science is especially related to physical things—is founded on experience and observation—and therefore has the character of permanency. Geology, Chemistry, Anatomy, Mathematics, Natural History are denominated sciences, and appear in their general principles and detailed arrangements to respond to the requisitions of the definitions of "science" just given. We are willing to accept them as sciences. It is sufficiently notorious, however, that geologists and naturalists differ greatly among themselves with reference to matters of primary importance, and that much doubt exists in regard to the correctness of certain classifications in their respective studies. Yet no intelligent man would refuse to accord a scientific character to both geology and natural history.

Now, as to Phrenology. In how much accord is it with the dicta of the above definitions? First, it is based on natural phenomena; second, its general principles are accepted by the great majority of learned men, particularly those whose pursuits, like that of the ethnologist, are related to the phenomena, mental and physical, which it has to deal with; third, it is arranged and systematized in a manner truly beautiful. In fact, when Phrenology was yet new to the world of letters, many men of distinction, who did not altogether endorse it, expressed a frank admiration for the harmony of its arrangement and the definiteness of its nomenclature. What more is necessary to sustain the claims of Phrenology to a scientific character? A short time ago we published a brief notice of some proceedings of the French Academy of Medicine, which showed incontestably the favor which phrenological theories find among a body of the most learned anatomists and physiologists of the age. In our May number we adverted to some statements made by

Dr. Dunn, a member of the Royal College of Surgeons, which were most explicitly in demonstration of phrenological principles. We could scarcely ask more from the truly learned than such satisfactory indorsements. With such facts before us, can we do otherwise than claim that Phrenology is a science?

REMEDIES (?)—Are specific homeopathic remedies that we see advertised in the newspapers valuable remedies, or humbugs?

Ans. We have no knowledge as to their efficacy, and consequently no faith in them. They may or may not be classed with quack medicines. It will be perfectly safe to—let them all alone.

WHAT OF IT?—I have a groove running around the back of the head to within an inch of the top of the ears. Is it natural?

Ans. Yes; the cerebellum or little brain protrudes, and this groove marks the division between the organs of Amativeness, in the cerebellum, and the organs of Parental Love and Conjugality in the cerebrum above.

IMPRESSIBILITY.—Is there such a thing as silent soul communion? or can a person impress a subject on the thoughts of another by directing his own to the same subject?

Ans. That such a thing is possible with some persons, under proper conditions, is doubtless true, but not with all; nor can any reliance be placed on how or when it may be expected so to work. See "Library of Mesmerism and Psychology" for a presentation of the whole subject.

WHO IS HOPE ARLINGTON?—Where does she live? What is her name?

Ans. Ah, what would you give to know? We will tell you just a little if you will ask no more questions. She is a young lady of culture, refinement, and high moral principles. She writes both prose—not poetry—and poetry of superior excellence. She resides in a pleasant town in one of the Western States. She is unmarried. Let not all the young men propose at once, and then challenge each other to mortal combat. Her real name is—F. A. If we should tell the other letter, everybody would puzzle their brains to guess the rest, so we spare them the "puzzle." We are not surprised that all our readers are in love with her, for she is truly most lovable. She is our dear Hope Arlington, of—the West.

WOULD you advise one to join the Odd-Fellows or the Freemasons?

Ans. First join the Church; then, if you think the Saviour would advise the step you now feel inclined to take, you may do so.

MANY correspondents will please accept thanks for kind favors, which we can not print for want of room. We desire, especially, only such scientific matter as relates to our special theme. Questions will be answered at our convenience, when possible, in an early number. Advertisements must reach us a month in advance of the date of publication.

SECOND SIGHT.—"I am troubled in that way, and I suppose it to be hereditary, as my grandmother had visions often. I wish to be free from it, as it is breaking down my health, but I can not shake it off."

Ans. This is, undoubtedly, some affection of the nervous system, which perhaps proper diet, and freedom from care, and abundance of sleep, and proper surround-

ings would obviate. In the "Library of Mesmerism," published by us, price \$4, this whole subject of mesmerism, clairvoyance, psychology, sight-seeing, etc., is explained, and we can not go into an extended disquisition upon these topics in the JOURNAL. We have frequent letters on various phases of psychological peculiarities, and we can but refer to that work, which, we suppose, covers the whole ground.

FEAR OF THE DEAD.—Why is a person timid in the presence of a corpse?

Ans. It may be natural. Even animals seem terrified in the presence of one of their kind which is dead. We suppose that there is a natural feeling of dread in connection with the dead, and on that natural feeling persons who are naturally timid and superstitious have exerted an influence upon children, until half the human race starts back from contact with a corpse.

TOBACCO CHEWING.—What shall a person use in the place of tobacco, who is trying to quit it and yet hankers after it?

Ans. He should use nothing in place of it. Some resort to the use of cloves, some to chamomile blossoms, some to beer and whisky, some to tea or coffee; but in most respects such alternatives are all of a piece, acting unfavorably upon the nervous system and tending to undermine the health. If a person yearns for tobacco he may take a sip of water, just enough to wet his lips and throat, thus cooling off the fever and allaying the excitement. The best antidote for the use of tobacco is a strong moral resolution, religiously taken, and lived up to. One must not sigh for the forbidden article as the Israelites did for the flesh-pots of Egypt, for that is no way to correct the habit. It is the moral or mental force that gives a man courage under such conditions. The mere animal in man says, give, give; and if men followed the desires and impulses of their appetites and passions in other respects as they do in the use of tobacco, they would descend to the lowest animalism in everything. Some men wind off gradually from using tobacco, using a tenth less each successive week, until the amount is reduced so very low that it has very little influence upon the system; then a moral effort will enable a man to wipe out the residue and stand up free.

Is Gen. Robert Anderson, of Fort Sumter fame, deceased? *Ans.* No.

POLAR INFLUENCES.—The fact that a person subject to nervous excitement can sleep more quietly when his head is toward the north is not sufficiently substantiated to warrant us to assert it. Induction, when applied to this subject, may finally establish it, and we certainly have no objection. We think it would be well for human nature to have a principle, relating to the position of the body during sleep, which will render that sleep more thorough in its recuperative influences. If one would sleep calmly, it is necessary that he should avoid late and hearty suppers, excessive nervous excitement, and that sort of life in general which tends to derange the system.

A. M. C.—The pain that you experience on listening to music, or viewing any beautiful scenery, is caused by an over-excitement of the nervous system. We sometimes weep for joy. Why not sometimes feel pain with an excess of pleasure in any enjoyment?

WHY do preachers, nearly all of them, denounce novel reading, and at the same time give novels—Sunday-school libraries are nearly all novels—out to children to read every Sunday? I do not uphold novel reading, but I would like to have a solution to the above, which is to me a puzzle. An answer is requested in your next.—Respectfully, WM. ORINGST.

Ans. My dear William, you will find, by a more extensive experience, that many of the ministers, who don't think as you and I think, are no better than other folks. Some of them preach one thing and practice another. They should do as we do instead. But then, we should be charitable, you know. What's that about the "beam" and the "mote?" As to the propriety of novel reading, the best men differ. We were made no worse by reading "Bunyan's Pilgrim's Progress," "Uncle Tom's Cabin;" and—well, Sir Walter Scott wrote some very good things. William, which have been read by good Christian men and women. But of the sensation "blood-and-murder" stories, and the low, sensual French novels, there can be no two opinions among good men. Such are not used in Sunday-schools. Are you a member of any Sunday-school? We hope so.

Publisher's Department.

COMPARISONS WITH OTHER JOURNALS.—Some of our cotemporaries have taken considerable pains to show up comparative statements of reading matter as furnished to their patrons during the past year. The *Educator*, published at \$1 a year, prints about 5,000 *ems* monthly; the *New York Teacher*, published at \$1 50, prints 4,500 *ems* monthly; the *American Educational Monthly*, subscription the same as the last, about 6,300 *ems*; and *Hall's Journal of Health*, published at \$1 50, prints some 3,000 *ems*. Our present rate is \$3 a year, and proportionately we should print double the quantity of matter furnished by those three monthlies last mentioned. Taking the *American Educational* as a fair standard, we would do our readers full justice by giving them 9,500 *ems* of reading matter. What, however, is the fact? An examination of our printer's bills enables us to make the astonishing announcement, that in reading matter alone over 15,000 *ems* monthly are furnished. Verily our recent advance of the subscription price is far within bounds. Our old readers, of course, would rebel at any curtailment in the number of pages. They keep crying out for more, more. Well, kind friends, we fain would meet the demand; and should our circulation reach 50,000, we may make further improvements in accordance with such liberal support.

HALF-YEARLY CLUBS.—We shall now accept clubs for the 48th volume, running the balance of the year, at the same rates as for yearly subscriptions. For example, we will send the 48th volume—from July to January—in clubs of five, for \$6; to clubs of ten for \$10; and to fifteen for \$15, with an extra copy to the agent; twenty copies for \$20, and a copy of "New Physiognomy," worth \$5, as a premium.

"GIVE IT A TRIAL."—There are many families in which this JOURNAL would prove useful where it has not yet been seen. Will not our friends take the trouble to exhibit or lend their numbers with a view to introducing it? We believe many would cheerfully invest a dollar,

"just to try it," on the recommendation of those who can fairly present its merits. Think of it. Ten copies, from July to January, for \$10. Why not get up a club?

TWO VOLUMES A YEAR.—For the convenience of the subscribers, we divide the yearly numbers of this JOURNAL into two volumes, commencing with January and July. The title and index are published with the December number, to be bound up with the work for the year. Those who prefer can begin their subscriptions with the next July number.

WRITING IN PALE INK AND IN PENCIL.—If a writer would introduce himself favorably to an editor, make a good impression, and not be cast unread into the waste basket, let him not write with a poor pen, in pale ink, nor with a lead pencil. The eyes of an editor are sufficiently tired in his ordinary duties not to have these unnecessary nuisances inflicted on him. Good writing materials are now plentiful and cheap, and if one's thoughts are worth recording, they are worthy of being plainly written, on good paper, with good black ink, or brown French ink—which is still better—on clean white paper. It is a luxury to meet with manuscript "plain as print." We do not ask for extra fine penmanship, nor for perfumed paper, but we beg our correspondents to spare our eyes from the pain of reading letters in pale ink and in pencil.

"BEAUTIFUL WOMEN."—Besides numerous other attractions, we are now engraving for the July number a large group of European and Asiatic beauties—types of several nations, such as English, French, Austrian, Turkish, Russian, Grecian, Swiss, Polish, Chinese, Swedish, German, Dutch, and Japanese, with some account of their physiognomies, characters, dress, and style. This will interest our young gentlemen readers who are seeking life-companions. So please wait, and not commit yourselves, till after seeing these beauties. Then you can judge where to look for a wife.

P. S.—On exhibiting the drawings of these ladies to our Emma, she promptly remarked, "They are not as handsome as our American girls." Was not that an evidence of jealousy on her part? Our readers shall see, and judge for themselves.

General Items.

GENERAL GRANT AGAIN ENGRAVED.—Mr. J. H. Littlefield's portrait of General Grant has been engraved by Mr. H. Guggler, who has succeeded in producing a work of the highest order of merit. The style of engraving is very strong, bringing out the features and the expressions of the countenance with the solidity and prominence of bronze or marble. Art critics generally who have seen it, award it great praise as a work of art. That it is a correct likeness we know, and we can hardly imagine how a better representation of this representative man can be produced. It has received the cordial indorsement of Generals Meade, Howard, Sickles, and Dent, and of Senators and others. The method of line engraving, as brought out in this picture, appears to us to leave nothing to be desired in the way of producing a strong, effective, and expressive picture.

SENT GRATIS.—Our new illustrated and descriptive catalogue of standard works on the science of man

contains a complete list of our publications, with full titles and descriptions; also a complete list of works on Phrenology; a list of apparatus and books, with instruction, adapted to physical education; portraits of Longfellow, Rosa Bonheur, Theodora Burr; a group of eleven most noted poets; six portraits illustrating THE TWO PATHS OF LIFE, the upward and the downward course. These portraits teach an important lesson to the young, and to all, in regard to the results of pursuing the wrong path. It contains illustrations of the Physiognomy of Idiotism and Idiocy, of the miser and the philanthropist; also Comparative Physiognomy, with portraits, showing the resemblance between man and animals. Also two groups, illustrating Ethnology, showing the Caucasian and other races; an illustration from "Æsop's Fables"—the Frog and the Ox; also a chart of the head, with name and location of all of the faculties, with descriptions of the same. All who are interested in the study of MAN in all his relations should have this catalogue for reference; the matter it contains will be interesting to every one. We send it free on receipt of stamp with which to prepay postage. For \$1, we will send it, post-paid, to fifty different addresses. Who will have it? Address this office.

LIBRARIANS AND POLITICIANS will be glad to know that the "Tribune Almanac" has been reproduced in two volumes, covering 1838 to 1863, both inclusive. Those wanting them should order them at once, as only one thousand copies are printed. For terms, see advertisement on last page of this JOURNAL.

GOOD THREAD.—In our notice of Messrs. Brook & Brothers, manufacturers of spool-cotton, in the May number, we inadvertently styled their mills the Waltham Mills, whereas we should have said "Meltham Mills," and are located near a village of the same name.

A NEW DISCOVERY IN EMBALMING.—In compliance with an invitation from Mr. W. R. C. Clark, of New York, we were present at the autopsy of a human body, which had been preserved from decay seventy-seven days by a new process. There were present for the purpose of testing the conserving powers of this process, several of our most prominent surgeons, chemists, and medics, among whom we recognized Prof. Smith, of the Bellevue Hospital Medical College, Drs. Back, Sanda, Doremus, DeLafeld, Guernsey, and Goulay. The result of the examination was satisfactory so far as the claims of the discoverer of the process go, the subject being apparently as fresh in all respects as a corpse but twenty-four hours old. The process is simply a wash, which is easily and readily applied, no mutilation in any way being necessary. It is said that its preserving effects continue for an indefinite period. There may be occasions when it will be considered desirable to preserve above ground dead human bodies; but we think the sooner they can be disposed of the better. We are not in favor of transporting dead bodies long distances. Let them be buried near the place where death came. It is but a foolish superstition of the "Celestials" that induces them to freight ships in California with the corpses of dead Chinamen and transport them to the Flowery Kingdom. This they do after bodies have been dead for years. So, too, foolish Americans disinter decayed bodies and send them as freight for many miles,

to be buried in another place. Why? Is there any reason in it? In the sight of God, is not one resting-place for the material part as good as another?

The invention may be valuable, nevertheless.

COMPOUND SWINDLING.—One set of swindlers send out circulars, with tickets, offering to send \$50 gold watches, or other jewelry, on receipt of \$2 40, or such other small sum as the rascals think "greenhorns" will venture to invest. The swindlers receive the money, but do not send the coveted article. The numerous swindled greenhorns becoming uneasy, write to parties here, inquiring about the responsibility of Messrs. Boggs & Co., such swindlers. This suggests a new trick, and the same parties assume a new name and send out circulars, offering to collect bills for a consideration, due on tickets, which they themselves had previously sent out.

We have no sympathy for those who are selfish enough to expect the worth of \$50 for \$5. They are as bad as the original rogues, save in smartness, and are game for the more cunning.

Readers of the A. P. J. are too well informed, too sensible, and honest to be "taken in" after all the warning they have had. When they want watches or jewelry they intrust their orders and money to those of known integrity.

Look out for the quacks, the gift enterprises, the lottery swindlers, Gettysburg asylums—and Gettysburg mineral waters, too. Look out for baggage smashers, swindling hack-men, ticket swindlers, counterfeiters, hair dyes, patent medicines; all sorts of bitters, sarsaparillas, etc., which are composed of whiskey and molasses, brook schnapps, and all the vile, medicated stuff good for nothing except to make drunkards. Look out for mock anctions, pocket-book droppers, and the professional beggars, who are usually only thieves and robbers.

A CHAIR FOR INVALIDS.—Mr. THOS. McILROY, 145 Perry Street, New York, has invented a mechanical contrivance, which is used in our naval, marine, and military hospitals with the most satisfactory results. He will send a circular on receipt of stamp.

EDUCATIONAL.—A new boarding and day school has been opened by the Misses COOLEY and BOARDMAN in the rural town of West Springfield, Massachusetts. Besides all the usual English branches, Latin and French are taught, and so is music. But that which we deem of more importance than any other one subject is that of gymnastics, or thorough physical training. If this be made a prominent feature, the girls and boys will learn far more rapidly and be kept constantly growing. In too many schools there is neglect of this, and the poor children pine away for want of air and exercise. Let it not be forgotten that the business of childhood is to grow—to take on constitution as well as to be educated mentally and spiritually. We wish these ladies the best success in their useful enterprise.

LEATHER, LEATHER, NOTHING LIKE LEATHER.—Since the great tanners Zadock Pratt and General Grant came upon the public stage, those engaged in the leather business have been "looking up," and none but political opponents turn up their noses at the smell of leather. Our attention was recently called to a newly patented process for tanning all sorts of hides and skins, with hair off or

on, and in a very short space of time. We have seen leather of remarkable softness and toughness said to have been produced by this new process. Mr. GEORGE W. HAZAREY, of Greenbush, Sheboygan Co., Wisconsin, is the inventor. Those who would know more about it should write for particulars.

GENERAL GRANT.—The large bust of General Grant which is on exhibition in the window of Mr. S. R. Wells' establishment, No. 389 Broadway, New York, is, curiously enough, the first life-size bust which has been made of the General. It is by a young Italian, named J. Turini.—*Evening Mail.*

[Copies of this bust may be had for \$12. Packed for shipping \$15.]

A UTAH paper has the following advertisement, by a jolly son of St. Cripin: Jas. Keate, Professor of Snobology.* Gentlemen troubled with deficient Understandings can have them dissected, analyzed, and re-created on the shortest notice, and go on their way with their pedal extremities secure against the insinuating influence of water, mud, sand, etc. Departed soles restored.

The various labyrinthian deviations, mystical ramifications, and multitudinous malformations of the Profession have been by me thoroughly analyzed, simplified, and annihilated, and the public need no longer groan under the deleterious effects of bad fits.

"MORE FRUIT AND LESS PORK."—This is the motto of the Missouri blackberry men, Messrs. THOMPSON & MYERS, who grow the Mammoth Berry. Yes, that sort of diet is just as good for Christians as for Jews. We are in favor of "fruit, fruit, more fruit."

SOAP.—The Persian Pine Tar Soap, manufactured by our missionary friend Constantine, is really a good article, and is constantly growing in public favor. There are intelligent persons who claim for it healing properties; but we say nothing on that score. Our estimate of its merits rests on its cleansing properties, and its cheapness as a toilet soap. An advertisement calling for agents gives the best of testimonials.

FARMS FOR SALE IN MARYLAND.—An advertisement in our present number describes two farms, one, said to be very beautiful, near the Potomac River. We have the fullest confidence in the statement of the advertiser. From its geographical position, Maryland must ever continue to be one of the most mild and healthful States in the Union. It is now in a somewhat unsettled state, politically and socially. But there is the land, the water, the climate, and all other conditions the most favorable. Besides, it is very near our national capital, which is an advantage. Read the advertisement, and then, if favorably impressed, visit the premises. We may add, Maryland is not only in almost every acre good garden ground, but just the State for the finest fruit.

THOSE of our readers who have children to educate, and desire to do so on a liberal scale, may do well to secure places for them in the seminary for young ladies and misses recently opened by Miss Beecher, in Norwalk, Conn. Send for a circular.

* Snob, a journeyman shoemaker.—*Webster's Dictionary.*

THE DICKENS' MANIA.—An artist friend thus facetiously alluded to the enthusiasm manifested by the citizens of Boston over Dickens, during his recent visit at the "Hub." "The Bostonians have discovered the secret of Dickens' originality and fruitfulness as an author. Being an early riser, he is enabled to practice that kind of exercise that is best adapted to stir up ideas and promote mental and physical equilibrium. After disguising himself as a young vagrant, he rushes to the 'Common,' and turns somersets over its whole length; returning in like manner. Then rushing back to his desk, he delivers his fresh thoughts with great velocity and fluency—his ink flowing in great blots and spatters. It is said that it was some time before the early passers could divine the nature of the strange object—that 'thing of light'—that went whizzing past them on the 'Common;' but when it was discovered to be DICKENS, taking for want of time condensed exercise—a new sensation occurred to 'upper snobdom,' and from busy experiments already making in private gymnasia, the Boston public must prepare itself to be astonished next spring, by a display on its 'Common' of fair tumblers in bewitching and appropriate costumes. Prominent among these will be that rising crop of literary imitators who are determined that thereafter they will consign Dickens to oblivion, by their immediate publication of their 'PICKWEEDS.'

COMMON SCHOOLS IN WEST VIRGINIA.—A correspondent writes hopefully of the progress of events in W. Va. He says: "We are greatly in want of a competent school-teacher here. The commissioner frequently gives certificates to persons who never studied geography or grammar, and who know but very little of arithmetic, because he thinks such better than none. There are four old men over seventy years of age teaching in one township this winter. They teach in *old style*. I wish we could get some of the Connecticut girls out here to teach." Yes, but isn't there a "prejudice" against "Yankee school marmers?" Our correspondent is right as to the State from which to draw not only teachers, but also the best wives and mothers. Connecticut can spare a few thousand pretty girls, and have enough left to keep good her excellent reputation. There is a hundred years' work in the South to bring all her people up to the New England educational standard.

A NEW ENTERPRISE.—Under the auspices of several gentlemen, residents of New York, who have for a long time regarded with pain the corrupting nature of the literature which is usually predominant in what is generally termed "railway reading," a company has been formed with the title "American Railway Literary Union," the object of which will be the improvement of the reading matter supplied by news agents and others to travelers; and also the promotion of "a judicious and profitable reform" among newsdealers generally. Of this Company Mr. Henry Wells is president, and Messrs. J. C. Fargo, Daniel Drew, and Yates Hickley are among the directors.

This is a good movement, and if diligently carried forward will prove a powerful auxiliary in the production of a healthy, moral, and intellectual growth in the general community. The motto of the new Union—"Knowledge and Virtue"—in itself promises much.

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED, and charged according to the space occupied, at the rate of \$1 a line.]

THE HYGEIAN HOME.—At this establishment all the Water-Cure appliances are given, with the Swedish Movements and Electricity. Send for our circular. Address A. SMITH, M.D., Wernersville, Berks County, Pa.

MRS. E. DE LA VERGNE, M.D.,
325 ADLPHI STREET, BROOKLYN.

HYGIENIC CURE, BUFFALO, N. Y.—Compressed Air Baths, Turkish Baths, Electric Baths, and all the appliances of a first-class Cure. Please send for a Circular. Address H. P. BURDICK, M.D., or Mrs. BRYANT BURDICK, M.D., Burdick House, Buffalo, N. Y.

INSTITUTE OF Practical Civil Engineering, Surveying, and Drawing, at Tolleston, Ind. For Circular, address A. VANDER NAILLEN.

WORKS ON MAN.—For New Illustrated Catalogue of best Books on Physiology, Anatomy, Gymnastics, Dietetics, Phsygnomy, Shorthand Writing, Memory, Self-Improvement, Phrenology, and Ethnology, send two stamps to S. R. WELLS, Publisher, No. 389 Broadway, New York. Agents wanted.

THE PROTESTANT CHURCHMAN.—A Religious Family Paper. The Leading Evangelical Organ in the Protestant Episcopal Church.

Devoted to the advocacy of Evangelical Truth, against Ritualism and Rationalism; the defense of the "Liberty of Preaching," and the cultivation of fraternal relations with Evangelical Churches.

The Editors are assisted by a large corps of clerical and lay contributors in all parts of the United States, in England, and on the Continent.

Published ever Thursday at 633 Broadway, New York.

TERMS: \$4 per annum. To Clergymen, \$3. To Theological Students and Missionaries, \$2. Club Rates: Five copies to one address, \$15; twenty copies, \$50.

SPECIMEN COPIES FURNISHED.

THE PROTESTANT CHURCHMAN.
Box 6009 P. O., New York.

ADVERTISE! ADVERTISE!!

The *Carrier Dove*, or Mecklenburg Female College Magazine, is offered to you as an advertising medium. It is a Quarterly Magazine of 48 pages, elegantly printed on fine paper, and issued from Charlotte, N. C., at the low rate of \$1 per annum, in advance.

It goes to the following States of the Union, viz.: Iowa, Connecticut, New York, New Jersey, Pennsylvania, Maryland, Virginia, North Carolina, South Carolina, Georgia, Alabama, Florida, Texas, Tennessee, Kentucky, and Illinois.

It goes into the hands of that very class of persons whom advertisers wish to reach. Its principal circulation is in the Southern States. Rates moderate.

For further information in regard to the Magazine, or in regard to Mecklenburg Female College, send \$1 for one year's subscription to the *Carrier Dove*, or simply correspond with the undersigned,
REV. A. G. STACY,
Charlotte, N. C.

JENKINS' VEST-POCKET LEXICON. An English Dictionary of all except Familiar Words; including the Principal Scientific and Technical Terms, and Foreign Moneys, Weights, and Measures. Price, in Gilt Morocco, Tuck, \$1; in Leather Gilt, 75 cents. Sent post-paid by S. R. WELLS, New York.

Advertisements.

[Announcements for this or the preceding department must reach the publishers by the 1st of the month preceding the date in which they are intended to appear. Terms for advertising, 50 cents a line, or \$50 a column.]

SWEDENBORG'S WORKS.—Uniform 12mo edition.

HEAVEN AND HELL, from things heard and seen. 1 vol. 12mo, pp. 373, price \$1.25.

This work unfolds the laws of the spiritual world, describes the condition of both good and evil spirits, exhibits the general arrangement of the inhabitants of both heaven and hell, and the scenery by which they are surrounded.

THE DIVINE PROVIDENCE. 1 vol. 12mo, extra cloth, beveled boards, gilt top, price \$1.25.

The object of this work is to show that the Divine Providence works according to certain invariable laws; that it is universal, extending to the least things as well as to the greatest; that it has respect to what is eternal with man, and to things temporary only for the sake of what is eternal.

THE FOUR LEADING DOCTRINES. Being those concerning the Lord, the Word, Faith, and Life. 1 vol. 12mo, pp. 390, price \$1.25.

THE ATHANASIAN CREED. 1 vol. 12mo, pp. 206, price \$1.25.

MAN AS A SPIRITUAL BEING.

By Chauncey Giles. 12mo, tinted paper, extra cloth, gilt top, price \$1.25.

The *New York Tribune* says: "It adheres rigidly to the received principles of Swedenborg's teachings, but it surrounds them with lucid illustrations, clears up their apparent difficulties, enforces their logical applications, and exhibits their practical scope and bearing in a style remarkable for clearness of statement, as well as argumentative force."

THE INCARNATION AND ATONEMENT. By Chauncey Giles. Uniform with the above, price 75cts.; also, in common cloth, 50cts.; paper, 25cts.

"Whoever is not satisfied with the commonly received doctrines of the Lord's work, while on earth, should read this little book."

All the writings of Swedenborg and collateral works constantly on hand. Publishing House of the New Jerusalem Church, 20 Cooper Union, New York.

JOS. R. PUTNAM, Manager.

478 Broadway, New York.

"AMER. SCHOOL INST.,"

founded 1855, is a reliable Educational Bureau—

For supplying Schools with Teachers;
For representing Teachers who want positions;

For giving parents information of good schools;

For selling and renting School Properties. All Teachers should have the "Application Form."

All Employers of Teachers should have "Amer. Educational Monthly" and "Teachers' Bulletin."

J. W. SCHERMERHORN, A.M., Actuary,
No. 14 Bond Street, New York.
(Removed May 1st from 430 Broome St.)

FARMS FOR SALE.—Hollywood contains near 400 acres of land, 300 in a good state of cultivation and under good chestnut fence. The remainder is timber land, consisting of a growth of White Oak, Hickory, Pine, Chestnut, Locust, and Cedar, affording an abundant supply for the Farm. This Farm is in the Second Election District of the County, known as the "Factory District," in a pleasant neighborhood, and within half a mile of the Potomac River and in full view of it. It is on Hening Creek, very famous for its abundance of fish, oysters, and wild fowl, which bounds it on the east, south, and west for three miles. I have known one person during the past season to catch with the hook and line, in two hours, 120 fine perch in this creek. We have Rock, Taylor, Trout, Sheepshead, Crocus, and Drum, all in season, besides other small fish which we catch ourselves. By an act of the Legislature, persons owning land binding on this creek have the exclusive right to the creek for the planting of oysters, etc.; and there are upon this estate some of the finest Cores for planting Oysters, and the supply around its shores is inexhaustible. This is certainly a great advantage in these times, when oysters are becoming scarce and the demand for them is so great. Here you have the oysters of the creek belonging exclusively to you, and no one—not even citizens of the County—can catch them without your consent.

This Estate has on it a good Dwelling-house, with eleven rooms, including Nursery and Kitchen, all under the same roof; a large yard, inclosed by a good, substantial, and ornamental fence; a Garden of one acre; an Orchard with a fine variety of good fruits—Peaches, Apples, Pears, Cherries, Plums, etc.; a good brick dairy in the yard, and a well of good water at the door; also as fine a spring as can be found in the State. It has all necessary out-houses, including Ice-house, Stables, Carriage-house, three Barns, Overseer's House, also a new Cottage, with five rooms. I have this Estate divided into five fields, with good water in each.

As an evidence of the productiveness of this land, I will mention the amount of crops grown upon it one year, just preceding our unfortunate civil war. Of Corn, 1,500 bushels; Wheat, 1,800 bushels; Oats, 750 bushels; Tobacco, 34,000 lbs.; besides Turnips and Potatoes in the greatest profusion. There is a Grist Mill three quarters of a mile from the house, Protestant Episcopal Church a quarter of a mile, Catholic Church one and a-half miles. Post Office one mile (a daily mail); two Steamboat Landings within five miles, with three and four boats a week, one of the Landings being the famous watering-place, Piney Point. Point Lookout is within sixteen miles of the Farm. There can be found no more desirable situation than this, both as a pleasant residence and for the productiveness of the land. We have great sport in the field with dog and gun, hunting Partridge, Snipe, and Squirrel. In the winter, the Redneck, Flock, Fowl, and Canvas-back Duck are most abundant.

A more extended description is deemed unnecessary, as the purchaser will of course visit the premises before buying. I will take for this Estate Sixteen Thousand Dollars, one half cash, and the deferred payments secured by Deed of Trust on the Premises.

I have also a very desirable Estate on the St. Mary's River, containing 500 acres of land, lying immediately upon said river for a distance of one mile. Has on it a comfortable Dwelling, a very fine Barn, and necessary out-houses. About 175 acres are cleared and under a good fence, and in a fine state of cultivation.

This is a high and airy situation, being some hundred feet above the river, and is very healthy. It has on it a large quantity of Chestnut Timber, also Oak, Pine, and Cedar, and delightful springs of water.

I will take for this Estate Ten Thousand Dollars. For further particulars address, THOS. A. LYNCH, Great Mills, St. Mary's County, Maryland.

IMPORTANT EDUCATIONAL

DISCOVERY.—THE NATURAL ALPHABET. For Printing and Writing ALL LANGUAGES. Based upon an Original and Comprehensive Classification of the Elementary Sounds.—Address, Inclosing 50 cents, J. MADISON ALLYN, Principal, Industrial Institute Ancora, Camden Co., N. J.

FREDRIKA BREMER.—HURD & HOUGHTON, 459 Broome St., New York, have just published the

LIFE, LETTERS, AND POSTHUMOUS WORKS

OF

FREDRIKA BREMER.

Edited by her Sister, CHARLOTTE BREMER. One volume, crown 8vo, cloth, price \$2.

NOTICES OF THE PRESS.

"In this handsome volume we have a fitting memorial of one of Sweden's most gifted writers,—a woman who labored for many years to improve the condition of her sex in Europe. Miss Bremer's character, as shown in her sketch of her own life, and in the interesting biography written by her sister, is one which womankind everywhere will do well to study. It is not without angularities; but it is an admirable illustration of steady working for a certain result, and that result—good to its kind. Her letters, which fill 151 pages of the volume, are replete with rich thought, and should be read by all mothers and daughters. It is through them that we get the best insight into the Swedish authoress's life, for they are what letters between friends always ought to be—transcripts of the life and thought. Her sketches are instructive as well as pleasing; and the book, as a whole, is a very acceptable addition to our memorial literature."—*Rural New Yorker*.

"The biography of one who did so much for the elevation of the women of her own country, and wished to do as much more, is especially timely and interesting now when the 'woman question,' with its various phases, is occupying so much of the public attention."—*Springfield Republican*.

"The double biography is delightful, chiefly because it shows Fredrika in the bosom of her family, from earliest childhood, and may be said to trace the history of her mind."—*Philadelphia Press*.

"The letters, which constitute the greater part of the volume, are its greatest charm."—*Albany Express*.

Copies of this charming book will be sent by mail, postage prepaid, on receipt of the price, \$2.

Nearly ready.

A SKETCH OF THE OFFICIAL LIFE OF JOHN A. ANDREW, as Governor of Massachusetts, to which is added the Valedictory Address of Governor Andrew upon retiring from office, January 5th, 1868, on the subject of the Reconstruction of the States recently in rebellion. In one volume, 16mo, with photographic portrait, price \$1 25.

THE CHARITIES OF NEW YORK, Compiled by Messrs H. J. Cammann and H. N. Camp, with illustrations. 1 vol., 8vo.

*A limited edition only is issued of this work.

LIFE IN THE ARGENTINE REPUBLIC IN THE DAYS OF THE TYRANTS; or, Civilization and Barbarism, from the Spanish of Colonel Sarmento, Minister Plenipotentiary to the United States, with a Biographical Sketch of the Author. By Mrs. Mary Mann. In one volume, crown 8vo.

REMINISCENCES OF EUROPEAN TRAVEL. By Andrew P. Peabody, D.D., LL.D., Preacher to Harvard University, and Plummer Professor of Christian Morals. 1 vol., 12mo.

Fior D'ALIZA. By Alphonse de Lamartine. 1 vol., 16mo.

*A simple, charming story. It is highly praised by the *Saturday Review*, and Leon de Gazlon pronounces it the "Paul and Virginia" of the Nineteenth Century.

THE NEW YORK SUN.—An Independent Daily Newspaper, giving All the News in a fresh, readable, attractive manner, condensed so that a business man can find time to read the whole. CHARLES A. DANA, Editor and Manager. Price: \$6 a year; \$1 50 for three months.

THE WEEKLY SUN.

Prepared with great care for country subscribers. Farmers' Club fully reported. Markets accurately given. Horticultural and Agricultural Department edited by ANDREW S. FULLER. Great variety of interesting miscellaneous reading, making it a first-rate

GENERAL FAMILY NEWSPAPER.

Price: \$1 a year; 20 copies to one address, \$17; 50 copies to one address, \$35.

Subscribers to the WEEKLY SUN who wish also to receive the *Rural New Yorker*—one of the best agricultural and literary journals in the country—can do so on very advantageous terms. The two papers will be sent for one year to any one remitting \$3 25.

THE SEMI-WEEKLY SUN.

Same size and character as the Weekly, but furnishing twice as much reading matter, and giving the News with greater freshness. Price: \$2 a year; 10 copies to one address, \$18; 20 copies to one address, \$35; 50 copies to one address, \$80; always in advance.

Apr. 3d. Address: THE SUN, New York City.

THE ROUND TABLE; A SATURDAY REVIEW OF POLITICS, FINANCE, LITERATURE, SOCIETY, AND ART, is offered to the public as a publication which has labored vigorously for national literature, for fearless discussion of political and social problems, and for the promotion of a higher type of journalism than in general has flourished among us.

Money and labor have been unsparingly used to make THE ROUND TABLE a credit to the metropolis and the country. It has been conducted with energy and perseverance, has aimed steadily at improvement in every department, and has now won a substantial position which, in a business point of view, is undoubtedly stronger than that of any similar journal yet founded in this country.

THE ROUND TABLE has achieved cosmopolitan success, and has been recognized by the leading journals of both our own country and Europe as the ablest paper of its class in America. In addition to its large circulation in the metropolis and in all the leading cities of America, THE ROUND TABLE has subscribers in every State in the Union, in the Canadas, West Indies, in the principal countries of Europe, in China, Japan, Australia, the Sandwich Islands, etc., etc. It exerts an influence equalled by that of very few publications, daily or weekly, in the United States.

Subscription price of THE ROUND TABLE \$6 a year.

THE ROUND TABLE (\$6), and the PHRENOLOGICAL JOURNAL (\$3), to one address for \$7 50 a year.

Office of THE ROUND TABLE ASSOCIATION, 132 Nassau Street, New York.

EDWARD O. JENKINS, Steam

Book and Job Printer, and Stereotyper, No. 20 North William Street, New York, announces to his friends and the public that his establishment is replete with Presses, Type, and material for the rapid production of every description of printing.

Address, JOHN BUCHANAN, 227 North Twelfth Street, Philadelphia, Pa.

A. A. CONSTANTINE'S

PERSIAN HEALING OR PINE TAR SOAP. Patented March 12th, 1867.

For the Toilet, Nursery, and Bath this Soap has no equal. It Cures Pimples, Rash, Chapped Hands, and all Diseases of the Scalp and Skin. Is a good Shaving Soap.

WHAT THOSE SAY WHO USE IT.

Baldness Cured.—It is bringing my hair in beautifully. I consider it the best hair renovator in use.—M. H. COMBS, 218 Atlantic St., Brooklyn, N. Y.

I have used it for catarrh in the head, making a snuff and snuffing it through the nose, and it has cured me. I use it constantly for the toilet, and consider it the best soap for that purpose.—G. R. BENSON, Office of the U. S. Life Ins. Co., 40 Wall St., N. Y.

I have used your Persian Healing Soap in my practice extensively, and it has proved the best healing soap I ever used. It has no equal as a soap for washing the heads and skin of children.—L. P. ALDRICH, M.D., 19 Harrison St., N. Y.

I had salt rheum badly fifteen years. Your soap has made a complete cure.—G. M. BALL, 119 West St., N. Y.

I use it for the toilet and bathing, and prefer it to any other I have ever known.—J. H. T. KING, Member of the Royal College of Surgeons, England.

I have used it for soldier's itch. The scalp was badly diseased, resembling scald-head. A cure was effected in a few days.—T. S. P. LORD, M.D., Chicago, Ill.

It is the best medicine we have ever seen for cutaneous eruptions of every kind, and every family should have it.—*American Baptist*.

It accomplishes all it claims.—R. HAMILTON, M.D., Saratoga, N. Y.

The wife of Rev. Dr. King, Missionary at Athens, Greece, writes: "I have used your Persian Healing Soap for rheumatism, and find it exceedingly good."

Agents wanted. Send 50 cents for sample, or 3 cents for circular.

A. A. CONSTANTINE, No. 90 Fulton St., N. Y.

REMOVAL!—The Office of

the "AMERICAN SCHOOL INSTITUTE" will be removed in June, 1868, to new and permanent quarters in that first-class locality, No. 14 BOND STREET, a few doors east of Broadway. All who have educational business of any kind are invited to call. In the new location there will be additional facilities for conducting the rapidly increasing business of this useful "Bureau of Educational Information."

"American School Institute," founded 1835, is a reliable Educational Bureau: 1. To all who seek well-qualified teachers; 2. To represent teachers who desire positions; 3. To give parents information of good schools; 4. To sell, rent, and exchange school properties. J. W. SCHERMEHORN, A.M., Actuary, 14 Bond Street, New York; M. J. YOUNG, Secretary; F. M. BROWN, Treasurer.

"The right teacher for the right place." Thirteen years' trial has proved the "AMERICAN SCHOOL INSTITUTE" a useful and efficient auxiliary in the Educational Machinery of our country. Its patrons and friends are among the first educational and business men.

Principals, School Officers, and others, should give early notice of what teachers they want. The "Teachers' Bulletin," published in the *American Educational Monthly*, will be sent on application.

All Teachers should have the APPLICATION FORM. Early applications for positions are desirable.

A circular containing Testimony for the "American School Institute" will be sent to those wanting it.

AMERICAN ARTISAN AND

PATENT RECORD.—New Series.

The *American Artisan*, now in the fourth year of its publication, is a Weekly Journal, devoted to fostering the interests of Artisans and Manufacturers, encouraging the genius of Inventors, and protecting the rights of Patentees.

Each number contains numerous original engravings and descriptions of new machinery, etc., both American and Foreign; reliable receipts for use in the field, the workshop, and the household; practical rules for mechanics and advice to farmers; "Mechanical Movements," and other useful lessons for young artisans; the official list of claims of all patents issued weekly from the United States Patent Office; reports of law cases relating to patents, etc.

Each number of the *American Artisan* contains sixteen pages of instructive and interesting reading matter, in which the progress of the arts and sciences is recorded in familiar language. Twenty-six numbers form a handsome half-yearly volume. The columns of the *American Artisan* are rendered attractive by articles from the pens of many talented American writers upon scientific and mechanical subjects.

Terms of subscription: Single copies, by mail, per year, \$2 50 in advance. Single copies, by mail, six months, \$1 25 in advance.

The publishers of the *American Artisan* are also extensively engaged as Solicitors of American and Foreign Patents, and will promptly forward to all who desire it, per mail, gratis, a pamphlet, entitled "Important Information for Inventors and Patentees." Address

BROWN, COOMBS & CO.,
Proprietors of the *American Artisan*,
Mch. tf. No. 139 Broadway, New York.

ESTABLISHED 1861—THE GREAT AMERICAN TEA COMPANY

Receive their Teas
BY THE CARGO,
 FROM THE BEST
 Tea Districts of China and Japan,
 AND SELL THEM IN
 QUANTITIES TO SUIT PURCHASERS
 AT CARGO PRICES.

To give our readers an idea of the profits which have been made in the Tea Trade (previous to the establishment of the GREAT AMERICAN TEA COMPANY), we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors.

First. The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in this country have made their immense fortunes through their Houses in China.

Second. The Banker makes large profits upon the foreign exchange used in the purchase of Teas.

Third. The Importer makes a profit of 30 to 50 per cent in many cases.

Fourth. On its arrival here it is sold by the cargo, and the purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth. The Speculator sells it to the Wholesale Tea Dealer in the lines, at a profit of 10 to 15 per cent.

Sixth. The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh. The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth. The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so much lower than small dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages, and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same price, with the small additional expense of transportation, as though they bought them at our Warehouse in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this: Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price-List, as published in the paper, or in our circulars. Write the names, kinds, and amounts plainly on the list, as seen in the club-order published below, and when the club is complete send it to us by mail, and

we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members can divide equitably among themselves.

Parties sending club or other orders for less than thirty dollars, had better send Post-office draft or money with their orders, to save the expense of collections by express; but larger orders we will forward by express, to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for clubs of less than \$30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom-House stores to our Warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within thirty days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of clubs. They are sold at cargo prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

OOLOONG (Black), 70c., 80c., 90c., best, \$1 per lb.
 MIXED (Green and Black), 70c., 80c., 90c., best, \$1 per lb.
 ENGLISH BREAKFAST (Black), 80c., 90c., \$1, \$1 10, best, \$1 20 per lb.
 IMPERIAL (Green), 80c., 90c., \$1, \$1 10, best, \$1 25 per lb.
 YOUNG HYSON (Green), 80c., 90c., \$1, \$1 10, best \$1 25 per lb.
 UNCOLORED JAPAN, 90c., \$1, \$1 10, best, \$1 25 per lb.
 GUNPOWDER (Green), \$1 25, best, \$1 50 per lb.

COFFEES ROASTED AND GROUND DAILY.

GROUND COFFEE, 20c., 25c., 30c., 35c., best, 40c., per lb. Hotels, Saloons, Boarding-house keepers, and Families who use large quantities of Coffee, can economize in that article by using our *French Breakfast* and *Dinner Coffee*, which we sell at the low price of 30 c. per lb., and warranted to give perfect satisfaction.

Consumers can save from 50c. to \$1 per lb. by purchasing their Teas of the

GREAT AMERICAN TEA COMPANY,

31 and 33 Vesey Street.

Post-Office Box 5,643, New York City.

THE GREAT AMERICAN TEA COMPANY (established 1861) is recommended by the leading newspapers, religious and secular, in this and other cities, viz.:

American Agriculturist, Orange Judd, Editor.

Christian Advocate, New York City, Daniel Curry, D.D., Editor.

Christian Advocate, Cincinnati, Ohio, J. M. Reid, D.D., Editor.

Christian Advocate, Chicago, Ill., Thomas M. Eddy, D.D., Editor.

Evangelist, New York City, Dr. H. M. Field and J. G. Craighead, Editors.

Examiner and Chronicle, New York City, Edward Bright, Editor.

Christian Intelligencer, E. S. Porter, D.D., Editor.

Independent, New York City, Henry C. Bowen, Publisher.

The Methodist, Geo. R. Crooks, D.D., Editor.

Moore's Rural New Yorker, Rochester, N. Y., L. D. T. Moore, Editor and Proprietor.

Tribune, New York City, Horace Greeley, Editor.

We call attention to the above list as a positive guarantee of our manner of doing business; as well as the hundreds of thousands of persons in our published Club Lists.

COMPLIMENTARY LETTERS FROM CLUBS.

MANHATTAN, KANSAS, July 26, 1867.

GREAT AMERICAN TEA COMPANY,

31 and 33 Vesey Street, New York.

Your "Advocate" is received and circulated. Please accept my thanks. You are extending a blessing to us old tea drinkers in the West.

My profession keeps me in my office, but the limited opportunities I have shall be devoted to the extension of your trade. The orders I have sent have been purely from private families. I have recommended your house to our merchants, with what success you know, not I. They might not like to have their customers see the profits they make.

I remain, very respectfully yours,

LORENZO WESTOVER.

DEARBORNVILLE, MICH., July 6, 1867.

GREAT AMERICAN TEA COMPANY,

31 and 33 Vesey Street, New York.

Gents: This day I forward you, by M. U. Express Company, \$107 50, being amount due you on one box of tea.

It may be proper here to state that the tea received gives entire satisfaction. This makes two orders from this place. Your patrons are so well pleased with the tea that you may expect to furnish us our tea and coffee. I have sent your papers to Linden, Genesee County, in this State, and other places, from whence you may expect to receive orders.

Please accept our thanks for the promptness with which you responded to our order.

Respectfully yours,

AMOS GAGE.

BRUNSWICK, MO., March 26, 1867.

TO THE GREAT AMERICAN TEA COMPANY,

31 and 33 Vesey Street, New York.

The order we sent you last month reached us in due time, and with which we are well pleased. We think there is, at least, 50 to 75 cents difference in your favor, compared with the prices of St. Louis, where we have been buying our teas for several years past. You may expect to receive our future orders.

Yours truly,

MERCHANT BEAZLEY.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the GREAT AMERICAN TEA COMPANY.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name, either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

TAKE NOTICE.—Clubs and quantity buyers are only furnished from our Wholesale and Club Department.

Post-Office orders and drafts made payable to the order of the GREAT AMERICAN TEA COMPANY. Direct letters and orders to the

GREAT AMERICAN TEA COMPANY,
 Nos. 31 and 33 Vesey Street, New York.
 Post-Office Box, 5,643, New York City.

FULAH WARRIORS.

SEASONABLE HINTS.

EACH subscriber is supposed to know, without special notification, *when* his subscription ends. The JOURNAL is continued only for the time paid for.

Renewals are now in order. If they be prompt, full and complete sets for binding will be obtained. But if they delay too long, we may not be able at the end of the year to supply *all* the back numbers.

Liberal premiums will continue to be given for clubs. We give sewing machines, melodeons, libraries, tool chests, etc. Enterprising persons interested in the JOURNAL will talk up the subject to their friends and neighbors.

Clubs may be made up at one or at different post-offices.

In remitting, it is best, when possible, to send P. O. orders, checks, or drafts, payable to the order of the editor. If greenbacks be sent, it should be in registered letters.

Finally. It must be apparent to every reader, that the work of disseminating new and unpopular truths must, in the nature of things, be an "up-hill work." Only brave and courageous hearts will engage in it; hearts not daunted by the sneers of prejudice, or by the bigotry of superstition and ignorance. Let each judge for himself what is his duty and his pleasure.

If the world is to be regenerated; if bad habits are to be overcome; and if the race is to be elevated physically, intellectually, and spiritually, the means must be used. We claim but a very moderate share in this work; but, so far as it goes, it is important. Others work well in other fields; let us work well in this. If it would be an aid to personal improvement

to have the JOURNAL read in every family; then, reader, we ask you to help place it there.

Science and religion may—should—go hand in hand, and the whole world brought into happy harmony and concord. If we ever come to know ourselves thoroughly, we shall be most thankful for the knowledge, and this will, no doubt, make us more charitable in judging others. Then let us all join in the good work of self-improvement.

THE FULAHS.

THESE people constitute one of the most important tribes of Western Africa. The region inhabited by them is that watered by the two great rivers Senegal and Gambia. The face of this large region, which extends interiorward to the distance of six or seven hundred miles, is generally flat and monotonous. The Senegal, which is under the control of the French, is navigable for small-sized vessels some five hundred miles; the Gambia is navigable for vessels of the largest size some thirty-five or forty miles, and for ordinary merchant vessels, to MacCarthy's Island, two hundred and fifty miles from the sea-coast.

Similar in many physical respects to the Abyssinians, the Fulahs differ greatly from the ordinary negro races. They have long been known to traders in Western Africa.

In 1534 commercial relations were commenced by the Spanish government through De Barros. In personal appearance and mental capacity they greatly exceed the neighboring tribes. In fact, they have attained to some degree of civilization, which is a matter of astonishment to European travelers when their rude and barbarous surroundings are

considered. They cultivate the soil, forge in iron and silver, work skillfully with leather and wood, and manufacture cloth to some extent. They also have schools in which their children are instructed according to the precepts of Mohammedanism, the prevailing religion.

The Fulahs are a warlike people, and the dominant tribe in Senegambia. In stature they are of middle size, limbs delicate in mold but well formed and graceful. As described by M. Golberry, a French traveler, they are "fine men, robust and courageous. They have a strong mind, and are mysterious and prudent; they understand commerce, and travel in the capacity of merchants, even to the extent of the Gulf of Guinea: they are formidable to their neighbors. Their women are handsome and sprightly. The color of their skin is a kind of reddish black; their countenances are regular, and their hair is longer, and not so woolly as that of the common negroes; their language is altogether different from that of the nations by whom they are surrounded—it is more elegant and sonorous."

The subject of their origin is a matter yet undetermined. Some ethnologists claim the Fulah as an offshoot from the Polynesian race, on account of the analogous sound existing between several words of the Fulah and Polynesian languages. Prichard considers them a genuine African race.

The Fulahs have a tradition that they are descended from Phut, the son of Ham. (Gen. x. 6.) The prefix of the word Futa to almost every district of any extent which they have occupied, is singular.

The recent Abyssinian difficulties which have brought that people into conspicuous notice, may stimulate African exploration to a degree which will bring to light many interesting facts related to the Fulahs and associate tribes. There is a good prospect for Ethiopia now that scientific men are becoming deeply interested in her obscurities.

A TRUE MAN.—Shakspeare's estimate of true manhood is not more definite and beautiful than suggestive:

His words are bonds, his oaths are oracles,
His love sincere, his thoughts immaculate;
His tears pure messengers sent from his heart;
His heart as far from fraud as heaven from earth!

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED.

Is devoted to *The Science of Man*, in all its branches, including PHRENOLOGY, PHYSIOLOGY, PHYSIOGNOMY, PSYCHOLOGY, ETHNOLOGY, SOCIOLOGY, etc. It furnishes a guide in *Choosing a Pursuit*, and in judging of the dispositions of those around us, by all the known external "Signs of Character."

Published monthly, \$3 a year in advance. Sample numbers, 30 cents. Now is the time to subscribe. A new volume begins with the July number. Clubs of ten or more, \$2 each. Supplied by Booksellers and Newsmen everywhere.

The Journal.

Man, know thyself. All wisdom centers there ;
To none man seems ignoble, but to man.—Young.

PETER VON CORNELIUS, THE EMINENT GERMAN ARTIST.

This is an imposing face. The great size of the cerebrum at once strikes the attention. The prominence of the perceptive faculties, the apparent breadth of the forehead, and the fullness of the side-head anteriorly, impress us with the strength and accuracy of his observation, the scientific compass of his analytical judgment, the force and fertility of his imagination. Appreciation of forms and proportions, the ready comprehension of mechanical relations and the laws of construction, the facile adaptation of means to proposed ends, and remarkable inventive and artistic discernment, were qualities which the great German painter and designer possessed to a surprising degree.

PORTRAIT OF PETER VON CORNELIUS.

He was by no means deficient in those organs which inspire perseverance, self-reliance, and aspiration; the elevated crown shows great Firmness and strong

Self-Esteem, while the adjacent organs, Approbateness, Conscientiousness, and Cautionness, swell grandly on the view. Although of Teutonic stock, yet the

temperament was more thoroughly infused with the forceful impulse of the motive than is usually the case with the pure Teutonic type. His nature was a practically imaginative one; not a metaphysically imaginative one. His views of a profession purely esthetic in its character were not, as is usually the case, and consistently, too, visionary or speculative, but utilitarian, objective. His wonderful capability to design allied itself with those faculties which appreciate tangible purposes and realities; and all that he wrought out has in it the elements of social utility, social culture. The world is the better off for having had such a man as Cornelius to labor in the noble realm of art, and leave behind him consummations which must refine and educate the observer.

BIOGRAPHY.

The first and greatest reformer of German painting—Peter von Cornelius—died at Berlin, on the 17th of March, 1857, in the eightieth year of a glorious and honored life. Commencing his career when German art had become degraded by foreign and frivolous elements, he sought to awaken and regenerate the slumbering art-spirit of his country; and at his death he was the recognized founder of a school which now claims as its followers the most distinguished German artists of the present day. Like the noble Goethe in literature, he sundered the bonds that held down the true spirit of art, and infused life where had before been decay and death. The great motto which inspired all that he did was comprised in that word *life*. "I despise every composition, and recognize nothing as art," he said, "that does not live; but the degrees of life in art are as infinite as in nature itself; and when I can love the meanest life with tenderness, so will I therefore not go astray in the highest and most perfect claim of human artistic ability."

Cornelius was born on the 3d of September, 1788, in Düsseldorf, the son of the inspector of the Gallery of Paintings there. He early found opportunities to become acquainted with the choicest works of art; even the play-hours of his boyhood were passed in the galleries that contained the masterpieces of Rubens and the old German school. As a mere child, he continually exercised himself in the imitation of beautiful forms, and his eminent talent soon became remarked. His father gave him the first directions in the path of his artistic destination, and also provided the means for his further improvement in the Academy; but he died suddenly. His mother, though in somewhat straitened circumstances, was advised to place her son apprentice to a goldsmith, but she had already perceived the extraordinary inclination of her son for art, and declared her willingness to suffer privation sooner than take him away from his studies. In later years, her

son often boasted of this, and confessed that the confidence of his mother had infused into his spirit a still stronger enthusiasm for his chosen pursuit.

In the Academy of his native city the young and gifted boy rapidly improved under the guidance of Langer. He was himself fully aware of his own power and aims; and became early noted for his spirit of personal freedom and independence, and for an earnest striving after truth in all that he did. His first studies were in drawings from Marc Antonio's engravings, from the antique, and from the works of Raphael, the latter of which he endeavored to copy entirely from memory. At twelve years of age he commenced upon his own compositions, and was soon able to contribute to the support of his family by illustrating almanacs, painting banners, and other general work. He received his first important commission when he was nineteen years old, to paint the cupola of the old cathedral at Neuss with colossal figures in chiaroscuro; which was necessarily a somewhat crude performance. He had now to depend entirely upon himself for support; and, with a deep religious spirit, he aimed to fulfill the highest requirements of his chosen profession.

Cornelius always looked to Rome as the proper theater for his studies; he had already become inspired with the grand idea of regenerating German art. In 1811 he reached the Eternal City from Frankfort on the Main, where he had been engaged on a series of illustrations to Goethe's "Faust," which are considered among the most original and successful of his designs. In Rome a new world enchanted him. Here he formed an intimate acquaintance with Overbeck; and these two, with other congenial spirits, formed themselves into a little brotherhood, and occupied a part of the old convent of St. Isidore as their studio. So eagerly and absorbedly did they pursue their studies, that they soon drew upon themselves the attention of other congenial souls; among whom were Goethe, Schlegel, and Niebuhr, who were in full sympathy with their well-known and settled purpose of replacing the pedantry and irksome rules of the academies by a return to the truer and nobler spirit of the old masters. The little band found abundance of employment. Among the chief works of Cornelius at this period are two frescoes, which he executed for the Prussian consul-general: "Joseph Interpreting the Dream of Pharaoh's Chief Butler," and "Joseph Recognizing his Brethren." These immediately brought him in high favor. He was also commissioned by the Marquis Massimi to decorate the walls of his palace with frescoes from the *Divina Commedia* of Dante, but he only completed the designs (which were subsequently engraved by Schoefer) for this work, having received an invitation from the Bavarian court to aid in the decoration of the Glyptothek at Munich.

Cornelius left Rome in the year 1819, and soon afterward commenced his labors in the Glyptothek, where he was employed for ten

years, with the assistance of a large number of pupils. In the mean time, in 1828, he had also reorganized the Academy of his native city of Düsseldorf, of which he was appointed director. In Munich he had two halls devoted to his own decoration. The Hall of Heroes he decorated with the history of the demi-gods and heroes who contended in the Trojan War; the other, the Hall of the Gods, with scenes representing the whole of the Grecian mythology. This work was one of the most remarkable of our times. The figures are of colossal proportions, and are as equally distinguished for their grandness of conception as for their exceeding simplicity in execution. While in Munich he also undertook the general decoration of the corridors of the Pinakothek, and commenced a series of symbolical frescoes for the ornamentation of Ludwig's Church, comprising the chief features of the contents of the Christian confession of faith, from the "Incarnation of Christ" to the "Last Judgment." The last-named picture, measuring 64 feet by 30, is the largest painting in the world, exceeding even that of Michel Angelo on the same subject. In merit, too, it is well worthy of comparison.

In 1841 Cornelius' fame had spread over Europe, and both royalty and fortune smiled upon him. He was consulted by the British Government with reference to its new Houses of Parliament. The King of Prussia also invited him to become director of the Art Gallery in Berlin; which honor he accepted. While here, he painted a portion of the frescoes in the Campo Santo, the cartoons of which are well known by the published plates. One of these, representing the "Four Horsemen" of the Apocalypse, is generally considered as his most powerful and original conception. He furnished the design for the baptismal "Shield of Faith" which King William presented to his godson, the young Prince of Wales. He also made several other beautiful designs for medals. In 1853 he commenced another remarkable painting, for the decoration of the Berlin Cathedral, entitled the "Day of Judgment," visiting Rome several times before its completion. His later works are quite as vigorous in spirit and life as the conceptions of his younger days. Indeed, he improved rather than degenerated up to the day of his death.

When Cornelius had finished the frescoes in the Ludwig's Church in Munich for King Ludwig I., king of Bavaria, the latter was displeased with some of the paintings which the great artist himself had executed. Cornelius felt deeply grieved by the manner of the king, and requested his release, so that he might leave Bavaria and find a more congenial home elsewhere. An artist relates that the king called him to his cabinet and asked him what he thought of the frescoes which Cornelius had painted in the Ludwig's Church. The artist extolled the work of Cornelius, but Ludwig interrupted him abruptly by saying: "But the painting! The painting is worth nothing! A painter must be able to paint!" The artist replied: "But Cornelius is more

than a painter,—he is an artist, and one of the greatest in the world!" "And yet he is no painter," said the king, excitedly. "He wants to go away! Let him go! I will not detain him!" "Your majesty," said the artist, "it will be a sad day for Munich and for us all, and you, your majesty, will lose in him a gem from your crown." These last words aroused Ludwig to a high degree: "What!" said he, "who is Art in Munich? Is it Cornelius? I! the king!" But Ludwig found out his loss afterward, and deeply regretted the slight that he had given him; but all his efforts to re-establish the old friendly relation between them were futile, for the noble spirit of Cornelius was as independent as it was gigantic.

Cornelius had long been the acknowledged and honored master of German art when death called him so suddenly away. His life-long enthusiasm had not been confined to his own soul, however; but by word and deed he had kindled it in the hearts of all who knew him. If his motto was, that art should represent life, he took care that his should not represent common life, but human life and human nature in its highest and noblest potencies. He himself had wandered through the whole history of man; he had studied him as he found him personified in Faust, in the Olympic paganism of the Greeks, in Homer's ideal songs, and among the wild romantic legends of his fatherland; and everywhere his lofty spirit appreciated whatever had the true ring of humanity; that represented man in his most exalted truthfulness; and these he wove into epic and dramatic scenes which are not less remarkable for their pureness of embodied thought than for their idealistic enchantment. His works are stamped throughout with the genius of originality; his spirit was full of the deepest poetic feeling, and from the fountain of his inexhaustible imagination his creations became ever newer, more elevated, and more beautiful.

Though Roman Catholic in religion, he was truly catholic in spirit; and whether in decorating the churches of the Protestant capital of North Germany, or the halls of Catholic Munich, he strove only for truth, and nothing but the truth—for a mind like his could not be bound by any narrow dogma of faith. In the annals of the history of German art his name will stand forth for all time among the greatest of German painters.

THEORY OF TRANSMISSION.—The physical characteristics, the intellectual traits, and the moral qualities and proclivities descend from sire to son. Upon seeing a man's children we instinctively begin to trace the resemblance to the father and mother, and sometimes discover a remarkable likeness to some grandparent or perhaps great-grandparent. That was the first series of observation in this line. Subsequent comparisons of phenomena established what is now generally accepted as the law of the transmission of mental and moral qualities.—*C. F. Deems, D.D.*

A FRENCH EDUCATOR ON AMERICAN FREE SCHOOLS.

THE intelligent reading classes in America are so much accustomed to seeing our systems of education censured and depreciated when reviewed in comparison with the English foundations and the French academies, and that, too, in newspapers and periodicals boasting the highest literary excellence in both the editorial and contributory departments, that they have generally become convinced that the methods in common use for training the young idea are faulty and even pernicious.

If we were to believe the strictures on American education which we recently read in a prominent New York weekly, we would denounce our prevailing system as superficial and fragmentary in its practical results. But we countenance no such view. The grand system of *free* education, which is one of the noblest outgrowths of our democratic republican policy, commands our warmest approval, and must be acknowledged by every candid mind as the surest way yet discovered to the education and improvement of an entire nation. In literature, science, and art, it must be acknowledged that old Europe is somewhat in advance of young America. Our literature, *i. e.*, the perfected expression of cultured minds, is young; it has no centuries of learned authorship to refer to as have the literatures of Germany, France, and England; yet it has already challenged the respect of foreign literati, and its vigor, boldness, ambition, and ardent hope are the earnest of future growth and excellence. The public school has proved, and will prove, a potent auxiliary to its growth, awakening to powerful endeavor, not a few scattered intellects, as in the case of schools on a private footing, but many, which are necessarily brought into conjunction and competition by a universal free system. But are American schools so faulty, so ill organized, and superficial? Let foreign testimony have its weight in answering this question, especially if such testimony be based on the only practical basis of comparative investigation. It will be scarcely necessary to remind our readers that at the Paris Exposition of 1867 there was a school building, with all the interior arrangements and apparatus generally found in American public schools of the primary grade. It was, in fact, "an exact reproduction of one of numerous free primary schools" of the West. This "curiosity" attracted no little attention, especially from the Continental educators and *savants*, and led to the publication of a very interesting paper on the American public school system in the *Manuel General de l'Instruction Primaire* of Paris, the chief French educational organ, by M. H. Ferte, late Chief of Instruction in Paris.

After a brief statistical review of the state of educational matters in Illinois, in the course of which he calls particular attention to the fact that a large portion of the teachers employed are females, "a singularity of which France

offers no example," attributing to this organization of teaching the well-known manly intellect for which the present generation of women in America are distinguished, M. Ferte proceeds to consider the general school system of the United States. The high-ceiled, commodious, and well-ventilated school-buildings, with their convenient furniture, challenge his admiration. The arrangement of the windows, so that a part of the sash can be readily opened to admit fresh air without creating a strong draft, the plan of the desks, and the adaptations of the maps, globes, books, and other apparatus are pronounced vastly superior to those in common use in France. To use his definite language: "While we have long tables, accompanied by long benches, for accommodating ten or twelve pupils, who crowd, elbow, and hinder each other, in this American school we find the desks or tables neatly arranged for either one or two scholars, with a seat having a support for the back of the pupil. The teachers who read this will understand at once the advantages of such an arrangement. Does a scholar need to leave his seat, he can do so without disturbing his neighbor, or without being obliged, to the great detriment of discipline, to pass before seven or eight of his fellow-students, who never fail to make good such an occasion for mischief. It would be highly desirable to have these American desks introduced in our schools. The discipline would be benefited by it, the children could prosecute their studies without disturbance, and be very much more comfortable. We wish the same for the introduction of the inkstand, with which each table is provided. The calculators, geometrical figures, globes, charts, and other school apparatus, resemble much those in our best schools.

"Among the books we have examined, we find many deserving of high commendation. We notice improved methods of teaching penmanship, excellent and simple spelling, reading, and drawing books, quite superior in every respect, and also conveniences for cleaning black-boards, carrying books, and methods of object-teaching, quite unknown with us."

The sheets of moral mottoes hung up on the walls are regarded as no inconsiderable feature of the school apparatus. The essence of civil virtue and integrity contained in them exerts an influence most favorable to developing in youthful minds those principles which, if practiced, can not fail to make the children good men and women and worthy citizens.

The effects of such universal education are thus grandly described:

"The free primary school in America is truly the common center whence have sprung up the greater number of the men who have shed luster upon the commonwealth. It is there that were formed those energetic nations who have developed, in such a prodigious manner, the power of the United States. It is there that were blended together the Saxon, French, German, Spanish, Italian, and other races

which people the New World. Each one, on landing on these remote shores, brought his own manners, his language, his national spirit, his opinions and tastes. All these unevennesses and differences disappear in the new educated generation, to form only one great nation—homogeneous in its patriotism, persevering and enlightened in the accomplishment of its political and other duties, audacious and powerful in the realization of its gigantic purposes and destiny.

"All these wonderful results are due in a great degree to the primary school, where the young generations are molded and where they have learned that *equality* and *liberty* can live together in perfect harmony."

M. Ferte goes on to describe the higher departments of free education as they are graded in most of the States, viz., the grammar-school, the high school, showing that not only does America aim to afford a substantial basis for the mental development of all her citizens in the way of a thorough *primary* education, but she also seeks to cultivate a general taste for a high intellectual culture by providing liberal means for "*all*, without reference to race, color, or religious opinions," who may desire to improve themselves.

The equality of the sexes in mental culture as promoted by the free system is commented upon in the following terms:

"The American system can not be blamed for keeping females in a deplorable inferiority, as is often witnessed in the Old World. Far from it; instead of having not enough knowledge, men of sense have held the opinion that the American ladies have too much, and that they neglect, for abstract sciences, those home and house duties which in a woman ought to receive the first consideration.

"Experience, however, shows that American women are excellent mothers and devoted wives, no less than the women of the Old World; indicating, in another view, that the education so free, universal, and ample, exerts its beneficial influence upon all classes of society. It is the sanctuary of the family which becomes so admirable in America, and is another school where the young girl learns by her mother's side the lessons of domestic economy which go hand in hand with her school privileges, and which secure such capable and intelligent women as reflect great honor upon the American country and its institutions."

Those things which M. Ferte thinks amenable to improvement are the privilege exercised by teachers or single schools in selecting text books for use, and the almost exclusive adoption of American works in the school libraries. The former practice he regards as conducive to irregularity and detrimental to progress, though some benefit may result from such experimenting; the latter he considers unhappy, because so many valuable foreign authors are not brought to the notice and appreciation of American youth.

The methods of discipline and order are

highly commended, and on them, it is remarked, depends in a great measure the rapid progress made by children in their studies. The closing paragraphs of M. Ferte's review, which are a summary of what has been said, are worthy of reproduction as he framed them.

"It is found that the average expenses for the education of each child in the United States amounts to about sixty-two and a half francs (or \$17 currency) per annum. Five hundred thousand teachers, male and female, spread in these vast regions the benefits of education to millions of children.

"This immense army of instructors is far from being composed, as a rule, of men. Women occupy the first rank in their number, devotion, and talent. Their salary is not large, but in return, the teachers (both male and female) enjoy a respect and esteem which adds very much to their moderate compensation. They are welcome among the wealthy and most respectable families, who extend to them every social advantage and consideration. This distinction is conferred with high satisfaction as a tribute to instruction, which is considered the basis of the social edifice. Professorships are esteemed so highly, that the most substantial families allow their sons and daughters to hold the position, and numerous persons occupy the place of teachers during preparation for college or a profession, while large numbers rise to eminence from beginning as teachers in the primary schools.

"The changes which are thus influenced among teachers must result in many abuses, which would not occur if the teachers found in their occupation an object for its permanent adoption as their definite career. But in the United States, as everywhere, teaching is, and will always be, a condition requiring great sacrifices in return for very small compensation.

The youth among this enterprising and ambitious people are more able amid the carelessness of material interests given by the hope of a long life to offer the commonwealth the ardor and abnegation which are the necessary conditions of good teaching. Everything is then for the best in this apparent disorder, and without admiring all that pertains to primary instruction in America, we can not help praising a system which from so many heterogeneous elements has been able to form such a great nation."

AMERICAN LITERATURE.—The following is an estimate of the books, pamphlets, etc., published in this country during the year 1867:

THE DEVELOPMENT THEORY.

[A Lecture delivered at Washington by Dr. THEODORE GILL, of the Smithsonian Institution, and expressly reported by SAMUEL BARROWS, phonographer, for the PHRENOLOGICAL JOURNAL.]

THE TWO SCHOOLS DEFINED.

IN considering this subject, it is first necessary to take cognizance of the two different schools which exist among naturalists. One may be called the Creatory school, and the other the Development school. Of the Creatory school, the most prominent advocate is Professor Agassiz. Of the Development school, the chief, as you are well aware, is Mr. Darwin. By the Creatory party it is generally maintained that all animals, as well as plants, have been created as they now are. The Development theory requires the belief that all animals, as well as plants, have sprung from one or few primordial germs. Most of the advocates of the Creatory theory further believe that all animals and plants have sprung from a pair or a combination of sexes; but it is not by any means granted by all who oppose the Development theory that this is the case.

AGASSIZ' OPINION.

Professor Agassiz is the one who carries to the greatest extreme this Creatory theory, and, it may be added, carries it to its logical conclusion. He maintains not only that all animals and plants are descended from like ancestors, but that they have descended from communities; that, for example, man did not come into existence as a single pair; but that when the fiat of the Creator was given, he sprang upon the earth in communities such as we now find them. As Mr. Agassiz may be considered the chief representative of the Creatory theory, and has very clearly presented the alternatives of belief and non-belief thereon, I may be permitted to read his views on that subject as published in Nott and Gliddon's "Types of Mankind," for they have relation to the subject of preceding lectures. Treating of the word *species*, and accepting the definition of Dr. Morton, that species are primordial forms, he says: "I am prepared to show that the differences existing between the races of men are of the same kind as the differences observed between the different families, genera, and species of monkeys or other animals, and that these different species of animals differ in the same degree one from the other as the races of men; nay, the differences between distinct races are often greater than those distinguishing species of animals one from the other. The chimpanzee and gorilla do not differ more one from the other than the Mandingo and the Guinea negro; they together do not differ more from the orang than the Malay or white man differs from the negro."

"I maintain, distinctly, that the differences observed among the races of men are of the same kind, and even greater than those upon which the anthropoid monkeys are considered as distinct species." At another place he resumes: "The coincidence between the circumscription of the races of man and the natural limits of different zoological provinces charac-

terized by peculiar distinct species of animals, is one of the most important and unexpected features in the natural history of mankind which the study of the geographical distribution of all the organized beings now existing upon the earth has disclosed to us. It is a fact which can not fail to throw light at some future time upon the very origin of the differences existing among men, since it shows that man's physical nature is modified by the same laws as that of animals, and that any general results obtained from the animal kingdom regarding the organic differences of its various types must also apply to man."

"We find upon Borneo (an island not so extensive as Spain) one of the best known of the anthropoid monkeys, the orang-outang, and with him as well as upon the adjacent islands of Java and Sumatra, and along the coasts of the two East Indian peninsulas, not less than ten other different species of *Hylobates*, the long-armed monkeys, a genus which next to the orang and chimpanzee ranks nearest to man. One of these species is circumscribed within the island of Java, two along the coast of Coromandel, three upon that of Malacca, and four upon Borneo. Also eleven of the highest organized beings which have performed their part in the plan of the creation within tracts of land inferior in extent to the range of any of the historical nations of men! In accordance with this fact we find three distinct races within the boundaries of the East Indian realm: the Telingan race in anterior India, the Malays in posterior India and upon the islands, upon which the Negrilles occur with them."

In closing he says: "Now there are only two alternatives before us at present—1st. Either mankind originated from a common stock, and all the different races with their peculiarities in their present distribution are to be ascribed to subsequent changes, an assumption for which there is no evidence whatever, and which leads at once to the admission that the diversity among animals is not an original one, nor their distribution determined by a general plan, established in the beginning of the creation; or, 2d. We must acknowledge that the diversity among the animals is a fact determined by the will of the Creator, and their geographical distribution part of the general plan which unites all organized beings into one great organic conception; whence it follows that what are called human races, down to their specialization as nations, are distinct primordial forms of the type of man. The consequence of the first alternative, which is contrary to all the modern results of science, runs inevitably into the Lamarckian development theory, so well known in this country through the work entitled 'Vestiges of Creation,' though its premises are generally adopted by those who would shrink from the conclusion to which they necessarily lead."

THE QUESTION AT ISSUE STATED.

Such are the alternatives presented, and fairly presented, I think, to us. Whether the community of origin of man and the alleged consequence—a Development theory—or a

Creatory one is most accordant with "all the modern results of science," is the question for examination. The advocates of the Development theory, as I have before said, instead of admitting that all men descended from a single pair, or instead of supposing, like Professor Agassiz, that all animals and plants are descended from communities or aggregations of individuals, insist that all animals and plants are descended, with modifications, from few primordial types. Although there are certain gradations of belief, yet they are not held by men most eminent in science. There are those who are willing to admit that all of the equine or horse tribe, for example, may have descended from a single horse-like animal, or all the feline tribe from a single cat-like one; yet the naturalist of wider experience, conversant with the classification of organic beings, contemplating all the conditions of existence, and going back to the times of the past and recognizing the fact of development among animals and plants, is logically and almost inevitably forced to the conclusion, if he admits these variations at all, that all are descended from a few primordial types.

THE THEORY OF DEVELOPMENT.

A statement of a few arguments for this belief may now be submitted. It has been shown in previous lectures that there is an identity of plan among all animals; that the plans are few in number; that there is also a regular subordination; that we find species that agree with each other in almost all essential characteristics, but differing in different ratios; that these species are combined into genera, these genera characterized, as is generally said, by ultimate modifications of structure, and differing also in various degrees. These genera are likewise combined into other groups, into subfamilies and families, characterized in a greater or less degree by fundamental similarity of form, and these families are combined again into orders, these orders into classes, these classes into branches, of which we have admitted five. In the vegetable kingdom we find nearly the same gradation, but with different names attached to some of the groups.

In examining these groups, we find as we ascend from the simple to the more comprehensive that it becomes more and more difficult to find distinctive characteristics for them; that is, it does in the main; there are exceptions. Although these different categories, these different combinations of individuals, of species, are recognized by the naturalist, it is by no means the case that they are clearly and distinctly defined in nature. Every practical naturalist is well aware of that, and the history of science shows well what a conflict there has always been, and still is going on, as to the limits of species and the limits and variations of groups. Take, for example, man himself. It is generally admitted that man forms one species; but Professor Agassiz will maintain that there is an indefinite number of species, for he is not decided upon the number, reserving the question for further study. But though we may variously estimate the varieties or

species, calling them three, accepting the views of Blumenbach; or five, accepting the views of Cuvier; or eleven, with Pickering; or many, with Professor Agassiz, it is impossible to give to each one of those species characteristics which will differentiate them from all others. If we look at the skull, we will find in the same race in the same tomb-yard those which are characterized by both brachycephalous and dolichocephalous forms. And take what character you will and run it through a long series of skulls, and it is impossible to find any one character which will hold good as defining any race. We can call in hybridity to account for this, but the facts exist nevertheless.

Take also the monkeys of the genus *Hylobates*. We find that Professor Agassiz admits ten species, while it is generally supposed that there are not more than seven or eight. There is, however, a reason for this latitude of opinion. These species of *Hylobates* are related together in various degrees. We have one type very distinct from any of the others. We have that one group equivalent in its value, although containing only a single species, to another containing, we will say, seven species, and those seven species so related to each other that they can be variously combined. The differences existing between the most nearly related of these aggregates of individuals have in one case been considered specific, and in the other varietal or individual. There is a difference of opinion also regarding the number of species of the orang-outang, or the genus *Simia*. Some say there are two, some three, and some that all are only varieties of a single species. With regard to the chimpanzee, some say there are three species, others that there are two, and others, again, that there is only one. There is also doubt about the value of the characters differentiating this animal from the gorilla. Some say that the characters are of generic value, others that they are only of specific value. In this case, likewise, difference of opinion prevails with regard to the interpretation of value rather than to the exact form of difference. It is acknowledged by all that difference exists. There is no doubt that the chimpanzee is separated from the gorilla by its smaller size, its less robust frame, its more rounded cranium, the number of the ribs, and the relative size of the incisors. There is no doubt that these differences exist; the only difference between naturalists relates to the interpretation of their value. So, in the same way, there is no doubt of the distinctions between representatives of the groups to which the name of genera, families, orders, and classes have been given; but there are doubts as to the interpretation which is to be given of these differences. Again, we see that although the differences between certain animals are extremely wide, there is still a recurrence in these extremes of the same elements; and though it becomes difficult in extreme cases for one who has not made a thorough study of comparative anatomy, of embryology, and geology to see these similarities, yet to one who is acquainted with these sciences, and who is endowed with

a proper scientific spirit, it is easy to see the transitions from one to the other. But if we limit our studies to one homogeneous group, it becomes easy to institute a comparison. A mere tyro in anatomy can institute a comparison between the various forms of the mammalia. It will be easy for him to recognize in the lowest forms the same bones that are developed in the highest; he will be led to observe the perfect identity of type in animals most widely separated externally.

THE TYPES IN NATURE.

The great types in nature generally recognized are five. These five, as I have said, are distinguished by difference of plan from each other; but even here we find it difficult to say how great is the value of those differences. In the highest forms there is no difficulty whatever in perfectly appreciating the great distinction existing between the groups; but when we descend in the scale, when in every group or branch we go from the high to the low, from the complex to the simple, then distinguishing characteristics become one by one so diminished there is an atrophy of certain organs, or the differentiating characteristics are not manifested on account of the simplicity, that it is difficult to ascertain what are the great groups and branches to which these lower forms belong. At present there is no doubt concerning the vertebrates; that group is well defined. There is no transition between the vertebrates and any other of the branches. But there is difficulty concerning the articulates, and the mollusks, and the radiates. The manner in which the relations of the lowest forms to their respective branches is ascertained is rather by a series of consecutive inductions than by the perception of any single character.

Another matter to be taken into consideration, and which logically follows the consideration of conformity to type, is the existence of rudimentary organs. As has been shown in former lectures with reference to the different forms of the vertebrata, all the important bones are represented to a greater or less extent; but there are some of the bones which are represented in a very rudimentary condition. Take for example the horse. We find that his feet end in single hoofs. We find two small slender bones, one upon each side of the carpal and tarsal bones, that are not apparent externally, which are called the splint bones. Now these bones are nothing but rudimentary metacarpal and metatarsal bones. The single hoof is not the homologue or correspondent of the double hoof of the cow, or the double hoof of the pig. It is rather the homologue of the external of these, and it is the homologue of the third digit in the hand and foot of man; and the two splint bones on each side are respectively the homologues or the representatives of the second and fourth. Now there is no transition in living forms between that type and the type with multiplied hoofs. But let us go back into the past. We find in the early tertiary an animal which in

the general features of its skeleton almost completely resembles the horse; but on each side of the metacarpal and metatarsal bones, instead of small splint bones existing, there are larger and quite well-developed bones which are evidently metacarpal and metatarsal bones, and these are capped by phalanges with hoofs. The rhinoceros on comparison with this animal (which is called hipparion) is found to exhibit the same number of bones in the feet, but then there is a greater hypertrophy of the splint bones of the horse, for instead of being small comparatively, as in the hipparion and the related types, they are very large, so that a hoof with three well-defined toes is the result. Now there is a striking affinity between the equine race and the rhinocerotid race. But if we study the group to which these forms belong in the living world, we find only the tapir, the rhinoceros, and the horse tribe, representing compact, strongly-marked families; but when we examine the animals of the past we find that between these families—trenchant as are their differences in the living world—there exist so many intermediate types that their close affinities can not for a moment be called into question. And this is only one out of many examples. Few groups can be named which can not be taken up in the same way.

AFFINITIES OF SPECIES.

Let us take another illustrating the presence of rudimentary parts. Among the animals of the present day we find that there is a division of ungulate animals into the two groups of the Astrodactyles and the Perissodactyles; that is, those having the hoofs in even number, as the cow and pig, and those having them in odd number, like the horse, tapir, and rhinoceros. If we go back into past times, we find that these forms are not so well defined as in those of the present day. In examining those of our own day, we find that those animals having the toes in even number are again divisible into two well-defined groups, ruminants and non-ruminants. Of the ruminants, the cow is a good example; of the non-ruminants, the pig. These groups among existent animals are strongly distinguished. One of the distinguishing characters, in addition to that of the structure of the stomach and intestinal canal, is the presence or absence of teeth in the upper jaw. All those animals that have a stomach and intestinal system adapted for rumination are likewise distinguished by an atrophy of incisor teeth in the upper jaw; the camel is a partial exception, and retains the external incisors. All those that have a simple intestinal canal have incisor teeth in the upper jaw as well as in the lower. The pig is a well-known example, and to the same group belongs the hippopotamus. Now if we examine the animals of past days, we do not find that these combinations of characteristics exist. Of course we can not know the condition of the intestinal canal; it is only by analogy from comparison of the skeletons that we are able to judge. But the comparison that we are able to make

between the skeletons shows quite a regular gradation of characters from one to the other. Bearing in mind also what has been said of rudimentary organs, in examining these animals of the ruminants, we find that in the young cow or the young sheep there are front teeth developed in the upper jaw, but they do not become functionally developed, and are early absorbed in the gums.

In embryology we have another series of facts which it is important to take into consideration. We find that the animal of a high type, man for example, goes through a series of changes, and that those changes assimilate him for the time being to the various animals which are below him in the scale of nature in a certain ratio to their rank and conformity with type. We do not find, however, exact similarities, and we should not expect to find them; for if Darwinism is true, we should rather expect that there should not be a gradation through a single series, but that there should apparently be divergences from a common type, and that these divergences should increase in ratios approximate to the dissimilarities of the adult forms. Such we find to be the case. The fetus of man at one time is very similar to that of the dog, hog, or porpoise, but not to the adult animals.

COMPARATIVE ANATOMY OF BRAIN.

We compared, on a former occasion, the condition of the brain of man with those of the ape and the lower animals. We see in the marsupials that the corpus callosum is almost entirely wanting, that functionally it might be said to be insignificant; that there is, however, a great commissure which takes its place functionally. Now, if we could examine the brain of foetal man, we should find that almost the same characteristics are represented in him. The brain, instead of being connected by a well-developed corpus callosum, is similarly connected by a rudiment of the corpus callosum, as in the marsupials; and the anterior commissure, as in the marsupials, is likewise well developed. But the resemblance would be still greater between the brains of the young of both forms; the more advanced development, however, causes the likeness to be lost in the adult man. You may also observe the difference in the combinations of bones. In the lower forms the elements of the occipital bone and the elements of the temporal bone of man are separated in all periods of life and persist as true independent bones. In man these elements combine at a very early period and form single compound bones.

GEOGRAPHICAL DISTRIBUTION OF TYPES.

Now let us take into consideration a few facts with reference to the geographical distribution of animals. In the first place there is a distinction of types in proportion to the isolation of areas. We find that in America we have one combination of animals, in Europe we have another; that as we go from the warmer regions of those countries—from this portion, for example, of America, and from England in the Old World—as we go upward

toward the northern regions, we find that the animals there become less numerous, but that there is a greater number common to the two regions, so that when we ascend into the polar regions, almost all the animals of one portion of the world are the same as those in any other portion of the same latitude; that is, in the Arctic regions animals are common to the whole areas of Europe, Asia, and America. Descending again, we find that those species that are common become very rapidly lost sight of; that the areas which they inhabit are soon passed and new species are found, in almost all cases different from those which are found in the corresponding latitudes of the other continents. As we go southward the distinction of types becomes greater and greater. In the regions that we should start from—the latitude of Washington—we find that the number of species common to the several countries was very small, but that there was at the same time a great similarity between many of the species of the two continents, that the species, although not identical, were at least representative, that they belong, in other words, to the same genera. But as we descend farther south we find that the differences become still greater and greater, and that generic differences are often lost sight of, and species become differentiated into sub-families and even into distinct families. There are, for example, in the tropical regions of the New World, monkeys of two different types (the *Cebidæ* and the *Mididæ*); the sloth, the ant-eaters, and the armadilloes among mammals; and among birds, the humming-birds (for the humming-birds form a family with all their numerous groups entirely confined to America), the toucans, and numerous others. But when we institute a comparison between these animals of the tropics, as regards the different continents, we find that although they have now become differentiated beyond the bounds of genera, and as families in many many cases, still there is analogy between them. Although the family of humming-birds is entirely peculiar to America, still it has, in one respect at least, representatives in the Old World in the group called the sun-birds.

Another fact of geographical distribution is the ratio, *ceteris paribus*, of entities in ratio to the isolation of areas. North America, in its whole extent north of Mexico, has little more than two hundred species of land shells, that is, the whole extent of America from a little south of the political boundary of the United States up to the Arctic regions. If we go to the West Indian Archipelago we shall find that that number has almost or quite trebled for single islands. We shall find that Cuba or Jamaica alone has about three times as many species as the whole of North America. In North America we find that its species are distributed over a very large portion of its area; that many of the species extend over the whole area east of the Rocky Mountains, and from the extreme north of at least the temperate region to the Gulf of Mexico. But in

examining the shells of those West Indian islands we find that not only are there great numbers of species, but that those species are not shared by the different islands. Most of the shells of the island of Cuba are peculiar to it, a very small percentage of them being found elsewhere. The same is true of Jamaica; and to a less extent the same may be said of the other islands, the number of species though not being so enormously great. The same facts also appear, but to a more limited extent, with regard to the Philippine Islands. Intermediate regions have intermediate types. If we again avail ourselves of the same shells, and examine those that are found in Texas and those found in this latitude, we find that though some of the former region are different from any found in the latter, more of the species are common to both; but between some of these different species even there are forms which show that there is a tendency to combine. And in the case of others, if a naturalist had but a few specimens from these areas only, he might consider them as very distant species; but when he began to get more, the characters used to differentiate them would be found inconstant, and they would necessarily be considered rather as varieties of the same species than as forms representing several species.

Hence follows another proposition: that the forms scattered over wide areas are variable in approximate ratio to the area.

FOSSIL REMAINS, AND THEIR TESTIMONY.

Let us go from the present world into the one immediately preceding. If we institute a comparison between our living marine shells and the Pliocene, that is, those immediately preceding the present, we find that there is a great similarity between the two. Going back into the Miocene age, we find as we compare it with our own age that the number of species common to the two is less; that the extinct species by far preponderate; and as we go back to the Cretaceous, we find that we have entirely lost all of the living species. But I must explain that although it is generally admitted that there are among Pliocene forms a number that are identical with those of the present day, still there are some naturalists who maintain that no two species have crossed the boundaries between the two formations; and that while naturalists and geologists are now almost entirely agreed that there are no cataclysms in nature, and that there have been none, such maintain that there have been cataclysms, and that there has been an entire extinction of the forms of one formation, and that they have been entirely replaced by those of a subsequent formation. By almost all, however, it is admitted that there is a transition of the animals of one formation into another, and various degrees of persistence in life of such. From the cretaceans found, it has indeed hitherto been generally agreed that there is no such transition; that all species of the Eocene formation are entirely distinct from those of the highest Cretaceous; but of the truth of this view there is great doubt. There is a gentleman in this audience (Professor

Blake) who has come from California, and who could tell us of beds found there that restore the lost link between the animals of the Eocene and the Cretaceous formations. There has lately been some dispute in regard to those beds of California, but the only effect it has upon my mind is to leave the impression that the difficulty is to find where the two formations, the Cretaceous and the Eocene, may be separated.

But from the Secondary Cretaceous, if we take a step backward into the strata of the same period, we find as we go farther back that the forms become more and more dissimilar from those of the present day; but that the transition into proximate beds is gradual. If we go into the Permian we find types of peculiar form; and the Permian was formerly regarded as a formation whose animals indicated that it belonged rather to the Secondary than to the Palaeozoic, and the Carboniferous formations were likewise associated with it in the Palaeozoic. But in this country we have been able to give most convincing proofs of the gradual transition of the Carboniferous (which is now universally admitted to belong to the Palaeozoic period) into the Permian; for when we go out to the West and examine the coal fields and superincumbent beds of Iowa and Nebraska, it is almost impossible to say where the one begins and the other ends. Any line drawn between those two systems—the Carboniferous and the Permian—is completely arbitrary. And if we visit New York or Pennsylvania we shall be convinced of the transition of the Carboniferous and Devonian. So in regard to the relation of the latter and the Silurian, and between the Upper Silurian and the Lower Silurian, until we finally come down to the base of the system. Now, if we take this lowest formation and compare the animals of that period with the animals of the present, we find that they are almost entirely dissimilar, and only have relations with each other as members of classes. But although we have this differentiation of types as we go back into the past, still we find that there are associated with forms entirely dissimilar to any now living certain forms which are like some that still exist; that is, there have been forms persistent through a long series of ages as far as we can go.

Now, if we compare the extinct animals of the different portions of the world, we shall find that they are combined in geographical areas as they now are, and that as we come upward again in point of time, the combinations assimilate themselves more and more in their mutual relations to those which now exist, till finally the element of time in differentiation becomes subordinate to area, and from this we deduce the proposition, that the relations of animals to time and to space are in inverse ratio to each other. For instance, we should find that the animals of the Tertiary of this country were more like those now living in this country than to those of the same age in Australia, but if we examined comparatively those of some older Secondary or Palaeozoic formations, the reverse would be the case; that is, there would be a greater resemblance between the organisms of the respective formations than between the extinct and living ones of the same country.

TRUE NOBLEMEN.

The noblest men I know on earth,
Are men whose hands are brown with toil;
When, backed by no ancestral graves,
Mow down the woods and till the soil,
And win thereby a prouder fame
Than follows king or warrior's name.

The working men, whate'er their task,
To carve the stone or bear the hod—
They wear upon their honest brows
The royal stamp and seal of God!
And brighter are the drops of sweat
Than diamonds in a coronet!

God bless the noble working men,
Who rear the cities of the plain—
Who dig the mines and build the ships,
And drive the commerce of the main;
God bless them! for their swarthy hands
Have wrought the glory of our lands.

ABBOTT LAWRENCE AND ZADOK PRATT;
OR, CITY SUCCESS AND COUNTRY SUCCESS.

SOME of the most thoughtful men of the country have remarked with expressions of concern and regret the growing distaste of our young men for rustic pursuits. East of the Alleghanies two thirds of the bright-minded youths have their faces set toward the cities and the large manufacturing towns. At the West there is the same drift of young manhood toward Chicago, Cincinnati, Pittsburg, and the other inland cities. And yet how often are these mistaken aspirants informed of the fearful hazards of commercial life; how frequently are they told that only one man in a hundred who enters upon a life of traffic gets rich by it; that for every millionaire, the pavements of Broadway and of Wall Street are white with the bones of bankrupts! The glittering success of a Stewart, a Vanderbilt, and a Belmont, and the princely surroundings amid which the latter years of the lives of such men flow on, blind our young men to the facts of the case and prevent their seeing the hundreds who, at the age of sixty, are still chained to the desk and counter, spending three dollars out of every four they can earn for daily subsistence. In order to add the voice of the PHRENOLOGICAL JOURNAL to this general note of warning, we have selected two characters, both alike in one respect, in that they began poor and made themselves rich; the one by legitimate commercial enterprise—the other by rural industries, equally legitimate and equally successful.

Abbott Lawrence, the most brilliant and polished of American merchants, was born in Groton, Mass., in 1792, and died in Boston at the age of sixty-three. Up to the age of forty his pursuits were strictly mercantile; for the last twenty years of his life he was a public man, statesman, and diplomatist. His ancestors were people in humble circumstances, who for a century and a half had tilled their farms in Groton, and his father, Major Samuel Lawrence, served with honor in Prescott's regiment at Bunker Hill, and in many of the severest battles of the Revolutionary war. His

PORTRAIT OF ABBOTT LAWRENCE.

educational advantages were quite limited, and in his sixteenth year he went to Boston with less than three dollars in his pocket and became an apprentice to his brother Amos, then recently established in mercantile business. When he reached majority he was taken into partnership with his brother under the firm name of A. & A. Lawrence, and for many years they conducted a prosperous business in the sale of foreign cotton and woolen goods on commission. After 1830 they became largely interested in Lowell manufacturing companies, and subsequently Abbott Lawrence participated extensively in the China trade. In 1834 he was elected to Congress from Suffolk District, embracing Boston, and as a member of the committee of ways and means showed considerable financial ability. He was prominent in adjusting the Northeastern boundary, and more is due to him than to any other member of the commission for the successful accomplishment of the negotiation. He was an active supporter of Mr. Clay in the presidential canvass of 1844; and in 1848 he came within six votes of being a candidate for the vice-presidency. He was an earnest supporter of Gen. Taylor for President, and was offered a seat in his cabinet, which he declined. From 1849 to 1852 he represented with credit the United States at the Court of St. James, but was recalled at his own request. During the rest of his life he was devoted to his private business. One of the most admirable traits in his character was his benevolence, manifesting itself in daily alms-giving and public charities. The man can be easily read from the face which heads our article. The brain is not large but very well balanced, and the harmony between the developments of the nose and the brow indicates a steady and graceful energy. Such a man is not likely to plan what he can not carry out, nor project anything impracticable. That sort of a brow signifies, in

general, a judicial turn of mind. He was adapted for forming and expressing a clear and sound opinion upon any question of justice, propriety, or expediency which was submitted to him; and during the latter part of his life such questions were being constantly revolved in his mind. This has stamped the face and made it what we see in the engraving. His character in its outline resembled his face. He was a fair, tasteful, graceful, and polished man, incapable of great or original thought, of vigorous or emphatic action, but careful of the feelings and rights of others, a person to whom every species of vulgarity was especially distasteful. He, by his original make-up, and by the habits of a lifetime, was a believer in social distinctions, and a natural aristocrat. We have produced very few persons in this country better adapted for moving in kings' courts than Mr. Lawrence. The atmosphere of St. James was to him native air. But we never look in such harmonious and handsome features for evidences of superior force, originality, or that hardy, irrepressible, masculine vigor which makes the deepest impression upon the age in which it is exercised. Such a man is the flower of the counting-room. It is the best specimen of manhood that traffic alone can produce for us. The wholesale house and the bank, the factory and the committee-room, can make the gentleman of polite exterior, graceful carriage, and faultless dress, the elegant routinist, and the successful negotiator; but the desk and the counter are incompatible with originality, freshness, and versatility.

Turn from this harmonious, bland, affable countenance to the rugged, energetic, original physiognomy facing it; one expresses talent and fine principles—the other, ideas and energy; one is the elegant representative of systematic routine and city polish—the other the embodiment of freedom from conventionality, the incarnation of boldness, of enterprise, fertility of invention. The outlines of his face are as rugged as the mountains of his native country; and the underlying granite of the hills he roamed over in boyhood is scarce firmer than the constitution he inherited from a robust and hardy ancestry. In every feature and on every line of this face is engraved as with steel upon flinty rock the action and purpose that must accomplish his ends. This man could follow in the wake of no other man's thought. He must by the force of his own vital power pioneer his way by new paths to assured success. He does not measure what can be done by any achievements of the past, but carefully surveying the field before him, he sees the possible results, and undaunted by opposition, regardless of difficulties insurmountable to weaker wills, with the goal ever in view he presses on to final victory.

Zadok Pratt was born October 30th, 1790, at Stephentown, Rensselaer County, New York. His father was a tanner, and of him Zadok learned the trade. During his leisure hours he braided whip-lashes, and thus earned quite

a sum. He was then apprenticed to a saddler, with whom he continued till his time expired, when he worked for his father for a year at ten dollars a month. He then commenced business for himself. His first project was to build a shop of his own, eighteen by twenty; and after this was completed and he had moved into it, "I felt then," said he, "half rich." He worked on an average, at this time, fifteen or sixteen hours a day. During the first year of his business life he commenced keeping an exact account of all business transactions, every year making an inventory of his possessions and calculating his profits, which system he adhered to ever afterward. The first year he made five hundred dollars, the second year twelve hundred, which continually increased till 1815. He now sold out his store and went into partnership with his brothers in the tanning business. Conducted with his fine judgment and rare energy it proved highly remunerative to all concerned. In 1820 he sold out his interest and went to Canada to traffic in furs. Only an iron constitution could have endured the cold and exposure he underwent, but he was successful in the object of his mission, and returned with a large purse full of golden "mint drops." Some years previous to this, just to test his powers of endurance, he walked forty miles without tasting food or drink. In 1825 he established among the wilds of Windham, at the foot of the Catskills, his gigantic tannery, the largest in the world. The immense fortune he accumulated, the thriving village that grew up around him, sufficiently attest the success of his enterprise. During these years he gave with unstinted hand to churches of all denominations and to charities of all sorts. His donations amounted to over twenty thousand dollars, and he paid over five hundred thousand dollars as security for friends.

In 1836 Mr. Pratt entered upon his career as a public man and a statesman, being one of the electors of the President and Vice-President of the Democratic party and Representative in Congress of the Eighth Congressional District of New York. In his new sphere he displayed the same traits that in business life were so signally rewarded. He familiarized himself with the duties of his office, and then taking a broad survey of the wants of the country, he set himself to supplying them. We give a few of the results of his labors. His record shows him to be in the best sense a public benefactor. He originated the measure for reducing the postage. He proposed the plan of encouraging and elevating agricultural pursuits, by obtaining various kinds of the best seeds and plants, and distributing them gratuitously to the farmers of the country through the Patent Office. He showed the inadequacy of the material of which the public buildings at Washington are constructed, and moved that granite or marble should be used in their stead. To Zadok Pratt we are indebted for the plan of the General Post-Office and its erection in marble. The Dry Dock in Brooklyn and the

PORTRAIT OF ZADOK PRATT.

branch of the Mint in New York were built at his suggestion. The bureau of statistics and commerce was established at his instance and under his direction. The National Monument at Washington was the conception of his brain, and constructed according to plans submitted by him. He first presented to Congress a memorial showing the importance of a national railroad to the Pacific. In 1845, at his instance, delegations were sent to Corea and Japan to remove prejudices against trading with foreigners, and to extend American commerce. To him we are indebted for the benefits conferred upon agriculture and the mechanic arts by the Smithsonian Institute. He is the author of the movement to engrave patents and distribute them all over the country, to suggest thus by different improvements and models new trains of ideas which may become the germs of future inventions. These are some of the results of Mr. Pratt's public life. All of them look toward the improvement, the enriching, and elevating the great masses of the American people.

In 1846 he closed his extensive tannery at Prattsville, after tanning nearly a million sides of sole leather, using one hundred and fifty thousand cords of bark from ten square miles of bark land, one thousand years of labor, and six millions of dollars, without a single case of litigation.

The wide area of land which had been cleared of hemlock trees by the demands of the tannery was now converted into a large dairy farm. Colonel Pratt kept eighty cows. His stock was of the common breeds of the country, and he endeavored, not so much to see what can be done, as to prove what the common farmer can do. The farm under his management was in many respects a model. On the rocks opposite the gateway he has had cut this inscription: "On the farm lying on the opposite side of the road, 224 pounds of butter

from each cow were made from eighty cows in a season."

Mr. Pratt still lives, with his faculties bright and active as ever; the keen, black, glittering eye shows no dimming of mental vision, and the same restless energy that characterized him in his prime makes him, even now that nearly four-score winters have snowed upon him, still irrepressibly active in social and private life.

There are two or three lessons of great importance that may be derived from the lives of these men. While traffic tends to the growth of cities, centralization, and aristocracy, the country is fertile with democracy and democratic ideas. The city values a man for what he has made—the country for what he can do; hence, as a great number of persons can do useful things, but can not make fortunes, the countryman's estimate of men is more just than the city man's. For that reason he makes the best natural ruler and administrator. In the past history of the United States, the North has been mainly commercial and manufacturing, while the South and West have been chiefly devoted to agriculture; and the men whose ideas and character have governed America, represented agricultural populations. Virginia was the mother of Presidents. In the West, Henry Clay, Stephen H. Douglas, Abraham Lincoln, were as strictly the products of rustic growth as a broad-spreading elm or a giant oak. Look at those statesmen who have made their mark on American society and in American history—Silas Wright, De Witt Clinton, Sam Houston, Thomas Benton, Andrew Jackson, and the public men whose names are mentioned above—none of them came from cities. They were not developed by urban society, they were not types of commercial culture.

The mistake which our young men make is in supposing that a posted man is an intelligent man, and one whose ideas are valuable. To know the precise hour and minute when trains leave their depôts; how to get from one part of the city to another in the most expeditious manner; where to find the best dinner for the least money; which is the best hotel; what tailor will give you the most fashionable cut of pantaloons; the arrival and departure of foreign steamers; the price of gold; how "Gould & Curry" is selling; the merits of the Drew and Vanderbilt controversy; the calculation of interest and percentages—this is not wisdom; ideas of this class do not make the individual strong or able, they do not make communities powerful or nations great. He is the true and permanent benefactor of society who leaves a hundred acres of land in a better condition after fifty years of tillage than they were when he took possession of them; who knows how to grow wheat rather than how to sell it; who understands the relations between supply and demand; who appreciates the value of railroads to farming communities; who would give the poor man, instead of three narrow, ill-ventilated rooms in a tenement-house, at an unrighteous rental, one hundred and sixty broad acres for his perpetual homestead; and the tendency of whose system is not toward piling wealth within the walls of five-story palaces, but sowing it broadcast like the sunshine and the rain of heaven.

On Physiolog.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—*Cabanis*.

My people are destroyed for lack of knowledge.—*Isaiah* iv. 6.

APPETITE PERVERTED.

BY DR. BUTOLPH.

ALIMENTIVENESS is the faculty which confers the desire to take food and drink. Man is possessed of an organized animal body, which requires food and drink for its growth and sustenance. To secure the introduction of proper and sufficient nourishment to meet the needs of his system and prevent the waste and decline of his bodily powers, and through them of the mental, a portion of his brain has been endowed with the capacity of perceiving or feeling the wants of his system; and as if to make assurance of his compliance with his animal wants doubly sure, the delicious sense of taste has been superadded. So far, however, he is only on a par with animals having appetites for food and drink, and nerves of taste to enjoy them.

To enable him to judge rightly in regard to the character and extent of his wants in these respects, and to secure him against mistake in all cases, intellectual faculties have been given him, which, when enlightened, are capable of ascertaining his bodily necessities and of determining the quality and quantity of nutriment which his animal nature requires.

Now, with all these advantages and safeguards, it would seem almost impossible for him to err in a matter so unequivocally plain; and yet the history of the race of man, from the tasting of the fatal fruit by our first parents in Eden down to the present hour, is largely composed of accounts of the disorderly and excessive action of this faculty of Alimentiveness. As before stated, its primary office is to confer a desire and relish for food and drink, and thus insure attention to man's wants as an organized animal; and yet, strange as it should appear to rational beings, and would appear to brutes, could they comprehend the nature and extent of human excesses, man often makes its exercise and gratification the chief object and aim of his earthly existence. Instead of partaking moderately, like quadrupeds, of simple nourishing food from nature's storehouse, and of the clear limpid fluid from her sparkling fountains, man, in his supremacy as a biped, gorges his body with unwholesome food to the bursting, deluges it with artificial drinks to the drowning point; and then, as if his original compliance with the suggestions of that arch-fiend, the serpent, to sin through this greedy faculty did not sufficiently attest the supremacy of his tempter, he resigns the use of legs altogether, and in his debasement imitates both the posture and motion of his reptile counselor; yes, he even exceeds the brutality of the former, and marks his rolling, writhing track, with his own overflowing gore. This form

and degree of excess, however, occurring occasionally, nay, even frequently, is not usually regarded as an indication of insanity, though the loss of balance in both mind and body, through the excessive functional activity of this organ would seem to dictate some such charitable conclusion.

The perverted faculty under notice still goes on in the occasional indulgence of disorderly excesses of this kind for brief periods, permitting its possessor to simulate the character of a man, and then again prostrating him in the dust, until, finally, as if in despair at the degradation to which they are subjected, all his higher human powers yield to the sway of appetite, and he becomes a senseless, useless thing of earth, having the form of a man, the habits of a reptile, and the spirit, only, of a demon or a bottle.

Such are the abuses to which this appetite is subject; and such the sad results to which they inevitably tend in untold numbers of our race; and yet the appointment of a legal guardian to check and restrain the excesses of this body-and-soul-destroying faculty when it had become perverted, is considered a direct infringement of its freedom and vested rights! "Oh, shame, where is thy blush?"

If, however, the destruction of the possessor was the only misfortune attending the excessive functional activity of this organ, the picture of human ill, thus darkly drawn, would be much less painful and revolting; but be it remembered, that the poverty and crime induced by its disorderly action blasts the earthly prospects and deranges parts of or whole families to which such slaves of appetites belong; and thus the evils of which we speak are transmitted to and directly interfere with the health and happiness of generations yet unborn.

TOBACCO.

BY EMMA AUGUSTA THOMPSON.

Now, perhaps, some confirmed lover of the "weed" will elevate his lordly brow and wonder what we have to say about his favorite; and he fortifies himself with a fresh cigar, his way of saying he "don't care a snap." Or if he happens to be of an ill-natured turn of mind, he may grumble out something about "motes" and "beams," "women always harping about men's faults" (poor souls), "don't know that it hurts them any if men do use tobacco," etc. Now, it makes no difference to us who you happen to be—a "retired merchant," a millionaire in a "coach-and-four," an ex-Congressman, or an "ex" anybody else, we beg leave to differ from you. Nay, we *do* differ from you, sir, plainly and pointedly, without your permission, and not merely for the sake of controversy, but with good reasons. Why, we are the very half of humanity who suffer from your disgusting tobacco chewing! Do you know that you are the terror of every neat housekeeper, as well as of every feminine nose of refined sensibilities? Did it ever occur to

you that your most valued lady friend feels glad, sometimes, when you take yourself and your tobacco together out of her front door? And have you any idea how many household blessings are sent after your retreating footsteps, and how many times in an imaginary way your filthy habit is scrubbed out of you under her skillful brush, and its very back-bone snapped up, twisted around, and squeezed out of you through her relentless mop? As much as she may value your friendship, believe me, she despises your pernicious habit.

We have often watched with an amused kind of pity an inveterate tobacco chewer who has entered a neatly-furnished room. How sheepishly he looks about for a spittoon, a seat by an open window, or a convenient corner by the hearth, to empty his mouth of its disgusting contents! And it never fails to remind us of the way little boys look when they are caught in a neighbor's hen-roost. Of course we speak to an intelligent public through the JOURNAL, so we will not address any remarks to the ignorant or besotted wretch, in broadcloth or rags, who never discriminates between a Brussels carpet and a bar-room floor, a lady's dress and the pavement; whose very skin and clothes seem to be saturated with tobacco odor, whose very perspiration seems to be distilled tobacco juice, who makes a match safe of his vest pocket, and a stove pipe or a mortar of the mouth God gave him for a better purpose. We are not writing these things at random, merely for the reader's amusement or disgust, as the case may be, but because they are facts, and show the deplorable effects of this beastly habit. My dear young lady, you do not know but that your perfumed Leander, in patent leathers and lavender kids, who smokes his fragrant Havana so daintily and drinks your precious health so gracefully among his boon companions, may one day personate this fearful picture! We can offer you no assurance to the contrary, for what has happened a thousand times may happen again. The "honeymoon" may hardly get to be an old song when those marvelous preparations for "purifying and sweetening" the breath, so indispensable to the lover, will be considered a superfluous item in the domestic catalogue, and what you at first thought to be only a harmless pleasure will after a while become a source of perpetual annoyance in your household and a "skeleton in your cupboard."

Much has been said and written upon this subject, but it is not "threadbare" yet, and never will be so long as tobacco grows. Besides, we have a kind of individual right to speak of it, for among our very earliest "adventures" comes the dropping of a great coal into our baby bosom from the paternal "meerschau," balanced above our little brown, curly head resting in fancied security against the paternal vest pattern. We might be cheated into the belief that it was only an ugly dream, but the scar remains to "tell the tale!"

We would say a few words to our boys, our dear young boys, who are to be our men some day, and the husbands, fathers, and grand-

fathers of future generations; but more particularly would we address those who expect to depend upon their own exertions for support, and with their own strong right arms and brave hearts carve out a name and "make a mark." Just as soon as you begin to feel that life is to you no holiday, and that there is something for you to do, then you are beginning to individualize yourself, to form your habits, and to make of yourself what you will be in all your after-life. Then you shoulder the knapsack of your own responsibility and set out upon the great highway of life to seek your fortune.

At this very period boys are apt to think it looks "manly" to smoke a cigar or take a chew of tobacco. Manly! There never was a greater mistake. We do not like to say it looks dishonest to see a boy chew tobacco, but we will say that a cigar in a boy's mouth, or the smell of tobacco about him, is *not* a recommendation. Why, if we happened to be the noted merchant "Mr. Stewart" or "Mr." somebody else, controlling a large business, and a boy should present himself to us to obtain employment, holding up his head as though he were not ashamed of his business, and say in a tone with a ring of true coin in it, "I never use tobacco, sir," would we examine the texture of that boy's clothes, or take into account the patch on his elbow? Would we expect to find the germ of a drunkard or a thief, or a lazy, idle, good-for-nothing lout inside of that boy's jacket? No, indeed! There is the self-denial of true "manliness." There is the spirit that will rise above circumstances and privations, the germ that will unfold the strength and vigor of true manhood. We would ask no better recommendation. We would find something for that boy to do, and hold out our hand in kindness and encouragement to bid him God-speed.

It is simply disgusting to see a man chew tobacco, but it is melancholy to see a boy. We can hardly help picturing him an easy prey to other temptations, and associating his future life with other more appalling evils. It suggests nothing pure, nothing elevating. Never begin it, boys. If you have money to spend, buy books, and cultivate the higher and nobler part of your natures. If every boy can't be a lawyer or a senator, every boy can be a MAN. So when you pack up the knapsack of your future self, set tobacco in your "catalogue of negatives;" set your boy's boot upon it with a good firm stamp that will keep you free from its polluting touch, and mature age will find you a healthier, wiser, and richer man.

PRESERVING YOUTH.—Cardinal de Salis, who died 1785, aged 110 years, said: "*By being old when I was young, I find myself young now I am old.*" I led a sober and studious, but not a lazy or sedentary life. My diet was sparing, though delicate; I rode or walked every day, except in rainy weather, when I exercised within doors for a couple of hours. So far I took care of the body; and as to the mind, I endeavored to preserve it in due temper by a scrupulous obedience to divine commands."

"LIKE BEGETS LIKE."

"The sins of the fathers are visited upon the children."

BASKET in hand, I entered the store, and asked for nuts (I was buying for Christmas), without noticing a boy who sat upon a barrel near me, until he exclaimed, "Nuts! nuts! what do you want of nuts?" Poor boy! he looked as if no one ever bought nuts for his Christmas. He had a difficulty of vision painful to behold—it seemed an effort to look you in the face. It was not from shame or modesty, for the boy was a vagabond, but evidently a constitutional defect. Without raising his head, his eyes were elevated with a leer so like a drunkard's, with an expression so far beyond his years, that I was struck with the expression. Upon a slight examination of his head and physique, I could discover no such defect as would account for the eccentricity. In pity I gave him an apple, when the storekeeper told him to "cluck and crow" for it. Turning his back to me I heard an old hen's clucking as if in search for a soft, downy spot for her unlaidd egg; then, standing upon his feet, he faced me, pulled his hat down over his eyes, raised himself upon his toes, slapped his sides with his hands as a rooster would flap his wings, and crowed after the fashion of the genuine shanghai. It was done so naturally, that it were easy to fancy oneself in the barnyard. Afterward he told me his name, and that his "father and mother had turned him out doors"—one, or both, being drunk. I knew something of the family. Of eight children, half are in the "county-house," from whence this boy had run away.

What a sad life he has before him!—the curse of the drunkard's obscured mind stamped upon him at its birth. When I looked upon my own two-year old a few hours afterward, I thanked God that its father's beverage was "pure water."

A. B. C.

THE SANITARY INFLUENCE OF LAUGHTER.—"Laugh and grow fat" is an aphorism which needs little argumentation to sustain it. To be happy we must be cheerful; and to render that cheerfulness truly enjoyable, one must now and then yield to mirthful impulses. As a healthful agent, a full-chested, "hearty" laugh is unrivaled. When his patient smiles, the doctor takes hope.

A clerical friend, at a celebrated watering-place, met a lady who seemed hovering on the brink of the grave. Her cheeks were hollow and wan, her manner listless, her steps languid, and her brow wore the contraction so indicative both of mental and physical suffering, so that she was to all observers an object of sincere pity.

Some years afterward he encountered this same lady, but as bright, and fresh, and youthful—so full of healthful buoyancy and so joyous in expression—that he began to question if he had not deceived himself with regard to her identity.

"Is it possible," said he, "that I see before

me Mrs. B., who presented such a doleful appearance at the springs a few years ago?"

"The very same."

"And pray tell me, madam, the secret of your cure? What means did you use to attain to such vigor of mind and body—to such cheerfulness and rejuvenation?"

"A very simple remedy," returned she, with a beaming face. "I stopped worrying and began to laugh—that was all."

OUR HAIR.

Is it actually the truth that the elaborate foundations whereupon the women of the year 1868 build up the superstructure of their tresses are masses of loathsome torpidity—we can scarcely say of life? We are compelled to answer, yes. Seeing is believing, and we have seen—through a magnifying glass, darkly!

And what was it that we saw? The hair, magnified to resemble small ropes, each studded with clustering masses, perhaps two or three on a hair, like swarms of bees as they hang from trees, or the unsightly excrescences called "Black Knot" that deform our plum and cherry orchards. A hair plucked direct from the head of the horrified wearer of "gregarines" presented a smooth surface, perfectly free from these hideous parasites.

"Why?" we gasped, almost unwilling to believe the evidence of our own senses—"why is it that 'curls,' and 'switches,' and 'foundations' are all so infested?"

"Much of the imported hair is brought from graveyards," was the reply of our scientific authority. "The dead are rifled for the sake of the living, and the hair that has long lain in coffins can hardly be a healthful appendage to living cerebellums. A great deal, moreover, is cut from the heads of Circassian women, who are—well, they are certainly *not* celebrated for their personal cleanliness!"

Well, what are we to do, thus confronted with bare, indisputable facts? The fact that these insect millions—for each one of these excrescences is said to contain something like ten hundred thousand gregarines—are in a state of torpidity, requiring such heat as only is evolved from chemists' furnaces to quicken them into life, is very little comfort. Boiling will not kill them—baking only starts them into vigor—brushes are powerless upon them. The hairs which we saw magnified had previously been repeatedly rubbed and wiped upon pocket handkerchiefs without being able to remove the clinging swarms!

What are we to do? Are we to heat our brains with piled-up cushions of "Circassian" hair and graveyard spoils? Are we to make ourselves hideous, simply to be in the fashion? Forbid it, good sense, cleanliness, self-respect. Sooner would we shave our heads and go about with pates like Franciscan monks! Let us have a new state of things! let us wear our hair as Nature intended it should be worn, pure, clean, and graceful! For once, let Fashion and Reason coincide.

A LADY.

EMINENT ROMAN CATHOLIC CLERGYMEN.

BIOGRAPHICAL SKETCHES, WITH PORTRAITS.

ON the opposite page we publish our ninth group of representative American clergymen. The denomination which these reverend gentlemen advocate and earnestly seek to advance in number and influence is already one of the most powerful on this continent; while in the United States proper the religion of Rome, fostered by universal toleration and disseminated by the multitudes of immigrants from countries essentially Roman Catholic, seems in a fair way to attain ere long among us a position second to no other denomination. Its rapid growth is marked by the numerous church, educational, and charitable edifices everywhere erected or being erected. Especially is its strength and extension marked in the States of the West, where the finest buildings for religious and educational purposes are in nearly every instance the property of zealous, enterprising Catholics. The Cathedral of St. Paul and St. Peter in Philadelphia is probably the largest church edifice in the United States.

According to the *Catholic Almanac* for 1865, there were in this country seven archbishops, thirty-seven bishops, five vicars apostolic, three mitred abbots, and about 2,400 priests, with a Roman Catholic population of nearly 4,500,000. At present the number can not be far from 5,000,000.

In considering the portraits composing our group, we are struck by one expression common to all—it is a deep, settled gravity. In some, to be sure, this expression is more strongly marked, and appears the outgrowth of natural or acquired asceticism. In nearly every instance the intellectual faculties are well developed, and that species of intellectual force prevails which inclines one to close study and meditation. Probably the most practical "Father" of the group is Rev. Sylvester Malone, who seems at the same time to possess an exuberant good-nature and strong social qualities. Rev. J. P. Woods exhibits considerable breadth of forehead, indicating good reasoning ability, unusual vivacity, and a strong appreciation of the humorous and comic. Tune is also large with him. We infer from the photograph that Archbishop Spalding possesses an excellent memory of details or minor facts. Benevolence is largely shown in most of the portraits, especially in those of Archbishop Spalding, Bishop Lynch, and Revs. Thomas Farrell, I. T. Hecker, Thomas Preston, and James Keogh. Among those who are distinguished for strength of will, and for those forceful elements of character which impart boldness, opposition, or aggression, we may specify the archbishops, and "Fathers" Malone, Farrell, and Hecker.

It is to be lamented that several of our portraits do not fully meet our wishes, owing to the inferior photographs which were the best we were able to procure.

THE MOST REV. MARTIN JOHN SPALDING, D.D., Archbishop of Baltimore, was born in Kentucky, early in this century. He graduated at the Propaganda in Rome, and after being ordained priest, served in that capacity for several years. On the 10th of September, 1848, he was consecrated Bishop of Legone, and coadjutor to the Right Rev. Dr. Flaget, Bishop of Louisville; in 1864 he was, in accordance with a papal bull, appointed to succeed the late Archbishop Kenrick in the see of Baltimore, and on the 1st of August, 1864, he was consecrated for such position with the usual ceremonies. On the 25th of July, 1868, the Congregation of the Propaganda, by a decree which was confirmed by his holiness Pope Pius IX., granted the prerogative of place to the see of Baltimore, thus making the Archbishop of that see the Primate of the Roman Catholic Church in the United States, and thus giving him the seat of honor above all other archbishops, without regard to promotion or consecration. In accordance with this decree, Archbishop Spalding presided over the Council of Catholic prelates that assembled in Baltimore last year, and delivered the opening address, which was extensively copied by the press of the country at that time; the address was a brief and remarkably lucid and able review of the Catholic Church, together with a resume of its progress in America. The Roman Catholic Church in the United States has never probably possessed a prelate of greater ability, and one more untiring in his efforts to promote the cause of his religion. An accomplished scholar and a profound theologian, he long since became widely known through his writings on religious subjects. Commencing first as a writer of reviews, he soon attracted considerable notice by the vigor with which he attacked those authors who differed from his Church, or who attacked its infallibility. His "History of the Reformation," published in two large volumes, is one of the most searching and exhaustive accounts of the great schism from the Catholic Church that has ever been written, and is ranked among the standard theological works in America. He also published "Evidences of Catholicity," "Sketches of the Early Catholic Missions in Kentucky," "Miscellanea," together with other works, all of which have commanded large circulations, and are still regarded as among the ablest defenses and expositions of the Roman Catholic religion.

THE MOST REV. JOHN McCLOSKEY, D.D., second Archbishop of New York, was born in the city of Brooklyn, N. Y., in the year 1810. At an early age he studied for the priesthood, and in January, 1834, was ordained priest by Bishop Dubois. Soon after his ordination he was appointed pastor of St. Joseph's Church in New York. In 1844 he was consecrated Bishop, and appointed coadjutor to the Archbishop of New York, and in 1847 he was transferred to Albany when that city was erected into a new diocese, and on the 21st of August, 1864, was installed with the usual ceremonies Archbishop of New York, to succeed the late lamented Archbishop Hughes.

Archbishop McCloskey is considered one of the most polished orators in the Catholic Church in the United States. In his private character he is known as possessing all those virtues which endear man to his fellow-man; possessed of a kind and charitable heart, he is constantly engaged in the endeavor to alleviate suffering and to elevate the moral and social standing of those intrusted to his care.

MOST REV. JOHN BAPTIST PURCELL, D.D., Archbishop of Cincinnati, was born in Mallow, County of Cork, Ireland, about the year 1798, and came to the United States while yet a boy. After receiving a preliminary education here, he was sent to finish his studies at the famous seminary of St. Sulpice, in Paris, where he graduated with high honors; he was ordained priest, and returned to the United States about the year 1822. He was soon after appointed president of the well-known Catholic College and Seminary of Mount St. Mary's, Emmettsburg, Md. In accordance with a special bull from the Pope, he was appointed Archbishop of the see of Cincinnati, and consecrated Bishop, October 13th, 1833. About the year 1840 he became well known by his controversial letters (which were published in two volumes) with the famous Dr. Campbell, founder of the Campbellites, on "Catholicity vs. Protestantism." Dur-

ing the late war he took a prominent part in sustaining the Government, both by voice and pen; he was also among the first to urge through his official organ (the *Catholic Telegraph* of Cincinnati) the abolition of slavery in the Southern States.

THE RIGHT REV. P. N. LYNCH, D.D., Bishop of Charleston, S. C., was born in South Carolina about the year 1812. After receiving a preliminary education in the United States, he went to finish his ecclesiastical studies at the College of the Propaganda in Rome, where he was ordained priest. He then returned to the United States, and labored in South Carolina as a zealous priest. On March 14th, 1858, he was appointed and consecrated Bishop of Charleston, to succeed the late Bishop Reynolds.

At the commencement of the late war, Bishop Lynch became well known throughout the country by his correspondence with the late Archbishop Hughes, in which he championed and advocated the "justice of the Southern cause," and tried to controvert the well-known Union views of Archbishop Hughes. In private life, Bishop Lynch is beloved for his many noble traits of character, especially for that of benevolence. He showed much kindness to Union prisoners of war in Charleston. As a preacher, he is well known for his eloquence. After the close of the war he preached in nearly all the Catholic churches in New York in aid of the destitute poor of Charleston. His goodness and piety have endeared him to the Catholics of America generally.

VERY REV. DENNIS DUNNE, D.D., Vicar-General and Administrator of the Diocese of Chicago, born in Queens County, Ireland, February 24th, 1824. Early in the following year his family emigrated to Miramichi, in the northern part of the Province of New Brunswick, where, under the guidance of pious parents, he early evinced a decided disposition for the priesthood. At that time there were but few Catholic collegiate institutions even of a preparatory character, either in the United States or the British Provinces. That in Prince Edward's Island, founded by the late lamented Bishop McDonald, was the most distinguished for affording to the student a thorough knowledge of the classics, mathematics, etc., necessary to form the foundation of a sound and wholesome theological education. Under the tutelage of the celebrated John Slattery, who afterward entered the Society of Jesus, and was one of the best classical teachers and critics of his time, the young Dunne quickly acquired the knowledge necessary to fit him for the study of the higher branches. As a school-boy, he manifested those qualities of sound judgment, and that peculiar tact for conciliating his fellow-students, without offending any but attracting all, which have since been frequently applauded by the men of stronger passions and sturdier intellects whom he has been commissioned to direct.

Having finished his preparatory studies, he entered the theological department of the University of Laval at Quebec, from which in deacon's orders he went to Chicago, his family having in the mean time emigrated thither. During the vacancy in the diocese caused by the death of Bishop Quarter, he was ordained priest by Bishop Lefevre, of Detroit, and immediately entered upon the arduous duties of a missionary in the diocese of Chicago; this was in 1848, when that unexplored diocese had but few priests, and their perilous labors were almost unknown beyond their extensive sphere. After the transfer of Bishop Vandeveldt to the diocese of Natchez, his successor, Bishop O'Regan, aware of Mr. Dunne's zeal and influence among the clergy and of his administrative talents, promoted him to the position of vicar-general, which he still holds, with credit to himself and satisfaction to his superiors. His labors in the cause of Catholic charity as well as of philanthropy are visible in the institutions which for the protection of the orphan and the reformation of the juvenile delinquent he has founded and fostered in the Garden City of the great West. He was the first in the United States to reduce to practical form the idea of those peculiar institutions which have since flourished so effectively under the zealous direction of Father Haskins at Boston, and the lamented Dr. Ives at New York.

At present, during the protracted absence of Bishop Duggan, the entire burden of a large diocese comprising

106 priests according to the *Catholic Almanac*, rests upon his shoulders, and by every one his administration is acknowledged to be most satisfactory.

A most determined opponent of slavery as he is of tyranny, at the commencement of our national struggle he vigorously espoused the cause of the Union and freedom. By his own exertions he placed in the field, fully armed and equipped, the gallant 90th Illinois Infantry, so famous in our war history on every field from Vicksburg to Mission Ridge, where by companies, including their brave Colonel O'Meara, they freely poured out their life-blood to uphold and advance the flag of their adopted country.

In person, the Very Rev. Dr. Dunne is tall and dignified, with a face expressive of qualities eminently social and attractive, and withal of unmistakable firmness.

REV. THOMAS FARRELL was born in Longford, Ireland, in the year 1820, and came to the United States while yet a child. He received his ecclesiastical education and graduated at Mount St. Mary's College, Emmetsburg, Md., and was ordained priest in the year 1847. He engaged at first in missionary labor; then became pastor of St. Paul's Church, Harlem, and afterward at St. Mary's Church, Grand Street. In 1857 he was appointed pastor of his present church (St. Joseph's, corner of Sixth Avenue and West Washington Place), one of the oldest and most influential congregations in New York.

During the late war Mr. Farrell was well known for his earnest and uncompromising advocacy of the "cause of the Union," and was a consistent and steadfast opponent of human slavery, believing firmly in the rights of man to life, liberty, and the pursuit of happiness. During the dark days of the rebellion our Government had among the clergy North no more steadfast champion, and republican institutions no firmer and sincerer friend than Thomas Farrell. As a scholar and theologian, he is ranked among the foremost divines of the Catholic Church in the United States. As a preacher, he belongs more to the solid than to the brilliant order. As a great lover of truth, he is known and beloved by men of all denominations for his noble qualities of heart and mind. Among his brethren of the clergy he is looked up to with the greatest respect and affection, so much so, that it is remarkable how many go to him for counsel and advice, and what implicit faith they place in his judgment and understanding.

REV. ISAAC THOMAS HECKER was born in New York, Dec., 1819. He received his education in this city, and entered into business with his brothers in the well-known milling and baking establishment of Hecker Brothers. He passed the summer of 1843 with the Association for Agriculture and Education at Brook Farm, West Roxbury, Mass., and subsequently spent some time in a similar institution in Worcester Co., Mass. He returned to New York in 1845, and became converted to, and received into, the Roman Catholic Church. Soon after taking this step he determined on entering the Congregation of the Most Holy Redeemer, and after making his novitiate at St. Trond, in Belgium, was admitted to the order in 1847. On the completion of his ecclesiastical studies he was sent by his superiors to England, and in 1849 was ordained priest by the late Cardinal Wiseman. He passed two years in England, engaged in missionary work. In 1851 he returned to New York, in company with several members of his order, and for the next seven years was constantly employed in missionary labors in various parts of the United States. In 1857, having visited Rome, Father Hecker with some of his colleagues were released by the Pope from their connection with the Redemptorists, and in 1858 he founded with his companions a new missionary society under the name of the Congregation of St. Paul the Apostle, whose church and monastery are at the corner of Ninth Avenue and Fifty-ninth Street. Father Hecker is the author of "Questions of the Son" (1855), and "Aspirations of Nature" (1857). While in Rome he published two papers on Catholicity in the United States, which were translated into several languages, and extensively read in Europe and America. About two years ago he started in this city the *Catholic World*, a monthly magazine of great literary ability, devoted to the interest of the Catholic Church. He is also well known as an able and eloquent lecturer on religious and secular subjects.

REV. SYLVESTER MALONE was born in Meath, Ireland, in the year 1821, and emigrated to the United States when but seventeen years of age. While yet a mere boy his heart yearned for God's holy sanctuary, and accordingly he entered St. John's College, Fordham, where he graduated. He was ordained priest in 1844, and sent to the eastern district of Brooklyn, then known as the city of Williamsburg. The population then was only 10,000, and there was no Catholic place of worship there. The energy and zeal of Mr. Malone soon showed itself; he had been there but a short time when he had built one of the handsomest and most substantial churches in the diocese, well known as Sts. Peter and Paul's Church. It may be here remarked that Mr. Malone was the first priest to introduce the Gothic style of architecture into the building of Catholic churches in this country, and his architect (P. C. Keely) has since designed over three hundred in that style. The Williamsburg that he knew with no Catholic church now has twelve, all grown out of his parish, to testify to his zeal and earnest work as a faithful minister. In the twenty-four years that he has resided in Brooklyn there is no name more honored and esteemed and spoken of with more affection by men of all creeds than the name of Rev. Sylvester Malone. As a pulpit orator, he is eloquent and fervid; his sermons are all extempore, and of a pure, elevated style. During the late civil war his patriotic record will long be remembered by every lover of free institutions. Perceiving at once that the dissolution of the Union would be the end of self-government everywhere, he threw all his influence, moral and social, on the side of our Government; his whole instincts yearned for freedom, and no man's heart beat gladder than his when it was announced that American slavery was at an end. When the great fair for the benefit of the Sanitary Commission took place, he was one of its most active supporters. When his ward committees were trying to raise their quota for the army, he, unsolicited, generously gave one fourth of his salary for a year for that object. It may truly be said of him that "he is more American than the Americans themselves." As a minister, he is distinguished for an intense desire to instill and disseminate the principles of Christian charity, avoiding all sectarian controversy, and illustrating the truth of his religion by a life replete with good deeds to his fellow-man.

REV. THOMAS S. PRESTON was born in the State of Connecticut in the year 1824; was educated and graduated with distinguished honors at Trinity College, Hartford, and was ordained a minister of the Protestant Episcopal Church in 1844. He became assistant minister of the Church of the Annunciation (Dr. Seabury's), of New York city, and afterward in St. Luke's Church, the well-known Rev. Dr. Forbes being at that time pastor. The great tractarian movement of Dr. Pusey, which was then in agitation, and which brought so many inquiring Protestants within the Catholic Church, had its effect on the subject of this sketch, who, with his associate, Dr. Forbes, embraced the Roman Catholic religion, and were received into its communion in 1849. In 1850 Mr. Preston was ordained a priest, and appointed an assistant pastor at the cathedral. In 1855 he was appointed Chancellor of the diocese—a position of high honor—which he still continues to hold in connection with the rectorship of St. Ann's Church, to which he was appointed in 1861. Father Preston is known as a ripe scholar and dogmatic theologian, and an eloquent divine. As an author, he has published several religious and devotional works, among them "Controversy of Reason and Revelation," "Lectures on Christian Unity," a Volume of Sermons, etc.

THE REV. JOSEPH P. WOODS was born in New York in the year 1836, educated under the Jesuit Fathers, and graduated with the highest academic honors from St. Francis Xavier College. He then entered St. Joseph's Theological Seminary, Fordham, and was elevated to the priestly office about the year 1857 by the late Archbishop Hughes, who appointed him assistant pastor of the cathedral. Here he made hosts of friends. He loved the work of the ministry, finding in it his highest and purest joys, as well as his severest trial. He showed himself the sympathizing friend of the people, studying their characters, that he might the

better know how to correct them. After four years' arduous labor in the cathedral parish he was appointed pastor of St. Augustine's parish, Morrisania, extending from Harlem bridge to Fordham, where he is the idol of his people, and ever spoken of with respect and esteem. In stern religious and moral feeling, in moral courage, in honesty, in fidelity, in charity, in patience, he holds in supreme contempt all arts to obtain popularity; independence and integrity are to him of priceless worth.

"His honor, his life both grow in one;
Take honor from him, and his life is done."

The mental qualifications of Father Woods are of a high order, and, moreover, they are under the rigid discipline of a strong understanding. He is an occasional contributor to some of our weekly and monthly magazines, and we hear that he is engaged at present preparing a religious work for publication. Kindness constitutes a prominent element of his nature. Music and the fine arts have always been cherished and cultivated by him with the greatest affection. Not only does he perform himself, but he is endowed with a rich voice. In the pulpit this gentleman is at home. His preaching is more instructive of late years than rhetorical; the ardor of poetical fire is tempered into the genial glow of a healthful enthusiasm. The fluency and beauty of his language, his earnest manner, his action, conspire to make him an effective speaker. He is all nerve—each sense, each faculty is absorbed in the great subject of his thought. His memory supplies quotations learned and to the point; his imagination calls each poetic fancy quick to his aid, and his love of music attunes itself to all the varied tones of his discourse, awakening in every breast the sentiments and impressions of his own. In delivery he is bold and commanding, and some of his best and most happy addresses have been extemporaneous flashes. Father Woods is considered one of the most promising and rising divines in the Catholic Church in this diocese.

REV. EDWARD MCGLYNN, D.D., was born in New York in the year 1837, attended the public schools of that city, and graduated from the Free Academy. He then determined to prepare himself for the priesthood, and went to finish his ecclesiastical studies at the American College of the Propaganda in Rome, where he graduated with distinguished honors, and was ordained priest in 1860. During the war he served as chaplain in one of the army hospitals for three years. In 1865 the late Rev. Dr. Cummings requested the appointment of Dr. McGlynn as his assistant, which was granted, and after the death of Dr. Cummings, Dr. McGlynn was appointed pastor of St. Stephen's Church, of this city, one of the wealthiest and largest congregations in the United States. In preaching, Dr. McGlynn belongs to the solid and persuasive school; his language is pure and elevated. He is alive to the genius of American institutions, but no less active in extending the influence of the Catholic Church in America. We might instance several of his lectures, especially one which he delivered in Cooper Institute about a year ago, advocating the progressive character of the Catholic Church, in which he displayed sound reason and good judgment. In private life Dr. McGlynn is admired and beloved for his genial and social qualities—in a word, he is the incarnation of sincerity.

REV. JAMES KEOGH, D.D., was born in Ireland, and is now about thirty-five years of age. During his infancy his parents emigrated to the United States, and when ten years old he was sent to receive his preliminary education from an aged clergyman in Pittsburg, Pa. The young student displayed unusual talent; in fact, when but fourteen years old he was considered quite a prodigy, because of his proficiency in classical studies. He was soon after sent to the College of the Propaganda in Rome, to finish his theological studies. He graduated with high honors. At the end of his theological course, when but eighteen years old, he prepared a thesis treating of mental philosophy. Being yet too young, according to canonical usage, to be ordained, he remained in Rome continuing his studies. In November, 1856, he delivered a public defense or thesis from "*Universal Theologia*" in the presence of his holiness Pope Pius IX., the cardinals, and other dignitaries of Rome. In consideration of the

manner in which he acquitted himself, Pope Pius IX., by his own hands, presented him with a valuable copy, in mosaic, of Raphael's "Madonna of the Saggiola." He was then ordained priest, and afterward returned to the United States, since which time he has chiefly been engaged as Professor of Theology in the Catholic seminaries of Pittsburg and Philadelphia. At the great Catholic Council held in Baltimore last year he was one of the chief lights. Some months previous to the meeting of the Council, by appointment of Archbishop Spalding, he, in conjunction with Rev. Dr. Corcoran, of North Carolina, was engaged in preparing the Latin volume which was the basis of the discussion of the Council. As a preacher Dr. Keogh is judicious and happy. He has a prodigious memory, and probably will be better known as a teacher than an orator. He is also editor of the *Philadelphia Standard*, the official organ of the Catholics of Philadelphia.

CARDINAL DOCTRINES.

The Catholic Church teaches that there is an all-perfect, eternal, spiritual Being, called God, who is possessed of infinite intelligence and free will, and who has of His free will created all other existences, both spiritual and material, *out of nothing*, with natures and substances totally distinct from His own, and not by any mere development or emanation from the Divine nature.

In this one God there are three persons—the Father, the Son, and the Holy Spirit; each with one and the same divine nature.

That the human race was from the beginning elevated beyond its natural deserts to a condition of grace and communion with God, the consummation of which was to be a more perfect and everlasting communion with Him in the beatific vision which is called Heaven. That by violating the Divine law the race forfeited these gratuitous gifts, which were *supernatural*, without losing anything that its *nature* absolutely requires; so that man could have been created as he is now born; but that the individuals of the race incur, moreover, a penalty for their individual sins. Thus, those who die unregenerate, are excluded from heaven, and condemned to suffer the consequences and penalties of their personal sins, in that condition of being which is called hell, and which, as well as heaven, is, from the immortal nature of the soul, everlasting; and even the infant who dies unregenerate, no matter what degree of *natural* beatitude it may enjoy in the next life, has no right to, and will not attain to, the superior happiness of heaven.

That to restore man to the grace of God and the promise of heaven, and to atone for sin, the Second Person of the Blessed Trinity became man, was born of the Blessed Virgin Mary, and suffered and died on the cross. He (Jesus Christ) is true God and true man, having two natures, the divine and human, in but one Divine Person, Christ's humanity never having had a mere human personality, as it was from the first instant of its existence made His own by the Second Person of the Blessed Trinity.

Christ is the new Adam, the Father of the order of regeneration. He came to regenerate men, in a manner adapted to their intelligence and free will, by teaching a system of truth and guiding and disciplining their affections; and hence He requires of us faith in His teachings and obedience to his ordinances. Besides the atonement, which Christ consummated on the cross, the other essential part of His mission, viz., the application of this atonement, and of His doctrine and ordinances to individual souls, He but *began* during His mortal life, and continues through a corporate Society which He has established for the purpose, and which He called His Church, and commissioned to teach, and gather into one fold, all nations, and with which He and His Holy Spirit are to abide to the end of the world; so that Christ is the Church, "His Body," as it is called by St. Paul, is living, and teaching all other ages and nations, with the same authority and explicitness with which He taught the nation and age in which He lived His mortal life. He has made His Church the depositary of His doctrine and ordinances, and has given her a well-defined constitution, power, mission, and means for its fulfillment, which she has no power to change, being the creature and not the creator of this divine constitution, which Christ has declared should last till "the consummation of the world."

The Apostles and their successors, the Bishops, are the teaching and governing body of the Church. One of the Apostles, Peter, was made by Christ chief and head of His Church (Matt. xvi.) and chief shepherd of His whole flock. (John xxi.) He (Peter) made Rome his See, and his successor, the Bishop of Rome, inheriting his authority, is the chief bishop, the center of Unity, and visible head of the Church, of which Christ is the invisible head and the Holy Ghost is the animating spirit. It is not the mission of the Church to invent or reveal new doctrines, but simply to transmit, expound, and define the original deposit of faith. This deposit of faith she does not gather from the Scriptures alone, the authenticity and inspiration of which she upholds, but from her own self-consciousness and her universal teachings, traditions, and practices; she being in her corporate capacity a cotemporary of Christ and His Apostles, as well as of every subsequent age, and an eye-witness and ear-witness, appointed for the purpose, of the teachings and ordinances of Christ. The living Church is really Christ's last will and "testament" to the world, of which the written book is on its face and by its own confession (John xxi.) but an imperfect fragmentary record. It is the mission of the Church to enforce Christ's law and apply His ordinances, chief among which are those solemn religious rights called sacraments, which are the outward visible signs and channels of the inward spiritual grace of Christ to those whose minds and hearts are properly prepared by faith and repentance to receive them.

There are seven sacraments established by Christ, viz., 1. Baptism, the sacrament of regeneration and initiation into the Christian Church. 2. Confirmation, in which a special gift of the Holy Ghost is received to perfect and confirm the Christian character in baptism. 3. The Eucharist, or sacrament of Christ's Body and Blood—the food of the spiritual life. 4. Penance (the spiritual medicine), for the forgiveness of sins committed after baptism. 5. Extreme Unction, to comfort and strengthen the dying. 6. Orders, for imparting the priestly and episcopal power. 7. Matrimony, for the confirming and sanctification of Christian marriage; the bond of which when once consummated the Church declares to be absolutely indissoluble.

The consecration, offering, and receiving by the priest of the Eucharist constitutes the Eucharistic sacrifice, which is commemorative of the sacrifice of the cross (1 Cor. xi.), and which, with the accompanying prayers and ceremonies, constitutes the solemn religious rite which is commonly called the Mass, from an old Latin word which occurs at the end of the service. The Church teaches that, by the power of the Almighty, at the word of consecration the bread and wine are changed into the Body and Blood of Christ, the forms and appearance only of bread and wine remaining as before. This change is called transubstantiation.

The ordinary condition precedent for the receiving of the sacrament of penance is, besides faith and repentance of sin, with purpose of amendment, the confession of one's sins to a priest, whose absolution constitutes the essential rite of this sacrament. (John xx.)

The Church teaches that works of self-denial, such as fasting, must be practiced, to discipline the lower appetites, and to do penance, or satisfaction, even for sins that have been absolved; and that there is a middle state of souls departed in the grace of God called purgatory, in which they are for a time excluded from heaven, either because of minor imperfections that will there be corrected or *purged* out, or because they have not yet fulfilled the measure of penance which the Divine justice exacts even of the sinner to whom the eternal guilt has been remitted. The Church teaches that not only are its members benefited by the prayers and good works of one another in this life, but that this communion extends beyond the grave, that the souls in purgatory are benefited by the prayers and good works of the living, and that the living may ask and enjoy the prayers and efficacious sympathy of those who have died in the grace of God.

The Church is partial to symbolism, and to an imposing and beautiful ritual in her worship, and believes that it is salutary to enlist in the service of religion and morality the natural instincts that make men treasure the portraits and every memorial of the departed objects of admiration or affection. It is in this spirit that she loves to adorn her churches and the homes of her members

with pictures and images of Christ, the Blessed Virgin, and other Saints, and places the relics of Christian martyrs under her altars. She believes that all the nobler capabilities of man should co-operate in fostering and giving expression to religion, which is the noblest of them all, and hence she calls to her aid in the expounding of her doctrines and the services of her ritual, philosophy, oratory, poetry, music, architecture, sculpture, and painting, the greatest masterpieces of which have been inspired of her genius.

While teaching that Christian marriage has the dignity of a sacrament, the Catholic Church enjoins absolute perpetual celibacy and chastity upon her clergy and upon others, both men and women, who dedicate themselves voluntarily by solemn vows in certain religious communities to works of charity and religion; which practice of celibacy and esteem for virginity she derives from the apostolic age, and commends by her experience of its utility in giving to her ministers a singlemindedness and devotion that were otherwise unattainable.

The highest authoritative utterances and enactments of the Church are those of her general councils of bishops, presided over by the Pope in person, or through his delegates. There have been eighteen general councils. The first was held at Nice, in Asia Minor, in the year 325, the last in Trent, 1545-1563.

The essential difference between the Roman Catholics and their separated brethren appears to be that the former believe in the indwelling of the Holy Ghost in the Church as a successor to Christ to infallibly teach the truths of faith and morals; whereas other Christian denominations profess to believe that the individual, aided by the illumination of the Holy Spirit for the searching mind, finds the truth of faith and morals in the Bible. The Catholic Church maintains in individual moral responsibility, whereby the individual who denies the authority of her teaching power is bound before God and man to leave her communion. The Catholic Church maintains the freedom of man, and his individual moral responsibility, which involves his capability of self-government and adaptability to republican institutions. She also maintains the sacredness and inviolability of conscience, and refuses to admit to her communion those who do not sincerely believe and honestly accept her teaching.

SAINT PETER.

HIS PHRENOLOGICAL CHARACTER.

WE have lately received the following letter:

"*Editor Phrenological Journal*—In our Sunday-school class, the phrenological character of St. PETER, as shown in his life, was lately brought up as a topic for consideration. Will you please give us your opinion on the subject?"

We have always fancied that, if accustomed to drawing heads, we could portray St. Peter pretty nearly to the life. He must have had a stout, robust body, and have been broad in the shoulders, deep in the chest, brawny in the arms, broad in the back, with a plump abdomen, rather high cheek-bones, but a round, broad face notwithstanding, with a great, square manly chin, a firmly set and rather high nose with large nostrils, a square forehead, a head broad between the ears, strong in the occiput or social region; large in Approbativeness and Firmness; large in Combative-ness, and not very large in Self-Esteem. His complexion we judge to have been bordering on the florid, with dark brown or black hair and beard, the latter slightly tinged with red, with a gray eye bordering on the blue. This would give him an impulsive temperament, great ardor, earnestness, and courage, and general enthusiasm and magnanimous manliness, which in many instances are clearly defined in his character. When his Master said to him,

"Simon Peter, lovest thou me?" his answer was, "Yea, Lord." His Master replied, "Feed my sheep." He repeated the question, and the answer was repeated. It was asked a third time, and Peter's full heart was touched; his strong Friendship and Benevolence and Approbativeness were awakened as well as his faith when he responded with emotion, "Lord, thou knowest all things—thou knowest that I love thee!" The Master answered, "Feed my lambs." Such a colloquy would have been impossible with the Apostle Paul.

When Peter saw his Master walking on the sea, he was the only one who cried out, "Bid me that I come to thee." This was eminently characteristic of him. It showed his faith, his enthusiasm, his affection, and his impulsiveness; and when his large Cautiousness became excited by the novel dangers of the scene; when his reason began to teach him that he was walking on an unnatural foundation; when he began to consider the perilous condition in which he was placed, his faith wavered and he began to sink, and his impulsive, affectionate, confiding faith, as well as his fear, were instantly expressed—"Lord, save, or I perish!"

When the Master suggested that his disciples would leave him, Peter spoke up bravely and yet impulsively, "Though all forsake thee, yet will I not." When enemies offered bold and manly opposition, Peter could draw the sword and defend the cause at the expense of the ears of the high-priest's servant; he was ready to battle for his Master.

On the Mount of Transfiguration, Peter, James, and John being present, Peter's affectionate heart began to glow; his brave and enthusiastic spirit burst forth and said, "Lord, it is good for us to be here. If thou wilt, let us make here three tabernacles—one for thee, one for Moses, and one for Elias."

At the trial of Christ, before his crucifixion, a maid of the high-priest came to Peter and said, "And thou also wast with Jesus of Nazareth;" and he denied it, saying, "I know not, neither understand I what thou sayest;" and a second maid saw him, and began to say to them that stood by, "This is one of them!" And he denied it again. This was done, not so much from a want of integrity, but through excessive Approbativeness, and that kind of gallantry for woman that can not bear to have her ridicule and laugh at him. Millions of followers of Christ have denied him in various ways from excited Approbativeness, who, like Peter, have gone out and "wept bitterly" when the excitement of that feeling had subsided, and when Conscientiousness and Veneration and Benevolence had an opportunity of coming into action. There is no feeling which it is so exceedingly difficult to withstand as that of mortified Approbativeness. Shame, of all the emotions, unless it be remorse, cuts the deepest. Had Peter been endowed with larger Self-Esteem and less Approbativeness, he would not have denied his Lord, nor would his Lord have prophesied such a result. Peter has been made the subject of ungenerous

comment for many centuries; but we can well understand how, without any serious moral obliquity, even a strong, bold, courageous man like Peter, when assailed on this tender point of Approbativeness, could break down and for the moment even deny his Master. We should try to avoid doing the same thing; but if we chance to fail in our faith and courage at the trying moment, let us remember that the Apostle "went out and wept bitterly." And if we deny our Lord as did Peter, let us at least have the grace to repent of it as earnestly and as quickly.

A CONVENTION OF THE FACULTIES.*

BY S. T. SPEAR, D.D.

THE several faculties which constitute the grandeur and glory of our spiritual humanity as so many distinct and separate *persons*, held a convention. Each of these mysterious persons made a formal statement of his exploits in the kingdom of mind. I saw them, and heard them, and took brief notes of what they said.

Perception through the bodily senses—a solid and matter-of-fact-looking character—thus opened the conference: "My office is to make men acquainted with the outward world. I am a sentinel posted on the watch-tower of material nature. By me the eye sees, the ear hears, and the hand touches. I rock the cradle of the first human thoughts. With me begins all knowledge. All the physical sciences come to me for all their facts and observations. In my own sphere I am supreme; and whoever disputes my authority in that sphere is simply a fool, with whom it will be a waste of words to hold any argument."

"Yes," said *Consciousness*—a much more delicate and ethereal personage, now becoming the speaker—"this is indeed your work; but let me tell you that I have an eye that you have not. If you see matter, I see mind. I am a *soul seer*; and but for me men would know nothing about themselves. What they call mental science is simply the inscription of my pen. By me the soul works in an atmosphere of pure light, and bathes itself in the limpid stream of self-knowledge. I am the sun of the interior world, and shed my beams on all its parts."

"Very true," responded *Memory*, seeming to be loaded with an immense budget of something. "Yet bear in mind that I am the keeper of knowledge. I am the historian and antiquarian of the soul. I tread the walks of the mysterious past, and connect that past with the present. All that man acquires he trusts to my care, and I keep it safely for his future use. Without me there could be no education, no mental progress, and no well-taught experience."

Intuition next came forward, having an eye blazing with the very whitest light, and thus addressed the conference: "Wait a moment!

* Published in *The Independent*, after the manner of "A Debate in Crania," published in Our Annual for 1865.

I have not yet spoken. I have a sharper eye than all of you—I am absolute sight. All primitive ideas and necessary principles are mine. I am, after all, the ultimate authority. I hold no disputes, and I hear none. When I speak, all men believe. My opinions are laws. I depend on nothing but myself. All absolute certainties must have my indorsement."

"All right, so far!" said *Reason*, bearing the distinctive marks of being a hard worker. Yet argument is mine, syllogism is my formula; conclusions are my creations, and premises my instruments. I pass from the known to the unknown, using the former to find the latter. The Websters, the Bacons, and the Newtons of the race are my pupils. Even common people can do nothing without me. Having an end, I plan the means. Seeing an event, I find the cause. When anything is to be *proved*, my services are always in demand."

Imagination had been patiently waiting her turn; and now it came. Before uttering a word, she spread her plumes and scented the air with fragrance. Her shining countenance, her long and flowing robes, her graceful attitude, at once fixed all eyes and opened all ears. Thus she proceeded: "I am the creative faculty, reconstructing the relations of thought, gathering nectar from every flower, culling all the beauties that exist in the garden of nature, and so combining them as to delight the children of men. At my touch the passions burn. The Cowpers and the Miltons were taught in my school. The diction of the orator is the charm I have lent him. A common object in my hands shines like a gem. I know where men keep their hearts, and how to reach them. Reason, until warmed by my inspiration, is cold, passionless, and unimpressive."

And who is that grave, sedate, dignified, and imposing character, that followed the Imagination with the measured and awful tread of moral truth? Hear him: "I am *Conscience*. That is my name. I am the sense of right and wrong in human action. I enact and publish laws for the government of men. Of their duties, I judge. I am the great comforter of the good, and the un pitying tormentor of the bad. My smile is peace, and my frown is woe. Those who dispute my authority do so at their peril. Those who keep my laws are safe. Both the happiness and the virtue of the world depend on my sway. The God who made me, made a *monarch*."

At length a character, seemingly little else but bone and muscle, marched forward, and, mounting the rostrum, gave utterance to the following words: "I am the *Will*—the free, the sovereign, the choosing power. When I tell the hand to move, it moves. When I bid the reason to think, it thinks. I am the commander-in-chief of all these forces. Purposes and decisions are mine. Ends adopted and plans pursued are my choice. I say Yes and I say No. Energy is simply the steadiness of my hand. But for me these other speakers would be a mere mechanism of rigid and inelastic fate. Philosophers have long disputed

whether I am a free man or a slave; yet I have always assumed my own freedom. If there be any chains binding me, I never felt them."

Just at this point there was a general and sudden rush, as of a vast crowd in violent motion—a sort of universal buzz, that seemed for the moment very seriously to mar the good order of the conference. "Here we are!" shouted the *Feelings*, all appearing anxious to be heard at once. "Yes, here we are—all the *Desires*, all the *Propensities*, all the *Emotions*, and all the *Affections*, that figure so largely in the history of earth. True, we do not think as does the reason, or choose as does the will; yet we are the steam-power of humanity, both heating and moving its thoughts and furnishing the ultimate seat of all its joys and sorrows. We form the impulsive electricity of human life. We sing all the tunes of that life. We magnetize souls. We constitute alike the attractions and repulsions of men. We have been known by different names, and felt in every heart, ever since God made man of

the dust of the earth. We shine in the eye, and we blush on the cheek, and weep in the falling tear. We paint the purest characters of time, and adorn with our own grace all that is human. We can make a hell or a heaven in any bosom."

Is it possible that all these multiform wonders are brought together in one soul? Is each single man such a stupendous picture-gallery of marvels? Lives there in every human breast such a vast empire of powers? Is this indeed the man whom we see walking the streets—so God-like in his nature, so glorious when morally erect, and so fully showing his original stateliness even when lying in the dust? What guests, then, did earth receive when human souls came here to dwell? What a wealth of being moves with this revolving globe! What a wealth of being death is transmitting to some other sphere! Humanity is surely no cheap article to be pitched into a gutter, and left there to rot. Its powers are imperial and immortal. It took a God to make a man. Millions of material suns are not equal to one soul. The universe of souls is immeasurably grander than the universe of matter. The ruin of a soul is the greatest evil imaginable. A chaos of matter would be a sorry sight, but "a chaos of the soul is a sorrier spectacle than a chaos of worlds."

[So each and all the faculties of the mind

PORTRAIT OF GUISEPPE VERDI.

"talk." Nothing is more interesting. What can be more instructive? There is Benevolence appealing for mercy; Acquisitiveness clamoring for gain; Friendship, for the loved ones; Mirthfulness, for fun; Veneration, for worship; Spirituality, for a living faith, and Hope for glorious immortality. Listen to the language of the faculties. But see to it that the passions be not perverted, and that the moral sentiments govern.]

GUISEPPE VERDI,

THE POPULAR OPERATIC COMPOSER.

This portrait of the composer Verdi represents an excellent organization temperamentally. There are marks of physical strength and endurance here which few modern musicians can boast. The base of the brain is broad and prominent, the nose plump and large, and the whole mass of the face wide, compact, and strong. The brain is wide in the region of the temples, showing large Tune, Constructiveness, Ideality; Form and the perceptive faculties generally are largely developed, while it may be safely inferred that the back-head is well rounded, giving warmth of social feeling and much passionate impulse. His intellect adapts him to appreciate details, relations, to collect information and retain it. He has a good degree of descriptive or graphic

ability, which coupled with his strong imagination enables him to depict in romantic phrase those phases of life which as a sympathetic member of society he is disposed to admire. He is ardent and aspirational, fond of popular applause and appreciative of worldly reputation. He lives a physical, earthly life in the main, is not much worked on or influenced by religious or spiritual considerations. He is firm and determined in his purposes, rather independent in action, yet desirous of the favor of society and friends. He enjoys deeply the surprise and admiration produced by the production of a brilliant musical work, and at the same time expects such expressions of approval. Criticism and depreciation deeply wound him, but do not disturb his confidence in himself. He aims to serve and please the world, and at the same time would have the world respect and honor him.

Giuseppe Verdi, the great Italian composer, was born on the 9th of October, 1814, in the small village of Roncole, where his father kept

an inn. He received his first musical instruction from the organ-player of the church of his native village. He went to Milan in 1833, and there took lessons of Lavigna, the leader of the theater "La Scala." In 1839 his first opera was brought on the stage, with a very favorable result; it was "Oberto di San Bonifacio." The next, "Giorno di Regno," did not please the public; but his "Nabucco" carried his fame far beyond Italy, into all civilized countries. Then followed, in 1844, "Lombardi" and "Ernani," with even greater success than the others.

Verdi composed new operas in rapid succession, as "Il due Foscari," 1845; "Jeanne D'Arc," "Alzira," 1846; "Attila," 1847; and subsequently, "Macbeth," "I Masnadieri," "The Corsair," "Battle of Legnago," "Louise Miller," "Stiffelia," "Rigoletto," "Il Trovatore," "La Traviata." In 1845 he brought out "Sicilian Vespers." Later appeared "Aroldo," "Simon Boccanegra," "Un Ballo in Maschera," and "Lear." His last work is "Don Carlos," which has recently been performed with great pomp at Paris, and has received the attention of all the first Continental theaters. Verdi is a modern composer in the fullest sense of the word. His music is lively, sparkling, melodiously sweet, and appeals fully to the senses, but he lacks the depth and sublimity of the great old masters. His music

is of that light, sparkling character which is adapted to represent on the operatic stage the sprightlier phases of fashionable gaiety, and for that reason is among the most popular music in common use. The operas "Rigoletto," "Il Trovatore," "La Traviata," "Un Ballo in Maschera," are frequently produced in the music halls of Europe and America, and always command large audiences.

Our Social Relations.

Domestic happiness, thou only bliss
Of paradise that has survived the fall!
Thou art the nurse of virtue. In thine arms
She smiles, appearing as in truth she is,
Heav'n-born, and destined to the skies again.—*Temper.*

SPIRIT GREETINGS.

BY SARAH E. DONMALL.

At nine o'clock, remember, the hour at eventide,
When, though unseen, I'm standing in spirit by thy side,
One hand upon thy shoulder, one clasped within thy own,
Then, dearest love, remember the hour you're not alone.

With face and eyes uplifted, I'm gazing into thine,
To read thy heart's emotion that Love reveals to mine;
To watch each thought and feeling that o'er thy features
play,

And see thee sweetly smiling, as thou dost smile alway.

You'll know just when I'm coming; for all the dark and
gloom

Will vanish in a twinkling from out your lonely room;
And if you'll listen, darling, across the fallow lea
You'll hear the spirit's greetings of hope and love to
thee.

Then through the open casement, and through the open
door,

The silent, shimmering moonbeams will play upon the
floor;

And all the stars of heaven will brighter, brighter seem,
And you perchance will think it a sweet delicious dream.

But, ah! this life is real; as you and I both know:
We can not chain the spirit here in this stern world be-
low;

But like the wind that bloweth o'er flowery mead and
dell,

It cometh and it goeth—but how, we can not tell.

Oh! holy the communion when soul to soul is drawn,
In silence, like the shadows that fall upon the lawn;
And sweet as dewy fragrance that scents the evening air,
And pure the spirit greetings, as holy angels are.

"LADY DAFFERTY"

AND THE GREAT QUESTION.

BY A. A. G.

MRS. DAFFERTY was not born low down, where *women* are born, but high up, where *ladies* are born. Her father belonged to the very top layer of society, and was known as a tip-top gentleman; for as soon as he entered on the business of life he began to make money, and made it faster than lightning can leap from one cloud to another. Fortune, who seems to have likes and dislikes, favoring some and frowning on others, called Mr. Cluff her well-beloved son, and poured her treasures into his lap. What wonder was it, then, that Alice Cluff had more suitors at her feet than she could manage? And what wonder was it that Mr. Dafferty, son of an unsuccessful

father, and grandson of a still more unsuccessful grandfather, pressed his suit with more earnestness than all the rest, knowing, as he did, that *marrying* rich is the easiest way in the world to get rich.

To say that Mr. Dafferty saw no charms in Miss Alice, and sought her only for the pile of rocks that was to be hers, would, however, be uncharitable. And yet to say that he was ambitious to marry poor would be very untruthful; for he thought that a good wife, with riches thrown in, was a very desirable possession for a man.

With this conviction, he placed himself in the forefront of the line of lovers, and wooed and won and married Miss Alice.

And no man could have desired a more beautiful bride than she was on her wedding evening, as she passed down the aisle of the crowded church, and no bride could have been more quiet in the consciousness of beauty. Neither did any one in the well-packed church fail to receive the impression that a beautiful bride always makes.

"Our city has lost its belle, and the young men will have dull times now," said one.

"Mrs. Trevalle will have a chance at last to push her plain-looking daughters forward," said another. "They won't look quite so homely as they have when Alice Cluff is fairly gone."

And another said—and she was a lady who prided herself upon being able to read character—"There is nothing plain or coarse about Miss Alice—now Mrs. Dafferty; she is the very soul of refinement and elegance, and well she may be, for not even the shadow of poverty has ever passed over her. She knows nothing whatever of the coarse associations of the poor."

Probably no one appreciated the "refinement and elegance" of Alice more than did Mr. Dafferty, and he left the church a proud as well as a happy man.

The home he had prepared for her was a home of luxury. Everything was in harmony with the "refinement and elegance" of the bride, and "the shadow of poverty" seemed farther removed than ever. Their married life, so pleasantly begun, moved pleasantly on. The years, one after another, came and went, but brought nothing and left nothing but prosperity.

Ten years had gone, and Alice Dafferty was neither a widow nor the wife of a poor man, but the petted wife of rich Judge Dafferty, for everything he had touched had turned to gold. She was ten years older than she was the night she passed out of the church, the admiration of all beholders; but she was only slightly changed, for the troubles and struggles that scar and mar so many she had known nothing of, as she had lived in all the ease and comfort that money brings. "What do you know of the world, Alice?" said her husband, one wild night of winter, as she sat in her velvet chair by the register, with her velvet-

slipped feet held out to receive the hot air. "What do I know of the world?" answered Mrs. Dafferty. "Well, I know it's not so bad a world as some would like to make it. Come, if you'll look like yourself, and not like grave Judge Dafferty, I'll sing you that song:

'This world is not so bad a world
As some would like to make it;
But whether good, or whether bad,
Depends on how we take it.'

"You can 'take it' in only one way," replied Judge Dafferty, "for your knowledge of the world is confined to its good and pleasant things."

"Of course, my grave judge, I can't have the experience of poor people, for I have never been poor, and I can assure you that I have not the slightest desire to be. It agrees with my temperament and tastes to be rich and have such a home as this. Really, I think I was never born for poverty. I am not adapted to it."

"And who do you think is 'adapted to it'?" replied Mr. Dafferty. "Judging from the struggles of people with poverty, I should say there are none in the world who perceive its adaptation to themselves."

"Well, do tell me what has stirred you up, my solemn judge. What have you been poring over in that newspaper?"

"I've been poring over an article on 'The Woman Question,' as it is called."

"'The Woman Question?' Well, I suppose it says that women are angels, and that *man-kind* ought forever to concede to them that great fact."

"No; it says that hundreds and thousands of women are dying of half-paid labor, and that *ladies—ladies* who know nothing of toil—are not in sympathy with them. It says, too, that the labor of women, whether it be the labor of the hands or the head, will never bring a just price until justice gives every woman her rights."

"Well now, Judge Dafferty, if you haven't got hold of that newspaper—*religious* newspaper they call it—that publishes so many articles on women's rights! That crazy old *progress* man, that fanatic and reformer, has lent it to you, and the first thing I know you'll be as wild on the great question as he is. Really, I for one am tired of it. A body can hardly find a *literary* article in any newspaper or magazine in these days. Everything is about women! women! women! I wonder where the great question of 'Women's Rights' started?"

"In women's wrongs, of course. No one can look deeply and candidly into this great question and not see that it has its source in wrongs."

"I'm not at all sure of that. I'm inclined to think it has its source in ambition," replied Mrs. Dafferty, dropping her embroidery and throwing herself back in her velvet chair. "The women of these days—the *women*, I mean, not the *ladies*—are very ambitious to take the places of men, and I have no sym-

pathy with them. My whole nature revolts at the idea of calling them ladies, for they have never risen above the low level of women, and they are not content with the place assigned them in the world."

"Ah, Lady Alice Dafferty," said the judge, with a smile, "you may well be content with the place assigned you in the world, for it is a very easy place—a place where no storms and tempests come, and where you sit and breathe the summer air in winter as well as in summer. The seasons and the years come and go, but bring you no discomforts, no hardships."

"Now, don't preach to me as if you were an ordained clergyman, please don't."

"I want to bring you into sympathy with women—with toiling, suffering women—and I must talk. Women do not seek power for its own sake, or because they want the places of men. Nearly all who advocate 'Women's Rights' have been led, through suffering, to do it, and their own troubles have opened their hearts to the troubles of others, of those who, like themselves, need relief. A great many of them, Alice, have no rich husband for a prop, and some have no husbands at all, but are widows, with five or six children to support; and they know that the advancement of women to a higher place than they have ever yet occupied will give them new ways and means of support, and make everything they do more profitable."

"Ah, well," said Mrs. Dafferty, tapping her pretty feet on the register, "women and negroes will be discussed in what you call the 'high-toned' newspapers until the end of the world, I suppose."

"It is to be hoped that all wrongs will be righted long before that," replied Judge Dafferty.

"Come, now, be amiable enough to drop that paper, and let's have a literary article from one of those magazines lying on the table."

"There is no such teacher as experience, you know, Alice," continued Judge Dafferty; "and if you had been compelled to toil and struggle, you would be in sympathy with women, with these very women whom you regard as ambitious to be in the places of men, and whom you denounce as no ladies. Yes, Lady Dafferty, you would feel the sufferings of women, if you had only suffered yourself. And you would appreciate the disadvantages under which they labor, if there had ever been in your life anything that could be called a disadvantage."

Mrs. Dafferty winced a little, and moved uneasily in her velvet chair, but replied, as if not yet convinced of women's wrongs, "What you say may possibly be true, but you know there is a very great difference between *women* and *ladies*."

"Yes, I know it, and I know, too, that *ladies* often fail to be *womanly*. Now, I want my wife to be a true woman as well as a true lady, and I want her to be in womanly sym-

pathy with all women who are tasked and tried, and who sigh and cry for the just reward of labor. You may depend upon it, Alice, that 'Women's Rights,' about which there is so much noise in the world, and women's wrongs are closely connected."

Judge Dafferty said no more, but, while Lady Dafferty sat thinking, took up his dropped newspaper, and was soon lost in the study of "The Woman Question."

Yes, the *woman* question. And what man, or what woman, living in the light of the nineteenth century, shall dare call the woman question an inferior question?

What *lady* shall sit at ease in her palace, and, handling her rich embroidery with jeweled fingers, laugh at the toils of women and sneer at "The Woman Question?"

"NO CARDS."

BY RHO. SIGMA.

On taking up a morning paper, the first thing I do—and does not every woman the same?—is to glance down the column of "Marriages" and "Deaths," to see if any whom I know have passed through either of these most momentous epochs in human life. Occasionally I meet with a familiar name. It may be that of an old school-mate or early friend; and many a pleasant recollection prompts the tear of regret for the departed, or the hope of happiness for the wedded.

Sometimes I find recorded here the death of one whom I but lately saw in the enjoyment of health, and surrounded by everything that serves to make life desirable; or the marriage of some young couple concerning whose courtship Mrs. Croaker declared a thousand times "that it never would come to anything." But, whether these things be so or not, the perusal of this column always furnishes food for reflection. Under the head of "Deaths" we frequently find "Curiosities of Literature," which make ridiculous the sublimity of grief; and occasionally, though far too seldom, we see appended to marriage notices the words, "No Cards."

In these days, when the reign of Fashion is almost supreme, it costs somewhat of a struggle for the generality of young people to act in defiance of her laws, especially when those laws are delightfully in accord with their own wishes. Excepting that of being born, and that of dying, marriage is the most important event in life, and this fact is usually felt by those who are about to take upon themselves its vows and responsibilities. It is a popular institution, and the majority of young people desire to make their wedding as popular an occasion as all the appliances of Fashion can render it. But the majority of young people do not belong to the "highest circles," where alone the capricious queen holds undisputed sway. Let us leave her laws for those who are bound to obey them,

while we consider whether you, young clerk or book-keeper, and you, young lady, who intend to marry a book-keeper or clerk, had not better append to your marriage notice the dissyllabic conclusion, "No Cards."

Setting aside the bare cost of the cards, which will be anywhere between fifty and three hundred dollars, according to style and quantity, look at the expense involved in a brilliant wedding and the consequent reception. Of course the time and labor spent in preparation are not taken into account, nor do I ask you to consider the sum total for the bridal tour, which, whether long or short, will be considerable. At the lowest figure, the cost is from three to five hundred dollars more than it would have been had the parties been contented with a plain ceremonial and "No Cards." To be sure, five hundred dollars isn't much when you can count your tens of thousands. But to a young couple just settling out in life it is a very considerable sum. Five years hence they can realize it better than now. At the end of that time many a young wife is broken down with care and toil, much of which might have been spared her had she been willing to forego a stylish wedding.

"But," objects some calculating young lady, "the presents one gets more than cover the cost."

Well, admitting that they do, that is just what I don't like. I never begged in my life. No kind of honest contrivance, no manner of fashionable subterfuge, no sort of pretext however plausible, can make it respectable.

Should queen Fashion decree that I stand at the street corner with my hand outstretched and a placard on my breast, or that I send out cards, saying that at such a time I would be at home to receive anything that people had a mind to give me, I would be equally as obstinate in the latter case as in the former. Look at it which way you will, it is neither more nor less than begging. Certainly, if one fancies it, the most pleasant way is to do it elegantly and politely. But fashionable beggary doesn't pay as well as genuine mendicancy. If you want to make it profitable, you had better procure a tattered gown and basket; and if you can hire a small baby at a reasonable price per day, you will succeed handsomely, no doubt.

But, seriously, the gifts seldom cover the expense. The actual and immediate cost may be returned threefold, but in the long run you are the loser. Suppose your wedding cost you five hundred dollars, and your gifts amount to as many thousands, how much will it cost you to live in a style corresponding with them? Book-keep-ing-ly and clerk-ing-ly speaking, when will you be able to do it? Five hundred dollars would help you materially on rent-day. Will wedding presents do this? A clerk on a salary of twelve hundred was married recently, and had ten thousand dollars' worth of presents. I wonder what he did with them? The presentation of gifts at a wedding is one of the most beautiful of all

NATIONAL TYPES OF FEMALE BEAUTY.

social customs. But let them be the voluntary offerings of friends and relatives who have a tender interest in the young couple, and wish to be remembered by them. Then, even the most insignificant articles will be fraught with sweet associations, and, to say nothing of the money saved, the recipients will be the better able to enjoy the gifts for not having begged them.

In conclusion, I have only to say that when you see a marriage notice with the addition of "No Cards," you may safely conclude that the parties are people of taste and culture, and in all probability, of wealth. For, I am sorry to say, it is only the rich who think that they can afford to wear patched boots, and only the wealthy who dare to be married with "No CARDS."

NATIONAL TYPES OF FEMALE BEAUTY.

In analyzing briefly the types of female beauty represented in our engraving, we must begin somewhere, and to avoid the appearance of partiality we proceed, as we used to, with a spelling lesson, beginning at the left-hand row and going downward, and next taking the second column in the same manner, and so on throughout the group. We may follow this with types of other nations at a future time.

First in the group we have a Turkish beauty, a dark, plump, inexpressive though voluptuous face, without much forehead and without much apparent vivacity. In the next we have a brisk, intelligent, well-formed French face, with pointed features and a dashing style of dress, somewhat unique and independent, showing that she belongs to that polite and facile nation which, while it gives fashions to some of the most influential nations in the world, has no fixed fashion of its own, each lady dressing according to her own figure, complexion, and taste, and always being tasteful; vivacity, emotion, and spirit are her leading traits. In the next, we have the Russian, from that growing giant nation of the North. What staid substantial features! what a neck! what a broad chin! how sedate and earnest the expression! what an ample bust! evidence of no effeminacy, but of healthfulness, vigor, and endurance. There is stamina, if not so much delicacy here.

Going to the top of the next column we find the Grecian, with her jaunty hat, classic features, tasteful habit, and symmetry of form, more artistic than utilitarian. Perhaps she would nearly realize the adage, "A thing of beauty is a joy forever;" but in the Russian we see strength, steadfastness, endurance, power, and less of the artistic and ornamental. In the next face we have the Swiss girl, with her masculine hat and short curly hair; the features indicating health, cheerfulness, physical exuberance, with not much culture. Liberty and self-helpfulness rather than sentiment are seen to be the characteristics. Next comes the Swede, with a well-formed head, strong

moral sentiments, a full, eloquent eye, and a really womanly face. Jenny Lind has taught us to respect whatever is truly Swedish, and without any knowledge to the contrary to think well of it. Next comes the Chinese, with its contracted forehead and opaque features. There is not much expression of the spiritual in her. Restricted in her education and sphere, she must content herself with dress decoration, and a diffident, submissive, subordinate life.

Next, at the top, we have the elegant Austrian. Here is a stately beauty—we are reminded of Marie Antoinette—classical in every feature, straight and dignified in person, with beautifully chiseled features, tresses abundant, exquisite taste in dress, which, though elaborate, is very appropriate. The Austrian woman is loving and lovable, and doubtless merits all the gallantry of her countrymen. The next is a Polish beauty with a square hat and a tassel. She has a good figure, a marked face, and a strong character; but we fancy there is a sadness in the expression, and we can not think of Poland without a feeling of sympathy. In looking at this sad countenance, it is perhaps made more so by looking through sad glasses. In that head, how much of ambition and bravery, how much of affection and patriotism, how much of intensity and power! and there, too, is a faultless figure, full, straight, dignified, suggestive of her noble derivation. We next have the Holland beauty, leaning on her hand. She has a quiet, motherly, loving look; the calmest, the most contented face in the group; and exhibiting a most domestic, good-tempered, and affectionate person.

The Japanese beauty doubtless looks beautiful to her countrymen, but those oblique almond eyes, that narrow forehead, and that general expression of weakness is not particularly fascinating to us. Still, there is benevolence if not bravery or beauty there. We will look further.

This English face, though beautiful, has less strength of expression than is requisite to illustrate English feminine character. It fails to do justice to the subject. An English—Anglo-Saxon—beauty has a soft silky skin, a florid complexion, fine auburn hair, blue or gray eyes, an ample chin, an aquiline nose, full rolling lips, sound, regular, and handsome teeth, and is one of the best of wives and mothers. The artist was unfortunate in the selection of his model to illustrate the typical English beauty. There is a class of ladies in England which that face might represent, but there is not enough of breadth and strength to represent the true English woman. There has been in this representative so much refining as to abolish the elements of strength, leaving only effeminate dignity.

The last in the group is the German beauty. She is plump, strong, broad, and substantial. Health, constitutional vigor, endurance, and power are seen here, rather than artistic grace or aristocratic refinement. A motherly affection is evinced in the full back-head, and is

also shown in the mouth, the luscious loving lips, and in the eyes. We see in this face, not much of aspiration, not a restless, discontented nature, but one who would love her husband, her children, her home, her friends, her pets, her duties, cares, and responsibilities, and be satisfied when she had fully met the claims of all these.

In some of these beauties we perceive wit, love of dash and display; in others, earnestness, sincerity, and a sense of duty; but in the German, in the Hollander, the English, and in the Russian we find those domestic qualities which give strength to a nation, and those constitutional developments which give power to a people. In the Grecian, and in the French and Austrian we find grace, elegance, brilliancy, sprightliness, dash, and wit; in the Swede, sincerity and tenderness; and in the Polander, power, patience, perseverance, patriotism, and a shade of melancholy. In the Asiatics, there is not much of the vital or the voluptuous, and much less of the mental and the spiritual. Take off the bands of barbarism and supply them with the light of a higher spiritual life, and they will take on expressions in accordance with the superior culture, true philosophy, and religion thus afforded.

In conclusion, we may state that the way to be BEAUTIFUL is to be HEALTHFUL, VIRTUOUS, and GOOD. To be selfish, vicious, dissipated, and bad, is to be ugly and repulsive. Vain, fashionable flirts always come to a bad end; while the temperate, the gentle, the kind, the meek, just, devotional, trusting, and self-sacrificing, no matter how plain in feature, are always reliable, lovable, good, gracious, and godly.

THE AMERICAN FACE.—Dr. Bellows writes the *Liberal Christian*, from Florence, as follows:

"Mr. Powers, the sculptor, says the American face is distinguished from the English by the little distance between the brows and the eyes, the openness of the nostrils, and the thinness of the visage. It is still more marked, I think, by a mongrel quality, in which all nationalities contribute their portion. The greatest hope of America is its mixed breed of humanity, and what now makes the irregularity of the American face is predestined to make the versatility and universality of the American character. Already, spite of a continental seclusion, America is the most cosmopolitan country on the globe. Provincial or local as manners or habits may be, ideas and sympathies in America are world-wide. And there is nowhere a city in which so many people have the complete world under their eyes and in their hearts and served up in the morning press with their breakfast, as New York!"

WHAT WE ALL SEEK.—There are those that say happiness is nothing; that one should not care or look for it. When you hear such a sentiment expressed, know that the speaker is saying what in his inmost soul he disbelieves. While nobody believes that happiness is the only object to be sought in life, there is not that human being who, while he lives, say what he may, is not seeking it either openly or unacknowledged to himself.

NEW YORK, JULY, 1868.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous precipice of telling unbiased truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*The Phoenix*.

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED is published monthly at \$3 a year in advance; single numbers, 30 cents. Please address, SAMUEL R. WELLS, 389 Broadway, New York.

A NEW VOLUME.

WITH this number we enter upon the FORTY-EIGHTH VOLUME of the PHRENOLOGICAL JOURNAL.

To disseminate a knowledge of science and philosophy, as revealed by the study of Man, physically, intellectually, and spiritually, is one of our leading objects. There are journals devoted to particular interests, such as Agriculture, Commerce, Finance, Mechanism, Art, Literature, Music, Politics, Medicine, Law, Religion, etc.; but *this* magazine occupies a field quite exclusively its own. While we take a lively interest in all reformatory, educational, and comprehensive measures for the advancement of society, we seek more especially to unfold the nature of man on scientific principles, enabling each to see himself as he is; to know his faults, and how to correct them; his virtues, and how to make the most of them.

It is believed that by a knowledge of the laws of our being, human life may be prolonged and rendered vastly more useful than at present. What other journal now published more effectually teaches these laws and conditions? Physicians have to do with patching up diseased bodies, rather than with teaching the people how to retain health or to avoid disease; the clergy look after our morals and point out the paths of virtue and the ways of vice; lawyers stir up or settle our disputes for a consideration; bankers discount notes and take care of our cash; merchants, manufacturers, and the rest practice their special vocations; but it is *ours* to expound the natural laws, and teach man how to live and turn all his talents to the best account.

The time was when even this JOURNAL was feebly edited and as feebly supported. It was almost a charity patient. Started as an experiment some years af-

ter the *Edinburgh Phrenological Journal*, which has been long since discontinued, by dint of much pushing, a good deal of begging, and with the aid of untiring and zealous friends of Phrenology, notwithstanding its glaring faults, it has outlived all its kindred, and is now firmly established.

The cause of failure on the part of other similar journals and that which sunk this so low in the estimation of many good men, was the cold, fatalistic tendencies of some of its promoters or advocates. Coupled with these repulsive doctrines was the taking on of every crazy crotchet suggested by addled brains and long-haired egotists. These small-minded noisy creatures were echoed by a still more miserable constituency, made up of blatant skeptics and pretenders. Some of these eccentrics went so far as to claim "original discovery," and sought to throw the founders, Gall and Spurzheim, overboard; but they were short-sighted, and their claims short-lived. A bad odor, however, was emitted by these creatures which tended to bring the subject into contempt—many sincere persons failing to discriminate between the counterfeit pretender and the genuine original. Besides, these egotistical popinjays mixed up with Phrenology all the current vagaries, "isms," and foolish speculations of the numerous vampires afloat in the world, for which our noble science was in no respect responsible. One class claimed that even the criminal must needs follow his bent, and commit such acts as his "bumps" inclined him to do; a doctrine not only subversive of all civil law, but entirely contrary to the true philosophy of Phrenology and Theology. Is it surprising that good men turned away in disgust from such teachings? Phrenology has also been unfortunate in other respects. It has not until within a few years commanded the highest cultured literary talent, and many of its best facts have been put forth in a rough, crude, uncouth style, so as to repel persons of taste, refinement, and culture. Some of the writers were actuated by no higher sense than that which appeals to the rabble and excites laughter in the buffoon. This class, fortunately for science, good taste, and good morals, are rapidly disappearing. They will shortly subside and be forgotten. Thus one absurdity after another will be weeded out,

and the valuable plant left in possession of the clear, rich ground.

Phrenology is now assuming a respectable position, and attracting that attention to which its merits entitle it. Good men now study it, practice it, apply it, commend it, promulgate it. Editors everywhere speak kindly of it, though they condemn its parasites. Physicians are observing how potent is the influence of the mind on the body, even to kill, or to cure! The clergy interpret truth on a broader and more comprehensive platform than hitherto. Emperors, kings, and rulers, the world over, are conceding the inalienable rights of man. Prisoners, lunatics, imbeciles, and idiots are managed, treated, and trained in accordance with their crimes, conditions, temperaments, and capacities. This is done with a view to their improvement as well as for their restraint. How much of this educational, prison, asylum, governmental and religious progress is due to PHRENOLOGY we can not pretend to say; but we do most sincerely believe that the world is greatly indebted to it for the light which it has thrown on all questions concerning MAN and his relations to life, to death, and to the future.

We can promise no more at present than to go on eliminating errors, and elaborating those truths and principles which legitimately grow out of this system of mental philosophy. Being favored with the same generous spirit on the part of readers which has hitherto been accorded us, we shall constantly aim to make the JOURNAL still more worthy the encouragement and support of its patrons.

THE DAY.

WHAT New Year's day is to New Yorkers, what Thanksgiving day is to New Englanders, what St. Patrick's day is to Irishmen, and what Christmas is to children and Christians, the FOURTH OF JULY, our National Independence day, is to every patriotic American. To lovers of political and religious freedom throughout the world, this day has a deeper significance than is realized by noisy boys, or even by young orators who delight to hear the echo of their own voices.

It means religious LIBERTY for all men

and women to worship God according to their own consciences. It means freedom from slavery, political liberty, the equal rights of all before the law. It means self-government, in contra-distinction from being governed by hereditary rulers—kings, queens, emperors, or despots. It means the inalienable right of every one to make the most of himself—to do the best he can, without the interference of any arbitrary power. It means material and spiritual progress, growth in grace, and in the means wherewith to supply the wants of body and mind.

Real Liberty means freedom from bad habits; especially liquor drinking, tobacco smoking and chewing, and the like. What species of slavery or bondage can be worse than these? The sort of Liberty we celebrate is freedom from vice, crime, and from bad habits, as well as from monarchical and despotic government. We celebrate the Fourth of July not only as the birth of a new-born Nation, but as embodying principles which must, in the nature of things, in time completely revolutionize all the kingdoms and nations of the earth.

Then let all Americans sing with gladness that ever-glorious song—

"Hail, Columbia, happy land."

NATIONAL REPUBLICAN CONVENTION.

THIS body met in Chicago on the 20th day of May, and on the 21st adopted a platform of principles, and unanimously nominated Gen. ULYSSES S. GRANT for the office of President of the United States, from the 4th of March next.

HON. SCHUYLER COLFAX was then nominated for the office of Vice-President by a very decided majority. Messrs Wade, Fenton, Wilson, Curtin, Hamlin, and Speed also received a very complimentary vote.

Mr. Colfax is one of our most popular parliamentary officers, and as such his Speakership of the House of Representatives for several sessions of Congress has made him more widely known, perhaps, than almost any other civilian of his age. He was born in the city of New York, March 23d, 1823. Gen. Grant was born April 7th, 1822, at Point Pleasant, Clermont Co., Ohio. The candidates, one being 46 and the other 45 years of age, are, we think, the youngest men who have ever been nominated for these high offices.

The Democratic Convention, to nominate candidates, will assemble on the 4th of July, after which we propose to publish the likenesses of all the candidates and the platform of principles on which they respectively go before the American people asking their suffrages.

We have only to express the hope, that every voter from the "Dominion" to the line of Mexico will inform himself as to what is his duty at the next Presidential election, and vote as a patriot and as a Christian. God speed the right!

VOTERS IN AMERICA.

VOTE.—Expression of wish, preference, or choice as to measures proposed; electing officers; the passing of laws by one having an interest in the subject or question. A vote may be by the voice, by uplifted hand, or by ballot.—*Webster.*

IMPARTIAL—if not universal—suffrage must be the rule of a republic, and it should be uniform in all the States. In the following we observe differences which are not "impartial," and we propose that the subject be submitted to the people of the nation, and a uniform impartial plan be adopted. At present each State now represented regulates the matter of voting as follows:

MAINE—Every male citizen.

NEW HAMPSHIRE—Every male inhabitant.

VERMONT—Every man.

MASSACHUSETTS—Every male citizen.

RHODE ISLAND—Every male citizen.

CONNECTICUT, INDIANA, ILLINOIS, MISSOURI, IOWA, NEW JERSEY, OHIO, CALIFORNIA, OREGON, NEVADA, WEST VIRGINIA, AND COLORADO—Every white male citizen.

NEW YORK—Every male citizen, but colored men required to own \$250 taxable property.

PENNSYLVANIA—Every white free man.

WISCONSIN—Every male person.

MINNESOTA—Every male person.

KANSAS—Every white male adult.

DELAWARE—Every free white male citizen.

MARYLAND—Every free white male citizen.

TENNESSEE—Every free white man formerly, but now negroes also vote.

In those States which were engaged in rebellion, and which are governed by the reconstruction laws, negroes are allowed to vote and hold office.

Personally, we would require the voter to be able to read and write, and to prove a good moral character. Neither aliens, criminals, drunkards, lunatics, imbeciles, or fools should ever vote. As to negroes, Indians, and Asiatics, we would require not less, in the way of qualification, than is required of native whites. But let us have impartial—though properly qualified—suffrage throughout the Union.

DAILY LECTURES ON MAN.

WE have now arranged to give daily lectures in New York on Phrenology, Physiology, and the training of the mind and the body for health, usefulness, and success. We have fitted up a handsome lecture-room at 889 Broadway, on the second floor of the building in which is located our collection of skulls, casts, busts, paintings, etc., where the lectures will be delivered.

These lectures will be plain and practical, intended to teach men how to "read character," to show mothers how to train and man-

age children; to advise young men how to select the right pursuits; to inform employers how to select servants, apprentices, clerks, and confidential agents; in a word, to "PUT THE RIGHT MAN IN THE RIGHT PLACE."

We are satisfied that the experience of a third of a century ought to make the suggestions in our lectures valuable to all but the useless class of society, and we do not see how even this class could listen to the analysis of the human mind, its powers and capabilities, the privileges and duties of life, without becoming incited to do something, and to be something worthy of humanity.

These lectures will be given for the present every day, Sundays excepted, between 8 and 4 o'clock in the afternoon. They will continue an hour, and the admission will be free. Should this proposition meet the favor of our citizens and strangers visiting the city, so that we shall have an audience each day, it will give us pleasure to minister to their instruction and profit. And it remains for the people to decide whether these lectures shall become a permanent institution.

These popular lectures will not supersede or interfere with our semi-annual professional classes for teaching thoroughly those who wish to practice Phrenology as a profession and an art.

As we have elsewhere announced, a class for ladies will be commenced on the first Monday in September, and the class for gentlemen on the first Monday in January next.

The popular daily lectures are intended for non-professional people, who need and desire information suited to daily life, self-improvement, domestic culture, choice of occupation, etc.; and we have no doubt that time will prove the utility of this method of public instruction.

SCIENCE vs. RELIGION.

ARE science and religion inimical? If not, why is it that many very religious persons oppose the study of geology, phrenology, and other sciences?

Such questions imply a want of knowledge. Truth is a unit, and there can be no conflict between religious truth and scientific truth. The fact that religious bigots oppose the real or assumed claims of science proves nothing but the ignorance of one or both of the disputants. The salvation of our souls is not dependent on the age of the world, its geological formation, nor on the dogmas of finite man. Our faculties were all given to us for use—affections, ambitions, sympathies, love of art, music, devotion, self-defense, and reason to enlighten and guide all our feelings and emotions. He who ignores the study of science or the proper exercise of reason in educational spheres might as well ignore any other class of our duties or the exercise of our God-given powers. Any religionist who attempts to enslave the minds of men by denying their personal freedom and accountability to God, or the free use of their intellects, is an enemy to his race.

The days of priestly infallibility and of persecution on account of religious opinion are past, especially in *this* country. The race has outgrown that narrow pretension; man has discovered that it is *right* for him to exercise his faculties to the fullest possible extent, to learn all that it is possible for him to know, and that what God wisely determined he should not know, he never will or can know. But it is no part of the duty of finite man to set the limits. God created us with a spirit to investigate and learn all we can of his works. Earth, air, water, and the living creatures and plants thereof, all offer themselves for man's examination and study. Nor is there any danger of our finding out any of His hidden secrets. We are finite. He is infinite. Ignorance is the parent of superstition and slavery. Education is the parent of liberty and the bulwark of freedom. Ignorance and monarchy go together. Education and self-government go together. The hope, the only hope, of our democratic republic is in our free common schools and in religious freedom. Science and religion, when rightly interpreted, will not clash, but will harmonize, support, and aid each other. Let us therefore learn all we can of the sciences, and get all the genuine religion we can, that we may develop into the perfect being our Creator intended us to become.

LORD BROUGHAM. OBITUARY.

HENRY, LORD BROUGHAM, the eminent ex-Chancellor of England, who as a legislator, reformer, and author had attained a high position forty years ago, died on the 9th of May last, at his country residence near Cannes, France. He was born in Edinburgh, September 19th, 1778, and had therefore nearly completed his ninetieth year.

His unusual longevity was due to the natural vigor and endurance of his constitution. His portrait, small as it is, shows a powerfully marked motive temperament. He was, as it were, constituted of finely tempered steel, which possessed both the qualities of elasticity and toughness. He was active, lithe, sprightly, but at the same time intense, tenacious, untiring, and persistent. His industry as a scholar, a lawyer, a statesman, is unparalleled. The fibers of his brain seemed capable of sustaining any labor, any strain, which his disposition or intellectual pursuits could impose on them. He would sometimes work day and night with scarcely an interval of repose, and when he had attained the object of his labor, he appeared as fresh and vigorous as at the commencement of his undertaking. In fact, even in advanced life he was ever active. There is nothing striking in his countenance as regards peculiar genius in a department philosophical or artistic. His temperament and practical organization, his keen observing powers and superior analytical talent, and his untiring activity formed the basis of his great executive abilities.

PORTRAIT OF LORD BROUGHAM.

Benevolence is conspicuous in his top-head, and inspired those reformatory and philanthropic measures which honor his memory. During his student career at the University of Edinburgh he exhibited marked scientific qualities, especially in the department of mathematics. Having chosen law as his profession, we find him as early as 1807 retained as counsel in suits of the highest importance.

In 1808 he settled in London, where the eloquence and ability displayed in an important commercial lawsuit attracted the attention of leading politicians, who succeeded in electing him a member of the House of Commons. There he soon took a strong position by reason of his aggressive zeal, oratorical vehemence, and pungent sarcasm. One of his first steps was to introduce measures for the suppression of the slave-trade. In their labors for this end Wilberforce and Clarkson had no more strenuous supporter than the fiery young Whig from Scotland. His efforts were not wanting in behalf of other liberal and progressive measures. The cause of Catholic emancipation, of reform in the government of India, and of the abolition of flogging in the army, received his powerful advocacy. Lord Brougham interested himself in the cause of popular education, and was mainly instrumental in the establishment of the "model schools" for the instruction of the poorer classes. The event of his life which conduced most to his popularity in England was his famous defense of Queen Caroline, on her trial before the House of Lords in 1820 and 1821. His eloquence on this occasion has seldom been equaled. On the formation of Earl Grey's ministry in 1830 he was appointed Lord Chancellor of England. In this honorable sphere he continued four years, commanding general admiration for his singular energy and promptitude in transacting the business of his onerous office. In 1839 he retired from public life to his villa in the south of France, and spent the remainder of his days in the peaceful pursuit of literature. Among his most important published works, in addition to the collection of his speeches, are a "View of Sir Isaac Newton's Principia," an annotated edition of Paley's

"Natural Theology," and "Sketches of Statesmen" and of "Men of Letters and Science" in the time of George III. Several editions of his "Political Philosophy" have been published, besides numerous minor works that are less known. See NEW PHYSIOGNOMY.

POPULAR LECTURES IN NEW YORK AND VICINITY.

In addition to our professional lectures to students, we have given, during the past winter and spring, many popular lectures on Phrenology, as applied to temperance, education, etc., in various parts of New York, Brooklyn, Williamsburg, Harlem, and other places contiguous.

In Brooklyn there was a course given at the Park Theater, when the house was filled from pit to dome. Mr. Greeley and other eminent advocates of temperance were among the speakers. As we aim to bring Phrenology and Physiology to bear upon every question, the lecture we were invited to give was chiefly based on those subjects. Dr. Bennett, the now venerable reformer, informed us that a gentleman came to him after one of the lectures, desiring to sign the pledge, and though he then had the title of M.D. and LL.D. to his name, he heard an argument based on physiology which convinced him that it was his duty to pledge himself to use no more alcoholic spirits. He had before heard many temperance arguments, but when from a phrenological stand-point the subject was presented, he became convinced that it was his duty to lay aside the occasional glass and give his name and his influence to the temperance cause.

Early in April we gave a brief course of lectures in the National Hall in Harlem; our chief attempt there was to show parents the proper method of training the dispositions, guiding the passions, and cultivating the intellectual and moral powers of their children. Besides giving us a cordial reception and attentive hearing, many mothers brought their stubborn daughters and wayward sons to have us describe their characters and give them special instructions how to guide and regulate them. We have no doubt that the good effects of this brief course of lectures will be felt and long remembered in Harlem. We also gave a course of seven lectures in Union Hall, Brooklyn, E. D. The subjects of this course were—

First—How to read character scientifically, including the principles and proofs of Phrenology and the Temperaments.

Second—How to rise in the world, or Phrenology applied to the choice of pursuits.

Third—Physiognomy; the signs of character as indicated by form, feature, gesture, walk, laughter, eyes, nose, mouth, chin, neck, etc.

Fourth—The moral sentiments; and how to awaken, guide, and cultivate them, especially in the young.

Fifth—How to train up a child; the passions, how to understand and guide them; high-tempered boys, timid children, and how to treat them.

Sixth—Vanity, pride, ambition, appetite, juvenile thieves and liars, how to reform them; self-culture, etc.

Seventh—Intellectual culture; the practical and the theoretical; memory, and how to improve it; the natural language of the faculties, every feeling and sentiment having its gesture, attitude, and indication unconsciously evinced by the person.

We receive also invitations to lecture for societies, for teachers' conventions, and other occasions, which we accept when our professional duties will permit. Sometimes we go 150 miles to give a single lecture by invitation. If our duties at home would permit these excursions, we could make them very frequently during the lecturing season. Thus in public and in private, in temperance associations, in school-gatherings and otherwise, by writing, teaching, printing, are we trying to spread the knowledge of phrenological truth, and we believe no day passes in which some one is not largely benefited by our instructions; reformed of bad habits; taught a higher and better rule of life, and led to be more in the sight of themselves, their neighbors, and their God. Men generally know more of everything else than of themselves. The majority of well-meaning people are living in ignorance of some of the plainest principles of physiology; they wonder why they are sick, or bilious, or unhappy, or unsuccessful; perhaps it is the abuse of their Alimentiveness or some other propensity which the phrenologist could point out, and thus open to them a new and better way.

PROFESSIONAL INSTRUCTION IN PRACTICAL PHRENOLOGY.

THERE are thousands who desire to know more of themselves than they do, and to learn how to read the characters of their fellow-men correctly. Some wish to follow Phrenology as a profession; to devote themselves to teaching it as a science, and to practicing it as an art. Others, connected with schools, with medicine, with the ministry, or with business, feeling that they are not able to understand mankind readily, that they are constantly making mistakes in their estimation and treatment of others, are now seeking the aid which Phrenology affords. They have also a strong desire to find out how much there is in Phrenology that will aid them in forming conclusions respecting themselves, and in guiding their judgment and conduct toward others. That some people read mind and character better than others, they are aware; that it is important that they should be able to read character better than they now can, they are also aware; hence their desire to examine the phrenological methods.

In order to meet this growing public want, we instruct classes every year in those facts and principles which thirty years of careful study and practice enable us to teach. By public lectures and publications we can do much, but we can not reach the whole community. We are attempting every year to instruct persons who shall be able to go out into the great harvest-field and instruct the public. There is, to-day, a great demand for good lecturers and examiners throughout Europe and America. Some have attempted to supply this demand, and feeling conscious of a lack of scientific information, and of that amount of practical experience necessary to success, they have become discouraged and left the field. Such persons come to us for additional information and training in this field of their love and ambition, and it gives us pleasure to state that not a few of those who have gone out from us are now doing a good and profitable work; and we receive letters almost daily from our former students thanking us for the benefits which our instruction afforded them, and for the better success which they are now enabled to secure in the promulgation of the science. In order to guard the public against being imposed upon by persons who profess to have received instruction from us, and have not, we give to each graduate who takes our course of instruction a certificate or diploma verifying the fact that he has received the necessary instruction, and that he goes forth with our approval and indorsement. While this serves the lecturer as an introduction, it assures the public that he is worthy of patronage as a phrenologist.

There is no other subject, perhaps, which more readily awakens public attention than that science which reveals human character and teaches men what they are best adapted to follow, and points out to them the pathway to success and happiness, and at the same time indicates wherein they are liable to go astray, and what faculties they can use to the best

advantage. No brighter field is open to enterprising and intelligent men and women than that of practical Phrenology.

We propose to open a summer class for ladies, the first Monday in September next. Woman, besides making the best teacher and the best nurse, may, for aught we can see, become an equally good phrenologist; and as the avenues opened to woman for usefulness and remuneration in honorable employment are not very numerous, we think she will hail this opportunity with delight, greatly to her own advantage and to the public weal. Ladies wishing to become members of this class will write us, asking for a circular entitled "Professional Instruction in Practical Phrenology, For Ladies."

On the first Monday in January next our annual class for gentlemen will be opened, and those wishing to become members will do well to address us at once, asking for a circular relative to the class of 1869, in which they will find a synopsis of the course of instruction, the books necessary to be read, together with terms and other matters of interest.

In order that proper preparations may be made for those who are to become members of either class, we desire to learn at as early a day as possible what number of students to provide for. Please address, "FOR INSTRUCTION," Office of the PHRENOLOGICAL JOURNAL, 389 Broadway, New York.

"DON'T LEAVE THE FARM."

[THIS is the burden of the following neat verses, which are dedicated to those restless youths who look to the exciting theater of city life for fame and fortune, when the chances for health, wealth, and happiness are far greater in peaceful agricultural pursuits. The advice is as sound as it is pleasantly administered.]

Come, boys, I have something to tell you;

Come near, I would whisper it low:

You are thinking of leaving the homestead—

Don't be in a hurry to go.

The city has many attractions,

But think of the vices and sins;

When once in the vortex of fashion,

How soon the course downward begins!

You talk of the mines of Australia—

They've wealth in gold without doubt;

But ah! there is gold on the farm, boys,

If only you'll shovel it out:

The mercantile life is a hazard,

The goods are first high and then low;

Better risk the old farm a while longer—

Don't be in a hurry to go!

The great busy West has inducements,

And so has the busiest mart,

But wealth is not made in a day, boys—

Don't be in a hurry to start!

The bankers and brokers are wealthy,

They take in their thousands or so;

Ah! think of the frauds and deceptions—

Don't be in a hurry to go!

The farm is the safest and surest,

The orchards are loaded to-day;

You're free as the air of the mountains,

And monarch of all you survey.

Better stay on the farm a while longer;

Though profit comes in rather slow,

Remember you've nothing to risk, boys—

Don't be in a hurry to go!

MOHAMMED.

"We follow the religion of Abraham the orthodox, who was no idolater."—*The Koran.*

BY EDWARD W. TULLIDGE.

It has been the habit of Christian writers to stigmatize Mohammed as "the great false prophet" and as an anti-Christ; but in this age of liberal views, even sound believers in the divine mission of the Christ from chosen Isaac's seed can afford to do justice to the great prophet who sprang from the loins of his brother Ishmael. Heterodox philosophers, on their side, will class the whole race of prophets and apostles together, and view them simply as marvelous psychological and sociological problems. They will treat the genuine of this peculiar order as rare types of beings whose visionary and inspirative natures saw empires in their own fervid minds. Out of such as these new civilizations and empires have grown; and it has ever been found in the course of nations that when the old empires have been rapidly passing through their states of decay, and the world needed a new impulse, then human giants have risen with their peculiar dispensations.

In Mohammed and his mission there is a genuine assumption of the Abrahamic covenant claimed by a descendant of the eldest son of the "Father of the Faithful;" and unless we give due weight to this fact, and its workings in the mind of this great representative of the line of Abraham's first-born, we shall make discordant that which is in itself grandly harmonious. "In thee, and in thy seed, shall all the kindreds of the earth be blessed," was the covenant made to the "Father of the Faithful;" and Mohammed claimed his portion thereof. Yet did the Arabian prophet magnanimously give unto the seed of Isaac the principal succession in the sacred prophetic line, affirming that, though it was latent in the race of Ishmael, the gift of prophecy, with the holy apostleship, was not vouchsafed to any of his seed until he (Mohammed), the last of the Prophets, came, while from Isaac had sprung a long succession of prophets to carry on the Abrahamic dispensations.

"We follow," says the Koran, "the religion of Abraham the orthodox, who was no idolater. We believe in God and that which has been sent down to us, and that which was sent down to Abraham and Ishmael and Isaac and Jacob and the tribes, and that which was delivered unto Moses and Jesus, and that which was delivered unto the prophets from the Lord. We make no distinction between any of them, and to God we are resigned."

Mohammed was born in Mecca, the sacred city of Arabia, in 569 of the Christian era, and he came of the illustrious tribe of Koreish, of which there were two branches descended from two brothers. His ancestor Haschem, through his commercial enterprise, made Mecca a great commercial mart, notwithstanding the city was located in a barren and stony country; and the tribe of Koreish became powerful and wealthy. Haschem was looked upon as a

public benefactor, and he became guardian of the Caaba, the great shrine of Arabia, and this guardianship gave to him the control of the sacred city. His son Abd al Motâlleb succeeded him; and having by his patriotism delivered the holy city from an invading army sent by the Christian princes of Abyssinia, the guardianship of the Caaba was confirmed unto his family. Abd al Motâlleb was blessed with sons and daughters, of whom Abdallah was the youngest and best beloved. This beloved son married Amina, a maiden of his own kin, and by her came into the world the illustrious subject of this article, their only child. Moslem traditions abound with the wonders that transpired at his birth, among which we read that, at the moment of his coming into the world, he raised his eyes to heaven, exclaiming, "God is great! There is no God but God, and I am his prophet." When he was scarce two months old his father died, leaving him no other inheritance than five camels, a few sheep, and a female slave. The grief of the young mother at the loss of her beloved robbed her child of nature's nourishment; but among the peasant women who came to Mecca to offer themselves as foster-mothers for the children of the wealthy was the wife of a Saadite shepherd, who out of compassion took the helpless infant to her home in one of the pastoral valleys of the mountains.

When at the age of four years, so says Moslem tradition, while playing in the fields with a foster-brother, two angels in shining apparel appeared, and laying Mohammed on the ground, the angel Gabriel took out his heart and cleansed it, and having filled it with prophetic gifts, replaced it; "and then from his countenance began to emanate a mysterious light peculiar to the sacred line of prophets from Adam, but which now for the first time shone upon a descendant of Ishmael." The angel Gabriel also stamped between the child's shoulders the seal of prophecy, "which continued throughout life as the symbol and credential of his divine mission," though," says Washington Irving, "unbelievers saw nothing in it but a large mole the size of a pigeon's egg." When the vision was told to his nurse, she and her husband became alarmed lest these angels were evil spirits, and she carried the youthful prophet back to Mecca, and delivered him to his mother.

Stripped of their fabulous dress, these traditions indicate that very early in youth rare qualities began to manifest themselves in Mohammed. It is a marked characteristic of those endowments which we call genius to show their signs in a wonderful degree and precocity in extraordinary children. Hence, when we find it in the musical composer, we have a Mozart astonishing the courts of Europe at seven years of age, by performing at sight the most difficult compositions of Handel and Bach, and already himself a celebrated composer.

The mother of Mohammed died when he was six years of age, and left him to the

guardianship of his illustrious grandfather, who, at his death, two years later, committed him to the special care of his eldest son, Abu Taleb. Nothing further of importance occurred in his eventful life until he reached the age of twelve, when a circumstance came which greatly tended to mold his peculiar character and prepare him for his subsequent career. His ancestor Haschem had first started those merchant caravans by which Mecca had been made a city of commerce. In the ardent mind of young Mohammed these caravan enterprises were glorified with romance and marvelous incidents. At the age of twelve, with his daring imagination wrought up to the highest pitch, he clung to Abu Taleb, who was preparing to mount his camel to start with his caravan, and implored his indulgent kinsman to be permitted to go with him to Syria. "For who, O my uncle, will take care of me when thou art gone?" plead the boy. Abu Taleb granted the prayer of his nephew, and the caravan started on its route, to return in due time loaded with its merchandise, and the mind of the future prophet more abundantly laden with the superstitions of the desert, a knowledge of the sacred Hebrew writings and of the mission of Christ.

"After skirting the ancient domains of the Moabites and the Ammonites," writes Washington Irving, "the caravan arrived at Bostra, on the confines of Syria, in the country of the tribe of Manasseh, beyond the Jordan, which was once a city of the Levites, but was now inhabited by Nestorian Christians. Here they camped near a convent of Nestorian monks."

At this convent Abu Taleb and his nephew were entertained with great hospitality; and one of the monks, surprised at the precocious intellect of young Mohammed, and his astonishing capacity for a religious mission, held frequent conversations with him upon the sacred Scriptures. The subjects which engrossed the ardent mind of the future prophet were those relating to his forefather Abraham, Moses, and the new dispensation opened in the ministry of Christ. One has only to read the Koran to trace the early inception of the germs of Islamism, and how much in youth the daring and capacious mind of Mohammed became pregnant with the ideas of new dispensations in an Abrahamic succession. In that Nestorian convent, in an ancient city of the Levites, Ishmael's prophet was born for the mission, and from that hour the new dispensation was nascent in Mohammed's soul. Moslem writers say that the origin of the interest taken by the monk Sergius in the young Arabian was in consequence of his having accidentally discovered the seal of prophecy which the angel Gabriel had stamped between his shoulders; but impartial writers attribute this interest to the desire of a zealous monk to proselyte an extraordinary youth whose quality of mind and earnestness would well fit him in after-years to become a great apostle of Christianity to the Arabian nations.

Mohammed returned with his uncle to Mec-

ca, the seeds of a great religious mission deeply planted in his mind. The son of Ishmael had been to the land in which Abraham sojourned when he departed out of Chaldea and out of the house of his idolatrous father, leaving his denunciation against idolatry, and carrying with him a knowledge of the true religion.

When he reached the age of twenty-five, another important circumstance occurred, which gave him wealth and influence and helped to determine his course. There lived in Mecca a lady of the Koreish tribe. Twice had she been married; her last husband, a wealthy merchant, had recently died. The extensive business of the fair widow required an efficient manager, and her nephew recommended young Mohammed to her as a fit person to be her factor. Cadijah, the name of the lady, was so eager to secure his services that she offered him double wages to conduct her caravan to Syria. As he is extolled for his manly beauty and engaging manners, it is thought that the fair widow's heart was her counselor. Mohammed, by the advice of Abu Taleb, accepted her offer, and so well pleased was his patroness on his return that she gave him double the stipulated wages. Similar expeditions brought to him like results, and finally the lady, through a trusty maid-servant, proposed marriage to her business agent, with successful result. At his marriage Mohammed caused a camel to be killed before his door to feast the poor, and Heléma his nurse was summoned, to whom her grateful foster-son presented a flock of forty sheep.

Mohammed now ranked among the most wealthy of the city, and his excellent conduct obtained for him the name of Al Amin, or the Faithful. For several years he continued in the sphere of commerce, but his heart was not in his vocation, and his enterprises were not as successful as before. It is supposed that in his subsequent journeys into Syria after the age of twenty-five, Mohammed renewed his intercourse with those versed in the sacred writings and the history and religion of the Jews and Christians. Waraka, a cousin of Mohammed's wife, was instrumental in developing his latent energy and starting him in his great career. This Waraka himself was a remarkable character. He was a learned man, of a bold, speculative mind, who had cast off the idolatrous religion of the East and held Arian opinions. He was also progressive and innovative in his tendencies. First he was a Jew, and then he advanced to the Christian, and perhaps more fully than his pupil, he had already conceived the necessity of a new dispensation, for the Christian churches generally at that period had fallen much from their primitive apostolic state, as the old Eastern empires had into the grossest idolatry. In the Koran, which so emphatically indorses the divine missions of Moses and Jesus, the apostasy of both the Jews and Christians is repeatedly marked. It is more than probable that much of Waraka's mature views and speculations became absorbed by the inspirative and force-

ful Mohammed. The learned cousin of Cadijah was, moreover, the man who first translated parts of the Old and New Testaments into Arabic, and to him Mohammed is supposed to have been chiefly indebted for his extensive knowledge both of the Scriptures and the traditions of the Mishnu and the Talmud.

His mind stored with all the materials for his work, Mohammed retired from the world to a cavern on Mount Hara, and in solitude prepared himself for Allah's service with fasting and prayer. His whole nature was now in painful travail with his great purpose, and it so wrought upon the healthful condition of his body, and perhaps sound state of his mind, that he became subject to dreams, ecstasies, and trances. For six months successively he is said to have received a series of dreams and visions. We are told that he would often lose all consciousness of surrounding objects, and lie upon the ground as if insensible; and when his anxious wife, whose ministering presence was with him in the cave of Mount Hara, entreated to know the cause of his paroxysms, he evaded her inquiries or answered mysteriously. Moslems consider these ecstasies to have been the workings of the spirit of prophecy, and the revelations of the Most High dawning vaguely upon him.

At length (in the fortieth year of his age) came the annunciation of his apostleship by the personal administration of the angel Gabriel. The following is the substance of Washington Irving's account of this circumstance: "He was passing, as was his wont, the holy month in the cavern of Mount Hara, fasting and praying. It was the night called Al Kader, or the Divine Decree, a night in which, according to the Koran, angels descend to the earth, and Gabriel brings down the decrees of God. As Mohammed in the silent watches of the night lay wrapped in his mantle, he heard a voice calling him; uncovering his head, a flood of light broke upon him of such an intolerable splendor that he swooned away. On regaining his senses, he beheld an angel in human form, which, approaching from a distance, displayed a silken cloth covered with written characters. 'Read,' said the angel. 'I know not how to read.' 'Read!' repeated the angel, 'in the name of the Lord who has created all things, who created man from a clot of blood. Read, in the name of the Most High, who taught men the use of the pen, who sheds on his soul the ray of knowledge, and teaches him what before he knew not.' Upon this Mohammed instantly felt his understanding illumined with celestial light, and read what was written upon the cloth, which contained the decrees of God as afterward promulgated in the Koran. When he had finished the perusal, the heavenly messenger announced, 'Oh, Mohammed, of a verity thou art the prophet of God, and I am his angel Gabriel.' Mohammed came trembling and agitated to Cadijah in the morning, not knowing whether what he had seen was indeed

true, a mere vision, or a delusion of his senses, or the apparition of an evil spirit. His wife said: 'Joyful tidings dost thou bring! By Him in whose hand is the soul of Cadijah, I will henceforth regard thee as the prophet of our nation. Rejoice,' added she, seeing him cast down, 'Allah will not suffer thee to fall to shame. Hast not thou been loving to thy kinsfolk, kind to thy neighbors, charitable to the poor, hospitable to the stranger, faithful to thy word, and ever a defender of the truth. She hastened to communicate the intelligence to her cousin Waraka. 'By Him in whose hand is the soul of Waraka, thou speakest true, oh, Cadijah. The angel who has appeared to thy husband is the same who, in the days of old, was sent to Moses the son of Amram. His annunciation is true. Thy husband is a prophet.'"

Thus it will be seen that his fond wife and her learned cousin were the first to rejoice and proclaim Mohammed the Prophet of their nation.

For a time Mohammed confided his revelations to his own household, but at length the rumor got abroad that he pretended to be a prophet. This stirred up, at the very opening of his career, hostility from every side. His immediate kinsmen, of the line of Haschem, were powerful, prosperous, and identified with idolatry. They therefore considered their family disgraced in the person of Mohammed, and that he was placing them in humiliation at the feet of the rival branch of their tribe; while the rival line of Abd Schems took advantage of the opportunity, and raised the cry of heresy and impiety, to depose the line of Haschem from the guardianship of the sacred shrine of Arabia and the governorship of Mecca. Thus the matter became an issue of rival family interests, as well as one of a radical conflict between idolatry and the mission of this earnest image-smasher.

During the first three years of his prophetic career the number of Mohammed's converts did not exceed forty, and most of these were young persons, strangers, and slaves; and so thoroughly was the new sect outlawed, that its meetings were held in secret, either at the house of one of the disciples or in a cave near Mecca. Their meetings at length were discovered, a mob broke into the cavern, and a scuffle ensued, in which one of the assailants was wounded in the head by Saad, an armorer, who thenceforth became renowned as the first of the disciples who shed blood in the cause of Islam.

Mohammed afterward had a second vision, in which the angel Gabriel commanded him to arise and preach and magnify the Lord. Accordingly, in the fourth year of his religious or fanatical activity, he summoned the line of Haschem to meet him on the hill of Safa, in the vicinity of Mecca, that he might unfold to them matters of importance concerning their welfare. They assembled, and with them came his uncle Abu Lahab, a man of a proud spirit, who held his nephew in reproach for bringing disgrace upon

his family. As soon as Mohammed commenced to make known to them his revelations, Abu Lahab started up in a great rage, reviling him for calling them on so idle an errand. Catching up a stone, he would have cast it at his nephew, but the Prophet turned upon him a withering glance, cursed the hand raised against him, and predicted his doom to the fire of Jehennam, with the assurance that his scoffing wife should bear the bundle of thorns with which the fire would be kindled. This woman was the sister of Abu Sofian, the great rival of the line of Haschem, and though the son of Abu Lahab had doubly united him to his nephew by a marriage with Mohammed's youngest daughter, Abu Lahab betrayed his family, and united with its rival. Enraged by the curse pronounced upon them, they immediately compelled their son to divorce his wife, who came weeping to her father; but she was soon consoled, by becoming the wife of her father's zealous disciple Othman, who in the number of Mohammed's successors ranks as the third Caliph in the rise of the vast Mohammedan empire.

Not discouraged, the Prophet called a second meeting of the Haschemites, and at this time announced in full the revelations which he had received, and the divine command to impart them to the chosen line of Haschem. "Oh, children of Abd al Montalleb," cried the Prophet, "to you of all men has Allah vouchsafed these most precious gifts. In His name I offer you the blessings of this world, and endless joys hereafter. Who among you will share the burden of my offer? Who will be my brother, my lieutenant, my vizier?" For a space of time the assembled Haschemites were silent, some wondering, others smiling in derision, until the youthful Ali, starting up with enthusiasm, offered himself to his great cousin, who caught the generous youth in his arms, and pressing him to his bosom, cried out to the assembly, "Behold my brother, my vizier, my vicegerent! Let all listen to his words and obey him." The outburst of the stripling Ali was received with a shout of derision, and the Haschemites scoffingly told Abu Taleb that he must now pay obedience to his son; but notwithstanding their scorn, the youthful Ali afterward became one of the mightiest of men, and fourth Caliph of the Mohammedan empire.

Mohammed now began to preach in public. The hills of Safa and Kubeis were his chosen audience chambers, from which he thundered against the reign of idolatry. These places were well chosen, for they were sanctified in the minds of the children of Abraham's first-born, by traditions of Ishmael and his mother Hagar; and from these holy hills he sent forth a mighty proclamation that God had sent him to restore "the religion of Abraham." The Koreishites, enraged by his denunciation of their idolatry and the stiffneckedness of themselves and their fathers in "the days of ignorance"—as the period prior to the Islam era is denominated—and, moreover, much alarmed by the spread of the new faith, urged Abu

Taleb to silence his nephew, and at length threatened to exterminate Mohammed and his disciples. Abu Taleb hastened to entreat his nephew to forego his work. "Oh, my uncle," exclaimed this grand fanatic or prophet, "though they should array the sun against me on my right hand and the moon on my left, yet until God shall command me, or shall take me hence, would I not depart from my purpose." Mohammed was retiring from the presence of his uncle with a dejected countenance, when Abu Taleb, struck with admiration, called him back, and declared that, preach what he might, he would never abandon him to his enemies; and Abu Taleb, as the representative of his line, forthwith bound the descendants of Haschem and Abd al Montálleb to aid him in protecting Mohammed against the rest of the tribe of Koreish. They considered the new religion of their kinsman a dangerous heresy, but the strong family instinct of the Arabs prevailed, and the descendants—excepting his uncle Abu Lahab—of Haschem and Abd al Montálleb consented to protect him.

About this time Mohammed was assailed and nearly strangled in the Caaba, but he was rescued by Abu Beker. He therefore deemed it wisdom to counsel those of his disciples who were not protected by powerful friends to fly from Mecca, for their lives were now in danger. He advised such to take refuge among the Nestorian Christians, and Othman Ibu Affan led a little band of the persecuted out of Mecca. The refugees were kindly received by the Nestorians, and others soon followed them. Meantime the Koreishites, finding Mohammed persistent in his work and daily making converts, passed a law of banishment against all who should embrace his faith, while he himself was forced to take refuge in the house of one of his disciples. Here he remained for a month. But his fame had spread abroad, and men from all parts of Arabia sought him in his retreat.

His powerful enemy Abu Jahl sought him and insulted and outraged him by personal violence. This was, however, avenged, and the circumstance was the indirect cause of bringing into the faith of Islam two of its mightiest champions. This outrage was told to his uncle Hamza, as he was returning from hunting, whereupon, in great ire, he marched with his bow unstrung into an assembly of Koreishites, where he found Abu Jahl boasting of his exploit; and Hamza smote him with a blow, wounding him in his head. The friends of the smitten man were in their turn about to avenge him, but Abu Jahl, fearing the warlike Hamza, himself pacified them, and apologized for his conduct, urging as his excuse the apostasy of his nephew. "Well," retorted Hamza, fiercely, "I also do not believe in your gods of stone; can you compel me?" Forthwith he declared himself a believer in his nephew's mission, and took the oath of allegiance. Yet more important a convert even than the warlike Hamza was Abu

Jahl's own nephew Omar, whose very walking-stick, it is said, struck more terror into beholders than any other man's sword. Omar, instigated by his uncle to avenge the blow dealt him by Hamza, promised to penetrate to the retreat of the Prophet and strike a poniard to his heart. He was on the way to execute his purpose, when he met a Koreishite friend, to whom he imparted his design. "Before you slay Mohammed, and draw upon yourself the vengeance of his relatives, see that your own are free from heresy," cautioned his friend, who had himself secretly embraced the faith. "Are any of mine guilty of backsliding?" demanded Omar. "Even so," was the reply. "Thy sister and her husband Seid." Omar, overwhelmed with astonishment, and beside himself with wrath, hastened to his sister's house, and surprised her and her husband reading the Koran. In his rage he struck Seid to the earth, and would have plunged his sword into his heart, but the wife interposed, and received a fierce blow in her face, which bathed it in blood. "Enemy of Allah," sobbed his sister, "dost thou strike me thus for believing in the only true God? In spite of thee and thy violence, I will persevere in the true faith. Yes, there is no God but God, and Mohammed is his prophet. And now, Omar, finish thy work." But Omar, struck by his sister's spirit, relented, and took his foot from her husband's breast. "Show me the writing," he said; but his sister refused to let him touch the sacred scroll until he had washed his hands. He opened the 20th chapter of the Koran, and read: "In the name of the most merciful God! We have not sent down the Koran to inflict misery on mankind, but as a monitor, to teach him to believe in the true God, the creator of the earth and the lofty heavens.

"The All-Merciful is enthroned on high; to Him belongeth whatsoever is in the heavens above and in the regions under the earth.

"Dost thou utter thy prayers with a loud voice? Know that there is no need. God knoweth the secrets of thy heart; yea, and that which is most hidden.

"Verily I am God; and there is none besides Me. Serve Me; serve none other. Offer up thy prayers to none but Me."

Omar, greatly moved by the new revelations, continued to read, and before he left his sister's house, this fierce man of war was a penitent and firm believer in the Prophet, to whose retreat he hastened, and knocking, humbly craved admittance. "Come in, son of Khat-tah," answered the Prophet. "What bringest thee hither?" "I come to enroll my name among the believers of God and His prophet," reverently replied the new convert.

No half-hearted manifestation of faith satisfied this proselyte. He desired to make his conversion most public, and prevailed on Mohammed to accompany him to the Caaba to perform openly the rites of Islamism. A procession of the faithful forthwith paraded the streets of Mecca, Hamza walking on the right

hand and Omar on the left hand of the Prophet, to protect him from violence; and though the Koreishites viewed this demonstration with astonishment and dismay, none dared to interrupt it, for Hamza and Omar glared upon their enemies "like two lions that had been robbed of their young." Next day, also, the fierce nephew of Abu Jahl went up to the holy shrine to pray, in defiance of the Koreishites, who, though they dared not to interfere in his worship, fell upon another of the disciples who also went up to worship. Wrathful at this, Omar immediately sought his powerful uncle. "I renounce," said he, "thy protection. I will not be better off than my fellow-believers." This terrible military apostle of the Arabian prophet became the second successor of Mohammed, and under him the conquests of Egypt, Syria, and Persia were added to that of all Arabia.

In the seventh year of Mohammed's mission a schism was produced in the Koreish tribe, and the rival branch entered into a solemn league against the Haschemites and the family of Al Montálleb, engaging themselves to contract no marriages and to have no commerce with them until they gave up the person of Mohammed, who had taken refuge in Abu Taleb's castle in Mount Safa. The families continued at variance for three years, when Mohammed told his uncle that God had manifested to him His displeasure of the league, by sending a worm to eat out every word of the instrument except the name of God. Abu Taleb went immediately to the Koreish, and offered, if it proved false, to give up his nephew, but exacted in turn that if it proved true the league should be declared void. To their great astonishment, they found it even as the Prophet had said, and he was allowed to return to Mecca.

In the same year Mohammed sustained a great loss in the death of his uncle Abu Taleb, and three days afterward in that of his wife Cadijah. This year is called the Year of Mourning. Left now without the protection of his uncle, in the midst of his merciless enemies, headed by Abu Sofian, into whose hands at the death of Abu Taleb had passed the guardianship of the sacred city, the Prophet, nevertheless lost nothing of that grand fanaticism that ever sustained him in his darkest hours. In the twelfth year of his prophethood he published the revelation of his famous night journey to the seven heavens. At first, it was too much even for the credulity of his disciples, and some of them left him; but Abu Beker timely vouched for the Prophet's veracity; and his prompt testimony to the truth of the night vision turned again the wavering faith, and raised the credit of Mohammed as the favorite Apostle of God to a towering pinnacle. It is thought that this hit of the Prophet was a bold stroke of policy. Says Mr. Sale, in his preliminary discourse to his translation of the Koran, "I am apt to think this fiction, notwithstanding its extravagance, was one of the most artful contrivances Mohammed ever put in practice, and what chiefly contributed to the raising of his reputation to that great height to which it afterward attained."

[TO BE CONTINUED.]

MISS ELIZA A. PITTSINGER,
THE CALIFORNIA POETESS.

In the great West we from time to time meet with authors, poets, orators, teachers, who have impressed themselves upon the Western mind, because in sentiment, thought, and expression they adapt themselves to the tone of thought and feeling current there. The portraits, biographies, or effusions of true Western poets, representing different States, have appeared in our JOURNAL from time to time, and now California presents one to us as worthy of consideration.

This lady has two marked mental peculiarities: one is activity; the other intensity, originating in a nervous, wiry, physical condition. She can walk or work with a kind of elasticity and spring that is very effective, and at the same time easy. She is sensitive, susceptible, and enduring, yet likely to wear herself out. She has abundant breathing power, muscular power, and mental power, but hardly enough digestive power to furnish the requisite support for brain and body. We would suggest that a hygienic mode of life should be her first study; that is to say, her exercise, her sleep, as well as her diet, should be in harmony with hygienic law. There has come to be a technical meaning to the word "Hygienic," and some people think it means to refrain from meat, butter, tea, and coffee, and to live on a very spare vegetable diet; but we do not mean all this when we say Hygienic. In this climate a piece of nice beef is not a bad article of food; but the oily matter, the pastry, the condiments, the stimulants, these we would repudiate.

Miss Pittsinger has a strong emotional nature; the middle portion of her head is large and wide between the ears, indicating that the force elements are strong, giving vigor, earnestness, and thoroughness. She has courage, fortitude, positiveness, and power; is not easily discouraged, not easily repelled. She is qualified to elbow her way through difficulties, and make herself master of the situation.

She is strongly social, and believes in friends, society; in affection and love; and as a wife would be very devoted to one who was adapted to her.

She has a strong love of life, and the

MISS ELIZA A. PITTSINGER.

word immortality receives as much of a heart-gush as anything she can speak; the thought that we are to live forever—as long as God himself exists, is a great thought to her.

She is ambitious; very fond of the good opinion of her friends. She is, perhaps, too sensitive to the censure and disapproval of others. When assailed directly, and when it is proper to respond and defend herself, she can meet the attack very well; but a leer, a laugh, a shrug of the shoulders, or a shake of the head cuts her keenly.

She is cautious, always on the watch for danger and difficulty; is not easily circumvented by treachery and policy; generally has an eye and an ear open to all such things; and when people are playing a double game, fair to the face, but with a sinister purpose, she generally appreciates the deception, and withdraws from the influence and power of such persons.

She has Constructiveness, which makes her ingenious; large Ideality and Sublimity, which give her a sense of the poetical, the beautiful, and the sublime in art and nature. Her integrity is more strongly marked than her Hope; she inclines to live an upright, just life, but not having large Hope, does not expect favorable results unless she can help to work out these results herself.

She sympathizes deeply with those who suffer, and has reverence for things sacred. Her intellect is sharp, clear, and practical; she picks up knowledge by the wayside, everywhere; her observation is quick, clear, and accurate. Her

Language is sufficient to qualify her for talking, teaching, writing, and explaining; she would do well in any literary pursuit that demands a quick, clear, analytical mind.

Though she has taste and refinement of feeling, she is more known for strength than for smoothness, for earnestness than for Secretiveness, and impresses people and wins their approval more by the earnestness and strength of her statements than by their plausibility and mellow persuasiveness. Having inherited her father's temperament, and much of his disposition, she inclines to take a higher rank in life than if she resembled her mother, even though they were equal. She is brave to meet and master difficulties and oppositions; has a feeling of self-trust that does not wince at trouble and give up at discouragements. She never has felt so much the necessity for protection as she has for elbow-room, and a chance to use her power; and all she asks of the world is to give her a clear track; she asks no help, but simply justice, room, and opportunity.

BIOGRAPHY.

The subject of this sketch was born at West Hampton, Mass. Her father, whom she resembles in feature and temperament, was of German descent, and a most humane and benevolent man. Her mother was of Anglo-Saxon birth, and blended unusual personal attraction with an amiable disposition and a spirit naturally bold and aspiring. Her death occurred at the early age of thirty-two, leaving Eliza with two brothers and two sisters to the care and guidance of an older sister, a girl of fourteen, who thus acted in the double capacity of mother and sister. Mr. Pittsinger deeply suffering from his bereavement, became negligent of his business matters, so that his circumstances and means of supporting his family were greatly reduced. Eliza early exhibited a disposition impulsive, daring, precocious; she cherished an unusual desire for knowledge of all kinds, and availed herself of all improving opportunities.

At the age of fourteen she took charge of the house for her father, two brothers, and a sister, and walked a mile (through the snow in winter) to teach a school; and at the same time instructed at home a younger brother and sister. At sixteen she was teacher of a school in Western New York, composed mostly of boys much older than herself. During the three following years her time was spent in teaching through the summer, and attending the Northampton high school in winter, from which she graduated with what is generally considered a thorough New England education.

Subsequently she was engaged for several

years at Rogers' stereotype institution in Boston as proof-reader and reviewer. In the spring of 1854 she sailed for California; and four years later her stirring songs and lyrics began to appear in the California journals. In the Golden State she has created many admirers and warm friends by her fervent patriotism and devoted enthusiasm to the zealous efforts in the cause of social and moral reforms. In the mining districts she was most enthusiastically received and appreciated.

In 1866 and 1867, at Nevada City, Grass Valley, at the lakes and among the Sierra Nevada, at St. Francisco and elsewhere, she has read her own poems to enthusiastic audiences, and at the same time wrote letters of travel for San Francisco papers. A farewell benefit was tendered her by the influential people of that city on the eve of her departure for a visit north.

Miss Pittsinger is now writing an extended "Poem on California," to be compiled with others, ere she returns to her adopted State, and will probably give some readings after more important duties are attended to. We close this brief sketch with a specimen quotation of her poetic muse. The verses are from a poem written in 1867, entitled "Ode to the Moon." Their style is smooth and flowing, yet tender and thoughtful.

All human life, perchance, is hushed in sleep!
Ah, who can rend the veil of night, and scan
The shattered hopes and broken threads that keep
Their silent councils in the soul of man?
Ah, who can rend the mystic shroud, and link
To joy and life those severed chords again,
That coldly tremble from the silent brink
Of past ambitions, planned and reared in vain?

'Tis almost midnight! and my soul is wrapt
Within the glory of thy subtle beams;
Far hence I watch the hills with grandeur capt,
While Nature lulls me in her softest dreams!
'Tis almost midnight! and I linger still
Beneath the glory of thy subtle spell,
Like one enchanted with new joys, until
My very thought in songs of rapture swell.

'Tis almost midnight! and they call me hence!
Those dreamy graces, with their waving wand;
But wrapt within a vision most intense,
To their soft charms will I not yet respond!
They call me hence! in vain their witching spells!
'Neath thy magnetic rays I have no thought
Save that which upward soars, and fondly dwells
On those grand laws with hidden glories fraught!

Thou midnight moon! most soothing, calm, and bland!
Oh, tell to me what silent mysteries lie
Between thy beams and that directing hand
That shapes thy course along the pathless sky!
Thy sister orbs, securely in their train,
What power upholds them in that world of light?
From what unbidden wisdom may we gain
A key to its vast depth, its magnitude and might?

The distant bells now cease their varied chimes,
The lesser orbs no longer greet mine eyes,
Thought after thought to azure summit climbs,
And revels in the grandeur of the skies!
On speeds the spirit in its wingéd car;
But, ah, what music thrills its quickened ear!
What name now trembles from that dome afar,
But His alone who rules the starry sphere!

It is an evidence of littleness of mind to rejoice over the errors of genius.

THE INDIANS AND MOUNTAINS OF OREGON.

FORT KLAMATH, OREGON, Feb. 17, 1868.

EDITOR OF PHRENOLOGICAL JOURNAL.—*My dear Sir:* In October last I reached this beautiful Indian Valley of Klamath, which is to be my home for a few months. The valley is near the Californian boundary of Oregon, two hundred miles from the coast, and seems made and stocked for Indians, nine hundred of whom are scattered along the border of the lake and river.

During my travels, since I left New York in July, I have been many times reminded of pleasant and valuable experience under your wise guidance and generous kindness. Your bust of Phrenology was the first friend to greet me in Aspinwall, Panama, and San Francisco; then at Portland, and Salem in the Willametta Valley; and then at an old hunter's cabin, at the foot of the great mountains covered with cloud and snow—a day's journey from any other cabin. Imagine, my surprise to find, on the table of rough hewn timber, a Bible, an almanac, and a "*Self-Instructor in Phrenology!*" Isn't this fame?^{*}

Ascending the mountains by a narrow way that leads toward heaven, with strong forebodings but stronger mules; surrounded by a dense and dreary forest of firs and pines, noon finds us six thousand feet above the sea, where Old Winter has full sway, while the seasons we love make earth beautiful below. The snow, already quite deep, was then falling, and the trees as heavily loaded as they could bear—the beautiful snow, like the rest of the world, bearing down most heavily upon the weak ones which had just commenced to bend; the cliffs of snow away up and up, seeming ready to fall and bury us; and below us the great canyons, nearly two thousand feet down, altogether made a glorious picture of dreary, wintry solitude!

We reached this valley at night, and with its clear, mild climate, its pure water, its fish and game, it is a pleasant, happy home to us. My desires and duties as physician have brought me into daily intercourse with the Indians here, who, like the animals, have made little or no improvement upon their original customs. The different tribes on this coast bear a strong general resemblance, physically and mentally, but they are far inferior to those of the Plains in all respects. I am still looking for the "noble red man."

They are an example for us in nothing, unless it be their frequent use of the Turkish bath. Their baths are not quite like Dr. Shepherd's, of Brooklyn, but are made close to the bank of the river, of boughs driven into the ground, their tops meeting together, and then covered by skins or blankets. In this two or three are huddled together; boiling water is poured upon heated stones for fifteen or twenty minutes, and when in a profuse perspiration they throw themselves into the river.

The Indian babe, when a week old, is wrapped in a wolf-skin, and fastened to a board, partly dug out and having a hole in its upper end, by which it is hung upon a hook or peg. Thus the little infant, early accustomed to "hanging," seems to enjoy it—a wonderful illustration of the power of habit—and is at once the Indian's only substitute for furniture, pictures, and statuary.

Their winter houses are constructed of logs, covered with bark and dirt; the only door is an opening at the top, through which all the smoke and family must pass. In the cold nights of winter even this opening is closed, keeping out the cold air so effectually, that according to the most accurate physiological and mathematical calculations, allowing so many square feet of air to each person, the family ought to die each morning between two and three o'clock! But these irregular red men seem resolved to neither live properly nor die scientifically.

Having no guns, they are able to get but very little game. Fish, "wookus," and "camus" is their entire

^{*} Our publications may be found not only in the cabins of our Western pioneers, but also in other countries—in Japan, China, and in the islands of the seas.—ED.

bill of fare. The dried salmon are eaten in the winter. The "wookus" (of which I inclose sample) is the baked and ground seeds taken from the pericarp of a yellow water-lily, quite similar to that so common on the Atlantic coast. Each seed vessel contains nearly half an ounce, which, when baked, is nutritious and palatable, tasting like parched wheat. The "camus" is a species of onion, gathered in June, steamed for two days, then dried in the sun, when it is ready to be eaten or preserved for winter's use.

When I said that the Indians were like the animals for some reasons, I should have made an exception of the men, or asked pardon of the birds and beasts; for from the time the boy is born, to old age, he does nothing for himself, but looks upon his mother, sister, or wife as a slave and drudge. When he is about twenty years old, he buys a wife from her parents, paying from three to five of his woolly horses, this "swap" being the only marriage ceremony; and from that time forward she is expected to build the houses, gather and prepare the "wookus," "camus," and often the fish, care for his horses—in fact, do everything, while he sits by the fire he is too indolent to keep, smokes his "kinikinick" (of which I send sample), sleeps, eats, and like Punch's "gentleman," is "a man who has no business in the world."

Under such treatment his wife grows old rapidly, and in a few years, surrounded by a family of children, she would often be taken for their grandmother. And then how is she treated? In her premature old age she and her children are turned out of doors, in the winter or summer, as it pleases him, and he buys another and younger wife. This is the custom, and I have yet to see an exception. The fact that two thirds of the men have been killed in wars with other tribes makes this practice possible.

Their natures and lives are peculiarly free from romance or sentiment, and the only exhibitions I have seen of a feeling deserving the name of love have been between mother and child. They are good, kind, and loving mothers. On horseback a few days ago, I stopped at the hut of a young chief and wife, and was surprised and pleased to find what appeared to be real conjugal love, and noticed little sacrifices made by each for the happiness of the other, which I told them was the custom among civilized people. I fear they saw doubt on my face; I did on theirs. But just as I was leaving, the chief, attracted by my horse, wished to buy it and a ride, offering in return the wife I had shown so much interest in. For once, a Yankee refused to trade on any terms.

If I could send you one of their heads, with its low forehead, high, full back-head, and wide middle-head, you would have a clearer insight into their social and spiritual life than I could possibly give.

At death, they are almost immediately burned, with all their earthly possessions, slaves, their prisoners of war, horses, etc. The body is supported about six feet from the ground by long green boughs, the ends of which rest upon two piles of stones. Under it a huge fire is made, and the body indeed returns to dust. Their property is burned in the same fire. No worthless sons here, idly waiting for the "old man" to die! When the owner of a few slaves is seriously ill, they are most attentive, sympathetic, and patient nurses. Disinterested friendship!

Their religion, as an old lady replied, "is nothing to speak of." If they have been brave and good during life, especially toward their doctor, whose duties, by the way, are not confined to a physical realm; and if then their property is properly burned, so that there is nothing left to draw their spirits again to this world, they are rewarded by an eternal rest or sleep. But if during life they have committed many sins; if they have degraded themselves by working like (their) women, or spoken ill or falsely of others often, as these ignorant, wicked savages do sometimes; or if one of their slaves or horses lives after them, their spirits can know no rest, but, floating in the shadowy air of the densest forest and darkest valleys, through which they infuse a feeling of sacred sadness, they live alone in sorrow for many years, only coming to their living friends in the winds of winter, so full of their moaning.

When we consider the close intermingling of physi-

cal and spiritual conditions and feelings, we see a certain appropriateness in their having but one doctor for both. In your great city it would be a little too much for the poor "medicine man" to soothe and cure, or even to prevent the suffering and agony of its million head and heart aches, or to modify and regulate the diet of both hungry bodies and souls. But wouldn't it be as well if our spiritual doctors would give a little more thought and care to the dwelling-house of the spirit? sometimes so feverishly hot and dry, so damp and cold. Thus the sick spirit which they would teach to soar toward heaven, seeking a life and world to come, by the use of the *tonics* joy, hope, and confidence, would be more effectually restored to health and strength.

In this tribe of Indians, two or three hundred have their foreheads flattened artificially, though it would seem nature had done quite enough in this direction. The babe, when a week old, fastened to its hanging cradle, has its forehead pressed and flattened by a thin board, which is padded and fastened by one end to the top of the cradle, the other to a curved stick passing over its body, and secured to the cradle. The board is kept on three weeks, and then permanently removed. This pressure upon the soft, yielding cartilage, before its development into bone, seems to cause no pain. I can not see that this practice, directly or indirectly, has any influence upon their health, nor of course upon their disposition or character.

After much inquiry and searching for the true reason for this custom, I now believe that in this tribe it is more a desire to promote the usefulness of the child in future years than to increase its comeliness. It may safely be said that *nine tenths of the infants whose heads are so made flat are females!* The girls and women, you remember, do all the work, carrying heavy loads long distances. And these heavy loads are so arranged in a basket on their backs, that a great portion of the burden comes upon their flat foreheads, by a strap passing over it and secured to the basket. In carrying their loads, often as heavy as themselves, their heads are necessarily bent downward slightly, and unless they were quite flat it would be impossible to keep the strap in place. Then the males have more pride and vanity than the females—as in New York—yet it is seldom we find one flat-headed. As one or two companies of soldiers have been stationed here four years, several of the Indians have shaved their foreheads, naturally so low, to improve their appearance, and thus make themselves like the "great Boston men," as they call all white men. But though their standard of beauty is changing in this respect, the female infants have their heads flattened as before. [See casts and skulls of Flat-headed Indians at our Phrenological Museum in New York.]

If you could examine the portraits of many of these Indians, you would doubtless be perplexed to account for their well-shaped Grecian noses, according to the teachings of "Signs of Character," as they lead a low, degraded, savage life. The reason is this: from ten to twelve years of age, both boys and girls have the septum of their nose cut or punctured, and wear in this wound a small round shell during the rest of their lives usually. This draws down the apex, and gives the nose its peculiar shape. Ridiculing an intelligent Indian for wearing this ornament—the same as a *chignon* is—I learned, to my discomfiture, that he had seen one white woman with her earrings, and of course my argument was lost, as no one away out here can say one word against white women; for if the few we have the pleasure of seeing are not all like angels, their visits are.

Wishing you the success you have so fully earned in a life-long pursuit of truth and in helping humanity, I am, sincerely and affectionately yours,
X. S. B., M.D.

IMPOSTORS.

This class is not confined to phrenology, medicine, and astrology, but they may be met everywhere. The "press" is largely infested by impostors and pretenders, and so is the pulpit. Free Masons and Odd Fellows complain that these creatures continually impose upon them. Here is what the *Northwestern Christian Advocate* of Chicago says of religious impostors:

There are no small number of gentlemen of leisure afloat, living upon their wits at the expense of an innocent public. Some of them personate families to which they have no claim by blood nor marriage. One young man staid a few days with a venerable retired minister of Central Illinois, as the son of Dr. Crary, and the nephew of Dr. Eddy. Now if the first, by no possibility known to heraldry, ancient or modern, could he have been the second? And he was not the first. However, he secured his board and some money. Almost weekly we receive notices of fellows playing the pious confidence dodge—preaching and borrowing, or otherwise victimizing good brethren—with a request to publish. We do not print a *Police Gazette*, nor are we fond of giving the pedigree or portraiture of scoundrels. If a pastor puts a stranger into his pulpit of whose capacity to instruct the people he is ignorant, he deserves to be mortified. There is no law of courtesy which requires a pastor to surrender his pulpit to another, and he is not justified in so doing unless he is certain that he will cause no injury to the congregation for whose instruction in righteousness he is accountable to God and the Church. The fact that a man brings credentials as a preacher, gives him no claim to another man's place and pulpit.

The Aminadab Sleeks are numerous, and try various plans of deception. We will give one specimen. We copy a letter from Rev. W. B. Farrah, of Hannibal, Mo.

"A man of clerical appearance and pretensions, about five feet six inches high, rather heavy set, with smooth face, rather light hair combed back, with a large head and forehead inclined to baldness, of honeyed words, neat and well dressed, with a black cloth suit, strait collar, and single-breasted coat, professing to be from Virginia originally, from Canada latterly, now just on his way to visit a very dear friend at Evanston, Ill., who is sick, presented himself in my study last Sabbath morning with a handful of letters of recommendation, and among others one purporting to be from you, recommending him to the favorable attention of railroad and steamboat men generally, by which with others he was procuring half fares, free passes, and seems to be getting on in the world economically. He becomes all things to all men that he may gain something.

"He is Episcopalian, Methodist, Christian, rebel or Union, just as occasion may require. He claims you as a very dear friend indeed; but Dr. McClintock is still nearer and dearer. Addresses persons as dear—'yes, dear,' 'no, dear,' 'thank you, dear,' etc. Seems to be sharp and well informed, and gave his name as M. H. Livingston, and his address, Evanston, Ill.

"He is evidently an impostor, and is either a grand rascal or an educated fool. He was exceedingly annoyed by extravagant charges at the hotel; was sick and ate but little, but they had the audacity to extort full price, which left him without means to get to Keokuk; wanted just enough money to take him there, which, to get rid of him, we gave him; received many good promises, but never expect to see the man or money again."

The *Advocate* adds: We do not know him. We don't give letters to any such men. We could not endure such fawning long enough to write a letter.

Bro. A. B. Kendig, of Davenport, writes us that A. G. Fletcher has left that city under sore censure; that he claims to be a local preacher, but that any Church letter he may present from Davenport is spurious. Bro. Kendig asserts he has signed none such.

To all we say, "Beware of confidence men and women." Deal kindly with strangers and aid the deserving, but scrutinize very closely the claims of any who come asking money and hospitality on Church letters, especially scrutinize such as come without them, and yet ask for aid on Church grounds.

[Why not examine their heads, and thus learn if they have Conscientiousness, Veneration, etc.? A good physiognomist can read a rogue the moment he sees him. Why not apply it? It would be good economy.]

PERSONAL.

RALPH WALDO EMERSON, in his eloquent lecture, "Quotation and Originality," thus epitomizes the essential features of literary success. "You can not overstate our debt to the Past, but the moment has the supreme claim. The Past is for us; but the sole terms on which it can become ours are its subordination to the Present. Only an inventor knows how to borrow, and every man is, or should be, an inventor. We must not tamper with the organic motion of the soul. 'Tis certain that thought has its own proper motion, and the hints which flash from it, the words overheard at unawares by the free mind, are trustworthy and fertile, when obeyed, and not perverted to low and selfish account. This vast memory is only raw material. The divine gift is ever the instant life, which receives, and uses and creates, and can well bury the old in the omnipotency with which Nature decomposes all her harvest for recombination."

REV. N. STACY, the oldest Universalist preacher in this country, lately died at his residence in Columbus, Pa., aged 90 years.

MR. IRA ALDRIDGE, a son of the late colored tragedian, a sketch of whom appeared not long since in the columns of the *PHRENOLOGICAL JOURNAL*, was lately announced as a prominent feature in the "cast" of the Melbourne Theater Royal.

ORVILLE GARDNER.—A well-known gentleman, in a recently published letter, in substance said he was riding between Ithaca and Waterloo, when he saw a small cabin standing on the bank of Cayuga Lake. A grave-faced working-man was chopping wood near by. This was Orville Gardner, the converted prize-fighter. It is now twelve years since he was touched by the inspired goodness of some missionary exhorter in New York, and he has since been struggling worthily to help others into the path of reform, preaching and praying, working and striving, in his earnest, rough way, while many of his former companions are in jail, or in the grave-yard and poor-house. Orville Gardner, matched against the wilderness, strengthened by faith, is fighting the good fight, hoping at last to receive an imperishable crown. Truly, he is the greatest champion who conquers himself.

BEFORE AND AFTER.

BY NATHAN UPHAM.

Timid and shy as a frightened hare,
Who knoweth her heart or her secret thought?
Is it love? or a fancy lingering there?—
Dearest of Jewels are the slowest bought!
"Coy as a maiden"—the adage is old—
Far better be coy than a maiden too bold!
Finally won! Is the wife like the maid?
Read here the answer, plain as a book:
Trusting, in thine, a soft hand is laid;
Boldly, in thine, the loving eyes look!
Ah! it is well; and we need not be told,
"The love of my wife is more precious than gold!"

DESIRABLE PREMIUMS.

OPEN TO ALL.

We offer the following to all who may feel an interest in the circulation of the *PHRENOLOGICAL JOURNAL*:

For 350 new subscribers, at \$3 each, we will give a Steinway or Weber Rosewood piano, worth \$650.

For 100 subscribers, at \$3 each, we will give a handsome five Octave Parlor Organ of Berry & Thompson's or Horace Waters' manufacture, worth \$170.

For 75 subscribers, at \$3 each, a ticket for one winter course of Professional Lectures on Phrenology, Physiology, and Anatomy, price \$100.

For 60 subscribers, at \$3 each, a five Octave Melodeon, for church or parlor, worth \$100.

For 40 subscribers, at \$3 each, a Florence Sewing Machine, worth \$65.

For 30 subscribers, at \$3 each, a Weed Sewing Machine, new style, worth \$60.

For 25 subscribers, at \$3 each, a Wheeler & Wilson's Family Sewing Machine, worth \$55.

For 25 new subscribers, at \$3, we will give a Gentleman's Tool Chest, worth \$35; and for 18 new subscribers, at \$3, a Youth's Tool Chest, worth \$25. For 10 new subscribers, at \$3, a Boy's Tool Chest, worth \$15. See advertisement on cover.

For 15 subscribers, at \$3 each, the worth of \$16 in any of our own publications.

For 12 subscribers, at \$3 each, a handsome Rosewood Writing Case furnished with materials, worth \$12.

For 10 subscribers, at \$3 each, Webster's Quarto Dictionary, Unabridged, Illustrated Edition, price \$12.

For 10 subscribers, at \$3 each, the Universal Clothes Wringer, worth \$10.

For 7 subscribers, at \$3 each, a handsomely finished Rosewood Stereoscope, a beautiful and useful article for home amusement, with 13 views, worth \$6.

Those persons desiring our own publications instead of the premiums offered, can select from catalogue books amounting to the value of the premium for which they would have such books substituted. Subscriptions commence with January or July numbers.

"What They Say."

Here we give space for readers to express, briefly, their views on various topics not provided for in other departments. Statements and opinions—not discussions—will be in order. Be brief.

TESTIMONY.—In a letter from Stanton, W. V. B. says: "It does me good to see such articles as Pauperism, Dissipation, and Hard Times in the March, April, and May numbers of the A. P. J.; and I think if our religious monthlies and weeklies would publish such articles, and use as much effort to reform men and society as you do, we would have a better world than we have. Let them try it."

"I repeat, I am much pleased with your article on Hard Times. But I think you lay too much blame on the poor, weak, ignorant, and vicious, and not enough on the rich, strong, intelligent, and professedly good. Are there not thousands of honest poor men, women, and children in New York city, as well as all over the United States, who are willing and anxious to be industrious, honest, good people, willing to pay their way in life, but can not, because oppressed, wronged, and neglected by the rich and strong? Is not all this true? Does not the Bible abound with curses against the rich and intelligent for oppressing and neglecting the poor and weak. See Matthew, chapter xxv., verse 45, as well as hundreds of other passages."

DRINK.—Here is a letter from Georgia, giving the views of the writer on the subject of the drinking of intoxicating liquors.

Ed. Phrenological Journal. You are a firm believer in human progress; so am I—and so is every reader of your progressive JOURNAL. There is nothing that would please me better than to see our country rid of every evil with which it is filled; and it is filled with evils of all descriptions. But there is one evil which in magnitude is greater than all others; and there will never be much real progress until we are rid of it entirely. It is the traffic in and drinking of intoxicating liquors. What can be done to arrest this evil? I propose that Congress take the matter in hand and abolish the liquor business entirely out of the land, and make it a penitentiary crime to manufacture it; also have government officers in every town whose business it shall be to seize liquor and empty it out wherever found; also to arrest the person found dealing in it, and let him be punished as the law may direct. I also propose that our Temperance people—"Sons of Temperance," "Knights of Jericho," "Good Templars," "Friends of Temperance," "Health Reformers," and all of our churches unite and petition Congress to act on this matter; and let us have a "United States Liquor Law" which shall banish this vile curse out of our land. What say the readers of the PHRENOLOGICAL JOURNAL?

Truly yours, ALEXANDER KING.

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office at prices annexed.]

THE EDUCATION OF THE FEELINGS ON AFFECTIONS. By Charles Bray. Third Edition. London: Longman & Co. New York: S. R. Wells. 8vo. Cloth, \$1 75.

This excellent work is best epitomized by reciting the contents. Chapter I. Mental Constitution. Chapter II. Education of each Feeling Considered Separately. The Self-Protecting Feelings: Appetite, Combativeness, Destructiveness, Secretiveness, etc. The Self-Regarding Feelings: Self-Esteem, Love of Approbation. The

Social Affections. The Moral Feelings. The Esthetic Feelings. The Religious Feelings. Feelings which give concentration, power, or permanence to the others, Authority and Obedience, Temper, Punishment, Manners, Example. Chapter III. The connection of Mind with Organization, the Subjective and the Objective. Chapter IV. The Intellectual Faculties. Conclusion.

THE PRINCIPLES OF MEDICINE.

By John M. Scudder, M.D., Professor of the Principles and Practice of Medicine in the Eclectic Medical Institute of Cincinnati, Ohio, Author of "A Treatise on the Diseases of Women," etc., etc. 8vo. Sheep, pp. xv., 361. \$3.

The volume is intended as an introduction to the study of medicine, and presents certain important basilar principles, which if mastered by the student will prove of invaluable service to him in subsequent examination and practice. Dr. Scudder embodies in this work the results of many years of professional observation and close thought. He ventures no favorite theories, no pet notions, no suppositions, but aims to furnish serious substantial fact. Appreciating the importance of a correct understanding of the *laws* which govern in practical medicine, he aims to present those definite principles which are comprehended in such *laws*. A cursory glance at the arrangement of the work must conclude our brief notice. The Introduction considers the nature, symptoms, analysis, and classification of disease. Chapter I. treats of Life, with a review of the opinions of leading medics thereon; Formative Force, and the other forces of vital power. Chapter II. considers Cellular Pathology. Chapter III. Nutrition of Texture. "Food is valuable as it is easy of appropriation." Digestion, Hypertrophy, Atrophy, Perverted Nutrition, Deposits, Repair of Injuries, Morbid Growths. Chapter IV. Of Secretions. Chapter V. Death and Life—how associated. Chapter VI. Of the Blood. Chapter VII. The Lymph and its Circulation. Chapter VIII. Lesions of the Circulation of the Blood. Chapter IX. Inflammation. Chapter X. Of Innervation. A very interesting chapter on the brain and nervous system. Appendix. Rational Medicine, with numerous practical suggestions on disputed subjects.

MAN'S ORIGIN AND DESTINY.

Sketched from the platform of the Sciences. In a course of Lectures delivered before the Lowell Institute in Boston, in the winter of 1855-6. By J. P. Lesley, member of the National Academy of the United States, Secretary of the American Philosophical Society. Philadelphia: J. B. Lippincott & Co. 8vo. Cloth, \$4.

One thing which strikes us in the outset of an examination of this work is the chaste and beautiful language with which Mr. Lesley has clothed his scientific expositions. There is no want of technicality; no lack of that precision of statement which is usually a characteristic of the descriptions of the well-versed scientist, but the terms and style are highly polished and rhetorical.

The first lecture is introductory, furnishing a general view of physical science and its classification. The second lecture treats of the "genius" of the ancient and modern sciences, ascribing fancy and hypothesis to the former, practicality and consistency to the latter. In the third lecture the subject of the course is fairly entered upon, and the "geological antiquity of man" considered. This lecture is rendered especially interesting by the dispassionate reasoning on the theories advanced by theological science and the science of the anthropologist. The balance of the lectures have for their

subjects respectively the "Dignity of Man," the "Unity of Mankind," the "Early Social Life of Man," "Language as a Test of Race," the "Origin of Architecture," the "Growth of the Alphabet," the "Four Types of Religious Worship," and "Arkite Symbolism," the interesting nature of which are obvious in the very titles. The appendix published with the volume is a valuable glossary for the reader who is but little versed in archæology.

ALCOHOL: its Nature and Effects. Ten Lectures. By Dr. C. A. Story, of Chicago. New York: National Temperance Society and Publication House. Price, 90 cents.

These lectures are clear and convincing in detail, vigorous, forcible, and spirited (not using the term in any malicious sense) in style. The topic, Alcohol, is discussed in a liberal and comprehensive manner, as only a cultivated scientific lecturer could discuss it. The nature, source, and utility of this subtle fluid are first considered; next, its effects upon the human system, and what organs are chiefly liable to injury by its action; next, the influence it exerts upon the brain and, of consequence, the mind; next, the mode of manufacture, with statistical accounts of the numbers employed in its preparation; how many drink it in one form or another; how many die from its use; what its use as a beverage costs the nation; how it is adulterated, counterfeited, and imitated; and, what is the duty of a free people with reference to it.

THE HOLLY-TREE INN; and other Stories. By Charles Dickens. Philadelphia: T. B. Peterson & Brothers. Cloth. Price, \$1 50.

This volume closes the so-called "People's Edition" of Dickens' works, issued by the Petersons. In quality of "composition" and manufacture it is equal to the first of the edition. Nineteen volumes constitute this edition, which is sold entire for \$23.

COLORADO. The Rocky Mountain Gem, as it is in 1858. Paper. 12mo, pp. 70. With small map. By Ned E. Farrell. Price, 25 cents. Chicago: Western News Co.

A compact gazetteer or hand-book of Colorado, describing each county in brief, with notes on the mineral and agricultural resources, climate, scenery, and such general information as the emigrant or tourist would be glad to have. This little book is warmly commended by Western editors and railway men.

THE PHRENOLOGICAL JOURNAL. New York: S. R. Wells, Editor and Publisher, 389 Broadway. \$3 per annum.

We have heard objections urged in some quarters against this admirably edited monthly, but we have as yet discovered no trace in the JOURNAL itself of grounds for such objections. It is natural that we should dissent from it on some few points, but as our friend Wells does not profess to edit the *Protestant Churchman*, we do not expect to find our paper mirrored in the PHRENOLOGICAL JOURNAL. It certainly has a vast amount of curious and useful information, and the articles are of a very high order in the line of literary composition. The monthly descriptions of character, whether accepted by readers or rejected, are certainly highly suggestive. —*The Protestant Churchman*.

[We thank the *Protestant Churchman* for its candor and courage in discountenancing what is a very prevalent belief in many minds, viz., that the teachings of the JOURNAL are materialistic, fatalistic, and infidel. We do not forget that the author

of our Christian religion, while on earth, encountered many "objections" to his teachings, and that ever since Christianity has been more or less subject to opposition and detraction. The JOURNAL can not hope to escape criticism, nor will it try to do so at the sacrifice of truth or principle. It will aim to be right on all questions, sacred and secular. But to err is human. Again, we say, thanks.]

THE BUTTERFLY HUNTERS. By Helen S. Conant. With illustrations. Boston: Ticknor & Fields. \$1 50.

Science presented in this pleasing way should not fail to make some permanent impressions on youthful minds. One of the chief diversions of innocent, frisking childhood, one which has furnished the argument for many a poem, is "chasing the butterfly;" and Mrs. Conant has caught the happy vein and given us and our children a pretty book on the natural history of the butterfly. In this volume we find the germs of the right mode of imparting scientific instruction to the young. Children must take real pleasure in reading such books, and at the same time imperceptibly gather the seeds of scientific knowledge, which will prompt them to further study and investigation in after-years.

UNITED STATES MUSICAL REVIEW. Price, \$3 a year; 25 cents per number.

PETERS' PARLOR COMPANION. For the Flute, Violin, and Piano. Price, \$3 a year; 30 cents a number.

PETERS' MONTHLY GLEE HIVE. Price, \$3 a year; 30 cents a number.

The above publications exhibit an unusual degree of musical ability and enterprise, and are well adapted to their respective departments. Publisher, J. L. Peters, New York.

THE OLD BROWN PITCHER. By the author of "Suey's Six Birthdays," etc., and other Tales. New York: National Temperance Society and Publication House. \$1.

Besides this very interesting and practical account of the experiences of an old brown pitcher, we have in the same volume very readable stories entitled as follows: "The Sleigh Ride," "John Saunders' Little Guide," "Just for the Fun of It," "The Butterfly Turned Bee," "Christmas Day," "The Bundle in the Doorway," "Derby Colt," "The Snow-storm," "Katy Whitefoot," "Nothing but Water to Drink," "Baby May's Work," "My Aunt Fanny," all by popular writers.

THE TEMPERANCE REFORMATION: Its History from the First Temperance Society in the United States to the Adoption of the Maine Liquor Law. By Rev. J. Armstrong. Post-paid, \$1 50. New York: S. R. Wells, publisher, 389 Broadway.

A new edition of this interesting historical work is now printing, and will be ready before this notice reaches the reader. We have only space at present to announce the fact. Copies may be ordered by post from this office, and received by return. Temperance men will find it full of truth and encouragement. See our new list of Temperance publications, sent on receipt of stamp to prepay postage.

THE PEOPLE'S MAGAZINE, published by the Society for Promoting Christian Knowledge, continues to merit the highest commendation. It is supplied by Messrs. POTT & AMERY, No. 5 Cooper Union, New York, at \$3 a year, or 30 cents a number, postage prepaid. Try a number.

THE FREEBOOTERS; a Story of the Texan War. By Gustave Aimard, author of "The Prairie Flower," etc. Philadelphia: T. B. Peterson & Brothers. Price 50 cents.

This novel abounds in vigorous portraits of frontier life as experienced among the Indians and Mexicans of Texas. The writer, a Frenchman, in early life lived among the Indians of the Southwest, and acquired a practical knowledge of their customs and language, so that the descriptions are more real than imaginative.

FOOTPRINTS OF LIFE; OR, Faith and Nature Reconciled. By Philip Harvey, M.D. New York: Samuel E. Wells. 12mo, cloth, pp. 140. \$1 25.

We offer to the public the above work with the utmost reliance on its worth. It is a poem written in the heroic measure, and in easiness of diction and gracefulness of style will compare favorably with many of the best modern productions in verse. It is no verbose or pedantic jingle, but a calm, somewhat profound and philosophical, yet engaging and instructive lyric. Nature, man and the Creator, God, and their relations with each other, form the burden of the song. The poem is divided into three parts. First, the Body, comprising the introduction, the origin, progressive development, and end of animal life. Second, the Soul, including exordium, soul, instinct, reason, faith, the laws of nature. Third, the Deity, including retrospect, the love of God, His worship, prayer, forms of faith, universal prayer. Conclusion.

No one can read this volume carefully without deriving much substantial instruction.

OUR PARISH. A Temperance Tale. By Emily C. Pearson. New York: National Temperance Society and Publication House. 75 cents.

Another stirring story of the workings of alcohol. In this neatly-written volume we have portrayed the ruin wrought in the house of the dispenser of the poisonous drink. The "dignitaries" of the religious society play a prominent part in the tale, and enliven it much. The book is adapted to accomplish good results if circulated.

CHRISTMAS BOOKS, and Sketches by Boz, illustrative of Every-day Life and Every-day People. By Charles Dickens. With sixteen illustrations. Boston: Ticknor & Fields. Price \$1 50.

This volume contains those irresistibly funny sketches for which "Boz" was distinguished in the outset of his career of authorship. The illustrations are the old ones by Cruikshank and Leech, but no better have since been produced. The volume belongs to the graceful "Charles Dickens'" edition.

NEW POEMS. By Owen Meredith. In two volumes. Boston: Ticknor & Fields. 16mo, fancy cloth. \$4.

Owen Meredith has won a poetic reputation which no encomiums of ours would heighten. The neat and graceful edition of his productions noticed above will serve to popularize him more than any chance remarks of approval. Volume I. contains "Chronicles and Characters," or poems of a historic or descriptive character, relating to the progress of events from the earliest Grecian periods to modern eras. The era of Grecian legend, the Roman empire, the opening of the Christian dispensation, the Mohammedan era, the important events from the twelfth to the eighteenth centuries, are discussed in flowing measure and with all the grace of cultivated classicism. Volume II. contains a continuation

of chronicles and characters, and "Orval," and other poems. Many of the poems abound in humorous allusions to the inconsistencies of church, state, and society, while their general moral influence is healthful. Some of the imitations and paraphrases of celebrated European authors are excellent, especially those of Dante and Lucretius.

THE WORKSHOP. A Monthly Journal, devoted to Progress of the Useful Arts. Edited by Prof. W. Baumer, J. Schnorr, and others.

We have received the first three numbers of this new monthly from Mr. E. Steiger, of 17 North William St., New York, and must confess our pleasure in examining so richly illustrated a work devoted to the mechanical arts. Its application seems general; architects, builders, cabinet-makers, carpenters, sculptors, plasterers, decorators, engravers, workers in metal, painters, weavers, potters, etc., etc., may all find something of value in its pages. There is no periodical work issued by the American press that can surpass it in richness of illustration.

Price, \$5 40 a year. Specimen numbers, 50 cents.

STEVEN LAWRENCE, YEOMAN. A novel. By Mrs. Edwards; author of "Archie Lovell," etc. Elegantly illustrated. Author's edition—printed from advance sheets. New York: Sheldon & Co. 8vo, cloth, \$2.

For neatness of style and delicacy of characterization, Mrs. Edwards' novels are conspicuous in the modern whirl of sensationalism. We will not say that this volume is a paragon of excellence in the realm of fictitious literature, but we do say that it were better for those who *will* read novels to read something of this kind, and avoid the extravagance and sensationalism of the common miscellaneous literature of the day.

FARMING FOR BOYS. What

They Have Done, and What Others May Do, in the Cultivation of Farm and Garden; How to Begin, How to Proceed, and What to Aim At. By the Author of "Ten Acres Enough." With illustrations. Boston: Ticknor & Fields. \$1 50.

The reading of "Ten Acres Enough" afforded us much pleasure and instruction, as it doubtless has thousands of others; and the present work, bearing as it does the evidence of like authorship, can not fail to interest and instruct all who read it. To boys—and girls, too—who enjoy the luxuries of farm or rural life, with opportunities for garden or field cultivation, this book will not only be found as entertaining as a story, but as instructive as a school manual on agricultural subjects. It furnishes many practical hints by which children may be enabled to make profitable use of a waste garden corner or an untilled acre. It, besides, has such an air of reality, that we have little doubt of the book's being based upon facts.

NEW MUSIC.—We have received from Mr. C. M. TREMANS (successor to Horace Waters), 481 Broadway, the following pieces of Music, just published: "La Belle Hélène," Polka. Arranged by Cull. 30 cents. "La Belle Danseuse," Mazourka Élégante. Cull. 40 cents. "Think of Me," Nocturne. T. N. Pattison. 60 cents. "The Bridge O'er the River." W. C. Baker. 40 cents. "Captain Jinks." T. MacLagan. 30 cents. "Day by Day." W. R. Dempster. 40 cents. "My own Elleen Bawn." Malméne. 30 cents. "Mother's Little One." G. F. Sargent, Esq. 30 cents.

THE LADIES' REPOSITORY, now in its twenty-eighth volume, though always an excellent family magazine, seems to improve with each succeeding year. It is now one of the best serial publications of a religious character—in which every member of the family would find profitable reading—produced in America. Terms, \$3 50 a year. Cincinnati: Messrs. Poe & Hitchcock.

The following volumes of their "Cheap Editions" of Charles Dickens' and Sir Walter Scott's works have been received from T. B. Peterson & Brothers, of Philadelphia. Each volume mentioned contains a novel complete.

THE HAUNTED HOUSE. By Charles Dickens. Price 25 cents.

A MESSAGE FROM THE SEA. By Charles Dickens. Price 25 cents.

SOMEBODY'S LUGGAGE. His leaving it till called for; his boots, umbrella, dressing-case, brown paper parcel, etc. By Charles Dickens. Price 25 cents.

THE UNCOMMERCIAL TRAVELER. By Charles Dickens. Price 25 cents.

MRS. LIRRIPIER'S LODGINGS, and Mrs. Lirriper's Legacy. By Charles Dickens. Price 25 cents.

LIFE OF JOSEPH GRIMALDI, the noted English clown. Written out from Grimaldi's own Manuscript and Notes. By Charles Dickens. Price 50 cents.

HEART OF MIDLOTHIAN. By Sir Walter Scott. Price 20 cents.

THE BLACK DWARF, and the Legend of Montrose. By Sir Walter Scott. Price 20 cents.

THE BRIDE OF LAMMERMOOR. By Sir Walter Scott. Price 20 cents.

THE MONASTERY. By Sir Walter Scott. Price 20 cents.

THE ABBOT. By Sir Walter Scott. Price 20 cents.

THE PIRATE. By Sir Walter Scott. Price 20 cents.

To our Correspondents.

SPECIAL INFLUENCE.—How can one organ gain control over the whole body contrary to the force of common sense, the person being intelligent?

Ans. That question to a phrenologist or physiologist answers itself; still it may need a formal answer. Sometimes the musical faculty will lead one, contrary to common sense, to devote that time to the practice of music which ought to be employed in earning food or clothing. Sometimes the love of fun leads men into jolly company, to the neglect of their business. Sometimes Alimentiveness leads men to use liquor, tobacco, or opium. The habit becomes formed, and though they struggle intellectually and morally to rid themselves of it, they find it next to impossible to do so. One is inflated with ambition, another with pride; another is depressed, contrary to common sense, and although he knows he is not surrounded by danger, yet the feeling of Cautiousness is feverish, and he can not help thinking himself in imminent peril. Another becomes a slave to lust, and against his own better judgment and every other restraining element rushes onward to ruin. It is the indulgence of appetites and passions unduly which makes them assume such control over men. A normal appetite or passion may become one's master through abuse and perversion. One takes opium, as prescribed by a physician, for neuralgia, and becomes ultimately a slave to it, and

he would take it if he had to steal the funds with which to buy it. All such dispositions are opposed to common sense.

CONTINUITY SMALL.—I have a good memory and but little Continuity. I have often wondered why I should not secure as good a standing in my classes as others, my memory being good. I never could study or place my mind in the least upon my books, especially when others were talking or there was any noise. The question is, can I improve Continuity, and how?

Ans. You can improve this organ by using it. It is, in fact, the only way to improve any organ; and having a good memory, if you can learn to hold the mind to its work, you can attain a good standing in your class.

BEST WORKS ON BOTANY.—Gray's Botanical Series now forms the most complete set of works on the subject. They are extensively used both in this and in the old country. They consist of: GRAY'S "HOW PLANTS GROW." A Botany for Young People, \$1 25. GRAY'S LESSONS IN BOTANY, \$1 75. GRAY'S MANUAL OF BOTANY, \$3. GRAY'S MANUAL AND LESSONS. In 1 vol. \$3 75. GRAY'S MANUAL, WITH MORSES, ETC., \$4 50. GRAY'S STRUCTURAL AND SYSTEMATIC BOTANY. (Revised and improved edition of the Botanical Text-Book.) \$4. GRAY'S GENERA OF THE PLANTS OF THE UNITED STATES. Illustrated. 2 vols. \$20. FLORA OF THE SOUTHERN UNITED STATES. By A. W. Chapman, M.D. \$4 50. May be ordered from this office.

IS PHRENOLOGY FATALISTIC?

Ans. The parties who base their opposition to phrenological teachings on the assertion or assumption that those teachings declare man to be a congeries of certain talents, dispositions, and peculiarities by virtue of certain fixed physical conditions; that he is what he is in consequence of an unalterable organization, and therefore thinks and acts not from choice but from an unavoidable necessity, are much in error. Does any candid, intelligent man impute fatalism to anatomy and physiology because those systems declare in the most positive terms the constitution of man physically, how he is organized, what is requisite for healthy and symmetrical bodily functions, how those functions may be disturbed by external or internal means, how the whole human economy may be promoted or depreciated, how intimately mind—thought and emotion—is related with body, the condition of one affecting the condition of the other? By no means; and yet Phrenology can not scarcely be said to go further in its prescriptions than those two sciences.
